

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFACE	PAGE xiii
-------------------	--------------

THE SHŪ.

INTRODUCTION.

CHAP.

I. THE NATURE AND HISTORY OF THE SHŪ	1
--	---

Meaning of the name Shū King. The Shū existed as a collection of documents before Confucius. Number of documents in it in his time. The Preface ascribed to him. The sources of the Shū. Destruction of the classical literature by the emperor of K'in. Recovery of the Shū.

II. THE CREDIBILITY OF THE RECORDS IN THE SHŪ	12
---	----

Are the records reliable or not? The Books of K'au; of Shang; of Hsiâ. The Books of Thang and Yü are professedly later compilations; legendary; based on ancient documents. The Tribute of Yü. Yáo, Shun, and Yü are all historical personages.

III. ON THE CHRONOLOGY OF CHINA, AND THE PRINCIPAL ERAS IN THE SHŪ	20
--	----

No detailed chronological system can be made out from the Shū. Attempts at systematic chronology began in the Han period. Ancient method of determining the length of Chinese history. The period of the K'au dynasty; of the Shang; of the Hsiâ; of Yáo and Shun.

A CHART BY THE REV. PROFESSOR PRITCHARD, representing the principal zodiacal stars above the horizon of any place in central China, about the year B. C. 2300; with note, and table of the apparent positions of the principal stars in B. C. 2300, B. C. 1500, A. D. 1, A. D. 1000, and A. D. 1878	27-30

THE SHIH.

INTRODUCTION.

CHAP.

I. THE NAME AND CONTENTS OF THE SHIH 275

The meaning of the character Shih. The contents. Only the pieces of the fourth Part have professedly a religious character. Classification of the pieces from their form and style.

II. THE SHIH BEFORE CONFUCIUS, AND WHAT, IF ANY, WERE HIS LABOURS UPON IT 280

Statement of Sze-mâ K'ien; in the Records of the Sui Dynasty; of K'ü Hsî. View of the author. Groundlessness of K'ien's statement. What Confucius did for the Shih.

CHAP.	PAGE
III. THE SHIH FROM THE TIME OF CONFUCIUS TILL THE GENERAL ACKNOWLEDGMENT OF THE PRESENT TEXT	285

From Confucius to the rise of the *K'in* dynasty. The Shih was all recovered after the fires of *K'in*. Three different texts:—of *Lû*; of *K'hi*; of Han Ying. The text of *Máo*.

IV. THE FORMATION OF THE COLLECTION OF THE SHIH; HOW IT CAME TO BE SO SMALL AND INCOMPLETE; THE INTERPRETATION AND AUTHORS OF THE PIECES; ONE POINT OF TIME CERTAINLY INDICATED IN IT; AND THE CONFUCIAN PREFACE	290
--	-----

The theory of the Chinese scholars about a collection of poems for governmental purposes. The music-master of the king got the odes of each state from its music-master; and the collected poems were disseminated throughout the states. How the Shih is so small and incomplete. The authors of the pieces. The year B. C. 776 clearly indicated. The Preface to the Shih.

THE HSIÃO.

INTRODUCTION.

CHAP.

I. THE NAME OF THE CLASSIC; ITS EXISTENCE BEFORE THE
HAN DYNASTY; ITS CONTENTS, AND BY WHOM IT WAS
WRITTEN 449

Meaning of the character Hsiao. Was the treatise called the Hsiao King by Confucius? It existed before the Han dynasty during the time of the K'au. It came, probably, from the school of ǰāng-ze.

II. THE RECOVERY OF THE HSIÄO UNDER THE HAN
DYNASTY, AND ITS PRESERVATION DOWN TO THE
PUBLICATION OF THE COMMENTARY OF THE THANG
EMPEROR HSÜAN SUNG 452

Recovery of the Hsião. The shorter or modern text. The old or longer text. Was another copy in the old text discovered? Can we fully rely on the copies catalogued by Liü Hsin? From Khung An-kwo to the emperor Hsüan Jung. The emperor's work. Hsing Ping's work.

III. CRITICISM OF THE HSIÃO SINCE THE THANG DYNASTY 458

Works on the old text by Sze-mâ Kwang and Fan ʒü-yü. Sceptical criticism;—views of K'ü Hsi and Wü K'hang. Conclusion regarding the genuineness and integrity of the Hsião. Note on the translation.

Transliteration of Oriental Alphabets adopted for the Trans- lations of the Sacred Books of the East	489
---	-----

P R E F A C E.

WHILE submitting here some prefatory observations on the version of the Shû King presented in this volume, I think it well to prefix also a brief account of what are regarded as the Sacred Books of the Religions of China. Those religions are three:—Confucianism, Tâoism, and Buddhism.

I. I begin with a few words about the last. To translate any of its books does not belong to my province, and more than a few words from me are unnecessary. It has been said that Buddhism was introduced into China in the third century B. C.; but it certainly did not obtain an authoritative recognition in the empire till the third quarter of our first century¹. Its Texts were translated into Chinese, one portion after another, as they were gradually obtained from India; but it was not till very long afterwards that the Chinese possessed, in their own language, a complete copy of the Buddhist canon². Translations from the Sanskrit constitute the principal part of the Buddhistic literature of China, though there are also many original works in Chinese belonging to it.

¹ I put the introduction of Buddhism into China before our Christian era thus uncertainly, because of what is said in the article on the history of Buddhism in China, in the Records of the Sui Dynasty (A.D. 589–618), the compilers of which say that before the Han dynasty (began B. C. 202) Buddhism was not heard of in China. They refer to contrary statements as what 'some say,' and proceed to relate circumstances inconsistent with them. It is acknowledged on all sides that Buddhist books were first brought to China between A. D. 60 and 70.

² Mr. Beal (*Catena of Buddhist Scriptures from the Chinese*, pp. 1, 2) says that 'the first complete edition of the Buddhist Canon in China dates from the seventh century; that a second and much enlarged edition of it, called the Southern Collection, was prepared in A. D. 1410; that a third edition, called the Northern Collection, appeared about A. D. 1590; which again was renewed and enlarged in the year 1723.'

II. Confucianism is the religion of China par excellence, and is named from the great sage who lived in the fifth and sixth centuries B.C. Confucius indeed did not originate the system, nor was he the first to inculcate its principles or enjoin its forms of worship. He said of himself (*Analects*, VII, i) that he was a transmitter and not a maker, one who believed in and loved the ancients; and hence it is said in the thirtieth chapter of the *Doctrine of the Mean*, ascribed to his grandson, that 'he handed down the doctrines of Yáo and Shun, as if they had been his ancestors, and elegantly displayed the regulations of Wăn and Wû, taking them as his models.'

In fulfilling what he considered to be his mission, Confucius did little towards committing to writing the views of antiquity according to his own conception of them. He discoursed about them freely with the disciples of his school, from whom we have received a good deal of what he said; and it is possible that his accounts of the ancient views and practices took, unconsciously to himself, some colour from the peculiar character of his mind. But his favourite method was to direct the attention of his disciples to the ancient literature of the nation. He would neither affirm nor relate anything for which he could not adduce some document of acknowledged authority. He said on one occasion (*Analects*, III, ix) that he could describe the ceremonies of the dynasties of Hsiâ (B.C. 2205-1767) and Yin (B.C. 1766-1123), but did not do so, because the records and scholars in the two states of K'âu, that had been assigned to the descendants of their sovereigns, could not sufficiently attest his words. It is an error even to suppose that he compiled the historical documents, poems, and other ancient books from various works existing in his time. Portions of the oldest works had already perished. His study of those that remained, and his exhortations to his disciples also to study them, contributed to their preservation. What he wrote or said about their meaning should be received by us with reverence; but if all the works which he handled had come down to us entire, we should have been, so far as it is possible for foreigners to be, in

the same position as he was for learning the ancient religion of his country. Our text-books would be the same as his. Unfortunately most of the ancient books suffered loss and injury after Confucius had passed from the stage of life. We have reason, however, to be thankful that we possess so many and so much of them. No other literature, comparable to them for antiquity, has come down to us in such a state of preservation.

But the reader must bear in mind that the ancient books of China do not profess to have been inspired, or to contain what we should call a Revelation. Historians, poets, and others wrote them as they were moved in their own minds. An old poem may occasionally contain what it says was spoken by God, but we can only understand that language as calling attention emphatically to the statements to which it is prefixed. We also read of Heaven's raising up the great ancient sovereigns and teachers, and variously assisting them to accomplish their undertakings; but all this need not be more than what a religious man of any country might affirm at the present day of direction, help, and guidance given to himself and others from above. But while the old Chinese books do not profess to contain any divine revelation, the references in them to religious views and practices are numerous; and it is from these that the student has to fashion for himself an outline of the early religion of the people. I will now state what the books are.

First, and of greatest importance, there is the Book of Historical Documents, called the *Shû* and, since the period of the Han dynasty (began B.C. 202), the *Shû King*. Its documents commence with the reign of Yáo in the twenty-fourth century B.C., and come down to that of king Hsiang of the *K'áu* dynasty, B.C. 651-619. The earliest chapters were not contemporaneous with the events which they describe, but the others begin to be so in the twenty-second century B.C. The reader will find a translation of the whole of this work without abridgment.

Second, and nearly as important as the *Shû*, there is the *Shih*, or the Book of Poetry. It contains in all 305

pieces, five of which are of the time of the Shang dynasty (called also the Yin), B.C. 1766-1123. The others belong to the dynasty of K'au, from the time of its founder, king Wăn, born B.C. 1231, to the reign of king Ting, B.C. 606-586. The whole is divided into four Parts, the last of which is occupied with 'Odes of the Temple and the Altar.' Many pieces in the other Parts also partake of a religious character, but the greater number are simply descriptive of the manners, customs, and events of the times to which they belong, and have no claim to be included in the roll of Sacred Texts. In this volume will be found all the pieces that illustrate the religious views of their authors, and the religious practices of their times.

The third work is the Yi, commonly called the Book of Changes. Confucius himself set a high value on it, as being fitted to correct and perfect the character of the learner (Analects, VII, xvi); and it is often spoken of by foreigners as the most ancient of all the Chinese classics. But it is not so. As it existed in the time of the sage, and as it exists now, no portion of the text is older than the time of king Wăn, mentioned above. There were and are, indeed, in it eight trigrams ascribed to Fû-hsî, who is generally considered as the founder of the Chinese nation, and whose place in chronology should, probably, be assigned in the thirty-fourth century B.C. The eight trigrams are again increased to sixty-four hexagrams. To form these figures, two lines, one of them whole (—) and the other divided (— —), are assumed as bases. Those lines are then placed, each over itself, and each over the other; and four binograms are formed. From these, by the same process with the base lines, are obtained eight figures,—the famous trigrams. Three other repetitions of the same process give us successively sixteen, thirty-two, and sixty-four figures. The lines in the figures thus increase in an arithmetical progression, whose common difference is one, and the number of the figures increases in a geometrical progression, whose common ratio is two. But what ideas Fû-hsî attached to his primary lines,—the whole and the divided; what significance he gave to his trigrams; what to the

sixty-four hexagrams,—if indeed he himself formed so many figures; and why the multiplication of the figures was stayed at sixty-four:—of none of these points have we any knowledge from him. There is some reason to believe that there were texts to the hexagrams under the dynasties of Hsiâ and Shang, but none of them have been preserved. It may be that king Wăn and his equally famous son, the duke of Kâu, adopted much of what they found already existing, and incorporated it with their own interpretations of the figures; but they, and they alone, are accepted as the authors of the text of the Yî. King Wăn, we are told, at a time when he was imprisoned by the tyrannical sovereign with whom the dynasty of Shang or Yin ended, took in hand the ever-changing hexagrams, and appended to each a brief explanation of the meaning which the trigrams composing it suggested by their union to his mind; and in some cases the practical course in affairs to which that meaning should direct. His son did for the separate lines of each hexagram what Wăn had done for the whole figure. Confucius is said to have entered into their labours about 600 years afterwards. Several appendixes are ascribed to him, in which there is an attempt to explain the origin of the Fû-hsi figures, and many of the interpretations of Wăn and his son. The early linear figures; the notes of Wăn and the duke of Kâu; and the Confucian appendixes:—these constitute the Yî.

The work was from the first intimately connected with the practice of divination, which, we know from the Shû, entered largely into the religion of the ancient Chinese. This goes far to account for its obscure and enigmatical character; but at the same time there occur in it, though in a fragmentary manner, so many metaphysical, physical, moral, and religious utterances, that the student of it is gradually brought under a powerful fascination. In consequence, moreover, of its use in divination, it was exempted by the superstitious tyrant of K'hin from the flames to which he condemned all the other Confucian literature in B.C. 213. It has thus come down to us entire, and a translation of the whole of it will be given.

An additional interest belongs to the *Yi* as the fountain-head from which the comparatively modern philosophers of the Sung dynasty (began A. D. 960) professed to draw what has been called their 'atheo-political' system. As an appendix to the translation of the *Yi*, there will be given an outline of that system, and an attempt will be made to test the correctness of the interpretation of this classic by its authors.

The fourth of the great classics is the *Lî Kî*, or the Record of Rites; but it is only one of a class that we may denominate the Constitutional and Ritual Books of ancient China, especially under the *K'au* dynasty. They are often mentioned together as 'the Three Rituals.' The first of them is called *K'au Lî*, the Rites of *K'au*, and also *K'au Kwan*, the Officers of *K'au*, which latter is the better name for it. It is the official book of the *K'au* dynasty. The prevailing opinion is that it was the production of the duke of *K'au*; and if it were not composed in its present form by him, it contains, no doubt, the substance of the regulations which he made for the administration of the government, after the dynasty of Shang had passed, through the achievements of his father and brother, into that of *K'au*. Under the various departments in which that administration was arranged, it enumerates the principal and subordinate officers belonging to each, and describes their duties. After the fires of *K'hin*, the work was recovered nearly complete in the first century B. C. A good translation of the whole work was published in 1851, at Paris, by M. Edouard Biot.

The second Ritual Collection bears the name of *Î Lî*, which has been translated 'the Decorum Ritual,' and 'the Rules of Demeanour.' It was recovered earlier than the former, and is as voluminous. It consists of the rules by which a scholar or officer should regulate his behaviour on social and state occasions. It has not yet, so far as I know, been translated into any European language.

The third Collection, more voluminous than either of the others, was made also under the Han dynasty. In the first century B. C., it was an immense compilation of 214 books arranged in five divisions. The 214 were reduced

to eighty-five by Tâi Teh, a scholar of the time, and his eighty-five again to forty-six by a cousin, called Tâi K'hang. Three other books were added to these towards the end of the Han period, forming forty-nine in all, which have come down to us under the title of Lî K'î, or 'the Record of Rites,' and have long constituted by imperial authority one of the five King. An abridgment of this work was translated by M. J. M. Callery, at Turin, in 1853, with the title,—'*Lî K'î, ou Memorial des Rites, traduit pour la première fois du Chinois, et accompagné de notes, de commentaires, et du texte original.*' Callery's work, however, contains only thirty-six of the forty-nine books of the Lî K'î, and most of those thirty-six in a condensed form. Whether it will be possible to give in these Sacred Books of the East translations of the whole of these Rituals; and if that be not possible, by what principles to be guided in the selection of portions of them:—these are questions to be determined after further deliberation. Many passages contain more of the mind of Confucius himself on the sacrificial worship of his country, and the ideas underlying it, than we find elsewhere.

But it must not be forgotten that these ritual books do not throw so valuable a light on the ancient religion of China as the older Shû and Shih. They belong to the period of the K'au dynasty, and do not go back as contemporaneous records to the dynasties beyond it and the still remoter age of Yâo and Shun. The views of Confucius, moreover, as given in them, do not come to us at first hand. They were gathered up by the Han scholars five and six centuries after his death, nor can we be sure that these did not sometimes put ideas of their own into the mouth of the sage, and make additions to the writings which were supposed, correctly or incorrectly, to have come from his immediate disciples.

We owe the fifth and last of the Kings of China to Confucius himself. It is what he called *K'hun K'hiu*, or 'the Spring and Autumn,' a very brief chronicle compiled by him of the annals of his native state of Lû for 242 years, from B. C. 722 to 481. But there is not much to be

gleaned from it for the Sacred Texts; and if we were to launch out into the three supplements to it of *So K'hiu-ming*, *Kung-yang*, and *K'ü-liang*, the result would not repay the labour. A translation of the whole of *So's* supplement, much the most important, is given in my work on the *K'ün K'hiu*, published at Hong Kong in 1872.

There is another short treatise attributed to Confucius,—the *Hsiáo King*, or 'Classic of Filial Piety.' Though not like one of the five great works that have been described, it was the first to receive the denomination of a King,—and that from the lips of the sage himself,—if the account which we have received of the matter is to be relied on. This little work does not come to us, like the *K'ün K'hiu*, as directly from the pencil of Confucius, but in the shape of conversations between him and his disciple *Šǎng-ze*, put on record in the first place, probably, by some members of *Šǎng's* school. No portion of the ancient literature has more exercised the minds and engaged the attention of many of the emperors of successive dynasties. The *Hsiáo* seems to me an attempt to construct a religion on the basis of the cardinal virtue of Filial Piety, and is open to criticism in many respects. A translation of it is given in the present volume.

The classical books are often spoken of as being 'the five King' and 'the four Shû.' The King have all been separately referred to above; the four Shû is an abbreviation for the Shû or Books of the four Philosophers. The first is the *Lun Yü*, or 'Discourses and Conversations,' occupied chiefly with sayings of Confucius and conversations between him and many of his disciples. The second is the *Works of Mencius*, perhaps the greatest thinker and writer of the Confucian school after the Master. I hope to be able to give both these works. The third of the Shû is the *T'â Hsio*, or 'Great Learning,' ascribed, like the *Hsiáo*, to *Šǎng-ze*. The fourth is the *Kung Yung*, or 'Doctrine of the Mean,' the production of *Šze-sze*, the sage's grandson. Both of these treatises, however, are taken from the *Lî K'î*. The whole of the Four Books were translated and published by me in 1861.

III. The third Religion in China is what is called Tãoism. It was, like Confucianism, of native origin, and its acknowledged founder was Lî R, called also Lî Po-yang, and, after his death, Lî Tan. More commonly he is designated Láo-ze, translated by some 'the Old Philosopher,' and by others 'the Old Boy' from a fabulous story that his mother carried him in her womb for seventy-two years, so that when he was at length cut out of it, his hair was already white. His birth is referred to the year 604 B.C., so that he was between fifty and sixty years older than Confucius. There are accounts, hardly reliable, of interviews and discussions between the two men.

Láo-ze's system often goes with English writers by the name of Rationalism; but if that name be retained, the term must be taken in quite a peculiar sense. His doctrine was that of the Tão, but it is not easy to determine what English term will best express the meaning of the Chinese character. The only record which we have of Láo-ze's views is the Tão-teh King, or 'Classic of Tão and Virtue,' a treatise of no great length. It was published at Paris in 1842, with a translation in French, by the late Stanislas Julien, under the title of '*Le Livre de la Voie et de la Vertu.*' Appealing to the views of Kwang-ze and other writers of the Tãoist school, M. Julien says that '*Le Tão est dépourvu d'action, de pensée, de jugement, d'intelligence,*' and adds that 'it appears impossible therefore to take it for the primordial reason, the Sublime Intelligence, which created and rules the world.'

A translation in English was published, in 1868, by the Rev. Dr. Chalmers of Canton, under the title of 'the Speculations in Metaphysics, Polity, and Morality, of "the Old Philosopher."' Dr. Chalmers retains the term Tão in his English Text, and says, 'I have thought it better to leave the word Tão untranslated, both because it has given the name to the sect,—the Tãoists,—and because no English word is its exact equivalent. Three terms suggest themselves,—the Way, Reason, and the Word; but they are all liable to objection. Were we guided by etymology, "the Way" would come nearest to the original, and in one

or two passages the idea of a Way seems to be in the term; but this is too materialistic to serve the purpose of a translation. Reason again seems to be more like a quality or attribute of some conscious Being than Tào is. I would translate it by the Word in the sense of the Logos, but this would be like settling the question which I wish to leave open, viz. what amount of resemblance there is between the Logos of the New Testament and this Tào, which is its nearest representative in Chinese.'

Two other translations of the Tào-teh King have appeared, both in German:—'Lao-tsze's Tao Te King, aus dem Chinesischen ins Deutsche übersetzt, eingeleitet, und commentirt, von Victor von Strauss (Leipzig, 1870),' and 'Lao-tse, Tao-te-king, "Der Weg zur Tugend," aus dem Chinesischen übersetzt und erklärt von Reinhold von Plänckner,' also published at Leipzig. Strauss closely follows Julien, while Plänckner allows himself great freedom in dealing with his original. Notwithstanding these four attempts to give the meaning of 'the Old Philosopher' in three European languages, there is room for a new version, which will be submitted to the reader in due course. It is only by an intense and long-continued study of the original that we can come to an agreement as to the meaning of the Tào. I propose not only to give a translation of the Tào-teh King, but also of the works of Kwang-ze, the most remarkable of the early writers of the Tàoist school.

Whatever Láo-ze intended by the Tào, Tàoism has, in the course of time, borrowed largely, both from Confucianism and Buddhism. It inculcates a morality of a high order in some respects, and has developed a system of grotesque beliefs and practices, ministering to superstition, and intended to refine and preserve the breath of life. Its practical teachings will be exhibited in the most popular of all the Tàoist writings,—the treatise on 'Actions and their Recompenses,' and perhaps in one or more, besides, of the characteristic productions of the system.

The version of the Shû that appears in this volume is substantially the same as that in the third volume of my

large edition of the Chinese Classics, and which was published in 1865. I wrote out the whole afresh, however, having before me not only my own version, but the earlier translations of P. Gaubil in French and Dr. Medhurst in English. Frequent reference was made likewise to a larger apparatus of native commentaries than I had formerly used. Going to the text anew, after more than twelve years devoted mainly to the continuous study of the Chinese classics, I yet hardly discovered any errors which it was necessary to correct. A few verbal alterations were made to make the meaning clearer. Only in one case will a reader, familiar with the former version, be struck with any alteration in this. The Chinese character 帝 (Tî), applied repeatedly to the ancient Yáo and Shun in the commencing books of the classic, and once in the 27th Book of the fifth Part, was there translated by 'emperor,' while it is left untranslated in the present volume, and its name transferred to the English text.

Before adopting this change, I had considered whether I ought to translate Tî in all other instances of its occurrence in the Shû (and invariably in the Shih), and its intensified form Shang Tî (上帝), by our term 'God.' Gaubil rendered Tî for the most part by 'le Seigneur,' and Shang Tî by 'le Souverain Maître,' adding sometimes to these names Tî and Shang Tî in brackets. Medhurst translated Tî by 'the Supreme,' and 'the Supreme Ruler,' and Shang Tî by 'the Supreme Ruler.' More than twenty-five years ago I came to the conclusion that Tî was the term corresponding in Chinese to our 'God,' and that Shang Tî was the same, with the addition of Shang, equal to 'Supreme.' In this view I have never wavered, and I have rendered both the names by 'God' in all the volumes of the Chinese Classics thus far translated and published.

What made me pause before doing so in the present volume, was the consideration that the object of 'the Sacred Texts of the Religions of the East,' as I understand it, is to give translations of those texts without any colouring in the first place from the views of the trans-

lators. Could it be that my own view of Tî, as meaning God, had grown up in the heat of our controversies in China as to the proper characters to be used for the words God and Spirit, in translating the Sacred Scriptures? A reader, confronted everywhere by the word God, might be led to think more highly of the primitive religion of China than he ought to think. Should I leave the names Tî and Shang Tî untranslated? Or should I give for them, instead of God, the terms Ruler and Supreme Ruler? I could not see my way to adopt either of these courses.

The term Heaven (天, pronounced Thien) is used everywhere in the Chinese Classics for the Supreme Power, ruling and governing all the affairs of men with an omnipotent and omniscient righteousness and goodness; and this vague term is constantly interchanged in the same paragraph, not to say the same sentence, with the personal names Tî and Shang Tî. Thien and Tî in their written forms are perfectly distinct. Both of them were among the earliest characters, and enter, though not largely, as the phonetical element into other characters of later formation. According to the oldest Chinese dictionary, the Shwo Wăn (A.D. 100), Thien is formed, 'by association of ideas,' from yî (一), 'one,' and tâ (大), 'great,' meaning—what is one and undivided, and great. Tâi Thung, of our thirteenth century, in his remarkable dictionary, the Liû Shû Kû, explains the top line of it as indicating 'what is above,' so that the significance of the character is 'what is above and great.' In both these dictionaries Tî (帝) is derived from 一 or 𠂇 (shang), 'above,' or 'what is above:' and they say that the whole character is of phonetical formation, in which I am not able to follow them¹;

¹ It is said in the Shwo Wăn that the phonetical element in Tî is 東; but this is pronounced 3hze. Neither in form nor sound is there any similitude between it and Tî. An error, probably, has crept into the text. Dr. Chalmers, in his treatise on 'the Origin of the Chinese,' attempts (p. 12) to analyse the character into its constituent parts in the following way:—'The peculiar nature of the Chinese written language has done good service in stereotyping the primi-

but Tâi Thung gives the following account of its meaning:—‘Tî is the honourable designation of lordship and rule,’ adding, ‘Therefore Heaven is called Shang Tî; the five Elementary Powers are called the five Tî; and the Son of Heaven¹—that is, the Sovereign—is called Tî.’ Here then is the name Heaven, by which the idea of Supreme Power in the absolute is vaguely expressed; and when the Chinese would speak of it by a personal name, they use the terms Tî and Shang Tî;—saying, I believe, what our early fathers did, when they began to use the word God. Tî is the name which has been employed in China for this concept for fully 5000 years. Our word God fits naturally into every passage where the character occurs in the old Chinese Classics, save those to which I referred above on p. xxiii. It never became with the people a proper name like the Zeus of the Greeks. I can no more translate Tî or Shang Tî by any other word but God than I can translate *sǎn* (人) by anything else but man.

The preceding is a brief abstract of the reasoning by which I was determined to retain the term God for Tî and Shang Tî in this volume, excepting in the cases that have called for these observations. But in the account of Tî which I have adduced from Tâi Thung, it is said that ‘the sovereign is also called Tî;’ and most of my readers know that Hwang Tî (皇帝) is the title of the emperor of China. How did this application of the name arise? Was it in the first place a designation of the ruler or emperor; and was it then given to the Supreme Power, when the vague Heaven failed to satisfy the thinker and worshipper,

tive belief in one Supreme Tî (帝), who is 大 “great,” over, and |, “ruling,” heaven (☾ = ☿) and earth (☶). This is ingenious, but not entirely satisfactory. The three last steps are so; but the finding 大 (great) in the top part of 帝 does not in the same way carry conviction to the mind.

¹ Thien 3ze, ‘the Son of Heaven,’ is a common designation of the sovereign of China. Originally 3ze performed in the expression the part of a verb, and Thien 3ze was equivalent to ‘he whom Heaven sons,’ that is, considers and treats as its son. See the second line of the ode, p. 318.

and he wished to express his recognition of a personal Being who was to himself his almighty ruler? If these questions be answered in the affirmative, Tî would be a name applied to the Supreme Being, just as we rise from the paternal relation among ourselves and call him Father. Or, on the other hand, was Tî the designation of the Supreme Lord and Ruler, corresponding to our God, and was it subsequently applied to the earthly ruler, thereby deifying him, just as the title Divus was given to a Roman emperor? I believe that it was in this latter way that Tî came to be used of the sovereigns of China; and therefore in again publishing a translation of the Shû, I resolved, that where the appellation is given in it to Yáo and Shun, and it is only to them that it is given, I would retain the Chinese term instead of rendering it, as formerly, by 'emperor.'

The following are the reasons which weighed with me in coming to this resolution:

First, the first really historical sovereign of China who used the title of Hwang Tî was the founder of the K'ín dynasty; and he assumed it in B. C. 221, when he had subjugated all the sovereignties into which the feudal kingdom of Káu had become divided, and was instituting the despotic empire that has since subsisted.

The Káu dynasty had continued for 867 years, from B. C. 1122 to 256, and its rulers had been styled Wang or kings.

Káu superseded the dynasty of Shang or Yin, that had endured for 644 years, from B. C. 1766 to 1123; and its rulers had similarly been styled Wang or kings.

Shang superseded the dynasty of Hsiá, which had lasted for 439 years, from B. C. 2205 to 1767, and its rulers had been styled Wang, or kings, and Háu, or sovereigns.

Thus, from the great Yü, B. C. 2205 to B. C. 221, that is, for nearly 2000 years, there was no Tî or emperor in China. During all that time the people had on the whole been increasing in numbers, and the nation growing in territory;—how did it come to pass, that the higher title, if it had previously existed, gave place to an inferior one?

Prior to the dynasty of Hsiâ, with the exception of the period of Yáo and Shun, the accounts which we have of the history of China have been, and ought to be, pronounced 'fabulous' and 'legendary.' The oldest documents that purport to be historical are the books in the Shû about Yáo and Shun, and even they do not profess to be contemporaneous with those personages. The earlier accounts open with a Phan-kû, in whose time 'heaven and earth were first separated.' To him succeeded the period of the San Hwang, or Three August Lines, consisting of twelve Celestial, eleven Terrestrial, and nine Human Sovereigns, who ruled together about 50,000 years. After them come a host of different Lines, till we arrive at the Wû Tî, or Five Emperors. The first of these is commonly said to be Fû-hsi, while he and two others are sometimes put down as the San Hwang, in order to bring in Yáo and Shun as the last two of the Tîs.

I have entered into these details because of the account which we have of the king of *K'in*'s assuming the title of Hwang Tî. We are told:—'As soon as the king had brought the whole country into subjection, thinking that he united in himself the virtues of the three Hwangs, and that his merits exceeded those of the five Tîs, he changed his title into Hwang Tî.' The three Hwangs are entirely fabulous, and the five Tîs are, to say the least, legendary. That there were either Hwangs or Tîs ruling in China before the age of the Hsiâ dynasty cannot be admitted.

Second, it has been stated above, and is shown in the Introduction to the Shû, pp. 13-19, that the books in the Shû, previous to the Hsiâ dynasty, are not historical in the sense of their being contemporaneous documents of the times about which they speak. They profess to be compilations merely from older documents; and when they speak of Yáo and Shun as Tîs, the title Tî precedes the name or designation, instead of following it, as it ought to do, according to Chinese usage, if Tî is to be taken in the sense of emperor. Yáo Tî would be 'the emperor Yáo,' but we have Tî Yáo, where Tî performs the part of an adjective. King Wán, the founder of the *Káu* dynasty, is

invariably mentioned as Wăn Wang, 'Wăn the king.' To say Wang Wăn would be felt at once by every Chinese scholar to be inadmissible; and not less so is Tî Yáo for 'the emperor Yáo.' It was the perception of this violation of usage in Chinese composition, five years ago, that first showed me the error of translating Tî Yáo and Tî Shun by 'the emperor Yáo' and 'the emperor Shun.' It is true that in the early books of the Shû, we have Tî used alone, without the adjunct of Yáo or Shun, and referring to those personages. In those cases it does perform the part of a substantive, but its meaning depends on that which belonged to it as an adjective in the phrases Tî Yáo and Tî Shun. If it be ascertained that in these it means 'the Deified,' then when used singly as a noun, it will mean Divus, or the Divine One.

Third, the sovereigns of the Hsiâ, the Shang, and the K'áu dynasties, it has been seen, were styled Wang and not Tî. Confucius speaks repeatedly in the Analects of Yáo and Shun, but he never calls either of them by the title of Tî. Mencius, however, uses it both of the one and the other, when he is quoting in substance from the accounts of them in the Shû. This confirms the view that the early books of the Shû were current after the middle of the K'áu dynasty, very much in the form in which we now have them; and the question arises whether we can show how the application of the title Tî as given in them to Yáo and Shun arose. We can.

The fourth Book of the Lî K'î is called Yüeh Ling, 'the Monthly Record of the Proceedings of Government.' In it certain sacrificial observances paid to the five Tîs are distributed through the four seasons. The Tîs are Fù-hsi, Shân-năng, Yü-hsiung or Hsien-yüan, K'in-thien, and K'ao-yang, who are styled Thái Hào (the Greatly Resplendent), Yen Tî (the Blazing Tî), Hwang Tî (the Yellow Tî), Shào Hào (the Less Resplendent), and K'wan Hsü (the Solely Correct); with each Tî there is associated in the ceremony a personage of inferior rank, who is styled Shân (神 = a Spirit). The language descriptive of the ceremony is the same in all the cases, with the exception of the names and

months. Thus the first entry is:—‘In the first month of spring, on such and such days, the Tî is Thái Hào, and the Shân is Kâu-mang.’ Now this Kâu-mang was a son of Shào Hào, several hundreds of years later than Thái Hào, so that the associating them together in this ceremony could only have arisen in later times.

However we explain the ceremony thus curtly described; whether we see in it the growing prevalence of nature-worship, or an illustration of the practice of worshipping ancient heroes and worthies:—Tî appears in the account of it plainly used in the sense of God. In each of the five instances, we have a Tî and a Shân, not an emperor and a spirit, but a God and a Spirit,—a Spirit standing in the same relation to the God, that *Khăn* (臣 = a subject or minister) stands in to a ruler. Thus it was that, by a process of deification, the title of Tî came to be given, in the time of the Kâu dynasty, to the great names, fabulous and legendary, of antiquity; and thus it was that it was applied to the heroes Yáo and Shun. It may well be that the title Hwang Tî, used by a Chinese of the present emperor or of any emperor of the past, does not call up to his mind any other idea than that of a human sovereign; but being satisfied as to the proper signification of Tî as God, and as to the process by which the title came to be applied to the ancient Yáo and Shun, I could no longer render it, when used of them in the Shû, by emperor, and elected to leave it untranslated in the present volume.

To any unimportant changes of translation it is unnecessary to refer. The dates B.C. in the introductions and notes are all one year more than in the translations formerly published. They are thus brought into accordance with those of P. Gaubil and the useful Chinese Chronological Tables of the late Mr. Mayers.

The changes in the transliteration of Chinese names are very considerable. As foreigners are now resident in Peking, it seemed proper to adopt the pronunciation of the

capital as given by Sir T. F. Wade in his Hsin Ching Lu and Tzŭ Erh Chî. At the same time, in order to secure as near an approach as possible to uniformity in all the volumes of the Sacred Books of the East, the letters employed were made to conform to those in Professor Max Müller's Scheme for the Transliteration of Oriental Alphabets. It was not easy at first to do this, for Chinese, having no alphabet, reluctated against being made to appear as if it had; but use has more than reconciled me to the method now employed. It was not possible to introduce into the table all the diphthongs in which Chinese speech is rich. The reader has to be informed that i before another vowel or a diphthong approximates to the sound of y, so that the whole utterance is still monosyllabic. The powers of *r* and *ze* must be heard before they can be appreciated.

To call the attention of the reader to passages in the Shû, embodying, more or less distinctly, religious ideas, an asterisk (*) will be found appended to them.

THE SHŪ KING
OR
BOOK OF HISTORICAL DOCUMENTS.

THE SHŪ KING

OR

BOOK OF HISTORICAL DOCUMENTS.

INTRODUCTION.

CHAPTER I.

THE NATURE AND HISTORY OF THE SHŪ.

1. The Shū is the most ancient of the Chinese classical books, and contains historical documents of various kinds, relating to the period from about B.C. 2357-627. The character Shū shows us by its composition that it denotes 'the pencil speaking,' and hence it is often used as a designation of the written characters of the language. This, indeed, was the earliest meaning of it, but from this the transition was easy to its employment in the sense of writings or books, applicable to any consecutive compositions; and we find it further specially employed by Confucius and others to designate the historical remains of antiquity, in distinction from the poems, the accounts of rites, and other monuments of former times. Not that those other monuments might not also be called by the general name of Shū. The peculiar significance of the term, however, was well established, and is retained to the present day.

Meaning of
the name
Shū King.

The book has come down to us in a mutilated condition; but even as it is said to have existed in the time of Confucius, it did not profess to contain a history of China, and much less, to give the annals of that history. It was simply a collection of historical memorials, extending over a space of about 1700 years, but on no connected method, and with frequent and great gaps between them.

The name King (now in Pekinese *King*) was not added to Shû till the time of the Han dynasty (began B. C. 202). If Confucius applied it to any of the classical works, it was to the classic of Filial Piety, as will be seen in the Introduction to the translation of that work. The Han scholars, however, when engaged in collecting and digesting the ancient literary monuments of their country, found it convenient to distinguish the most valuable of them, that had been acknowledged by Confucius, as King, meaning what was canonical and of unchallengeable authority.

2. In the Confucian Analects, the sage and one of his disciples quote from the Shû by the simple formula—

The Shû was
an existing
collection of
documents
before
Confucius.

‘The Shû says.’ In the Great Learning, four different books or chapters of the classic, all in it as we have it now, are mentioned, each by its proper name. Mencius sometimes

uses the same formula as Confucius, and at other times designates particular books. It is most natural for us to suppose that Confucius, when he spoke of the Shû, had in his mind’s eye a collection of documents bearing that title.

One passage in Mencius seems to put it beyond a doubt that the Shû existed as such a collection in his time. Having said that ‘it would be better to be without the Shû than to give entire credit to it,’ he makes immediate reference to one of the books of our classic by name, and adds, ‘In the Completion of the War I select two or three passages only, and believe them¹.’ In Mo-ze, Hsün-ze, and other writers of the last two centuries of the Kâu dynasty, the Shû is quoted in the same way, and also frequently with the specification of its parts or larger divisions,—‘The Books of Yü,’ ‘of Hsiâ,’ ‘of Shang,’ ‘of Kâu.’ And, in fine, in many of the narratives of 3o K’hiu-ming’s commentary on the Spring and Autumn, the Shû is quoted in the same way, even when the narratives are about men and events long anterior to the sage². All these consi-

¹ Mencius, VII, ii, ch. 3.

² The first quotation of the Shû in 3o is under the sixth year of duke Yin, B. C. 717.

derations establish the thesis of this paragraph, that the Shû was an existing collection of historical documents before Confucius.

3. From the above paragraph it follows that Confucius did not compile the collection of documents that form the

Confucius did not compile the Shû. The number of documents in it in his time. The Preface ascribed to him.

Shû. The earliest assertion that he did so we have from Khung An-kwo, his descendant in the eleventh generation, in the second century, B. C. Recounting the labours of his ancestor, An-kwo says, in the Preface to his edition of the Shû, that 'he examined and arranged the old literary monuments and records, deciding

to commence with Yáo and Shun, and to come down to the times of K'áu. Of those deserving to be handed down to other ages and to supply permanent lessons, he made in all one hundred books, consisting of canons, counsels, instructions, announcements, speeches, and charges.' The same thing is stated by Sze-mâ K'ien in his Historical Records, completed about B. C. 100, but K'ien's information was derived from An-kwo. Such a compilation would have been in harmony with the character which Confucius gave of himself, as 'a transmitter and not a maker, believing and loving the ancients'¹, and with what his grandson says of him in the Doctrine of the Mean, that 'he handed down (the lessons of) Yáo and Shun, as if they had been his ancestors, and elegantly displayed those of Wán and Wû, whom he took for his model'².

We have seen, however, that the collection existed in his time and before it. Did it then, as An-kwo says, consist of a hundred books? His authority for saying so was a Preface, which was found along with the old tablets of the Shû that were discovered in his time and deciphered by him, as will be related farther on. He does not say, however, that it was the work of Confucius, though K'ien does. It still exists,—a list of eighty-one documents in a hundred books. The prevailing opinion of scholars in China is now, that it was not written by the sage. I entirely

¹ Analects, VII, i.

² The Doctrine of the Mean, XXX, 1.

agree myself with the judgment of *Shâi K'han*, the disciple of *K'ü Hsi*, whose Collected Comments, first published A. D. 1210, are now the standard of orthodoxy in the interpretation of the Shû. He says of the document: 'It sheds light on nothing, and there are things in it at variance with the text of the classic. On the books that are lost it is specially servile and brief, affording us not the slightest help. That it is not the work of Confucius is exceedingly plain.'

The eighty-one documents mentioned in it, and more, may have been in the Shû of the time of Confucius. I think, however, that several of them must have been lost subsequently, before the rise of the tyrant of *K'in*, who doomed the whole collection to the flames. Mencius complains that in his days the feudal princes destroyed many of the records of antiquity that they might the better perpetrate their own usurpations and innovations¹. Other considerations, on the exhibition of which I need not enter, confirm me in this conclusion.

4. It will be well here to devote a paragraph to the sources of the Shû. Have we sufficient proofs of the composition in ancient times of such documents as it contains, and of their preservation, so that they could be collected in a sort of historical canon?

We have. Under the dynasty of *K'au* (B. C. 1122-256), at the royal court, and at the courts of the feudal princes on a smaller scale, there were officers styled *Sze*, which has been translated 'Recorders,' 'Annalists,' 'Historiographers,' and simply 'Clerks.' There were the Grand Recorder, the Assistant Recorder, the Recorder of the Interior, the Recorder of the Exterior, and the Recorder in Attendance on the Sovereign. Among the duties of the Recorder of the Interior were the following:—'In case of any charge given by the king to the prince of a state, or to any other dignitary, he writes it on tablets;' 'In case of any memorials on business coming in from the different quarters of the kingdom, he reads them (to the king);' 'It is his business

¹ Mencius, V, ii, ch. 2.

to write all charges of the king, and to do so in duplicate.' Of the duties of the Recorder of the Exterior it is said :— ' He has charge of the histories of the states in all parts of the kingdom ; ' ' He has charge of the most ancient books ; ' ' It is his business to publish in all parts of the kingdom the books and the characters in them¹.'

These entries show that under the *K'au* dynasty there was provision made for the recording and preservation of royal charges and ordinances, of the operations of the general government, and of the histories of the different states ; and, moreover, for the preservation and interpretation of documents come down from more ancient times. Confucius himself tells us that in his early days a recorder would leave a blank in his text, rather than enter anything of which he had not sufficient evidence². Mencius also mentions three works, the *Shǎng* of *Kin*, the *Thâu-wû* of *K'ôu*, and the *K'kun K'hiu* of *Lû*, which must have come from the recorders of those states.

Of the existence of a similar class of officers under the previous dynasties of Shang or Yin (B.C. 1766–1123) and Hsiâ (B.C. 2205–1765), we have not such abundant evidence. Chapter 2 in the 10th Book of the 5th Part of our classic, however, seems to speak of them in the time of the former. *Wû-ting* (B.C. 1324–1264), the twentieth sovereign of it, is described as communicating, in writing, a dream which he had had, to his ministers³; and fully four hundred years earlier, *Î Yin*, the chief minister, remonstrates, in writing, with his young and careless sovereign *Thâi K'ia*⁴. Going back to the dynasty of Hsiâ, we find the prince of Yin, during the reign of *Kung Khang* (B.C. 2159–2145), in addressing his troops, quotes the Statutes of Government in a manner which makes us conceive of him as referring to a well-known written compilation⁵. The grandsons of the great *Yü*, its founder (B.C. 2205–2196), likewise, make mention, in the Songs of the Five Sons, of his Lessons, in a style that suggests to us the formula that Mencius was

¹ See for all these statements the Ritual or Official Book of *K'au*, XXXI, 35–42.

² Analects, XV, xxv.

⁴ Part IV, v, section 1.

³ Part IV, viii, section 1.

⁵ Part III, iv.

wont to employ when referring to the documents acknowledged to be of authority in his day¹.

Mâ Twan-lin, the encyclopedist, in his General Examination of Records and Scholars, first published A. D. 1321, says that 'the pencil of the recorders was busy from the time of Hwang Tî (B. C. 2697).' The compilers of the records of the Sui dynasty (A. D. 589-617) say that 'historical documents began immediately with the invention of written characters.' That invention I must place myself at an earlier date than the time assigned to Hwang Tî. When once the characters were invented, they would come in time to be employed in the writing of history. The early dates alleged for many of the documents in the Shû are no valid reason for rejecting them without further examination. We may rather be surprised that, when the compilation was made, it did not contain many more than a hundred documents.

5. The dynasty of K'âu came to an end in B. C. 256, and after an anarchic interval of thirty-five years, the king of K'hin succeeded in uniting all the feudal states under his own sway, and proclaimed himself emperor.

Destruction of the classical literature by the emperor of K'hin. Up to this time the Shû had sustained no other damage than all human works are liable to in the course of time; but now it narrowly escaped an entire destruction. An edict went forth from the tyrant in B. C. 213, commanding that all the old classical books should be consigned to the flames, excepting those belonging to the great scholars in the service of the court, and the Yî. His rage was hottest against the Shû and the Shih (the Book of Poetry). Death was the doom of scholars who should be known to meet together and speak of these works, and all who should be discovered having copies of them in their possession, when thirty days had elapsed after the publication of the edict, were to be branded, and sent to labour for four years on the Great Wall, which was then building.

This is not the place to explain the reasons that led to

¹ Part III, iii.

this insane attempt to extinguish, with the exception of one work, the ancient literary monuments of China. The edict was ruthlessly enforced, and hundreds of scholars who refused obedience to the imperial command were buried alive. The Shû had nearly perished from off the earth.

6. The tyrant, however, died in B. C. 210, within four years from the issuing of his edict. The dynasty which he had sought to establish passed away in B. C. 206. That of Han dates from the year B. C. 202, and in 191 the edict against the ancient books was formally repealed. They had been

Recovery of
the Shû. under the ban for less than a quarter of a century. There would probably have been no difficulty in recovering copies of them, but for the sack of the capital in B. C. 206 by the most formidable opponent of the founder of the House of Han. Then the fires blazed, we are told, for three months among the palaces and public buildings, and proved as destructive to the copies that might have been preserved about the court as the edict of *K'ên* had been to those among the people.

Among the scholars of *K'ên*, however, there had been one, of the surname Fû, who, when the edict was issued, hid his tablets of the Shû in a wall. Returning for them, after the rule of Han was established, he found that many were perished or gone. He recovered only twenty-nine of the documents, containing, according to the division of them that has long been followed, thirty-five books in all. About one of them there is some difficulty, on the discussion of which I need not enter. Fû commenced teaching them, and from all parts scholars resorted to him, and sat at his feet. The emperor Wăn (B. C. 179-155) heard of him, and sent one of the recorders of the court to visit him, and bring the recovered tablets themselves, or a copy of them, to the capital. They were in the form of the character that was prevalent at that time, different from that which had been used in previous centuries, and are known as 'the Shû of the modern text.' The Catalogue of the Imperial Library, prepared by Liû Hin for the emperor Âi (B. C. 6-1), contains an entry of 'the text of the Shû in twenty-nine portions,'—the same, no doubt, which was

received from Fû. Fû himself commented on his Shû. The text was engraved on the stone tablets of the emperor Ling (A.D. 168-189). Very many scholars of the Han times laboured on this text, taught it to their disciples, and published their views on it. Not one of their writings, however, survived, in a complete form, the troubles which desolated the empire during the reign of the emperor Hwâi (A.D. 307-312) of the western dynasty of Kin.

In the reign of the Han emperor Wû (B.C. 140-85) a discovery was made in the wall of the house of the Khung or Confucian family of the tablets of the Shû, the Spring and Autumn, the classic of Filial Piety, and the Lun-yü or Confucian Analects. How long they had lain there we do not know. It is commonly said that they had been hidden by some one of the Khung family to save them from the fires of K'hin. But they were in a form of the character that had long gone into disuse, and which hardly any one could decipher, and must have been deposited towards the beginning of the fifth century B.C. They were committed to the care of Khung An-kwo, who was then one of the 'great scholars' of the empire, and the chief of the Khung family. By means of the current text of Fû and other resources he made out all the tablets of the Shû that were in good preservation, and in addition to Fû's twenty-nine documents several others. He found also that Fû had in three cases incorporated two different documents under one name, and taken no note of the division of one other into three books or sections. Altogether there were now forty-six documents or different portions of the old Shû brought anew to light. They appear in Liû Hin's Catalogue as 'the text of the Shû in old characters in forty-six portions.'

When An-kwo had made out the tablets, he presented them to the emperor in B.C. 97, with a transcript of them in the current characters of the time, keeping a second transcript of them for himself; and he received an order to make a commentary on the whole. He did so, but when he was about to lay the result of his labours before the court, troubles had arisen which prevented for several years the paying attention to literary matters. It was

owing to these that his commentary was neglected for a time, and the enlarged text which he had deciphered was not officially put in charge of the Board of 'Great Scholars,' to which the care of the five King, so far as they had been recovered, had been committed in B. C. 136.

An-kwo's commentary, however, was not lost; but before speaking of it, I must refer to a third recovery of a large portion of the Shû early in our first century. A scholar and officer, named Tû Lin, had been a fugitive, having many wonderful escapes, during the usurpation of Mang (A. D. 9-22). During his wanderings he discovered a portion of the Shû on 'lacquered' tablets, or perhaps on lacquered cloth, which he thenceforth guarded as his richest treasure, and kept near his person. When the empire was again settled by the first emperor of the eastern Han, he communicated his text to other scholars. Wei Hung published a commentary on it, and subsequently K'ia Khwei, Mâ Yung, and K'ang Khang-*k'hang* (all, great names in Chinese literature) did the same. Tû Lin's 'lacquered' books were the same in number as An-kwo's, but they contained five documents in thirteen books, which were not in the text of the other, and wanted nine documents, also in thirteen books, which An-kwo's text had. The commentary of K'ang Khang-*k'hang* continued till the Sui dynasty, after which we lose sight of it.

I return to the commentary of An-kwo, which, of course, contained his text. Its transmission from hand to hand down to the close of the western Han dynasty is clearly traced. Less distinctly, but surely, we can discover evidence of its preservation, till we come to the commencement of the eastern dynasty of Kin, when Mei Jeh, a recorder of the Interior, having come into possession of a copy, presented it to the emperor Yüan (A. D. 317-322). The Canon of Shun was wanting in it, and was supplied from the commentary of Mâ Yung, based on the text of Tû Lin. From this time the text and commentary of An-kwo had their place assigned them in the Imperial College. They are mentioned in the Catalogue of the Imperial Library of Sui. The second emperor of the Thang dynasty gave orders

for a grand edition of the Shŭ, under the superintendence of Khung Ying-tâ, assisted by others. They adopted the commentary of An-kwo, and enriched it with profuse annotations. In A. D. 654 their work was ordered to be printed, and happily remains to the present day. The text of the Shŭ, that is, of all of it that had been recovered by An-kwo, was still further secured, being engraved with that of all the other classics on the Thang tablets of stone which were completed in the year 837, and are still preserved at K'ang-an, in Shen-hsi.

It is not necessary to trace the history of the Shŭ further on. The titles of more than 500 works, on the whole of it or on portions, from the dynasty of Thang to the present day, could easily be adduced. Under the Sung dynasty, indeed, there began the sceptical criticism, which, setting comparatively little store on external evidence, decides on the genuineness of documents principally from their style. The results of such criticism always vary according to the knowledge and the subjective character of the mind of its author. Many maintain that the commentary said to be that of An-kwo was not really from him, but was made by Mei Jch, and palmed on the world under the name of the great Han scholar. Even if it were so, the work would remain, produced nearly 1600 years ago. And to the annotations of the Thang scholars upon it we are indebted for most of what we know of the earlier views of Mâ Yung, K'ang Khang-k'ang, and other writers of the Han period. Whether its author were the true Khung or a false Khung, its value cannot be over-estimated. But I do not believe that it was a forgery. That An-kwo did write a commentary on his 'Shŭ in the ancient characters' is admitted by all. When did it perish? There is no evidence that it ever did so. On the contrary, its existence rises as a fact, here and there, at no great intervals of time, on the surface of the literary history of the empire, till we arrive at Mei Jch, who received it, as Khung Ying-tâ proves, from a scholar named Jang Jhao.

Then as to the text of the Shŭ, there is no controversy about the documents which were recovered in the first

place by Fû ; but the additional ones found by Khung An-kwo are so much more easily understood, that I do not wonder that the charge of not being genuine has been raised against them. But even they are not easy. They only appear to be so, when we come to one of them, after toiling through some of the more contorted portions common to both texts. And, moreover, the style of the different books differs according to their subjects. The 'Announcements' are the hardest to understand of all. The 'Charges,' 'Speeches,' and 'Instructions' are much simpler in their construction ; and the portions which we owe to An-kwo consist principally of these. In making out his obsolete characters he had, in the first place, to make use of the Books of Fû. That he did not servilely follow his text we conclude from the readings of Fû's followers, different from his in many passages which the industry of critics has gathered up. When he came, however, to new books, which were not in Fû's copy, he had to make out his tablets as he best could. His most valuable aid had ceased. We can conceive that, when he had managed to read the greater portion of a paragraph, and yet there were some stubborn characters that defied him, he completed it according to his understanding of the sense with characters of his own. That he was faithful and successful in the main we find by the many passages of his peculiar books that are found quoted in writings of the Kâu dynasty. This is a fact worthy of the most attentive consideration. I do not think there is an important statement in his chapters that is not thus vouched for. The characteristics of his books which have exposed them to suspicion are not sufficient to overthrow their claims to be regarded as genuine transcripts of the tablets discovered in the wall of the house of the Khung family.

The conclusion to which I come, at the close of this chapter, is, that there is nothing seriously to shake our confidence in the portions of the Shû that we now possess, as being substantially the same as those which were in the collection of the Kâu dynasty both before and after Confucius.

CHAPTER II.

THE CREDIBILITY OF THE RECORDS IN THE SHŪ.

1. Accepting the conclusion which I have stated immediately above, I now go on to enquire whether the documents in the Shū can be relied on as genuine narratives of the transactions which they profess to relate. And it may be said at once, in reference to the greater number of them, that there is no reasonable ground to call their credibility in question. Allowance must be made, indeed, for the colouring with which the founders of one dynasty set forth the misdeeds of the closing reigns of that which they were superseding, and for the way in which the failures of a favourite hero may be glossed over. But the documents of the Shū are quite as much entitled to credit as the memorials and edicts which are published at the present day in the Peking Gazette.

Whether the
records in
the Shū
are reliable
or not.

The more recent the documents are, the more, of course, are they to be relied on. And provision was made, we have seen, by the statutes of *K'áu*, for the preservation of the records of previous dynasties. But it was not to be expected that many of those should not perish in the lapse of time, and others suffer mutilations and corruptions. And this, we find, was the case. Of the eighty-one documents that the Shū at one time contained, only one belonged to the period of *Yáo*; seven to the period of *Shun*; four to the dynasty of *Hsiá*, much the larger one of which narrates what was done in the time of *Yáo*; thirty-one to the dynasty of *Shang*; and thirty-eight to the first 500 years of that of *K'áu*. All this seems to bear on the surface of it the stamp of verisimilitude.

2. The Books of *K'áu* were contemporaneous with the events which they describe, and became public property not long after their composition.

The Books
of *K'áu*. They are to be received without hesitation.

Nor are those of the previous dynasty of Shang open to suspicion. We ascend by means of them to Thang the Successful, its founder, with a confident step. The beginning of his rule is placed chronologically in B. C. 1766.

Of the still earlier dynasty of Hsiâ, there are only four documents, and we have no evidence that there were any more when the collection of the Shû was made in the times of K'au. The first and longest of the four, though occupied with the great achievement of Yü, the founder of Hsiâ, whose chronological place is B. C. 2205-2196, really belongs to the reign of Yâo, and is out of place among the records of Hsiâ. The other three documents bring us down only to the reign of Kung Khang (B. C. 2159-2145), and I see no grounds for doubting their genuineness. In the last of them a celestial phenomenon is mentioned, which has always been understood to have been an eclipse of the sun in Fang, a space of about $5\frac{1}{2}^{\circ}$ from π to σ of Scorpio, on the first day of the last month of autumn. P. Gaubil thought he had determined by calculation that such an eclipse really took place in the fifth year of Kung Khang, B. C. 2155. Doubts, however, have been cast, as will be seen in the next chapter, on the accuracy of his calculation, and therefore I do not avail myself of it here as a confirmation of the truth of the document.

3. We come to the earlier records,—those of the reigns of Yâo and Shun, with which must be classed the Tribute of Yü, the first of the documents of Hsiâ; and it must be admitted that there is not the same evidence that they existed originally in their present form.

i. The Canon of Yâo and three of the four still existing books of the time of Yü, all commence with the words, 'Examining into antiquity, we find.' They are therefore, on their own showing, the compilations of a later age. The writer separates himself from the date of the events which he narrates, and while professing to draw from the records

The Books
of Thang
and Yü.

They are
professedly
later compi-
lations.

of 'antiquity,' yet writes himself from a modern standpoint. The Yî and Kî, the last of the documents of the Shun period, formed one book with the preceding in the Shŭ of Fû, and came under the opening words of that, as being a result of 'the examination of antiquity.' I will draw separate attention farther on to the Tribute of Yü.

ii. Much of what is related in the Canons of Yáo and Shun, as well as in the other documents, has more the air

of legend than of history. When Yáo has ^{They are} ^{legendary.} been on the throne for seventy years, he proposes to resign in favour of his principal minister, who is styled the Four Mountains. That worthy declares himself unequal to the office. Yáo then asks him whom he can recommend for it; be the worthiest individual a noble or a poor man, he will appoint him to the dignity. This brings Shun upon the stage. All the officers about the court can recommend him,—Shun of Yü¹, an unmarried man among the lower people. His father, a blind man, was obstinately unprincipled; his mother, or stepmother, was insincere; his brother was arrogant; and yet Shun had been able by his filial piety to live harmoniously with them, and to bring them to a considerable measure of self-government and good conduct. Yáo is delighted. He had himself heard something of Shun. He resolved to give him a preliminary trial. And a strange trial it was. He gave him his own two daughters in marriage, and declared that he would test his fitness for the throne by seeing his behaviour with his two wives.

Shun must have stood the test. Yáo continued to employ him as General Regulator for three years, and then called him to ascend the throne. Shun refused to do so, but discharged the royal duties till the death of Yáo in 2257, becoming himself sole ruler in B. C. 2255. These

¹ 虞舜—Yü is the dynastic designation of Shun. It is to be distinguished from Yü (禹), the name of Shun's successor, the founder of the dynasty of Hsiâ. Bunsen confounded the two appellations (Egypt's Place in Universal History, III, p. 399).

and other marvellous notices of Yáo and Shun are largely added to by Mencius and Sze-má *K'ien*, but their accounts are of the same extraordinary character. I must believe that the oldest portions of the Shû do not give us the history of Yáo and Shun, but legendary tales about them.

At the same time it must be allowed that the compiler of these books in their present form had in his possession some documents as old as the time of Yáo. To my mind three things render this admission necessary. First, the titles of the high officers of Yáo and Shun are different from those of the corresponding dignitaries at a later age. The principal personage was called the Four Mountains; next to him was the General Regulator; and the Minister of Religion was the Arranger of the Ancestral Temple. It is more probable that the compiler received these and other peculiar designations from old documents than that he invented them himself. Second, the style of these early books is distinguished in several particulars from the style of those of Hsiâ, Shang, and K'áu. I need only specify the exclamations, 'Alas!' 'Ah!' and 'Oh!' which are expressed by characters that we do not elsewhere find used in the same way. Third, the directions of Yáo to his astronomers, telling them how to determine the equinoxes and solstices, by means of the stars culminating at dusk in those seasons, could not be the inventions of a later age. The reader will find this subject discussed in the next chapter, where it is shown how those culminating stars may be employed to ascertain the era of Yáo. No compiler, ignorant of the precession of the equinoxes, which was not known in China till about the middle of our fourth century, could have framed Yáo's directions with such an adjustment to the time assigned to him in chronology.

When the Books of Thang and Yü received their present form, we cannot tell. Probably it was in the early period of the K'áu dynasty, though I am not without a suspicion that some verbal changes were made in them under the short-lived dynasty of K'ên, which intervened between

Their compiler

documents on
which to
base his
representations.

the dynasties of K'âu and Han, and possibly some also when they were recovered under the latter.

4. It remains for us to consider the case of the Tribute
 The Tribute of Yü, the first, as the books are now arranged,
 of Yü. of those of Hsiâ, but belonging, as has been
 already said, to the period of Yáo, or at least to the period
 when Yáo and Shun were together on the throne. It thus
 appears out of its chronological order, and must share in the
 general uncertainty which attaches to the documents of
 the first two parts of our classic.

Yáo, in what year of his reign we are not told, appears suddenly startled by the ravages of a terrible inundation. The waters were overtopping the hills, and threatening the heavens in their surging fury. The people everywhere were groaning and murmuring. Was there a capable man to whom he could assign the correction of the calamity? All the nobles recommend one Khwăn, to whom Yáo, against his own better judgment, delegates the difficult task, on which Khwăn labours without success for nine years. His son Yü then entered on the work. From beyond the western bounds of the present China proper he is represented as tracking the great rivers, here burning the woods, hewing the rocks, and cutting through the mountains that obstructed their progress, and there deepening their channels until their waters flow peacefully into the eastern sea. He forms lakes, and raises mighty embankments, till at length 'the grounds along the rivers were everywhere made habitable; the hills cleared of their superfluous wood; and access to the capital was secured for all within the four seas. A great order was effected in the six magazines (of material wealth); the different parts of the country were subjected to an exact comparison, so that contribution of revenue could be carefully adjusted according to their resources. The fields were all classified according to the three characters of the soil, and the revenues of the Middle Kingdom were established.' Of the devotion with which Yü pursued his work, he says himself in the Yî and K'î:—'I mounted my four conveyances,'—carriages on the land, boats on the water, sledges in icy places, and

shoes with spikes in them in ascending the hills,—‘and all along the hills hewed down the woods, at the same time, along with Yî, showing the people how to get flesh to eat,’—that is, by capturing fish and birds and beasts. ‘I opened passages for the streams throughout the nine provinces, and conducted them to the sea. I deepened the channels and canals, and conducted them to the streams, at the same time, along with Kî, sowing grain, and showing the people how to procure the food of toil in addition to flesh meat. I urged them to exchange what they had for what they had not, and to dispose of their accumulated stores. In this way all the people got grain to eat, and the myriad regions began to come under good rule.’ And again:—‘When I married in Tû-shan, I remained with my wife only four days.’ Mencius says that while engaged on his task, he thrice passed the door of his house; but did not enter it. His own words are:—‘When K’hi (my son) was wailing and weeping, I did not regard him, but kept planning with all my might my labour on the land.’

Along with his operations to assuage the wide-spread inundation, Yü thus carried on other most important labours proper to an incipient civilization. We gather from the Shû that it did not take him many years to accomplish his mighty undertaking. It was successfully finished before the death of Yáo. All this is incredible. The younger Biot, in an article on the Tribute of Yü, published in the *Journal Asiatique*, in 1842, says:—‘If we are to believe the commentators, Yü will become a supernatural being, who could lead the immense rivers of China as if he had been engaged in regulating the course of feeble stream-lets.’ There is no occasion to say, ‘If we are to believe the commentators;’—if we are to believe the Shû, this is the judgment that we must form about Yü.

The general conclusion to which Biot came about the document under our notice was that we are to find in it only the progress of a great colony. Yü was the first explorer of the Chinese world. He established posts of colonists or planters in different parts of the territory. He caused the wood around those posts to be cut down,

and commenced the cultivation of the soil. After Yü, the labours of draining the country and clearing the forests continued during some ages, and the result of all was attributed by Chinese tradition to the first chief. I have no doubt there is an inkling of the truth in this view of the French sinologue, but the idea of Yü's being the leader of a Chinese colony had better be abandoned. We recognise the primitive seat of the Chinese people, in the southern parts of the present Shan-hsi, with the Ho on the west and south of it. His son fought a battle with the Chief of Hû at a place in the present department of Hsi-an, in Shen-hsi, across the Ho, and his grandson was kept a sort of prisoner at large in the present province of Ho-nan, south of the river. The people or tribe extended itself westward, eastward, and southward, and still later northward, as it increased in numbers, and was able to subdue the earth.

The flood of Yáo was probably an inundation of the Ho, similar to many in subsequent times which have procured for that river the name of 'China's Sorrow,' and Yü distinguished himself in the assuaging of it, and the regulation of its course to the sea. The extent of the country came to be ascertained under the dynasties of Hsiâ and Shang, and its different parts were gradually occupied by the increasing numbers of the people, and contributed their various proportions of revenue to the central government. There were memorials of the toils which Yü had undergone, and of allotments of territory which he had made to the most distinguished among his followers. It occurred to some historiographer to form a theory as to the way in which the whole country might have been brought to order by the founder of the Hsiâ dynasty, and he proceeded to glorify Yü by ascribing so grand an achievement to him. About the same time, probably, the popular stories of Yü's self-denial had found their expression in the Yî and Kî, prompting at once the conception of the Tribute of Yü, and obtaining for it a favourable reception. Yü entered well into association with Yáo and Shun, and formed a triad with them

at the beginning of the Chinese monarchy. Their wisdom and benevolence appeared in him, combined with a practical devotion to the duties of his position, in which all sovereigns would have a model, to win them from indolence and self-indulgence, and stimulate them to a painstaking discharge of their responsibilities.

In the nineteenth of the Books of Part V, the duke of *Kâu* counsels his young sovereign, king *Khăng* (B.C. 1115-1077), to have his armies in a good state of preparation, so that he might go forth 'beyond the footsteps of Yü,' and travel over all beneath the sky, everywhere meeting with submission. The duke's reference to 'the footsteps of Yü' does not prove that Yü really travelled and toiled as the Tribute of Yü reports, but only that such was the current belief at the commencement of the *Kâu* dynasty, while it affords at the same time a presumption that our document was then among the archives of the kingdom. It may have been compiled before the end of the *Hsiá* dynasty, or under that of *Shang*. From *Shang* it passed to *Kâu*, and came under the care of the recorders of the Exterior. Then subsequently it was very properly incorporated in the collection of the *Shû*.

5. While we are thus unable to receive the six earliest documents in our classic as contemporaneous in their present form with the events which they relate, it is not meant to throw doubt on the existence of Yáo, Shun, and Yü as historical personages. More especially does Yü stand forth as the first sovereign of the dynasty of *Hsiá*, the man who laid the foundation of the hereditary monarchy in China, its feudal sovereign who 'conferred surnames and lands.' The documents which follow the Tribute of Yü, commencing with the Speech at Kan, delivered in B.C. 2197 by Yü's son and successor, may all be received as veritable monuments of antiquity.

Yáo, Shun,
and Yü are
all historical
personages.

CHAPTER III.

ON THE CHRONOLOGY OF CHINA, AND THE PRINCIPAL
ERAS IN THE SHŪ.

1. I do not enter here on the subject of the chronology of China further than is necessary to show that there is no chronological difficulty in the way of our accepting the documents of the Shŭ, which I have just specified, as being possessed of the antiquity ascribed to them.

The Shŭ itself does not supply the means of laying down any scheme of chronology for the long period of time which it covers. We learn from it that No detailed chronological system can be made out from the Shŭ. the dynasty of Kâu succeeded to that of Shang (another name for which was Yin), and the dynasty of Shang to that of Hsiâ, and that prior to Yü, the founder of the Hsiâ, there were the reigns of Shun and Yáo. As P. Gaubil has observed, 'If we had only the Shŭ King, we should have but confused ideas of the time comprised in the different parts of the book.' There is nothing in this to awaken our surprise. The chronology of a nation comes to be cultivated as a science only when a necessity is felt to arrange the events of its history in regular series on the course of time.

2. It was under the Han dynasty that it was first attempted to construct a chronological scheme of the history of the nation. For this purpose its scholars employed the well-known cycle of sixty years, in the fifteenth year of the seventy-sixth revolution of which Attempts at systematic chronology began in the Han period. I am now writing. It was assumed that this cycle was first devised by Tâ-não, an officer of Hwang Tî, in B.C. 2637, which is the first year of the first cycle. But all scholars in China, whether they call in question this origin of the cycle or not, now agree in saying that the use of the cyclic characters to chronicle years was not the ancient method, and did not begin earlier than the time of the usurper Mang (A. D. 9-22).

In the Shŭ itself the current cycle is used to chronicle

days, and days only. Years are specified according to their order in the reign of the sovereign to whom they are referred. Such specification of years in it, however, is rare.

Before the Han dynasty a list of sovereigns, and of the length of their several reigns, was the only method which the Chinese had of determining the duration of their national history. And it would still be a satisfactory method, if we had a list of sovereigns, and of the years that each reigned, that was complete and reliable. But we do not have this. Even in the early part of the Han dynasty, Sze-mâ *K'ien*'s father and himself, in their Historical Records, completed about B. C. 100, were obliged to content themselves with giving simply the names and order of most of the rulers of Shang and Hsiâ. It is right to state also that in A. D. 279, when the grave of king Hsiang of Wei (died in B. C. 295) was opened, there were found a number of bamboo tablets in it, written in the ancient seal characters, among which the most valuable portion was a book of annals, beginning with the reign of Hwang Tî, and coming down to the sixteenth year of the last king of K'âu, B. C. 299. This work is still current under the name of the Annals of the Bamboo Books. The chronology derived from it is shorter than the received system by rather more than 200 years.

If in any of the 'classical books of the K'âu dynasty we had a statement of the length of the national history from any given era to the time of the writer, the notice would be exceedingly valuable; or, if the length of the reigns of the sovereigns of Shang and Hsiâ, cursorily mentioned in it, were correctly given, we should be in a position to make an approximate computation for ourselves. But there are only two passages in all those books which are helpful to us in this point. The former of them is in a narrative in 30 *K'îu-ming*'s supplement to the Spring and Autumn, under the third year of duke Hsüan, where it is said that the dynasty of Shang possessed the throne for 600 years. The other passage is the last chapter of the works of Mencius, where that philosopher says that 'from Yáo and Shun to Thang'—a period including all the dynasty of Hsiâ—

'there were 500 years and more; from Thang to king Wăn'—the period of the Shang dynasty—'500 years and more; and from king Wăn to Confucius, 500 years and more.' We know that Confucius was born in B. C. 551. Adding 551 to the 1500 years 'and more,' given by Mencius, we have the era of Yáo and Shun at 2100 years 'and more' before our Christian era. And the received chronology places Yü's accession to the throne, as the successor of Shun, in B. C. 2205. Vague as the language of Mencius is, I do not think that with the most painstaking research, apart from conclusions based on astronomical considerations, we can determine anything more precise and definite concerning the length of Chinese history than it conveys.

3. The Charge to the Marquis Wăn, which now forms the 28th Book of the 5th Part of the Shŭ, is understood to have been delivered by king Phing, the thirteenth of his line. His place in historical time is well ascertained. Confucius' chronicle of the Spring and Autumn commences in B. C. 722. The first of the thirty-six solar eclipses mentioned in it took place three years after, on the 14th February (N. S.) 719, and it is recorded that in the month after king Phing died. Here therefore is a point of time about which there can be no dispute. An earlier date in the Kâu dynasty is known with the same certainty. The Book of Poetry mentions an eclipse of the sun which took place on the 29th August, B. C. 776, in the sixth year of king Yü, who preceded Phing. Yü reigned eleven years, and his predecessor, Hsüan, forty-six, whose reign consequently commenced B. C. 827. Up to this date Chinese chronologers agree. To the ten reigns before king Hsüan, the received chronology assigns 295 years, making the dynasty begin in B. C. 1122, which cannot be far from the truth.

4. In the period of the Shang dynasty we cannot fix a single reign by means of astronomical facts. The received chronology assigns to it twenty-eight reigns, extending over 644 years, so that its commencement was in B. C. 1766. The scheme

The period
of the Shang
dynasty.

derived from the bamboo books makes the sovereigns to be thirty, but the aggregate of their reigns is only 508. Mencius says that between Thang, the founder of the dynasty, and Wû-ting, the twentieth sovereign (in the common scheme), 'there had been six or seven worthy and sage rulers¹,'—leading to the conclusion that the number of twenty-eight sovereigns in all is not beyond the truth. In the fifteenth of the Books of *Kâu* the names of three of the Shang rulers are given, and the duration of their reigns,—to show how Heaven is likely to crown a good king with length of sway. They are *Thâi Mâu*, who reigned seventy-five years; *Wû-ting*, who reigned fifty-nine; and *Û-kia*, who reigned thirty-three. The two schemes agree in the length of those reigns and of five others. From the statement in the *Ûo-kwan*, to which I have referred above, that the Shang dynasty possessed the throne for 600 years, and Mencius' language that it lasted 'for 500 years and more,' we may believe that the 644 years of the common scheme are more likely to be correct than the 508 of the shorter.

5. The dynasty of *Hsiâ* lasted, according to the received chronology, 439 years, and according to the bamboo books,
 The period 431; so that the difference here between the
 of *Hsiâ*. two schemes is small. The former estimate carries us up to B.C. 2205, as the first year of *Yü*'s reign.

I referred on page 13 to an eclipse of the sun, mentioned in the fourth of the Books of *Hsiâ*, as having occurred in the reign of *Kung Khang*, a grandson of *Yü*, and stated that P. Gaubil had found by calculation that on the day and month stated in the document, and in the quarter of the heavens given, an eclipse did occur in the fifth year of *Kung Khang*, that is, in B.C. 2156, and was visible at his capital at 6^h 49', A.M. In 1840, J. B. Biot submitted a copy of Gaubil's calculations to the younger *Largeteau*, a member, like himself, of the Institute of France, who went over them with the lunar tables of *Damoiseau* and the solar tables of *Delambre*, and brought out the result that

¹ Mencius, II, i, ch. 1.

there was indeed an eclipse on the day stated, but before the rising of the sun at the then capital of China¹. My friend, the Rev. Dr. Chalmers of Canton, not knowing anything of the examination made by Largeteau, undertook to verify the eclipse in 1861, and found that while the year, the month, and the day, as given by Gaubil, were correct, the eclipse had taken place during the night, and could not have been seen by the Chinese astronomers. The eclipse mentioned in the document of the Shŭ cannot therefore be used at present to confirm the received chronology of China; but I am unwilling to give it up entirely. M. Biot says that, 'Notwithstanding the failure of the attempt of Largeteau to verify the eclipse, the hope of yet finding it in some one of the years of the twenty-second century before our era is not entirely lost. We ought to wait till the further perfecting of the lunar tables brings us new lights, by means of which we can form a surer judgment.'

6. We come to the earliest period of Chinese history of which the Shŭ makes more than a cursory mention,—that

The period
of Yáo
and Shun.

of Yáo and Shun. It says that Shun was thirty years on the throne with Yáo, and that, fifty years after, he died and went on high.

We learn from it also that it was in the seventieth year of his reign that Yáo sought for another to relieve him of the toils of government. The period covered by the two therefore is 150 years, which both the schemes of chronology accept. Adding two years of mourning between Shun's death and Yü's accession to the throne, we have B. C. 2357 as the first year of Yáo.

In the Canon of Yáo, when that personage is giving directions to his astronomers how to determine the equinoxes and solstices, he tells them that at the vernal equinox they would find the star in Niáo, and at the autumnal in Hsü; at the summer solstice, the star in Hwo, and at the winter in Mão. It has always been assumed by Chinese scholars that when Yáo said, 'The star of mid-spring is in

¹ Etudes sur l'Astronomie Indienne et sur l'Astronomie Chinoise, pp. 376-382.

Niáo,' he meant the star culminating at dusk at that season, at the point of observation. And so of the other stars and seasons. A Chinese astronomer at the present day would similarly express himself.

Further, the most common, and what was the earliest division of the ecliptic in China, is that of the twenty-eight lunar mansions, forming what we may call the Chinese zodiac. These mansions are grouped together in four classes of seven each, assigned to the four quarters of the heavens¹. Of the celestial spaces which Yáo specified, Niáo is the general name for the seven mansions or constellations belonging to the southern quarter; Hwo is an old name of what is now called Fang, the central constellation of the eastern quarter; Hsü and Mão are the central constellations of the northern and southern quarters respectively. What Yáo meant therefore was, that his astronomers could determine the solstices and the autumnal equinox by the culmination of the stars in the mansions which he specified for those seasons. And we may assume that he directed them, for the star of the vernal equinox, to Hsing, the central mansion in the southern space Niáo. Now, Hsing corresponds to α (Alphard) Hydræ, and small stars near it, in our stellar nomenclature; Hwo, to β , δ in Scorpio; Hsü, to β Aquarii; and Mão, to Pleiades. When we wish to make the directions of Yáo available for the purpose of chronological enquiry, the question that arises is this:—When did the above-named stars culminate at dusk in China at the equinoctial and solstitial seasons?

Bunsen tells us that Ideler, computing the places of the constellations backwards, fixed the accession of Yáo at B. C. 2163, and that Freret was of opinion that the observations left an uncertainty of 3°, leaving a margin of 210

¹ In the Official Book of Káu, a work of the twelfth century before our era, Book XXVI, par. 25, in the enumeration of the duties of the astronomer royal of that day, there is mentioned the determination of 'the places of the twenty-eight stars,' meaning 'the principal stars in the twenty-eight lunar mansions.' The names of the stars and their mansions are not mentioned;—surely a sufficient indication that they were even then well known. See Biot's *Etudes sur l'Astronomie Indienne*, &c., pp. 112, 113.

years¹. On the other hand, J. B. Biot found in the directions a sufficient confirmation of the received date for Yáo's accession,—B.C. 2357². Appended to this Introduction is a chart of the stars as they were visible in China in B.C. 2300, which the Rev. C. Pritchard, Savilian Professor of Astronomy in the University of Oxford, kindly prepared for me. An inspection of it, in the manner directed by him, will show that the phenomena indicated by Yáo to his astronomers were all apparent at that date. This fact must be accepted as a strong proof of the approximate correctness of the chronology, which places Yáo in the twenty-fourth century B. C. The precession of the equinoxes, it has already been observed, was not known in China till more than 2500 years after the time assigned to Yáo, so that the culminating stars at the equinoxes and solstices of his remote period could not have been computed back scientifically in the time of the K'áu dynasty, during which the collection of the Shŭ existed. The form in which the directions are given, and other things in the Canon, savour, indeed, of legend, and I have not claimed for it that in its present form it be received as a document contemporaneous with the reign of Yáo. I have argued, however, that the compiler of it had before him ancient documents, and one of them must have contained the facts about the culminating of the stars, which I have now endeavoured to set in a clear light.

The mention of these culminating stars does seem to fix Yáo's place in chronology in the twenty-fourth century B. C., and to show that at that remote era it was the custom to make and to record astronomical observations of the heavenly bodies. Having respect to these things, my claim to have the documents of the Shŭ from the Speech at Kan, nearly two centuries later than Yáo, downwards, regarded as contemporaneous with the events which they describe, cannot be considered extravagant.

7. In the 27th Book of the 5th Part, the Marquis of

¹ Egypt's Place in Universal History, III, pp. 400, 401.

² Etudes sur l'Astronomie Indienne, &c., pp. 361-366.

Lü on Punishments, there is a historical reference which would carry us back four centuries beyond the time of Yáo. It is said that, 'According to the teachings of antiquity, *K'ih Yü* was the first to create disorder.' There is no intimation, however, of the time when this rebel disturbed the happy order and innocence which had previously prevailed; and the very same sentence brings the review of antiquity down to the time of Shun. But the chronologers place him in the reign of Hwang Tî, towards the end of the twenty-seventh century B.C. Other writers describe the struggle between him and Hwang Tî, in which dragons, mists, and the invention of the compass play conspicuous parts. It is to the credit of the Shû, and an evidence of its being a genuine collection of historical memorials, that this cursory reference to *K'ih Yü* is the only mention in it of any name older than that of Yáo.

THE USE OF THE CHART.

This chart is intended to represent approximately the aspect of the principal zodiacal stars as seen above the horizon of any place in central China, at any hour of any day, about the year B.C. 2300.

In order to apply the chart to a practical purpose, the reader is advised to cut out a sheet of paper (cardboard is preferable) with its upper edge exactly fitting the curved line A B O C D, and to draw, near to the bottom of the paper, a line coinciding with 'the hour-line' on the chart.

This being done, if it be asked what will be the aspect of the heavens when the Sun sets at the Vernal Equinox, the reader is to move the line at the bottom of the cardboard along the horizontal 'hour-line' of the chart until the place of the Sun in the Ecliptic at the Vernal Equinox O just touches the curved top of the paper; then all the stars not covered over are above the horizon at the time of that sunset, viz. in this case Aldebaran, Sirius, Spica, &c.; the Pleiades are just setting, Regulus and α Hydræ are very near the meridian, β Centauri is on the point of rising, and α Serpentis is well up above the horizon. This exactly corresponds with that state of the heavens which Yáo, (alleged in the Chinese records to have flourished about B.C. 2300,) indicated to his astronomers (Hsi and Ho) would be the case, viz. that he would find the star (or the

stellar division) Shun Hwo (corresponding, it is said, to α Hydræ) culminating at the time of sunset at the Vernal Equinox¹.

Again, if it be required to find what constellation is culminating at the time of sunset at the Summer Solstice, the cardboard must be moved, as before, towards the right hand until the position of the Sun at the Summer Solstice, viz. G, just touches the horizon curve, when it will be seen that α Serpentis and Antares are then culminating, Regulus and β Centauri are just setting, while the constellations of Aquila and Aquarius are rising; Vega is a conspicuous object above the eastern horizon. This again corresponds to the indications given by Yâo to his astronomers, viz. that they would find the constellation Scorpio culminating at the time.

Thirdly, to find what constellation is culminating at sunset at the Winter Solstice, the cardboard horizon is to be moved, as before, until the Sun at F falls upon it, when the constellations Aries and Taurus with the Pleiades will be seen near to their culmination. This is a third correspondence with the indications of the astronomical sovereign.

Lastly, at sunset of the Autumnal Equinox the movable horizon is to be shifted to the left until the point A falls upon it, where it will be seen in this position that the stars in Aquarius are culminating at the time. It is scarcely possible that all these indications of the positions of the stars at these several times of the year could be simultaneously correct at any other epoch than somewhere about B.C. 2300 or a very small number of centuries before or after.

The reader may easily make for himself many other interesting applications of the chart. A general notion of the effects of precession on the positions of the stars may be seen at once by observing the three positions of the Pleiades, at the three epochs B.C. 2300, A.D. 1, and A.D. 1878, marked in the chart by the letters K, L, M; and as the approximate effect of precession is to cause all stars to move parallel to the Ecliptic and through the same arc, if the reader will imagine every star to be shifted parallel to the Ecliptic through spaces equal respectively to K L, L M, he will get the aspect of the heavens at the epochs A.D. 1 and A.D. 1878.

The following table has been calculated for the apparent positions of the principal stars in the years B.C. 2300, B.C. 1500, A.D. 1, and A.D. 1000; except in one instance it will be found to confirm a similar calculation made by Biot for the earliest of these dates.

¹ See an excellent memoir by Mr. Williams, the late Assistant Secretary of the Royal Astronomical Society, on Chinese Comets, procurable at the apartments of the Royal Astronomical Society, Burlington House, London.

THE SHŪ KING.

PART I. THE BOOK OF THANG.

THE CANON OF YÁO.

SHŪ KING, the name of the whole work, has been sufficiently explained in the Introduction. The name of this Part, the first of the five into which the whole is divided, is the Book of Thang, Thang being taken as the dynastic designation of Yáo, who before his elevation to the throne had been marquis of the small state of Thang, the name of which is supposed to be still retained in Thang, one of the districts of the department Páo-ting, in K'ih-lí. It is said that after his elevation he established his capital in Phing-yang, lat. $36^{\circ} 06'$, long. $111^{\circ} 33'$, in Shan-hsí. But all this is very uncertain. See on Part III, Book iii, ch. 2. The one Book, forming this Part, is called the Canon of Yáo. The character which we translate 'Canon' means a document of the most exalted nature, the contents of which are entitled to the greatest regard. The name is given expressly only to one other Book in the Shū. The Canons are the first of the six classes of documents which the Shū contains.

Yáo is the subject of the Book:—In ch. 1, in his personal character and the general results of his government; in ch. 2, in his special care for the regulation of the calendar and the labours of agriculture; in ch. 3, in his anxiety to find one who could cope with the ravages of a terrible inundation, and take his place on the throne. The third chapter introduces to our notice Shun, the successor of Yáo.

1. Examining into antiquity, (we find that) the Tî Yáo¹ was styled Fang-hsün². He was reverential, intelligent, accomplished, and thoughtful,—naturally and without effort. He was sincerely courteous, and capable of (all) complaisance. The bright (influence of these qualities) was felt through the four quarters (of the land), and reached to (heaven) above and (earth) beneath.

He made the able and virtuous distinguished, and thence proceeded to the love of (all in) the nine classes of his kindred, who (thus) became harmonious. He (also) regulated and polished the people (of his domain), who all became brightly intelligent. (Finally), he united and harmonized the myriad states; and so the black-haired people were transformed. The result was (universal) concord.

2. He commanded the Hsîs and Hos³, in reverent accordance with (their observation of) the wide heavens, to calculate and delineate (the movements and appearances of) the sun, the moon, the stars, and the zodiacal spaces, and so to deliver respectfully the seasons to be observed by the people.

¹ Yáo is to us now the name of the ancient ruler so denominated. The character means 'high,' 'lofty and grand.' It may originally have been an epithet, 'the Exalted One.' On the meaning of Tî in Tî Yáo, see what has been said in the Preface.

² The Han scholars held that Fang-hsün was the name of Yáo. Those of Sung, taking the characters as an epithet, make them signify 'the Highly Meritorious.'

³ The Hsîs and Hos seem to have been brothers of two families, on whom devolved the care of the calendar, principally with a view to regulate the seasons of agriculture. See Parts III, iv, and V, xxvii. On Yáo's directions to them, see the Introduction, pp. 24-28.

He separately commanded the second brother Hsi to reside at Yü-î¹, in what was called the Bright Valley, and (there) respectfully to receive as a guest the rising sun, and to adjust and arrange the labours of the spring. 'The day,' (said he), 'is of the medium length, and the star is in Nião;—you may thus exactly determine mid-spring. The people are dispersed (in the fields), and birds and beasts breed and copulate.'

He further commanded the third brother Hsi to reside at Nan-kião², (in what was called the Brilliant Capital), to adjust and arrange the transformations of the summer, and respectfully to observe the exact limit (of the shadow). 'The day,' (said he), 'is at its longest, and the star is in Hwo;—you may thus exactly determine mid-summer. The people are more dispersed; and birds and beasts have their feathers and hair thin, and change their coats.'

He separately commanded the second brother Ho to reside at the west, in what was called the Dark Valley, and (there) respectfully to convoy the setting sun, and to adjust and arrange the completing labours of the autumn. 'The night,' (said he), 'is of the medium length, and the star is in Hsü;—you may thus exactly determine mid-autumn. The people feel at ease, and birds and beasts have their coats in good condition.'

He further commanded the third brother Ho to

¹ Yü-î is by some identified with Täng-kâu, in Shan-tung, lat. 37° 48', long. 121° 4'; by others, it is sought in Corea.

² Nan-kião was south, it is said, on the border of An-nan or Cochinchina. The characters for 'in what was called the Brilliant Capital' are supposed to have dropt out of the text.

reside in the northern region, in what was called the Sombre Capital, and (there) to adjust and examine the changes of the winter. 'The day,' (said he), 'is at its shortest, and the star is in Mão;—you may thus exactly determine mid-winter. The people keep in their houses, and the coats of birds and beasts are downy and thick.'

The Tî said, 'Ah! you, Hsîs and Hos, a round year consists of three hundred, sixty, and six days. Do you, by means of the intercalary month, fix the four seasons, and complete (the period of) the year. (Thereafter), the various officers being regulated in accordance with this, all the works (of the year) will be fully performed.'

3. The Tî said, 'Who will search out (for me) a man according to the times, whom I can raise and employ?' Fang-*k'hi* said, '(Your) heir-son *K'û*¹ is highly intelligent.' The Tî said, 'Alas! he is insincere and quarrelsome:—can he do?'

The Tî said, 'Who will search out (for me) a man equal to the exigency of my affairs?' Hwan-tâu² said, 'Oh! the merits of the Minister of Works have just been displayed on a wide scale.' The Tî said, 'Alas! when all is quiet, he talks; but when employed, his actions turn out differently. He is respectful (only) in appearance. See! the floods assail the heavens!'

The Tî said, 'Ho! (President of) the Four

¹ In Part II, iv, 2, Yü speaks of this son of Yáo as 'the haughty *K'û* of Tan,' Tan probably being the name of a state, over which, according to tradition, he had been appointed.

² Hwan-tâu and the Minister of Works, whom he recommends, appear in the next Book as great criminals.

Mountains¹, destructive in their overflow are the waters of the inundation. In their vast extent they embrace the hills and overtop the great heights, threatening the heavens with their floods, so that the lower people groan and murmur! Is there a capable man to whom I can assign the correction (of this calamity)?' All (in the court) said, 'Ah! is there not Khwăn²?' The Tî said, 'Alas! how perverse is he! He is disobedient to orders, and tries to injure his peers.' (The President of) the Mountains said, 'Well but—. Try if he can (accomplish the work).' (Khwăn) was employed accordingly. The Tî said (to him), 'Go; and be reverent!' For nine years he laboured, but the work was unaccomplished.

The Tî said, 'Ho! (President of) the Four Mountains, I have been on the throne seventy years. You can carry out my commands;—I will resign my place to you.' The Chief said, 'I have not the virtue;—I should disgrace your place.' (The Tî) said, 'Show me some one among the illustrious, or set forth one from among the poor and mean.' All (then) said to the Tî, 'There is an unmarried man among the lower people, called Shun of Yü³.' The Tî

¹ (President of) the Four Mountains, or simply Four Mountains, appears to have been the title of the chief minister of Yáo. The four mountains were—mount Thái in the east; Hwâ in the west, in Shan-hsí; Hăng in the south, in Hû-nan; and Hăng in the north, in Kih-lí. These, probably, were the limits of the country, so far as known, and all within these points were the care of the chief minister.

² Khwăn is believed to have been the father of Yü, who afterwards coped successfully with the inundation. We are told that he was earl of K'hung, corresponding to the present district of Hû, in Shen-hsí.

³ See on the title of next Book.

said, 'Yes, I have heard of him. What have you to say about him?' The Chief said, 'He is the son of a blind man. His father was obstinately unprincipled; his (step-)mother was insincere; his (half-)brother Hsiang was arrogant. He has been able, (however), by his filial piety to live in harmony with them, and to lead them gradually to self-government, so that they (no longer) proceed to great wickedness.' The Tî said, 'I will try him; I will wive him, and thereby see his behaviour with my two daughters.' (Accordingly) he arranged and sent down his two daughters to the north of the Kwei¹, to be wives in (the family of) Yü. The Tî said to them, 'Be reverent!'

¹ The Kwei is a small stream in Shan-hsî, which flows into the Ho.

PART II. THE BOOKS OF YÜ.

BOOK I. THE CANON OF SHUN.

THE Books of Yü is the name of this Part of the *Shû*, Yü being the dynastic designation of Shun, as Thang was that of Yáo. It does not appear so clearly, however, how it came to be so. Yü must be the name of a state, and is commonly identified with the present district of An-yü, in *Kieh Kâu*, *Shan-hsi*. Some think that Yáo, after marrying his two daughters to Shun, appointed him lord of this state; but in the first mention of him to Yáo in the last Book, he is called Shun of Yü. It is generally said that Shun's ancestors had been lords of the principality of Yü up to the time of his father, who lost his patrimony and was reduced to the rank of a private man. But after what has been said, in the Introduction, on the Books in the first two Parts of the *Shû*, it will not be thought surprising that much in the accounts about Yáo and Shun should be open to suspicion. According to Mencius, IV, Part ii, ch. 1, Shun was from the country of the wild tribes on the east. Sze-mâ *K'ien* makes him to have been descended from Hwang-Ti, in which case he and his wives, the daughters of Yáo, would have had the same ancestor. Nothing more injurious to the fame of Yáo and Shun, according to Chinese notions of propriety, could be alleged against them.

Shun is the subject of this Canon, as Yáo was of the former. As it now stands, we may divide it into six chapters:—the first, describing Shun's virtues and gradual advancement; the second, Yáo's satisfaction with his administration of affairs, and associating of Shun with himself on the throne; the third, the acts of Shun in that position; the fourth, the demise of Yáo, and Shun's accession as sole monarch; the fifth, his choice of ministers and complete organization of his government; and the sixth, his death.

1. Examining into antiquity, (we find that) the Tî Shun¹ was styled *K'ung-hwâ*². His character was entirely conformed to (that of) the (former) Tî; he was profound, wise, accomplished, and intelligent. He was mild and courteous, and truly sincere. The report of his mysterious virtue was heard on high, and he was appointed to office.

2. (Shun) carefully set forth the beauty of the five cardinal duties, and they came to be (universally) observed. Being appointed to be General Regulator, the affairs of every (official) department were arranged in their proper seasons. (Being charged) to receive (the princes) from the four quarters of the land, they were all docilely submissive. Being sent to the great plains at the foot of the mountains, notwithstanding the tempests of wind, thunder, and rain, he did not go astray.

The Tî said, 'Come, you Shun. I have consulted you on (all) affairs, and examined your words, and found that they can be carried into practice;—(now) for three years. Do you ascend the seat of the Tî.' Shun wished to decline in favour of some one more virtuous, and not to consent to be (Yáo's) successor. On the first day of the first month, (however), he received (Yáo's) retirement (from his duties) in the temple of the Accomplished Ancestor³.*

3. He examined the pearl-adorned turning sphere,

¹ If Shun be taken as an epithet, it will mean 'the Benevolent and Sage.'

² *K'ung-hwâ*, the name of Shun according to the Han scholars, may mean 'the Glorious (Yáo) repeated.'

³ The Accomplished Ancestor would be, probably, the individual in some distant time to whom Yáo traced his possession of the throne.

with its transverse tube of jade, and reduced to a harmonious system (the movements of) the Seven Directors¹.

Thereafter, he sacrificed specially, but with the ordinary forms, to God; sacrificed with reverent purity to the Six Honoured Ones; offered their appropriate sacrifices to the hills and rivers; and extended his worship to the host of spirits².*

He called in (all) the five jade-symbols of rank; and when the month was over, he gave daily audience to (the President of) the Four Mountains, and all the Pastors³, (finally) returning their symbols to the various princes.

In the second month of the year he made a tour of inspection eastwards, as far as Thái-jung⁴, where he presented a burnt-offering to Heaven, and sacrificed in order to the hills and rivers.* Thereafter he gave audience to the princes of the east. He set in accord their seasons and months, and regulated the days; he made uniform the standard-tubes, with the measures of length and of capacity, and the steel-yards; he regulated the five (classes of) ceremonies, with (the various) articles of introduction,—the five

¹ Probably the seven stars of the Great Bear.

² Who the Six Honoured Ones were cannot be determined with certainty. An-kwo thought they were, 'the seasons, cold and heat, the sun, the moon, the stars, and drought,' that is, certain spirits, supposed to rule over these phenomena and things, and residing probably in different stars. The whole paragraph describes Shun's exercise of the prerogative of the sovereign, so far as religious worship was concerned.

³ The princes of the various states, whose official chief was the President of the Four Mountains, all 'shepherds of men.'

⁴ Thái-jung is mount Thái, in Shan-tung. See note on the President of the Four Mountains, p. 35.

symbols of jade, the three kinds of silk, the two living (animals) and the one dead one. As to the five instruments of rank, when all was over, he returned them. In the fifth month he made a similar tour southwards, as far as the mountain of the south¹, where he observed the same ceremonies as at Thái. In the eighth month he made a tour westwards, as far as the mountain of the west¹, where he did as before. In the eleventh month he made a tour northwards, as far as the mountain of the north¹, where he observed the same ceremonies as in the west. He (then) returned (to the capital), went to (the temple of) the Cultivated Ancestor², and sacrificed a single bull.*

In five years there was one tour of inspection, and there were four appearances of the princes at court. They gave a report (of their government) in words, which was clearly tested by their works. They received chariots and robes according to their merits.

He instituted the division (of the land) into twelve provinces³, raising altars upon twelve hills in them.* He (also) deepened the rivers.

He exhibited (to the people) the statutory punishments, enacting banishment as a mitigation of the five (great) inflictions⁴; with the whip to be employed in the magistrates' courts, the stick to be

¹ See note on the President of the Four Mountains, p. 35.

² Probably the same as the Accomplished Ancestor on p. 38.

³ As Yü, according to Part III, i, divided the land into nine provinces, this division of it into twelve must have been subsequent to the completion of Yü's work. See on the Tribute of Yü.

⁴ Those five great inflictions were—branding on the forehead; cutting off the nose; cutting off the feet; castration; and death, inflicted in various ways.

employed in schools¹, and money to be received for redeemable offences. Inadvertent offences and those which could be ascribed to misfortune were to be pardoned, but those who transgressed presumptuously and repeatedly were to be punished with death. 'Let me be reverent! Let me be reverent!' (he said to himself.) 'Let compassion rule in punishment!'

He banished the Minister of Works to Yü island; confined Hwan-tâu on mount *Khung*; drove (the chief of) San-miào (and his people) into San-wei, and kept them there; and held Khwân a prisoner till death on mount Yü. These four criminals being thus dealt with, all under heaven acknowledged the justice (of Shun's administration)².

24. After twenty-eight years the Tî deceased, when the people mourned for him as for a parent for three years. Within the four seas all the eight kinds of instruments of music were stopped and hushed. On the first day of the first month (of the) next year, Shun went to (the temple of) the Accomplished Ancestor.*

¹ This punishment was for officers in training; not for boys at school.

² The Minister of Works, Hwan-tâu, and Khwân are mentioned in the former Canon. Yü island, or Yü Kâu, was in the extreme north of the present district of Mî-yun, department Shun-thien, Kih-lî.

Mount *Khung* was in the district of Yung-ting, Lî Kâu, Hû-nan. San-miào was the name of a territory, embracing the present departments of Wû-khang in Hû-pei, Yo-kâu in Hû-nan, and Kîu-kiang in Kiang-hsî. San-wei was a tract of country round a mountain of the same name in the present department of An-hsî, Kan-sû. Mount Yü was in the present district of Than-khăng, Shan-tung.

5. He deliberated with (the President of) the Four Mountains how to throw open the doors (of communication between himself and the) four (quarters of the land), and how he could see with the eyes, and hear with the ears of all.

He consulted with the twelve Pastors¹, and said to them, 'The food!—it depends on observing the seasons. Be kind to the distant, and cultivate the ability of the near. Give honour to the virtuous, and your confidence to the good, while you discountenance the artful;—so shall the barbarous tribes lead on one another to make their submission.'

Shun said, 'Ho! (President of) the Four Mountains, is there any one who can with vigorous service attend to all the affairs of the Tî, whom I may appoint to be General Regulator, to assist me in (all) affairs, managing each department according to its nature?' All (in the court) replied, 'There is Po-yü², the Minister of Works.' The Tî said, 'Yes. Ho! Yü, you have regulated the water and the land. In this (new office) exert yourself.' Yü did obeisance with his head to the ground, and wished to decline in favour of the Minister of Agriculture, or Hsieh, or Kâo-yâo. The Tî said, 'Yes, but do you go (and undertake the duties).'

The Tî said, 'K'hi³, the black-haired people are (still) suffering from famine. Do you, O prince, as

¹ These were the twelve princes holding the chief sway and superintendence in his twelve provinces.

² Po-yü is the great Yü, the founder of the Hsiâ dynasty. Po denotes, probably, his order as the eldest among his brothers.

³ K'hi was the name of the Minister of Agriculture, better known in the Shih and other books as Hâu-k'hi, the progenitor of the kings of K'âu. See the legend about him in the Shih, Part III, ii, Ode 1.

Minister of Agriculture, (continue to) sow (for them) the various kinds of grain.'

The Tî said, 'Hsieh¹, the people are (still) wanting in affection for one another, and do not docilely observe the five orders of relationship. It is yours, as the Minister of Instruction, reverently to set forth the lessons of duty belonging to those five orders. Do so with gentleness.'

The Tî said, 'Kâo-yâo², the barbarous tribes trouble our great land. There are (also) robbers, murderers, insurgents, and traitors. It is yours, as the Minister of Crime, to use the five punishments to deal with their offences. For the infliction of these there are the three appointed places. There are the five cases in which banishment in the appropriate places is to be resorted to, to which places, though five, three localities are assigned. Perform your duties with intelligence, and you will secure a sincere (submission).'

The Tî said, 'Who can superintend my works, as they severally require?' All (in the court) replied, 'Is there not Zui³?' The Tî said, 'Yes. Ho! Zui, you must be Minister of Works.' Zui did obeisance with his head to the ground, and wished to decline in favour of Shû, K'hiang, or Po-yü. The

¹ Hsieh was honoured by the kings of the Shang dynasty as their progenitor. See the Shih, Part IV, iii, Odes 3 and 4.

² See the preliminary note to Book iii.

³ Zui was not claimed by any great family as its progenitor, but he was handed down by tradition as a great artificer. See a reference to him in Part V, xxii, 2. Shû and K'hiang must have been named from their skill in making halberds and axes. The Yü (quite different from the name of the great Yü) in Po-yü gives us no indication of the skill of that individual.

Tî said, 'Yes, but do you go (and undertake the duties). Effect a harmony (in all the departments).'

The Tî said, 'Who can superintend, as the nature of the charge requires, the grass and trees, with the birds and beasts on my hills and in my marshes?' All (in the court) replied, 'Is there not Yî?' The Tî said, 'Yes. Ho! Yî, do you be my Forester.' Yî did obeisance with his head to the ground, and wished to decline in favour of Kû, Hû, Hsiung, or Pî.¹ The Tî said, 'Yes, but do you go (and undertake the duties). You must manage them harmoniously.'

The Tî said, 'Ho! (President of the) Four Mountains, is there any one able to direct my three (religious) ceremonies²?' All (in the court) answered, 'Is there not Po-î³?' The Tî said, 'Yes. Ho! Po, you must be the Arranger in the Ancestral Temple. Morning and night be reverent. Be upright, be pure.' Po did obeisance with his head to the ground, and wished to decline in favour of Khwei or Lung. The Tî said, 'Yes, but do you go (and undertake the duties). Be reverential!'^{*}

The Tî said, 'Khwei⁴, I appoint you to be Director of Music, and to teach our sons, so that the straightforward shall yet be mild; the gentle, dignified; the strong, not tyrannical; and the impetuous,

¹ For Yî, see the preliminary note to Book iv. He wishes here to decline his appointment in favour of Kû ('The Cedar'), Hû ('The Tiger'), Hsiung ('The Bear'), or Pî ('The Grisly Bear').

² The three ceremonies were the observances in the worship of the Spirits of Heaven, the Spirits of Earth, and the Spirits of Men.

³ Po-î was the progenitor of the great family of K'iang, members of which ruled in K'hi and other states.

⁴ Of Khwei we know nothing more than what is here told us. The character denotes a monstrous animal, 'a dragon with one leg.'

not arrogant. Poetry is the expression of earnest thought; singing is the prolonged utterance of that expression; the notes accompany that utterance, and they are harmonized themselves by the standard-tubes. (In this way) the eight different kinds of musical instruments can be adjusted so that one shall not take from or interfere with another; and spirits and men are brought into harmony.' Khwei said, 'I smite the (sounding-) stone, I gently strike it, and the various animals lead on one another to dance.'

The Tí said, 'Lung¹, I abominate slanderous speakers and destroyers of the (right) ways, who agitate and alarm my people. I appoint you to be the Minister of Communication. Early and late give forth my orders and report to me, seeing that everything is true.'

The Tí said, 'Ho! you, twenty and two men, be reverent; so shall you be helpful to the business (entrusted to me by) Heaven.'*

Every three years there was an examination of merits, and after three examinations the undeserving were degraded, and the deserving advanced. (By this arrangement) the duties of all the departments were fully discharged; the (people of) San-miáo (also) were discriminated and separated.

6. In the thirtieth year of his age, Shun was called to employment. Thirty years he was on the throne (with Yáo). Fifty years afterwards he went on high and died².*

¹ We are in ignorance of Lung, as we are of Khwei. The character denotes 'the dragon.'

² The Chinese text is here difficult to construe. K'ü Hsi says that the term 'went on high' is appropriate to the death of the Son of Heaven; and that the meaning is that Shun went to heaven.

BOOK II. THE COUNSELS OF THE GREAT YŪ.

OF the six classes of documents in the Shŭ, 'Counsels' are the second, containing the wise remarks and suggestions of high officers on the subject of government.

This Book may be divided into three chapters:—the first, containing counsels of Yŭ and Yî on principles and methods of government; the second, occupied with Shun's resignation of the administration to Yŭ, and containing also many sage observations and maxims; and the third, describing Yŭ's operations against the people of Mião, and counsels addressed to him by Yî. The style differs from that of the Canons; being more sententious, and falling occasionally into rhyme.

1. Examining into antiquity, (we find that) the Great Yŭ¹ was styled Wăn-ming². Having arranged and divided (the land), all to the four seas, in reverent response to the Tî, he said, 'If the sovereign can realize the difficulty of his sovereignty, and the minister the difficulty of his ministry, the government will be well ordered, and the black-haired people will sedulously seek to be virtuous.'

The Tî said, 'Yes; let this really be the case, and good words will nowhere lie hidden; no men of virtue and talents will be left neglected, away from court, and the myriad states will all enjoy repose. (But) to obtain the views of all; to give up one's opinion and follow that of others; to keep from oppressing the helpless, and not to neglect the

¹ The name Yŭ, taken as an epithet, would mean 'the Unconstrained.' As an epithet after death, it has the meaning of 'Receiving the Resignation and Perfecting the Merit;' but this is evidently based on the commonly received history of Yŭ.

² Wăn-ming may be translated, 'the Accomplished and the Issuer of Commands.'

straitened and poor ;—it was only the (former) Tî who could attain to this.'

Yî said, 'Oh! your virtue, O Tî, is vast and incessant. It is sagely, spirit-like, awe-inspiring, and adorned with all accomplishments. Great Heaven regarded you with its favour, and bestowed on you its appointment. Suddenly you possessed all within the four seas, and became ruler of all under heaven.'*

Yü said, 'Accordance with the right leads to good fortune ; following what is opposed to it, to bad ;—the shadow and the echo.' Yî said, 'Alas! be cautious! Admonish yourself to caution, when there seems to be no occasion for anxiety. Do not fail to observe the laws and ordinances. Do not find your enjoyment in idleness. Do not go to excess in pleasure. In your employment of men of worth, let none come between you and them. Put away evil without hesitation. Do not carry out plans, of (the wisdom of) which you have doubts. Study that all your purposes may be with the light of reason. Do not go against what is right, to get the praise of the people. Do not oppose the people's (wishes), to follow your own desires. (Attend to these things) without idleness or omission, and the barbarous tribes all around will come and acknowledge your sovereignty.'

Yü said, 'Oh! think (of these things), O Tî. The virtue (of the ruler) is seen in (his) good government, and that government in the nourishing of the people. There are water, fire, metal, wood, the earth, and grain,—these must be duly regulated ; there are the rectification of (the people's) virtue, (the tools and other things) that supply the conveniences of life, and the securing abundant means of sustentation,—these must be harmoniously

attended to. When the nine services (thus indicated) have been orderly accomplished, that accomplishment will be hailed by (the people's) songs. Caution them with gentle (words), correct them with the majesty (of law), stimulate them with the songs on those nine subjects,—in order that (your success) may not suffer diminution.' The Tî said, 'The earth has been reduced to order, and the (influences of) heaven produce their complete effect; those six magazines and three departments of (governmental) action are all truly regulated, and may be depended on for a myriad generations :—this is your merit.'

2. The Tî said, 'Come, you Yü. I have occupied my place for thirty and three years. I am between ninety and a hundred years old, and the laborious duties weary me. Do you, eschewing all indolence, take the leading of my people.' Yü replied, 'My virtue is not equal (to the position), and the people will not repose in me. (But there is) Kâo-yâo with vigorous activity sowing abroad his virtue, which has descended on the black-haired people, till they cherish him in their hearts. O Tî, think of him! When I think of him, (my mind) rests on him (as the man fit for this place); when I would put him out of my thoughts, (my mind still) rests on him; when I name and speak of him, (my mind) rests on him (for this); the sincere outgoing of my thoughts about him is that he is the man. O Tî, think of his merits.'

The Tî said, 'Kâo-yâo, that of these my ministers and all (my people) hardly one is found to offend against the regulations of the government is owing to your being Minister of Crime, and intelligent in the use of the five punishments, thereby

assisting (the inculcation of) the five cardinal duties, with a view to the perfection of my government, and that through punishment there may come to be no punishments, but the people accord with (the path of) the Mean. (Continue to) be strenuous,' Káo-yáo replied, 'Your virtue, O Tí, is faultless. You condescend to your ministers with a kindly ease; you preside over the multitudes with a generous forbearance. Punishments do not extend to (the criminal's) heirs, while rewards reach to (succeeding) generations. You pardon inadvertent faults, however great, and punish purposed crimes, however small. In cases of doubtful crimes, you deal with them lightly; in cases of doubtful merit, you prefer the high estimation. Rather than put an innocent person to death, you will run the risk of irregularity and error. This life-loving virtue has penetrated the minds of the people, and this is why they do not render themselves liable to be punished by your officers.' The Tí said, 'That I am able to follow and obtain what I desire in my government, the people responding everywhere as if moved by the wind,—this is your excellence.'

The Tí said, 'Come Yü. The inundating waters filled me with dread, when you accomplished truly (all that you had represented), and completed your service;—thus showing your superiority to other men. Full of toilsome earnestness in the service of the country, and sparing in your expenditure on your family, and this without being full of yourself and elated,—you (again) show your superiority to other men. You are without any prideful assumption, but no one under heaven can contest with you the palm of ability; you make no boasting, but no

one under heaven can contest with you the palm of merit. I see how great is your virtue, how admirable your vast achievements. The determinate appointment of Heaven rests on your person; you must eventually ascend (the throne) of the great sovereign.* The mind of man is restless, prone (to err); its affinity to what is right is small. Be discriminating, be uniform (in the pursuit of what is right), that you may sincerely hold fast the Mean. Do not listen to unsubstantiated words; do not follow plans about which you have not sought counsel. Of all who are to be loved, is not the ruler the chief? Of all who are to be feared, are not the people the chief? If the multitude were without their sovereign Head, whom should they sustain aloft? If the sovereign had not the multitude, there would be none to guard the country for him. Be reverential! Carefully maintain the throne which you are to occupy, cultivating (the virtues) that are to be desired in you. If within the four seas there be distress and poverty, your Heaven-conferred revenues will come to a perpetual end. It is the mouth which sends forth what is good, and raises up war. I will not alter my words.'

Yü said, 'Submit the meritorious ministers one by one to the trial of divination¹, and let the favouring indication be followed.' The Tî replied, '(According to the rules for) the regulation of divination, one should first make up his mind, and afterwards refer (his judgment) to the great tortoise-shell. My mind (in this matter) was determined in the first place; I consulted and deliberated with all (my

¹ On Divination, see Part V, iv.

ministers and people), and they were of one accord with me. The spirits signified their assent, and the tortoise-shell and divining stalks concurred. Divination, when fortunate, should not be repeated.* Yü did obeisance with his head to the ground, and firmly declined (the place). The Tî said, 'You must not do so. It is you who can suitably (occupy my place).' On the first morning of the first month, (Yü) received the appointment in the temple (dedicated by Shun) to the spirits of his ancestors¹, and took the leading of all the officers, as had been done by the Tî at the commencement (of his government).*

3. The Tî said, 'Alas! O Yü, there is only the lord of Miáo² who refuses obedience; do you go and correct him.' Yü on this assembled all the princes, and made a speech to the host, saying, 'Ye multitudes here arrayed, listen all of you to my orders. Stupid is this lord of Miáo, ignorant, erring, and disrespectful. Despiteful and insolent to others, he thinks that all ability and virtue are with himself. A rebel to the right, he destroys (all the obligations of) virtue. Superior men are kept by him in obscurity, and mean men fill (all) the offices. The people reject him and will not protect him. Heaven

¹ Many contend that this was the ancestral temple of Yáo. But we learn from Confucius, in the seventeenth chapter of the Doctrine of the Mean, that Shun had established such a temple for his own ancestors, which must be that intended here.

² The lord of Miáo against whom Yü proceeded would not be the one whom Shun banished to San-wei, as related in the former Book, but some chieftain of the whole or a portion of the people, who had been left in their native seat. That Yáo, Shun, and Yü were all obliged to take active measures against the people of Miáo, shows the difficulty with which the Chinese sway was established over the country.

is sending down calamities upon him.* I therefore, along with you, my multitude of gallant men, bear the instructions (of the Tî) to punish his crimes. Do you proceed with united heart and strength, so shall our enterprize be crowned with success.'

At the end of three decades, the people of Miào continued rebellious against the commands (issued to them), when Yî came to the help of Yü, saying, 'It is virtue that moves Heaven; there is no distance to which it does not reach. Pride brings loss, and humility receives increase;—this is the way of Heaven.* In the early time of the Tî, when he was living by mount Lî[†], he went into the fields, and daily cried with tears to compassionate Heaven, and to his parents, taking to himself all guilt, and charging himself with (their) wickedness.* (At the same time) with respectful service he appeared before Kû-sâu, looking grave and awe-struck, till Kû also became transformed by his example. Entire sincerity moves spiritual beings,—how much more will it move this lord of Miào!''* Yü did homage to the excellent words, and said, 'Yes.' (Thereupon) he led back his army, having drawn off the troops. The Tî set about diffusing on a grand scale the virtuous influences of peace;—with shields and feathers they danced between the two staircases (in his courtyard). In seventy days, the lord of Miào came (and made his submission).

[†] Mount Lî is found in a hill near Phû Kâu, department of Phing-yang, Shan-hsi. It is difficult to reconcile what Yî says here of Shun 'in his early life' and his father Kû-sâu with the account of it as happening when Shun was fifty years old; see Mencius V, Part i, ch. 5. The whole is legendary, and there were, no doubt, more forms of the legend than one.

BOOK III. THE COUNSELS OF KÂO-YÂO.

KÂO-YÂO was Minister of Crime to Shun, and is still celebrated in China as the model for all administrators of justice. There are few or no reliable details of his history. Sze-mâ *Khien* says that Yü, on his accession to the throne, made Kâo-yáo his chief minister, with the view of his ultimately succeeding him, but that the design was frustrated by Kâo-yáo's death. But if there had been such a tradition in the time of Mencius, he would probably have mentioned it, when defending Yü from the charge of being inferior to Yáo and Shun, who resigned the throne to the worthiest, whereas he transmitted it to his son. Kâo-yáo's surname was Yen, but an end was made of his representatives, when the principality belonging to them was extinguished in the dynasty of *Kâu* by the ambitious state of *K'û*. There is still a family in China with the surname Kâo, claiming to be descended from this ancient worthy; but Kâo and Yáo are to be taken together in the *Shû* as his name.

The 'Counsels' in the Book do not appear as addressed directly to Shun, but are found in a conversation between Yü and Kâo-yáo, the latter being the chief speaker. The whole may be divided into four chapters:—the first, enunciating the principle that in government the great thing is for the ruler to pursue the course of his virtue, which will be seen in his knowledge and choice of men for office, thereby securing the repose of the people; the second, illustrating how men may be known; the third, treating of the repose of the people; in the fourth, the speaker asserts the reasonableness of his sentiments, and humbly expresses his own desire to be helpful to the sovereign.

1. Examining into antiquity, (we find that) Kâo-yáo said, 'If (the sovereign) sincerely pursues the course of his virtue, the counsels (offered to him) will be intelligent, and the aids (of admonition that he receives) will be harmonious.' Yü said, 'Yes, but explain yourself.' Kâo-yáo said, 'Oh! let him be careful about his personal cultivation, with thoughts that are far-reaching, and thus he will

produce a generous kindness and nice observance of distinctions among the nine branches of his kindred. All the intelligent (also) will exert themselves in his service; and in this way from what is near he will reach to what is distant.' Yü did homage to the excellent words, and said, 'Yes.' Kào-yáo continued, 'Oh! it lies in knowing men, and giving repose to the people.' Yü said, 'Alas! to attain to both these things might well be a difficulty even to the Tî. When (the sovereign) knows men, he is wise, and can put every one into the office for which he is fit. When he gives repose to the people, his kindness is felt, and the black-haired race cherish him in their hearts. When he can be (thus) wise and kind, what occasion will he have for anxiety about a Hwan-tâu? what to be removing a lord of Miào? what to fear any one of fair words, insinuating appearance, and great artfulness?'

2. Kào-yáo said, 'Oh! there are in all nine virtues to be discovered in conduct, and when we say that a man possesses (any) virtue, that is as much as to say he does such and such things.' Yü asked, 'What (are the nine virtues)?' Kào-yáo replied, 'Affability combined with dignity; mildness combined with firmness; bluntness combined with respectfulness; aptness for government combined with reverent caution; docility combined with boldness; straightforwardness combined with gentleness; an easy negligence combined with discrimination; boldness combined with sincerity; and valour combined with righteousness. (When these qualities are) displayed, and that continuously, have we not the good (officer)? When there is a daily

display of three (of these) virtues, their possessor could early and late regulate and brighten the clan (of which he was made chief). When there is a daily severe and reverent cultivation of six of them, their possessor could brilliantly conduct the affairs of the state (with which he was invested). When (such men) are all received and advanced, the possessors of those nine virtues will be employed in (the public) service. The men of a thousand and men of a hundred will be in their offices; the various ministers will emulate one another; all the officers will accomplish their duties at the proper times, observant of the five seasons (as the several elements predominate in them),—and thus their various duties will be fully accomplished. Let not (the Son of Heaven) set to the holders of states the example of indolence or dissoluteness. Let him be wary and fearful, (remembering that) in one day or two days there may occur ten thousand springs of things. Let him not have his various officers cumberers of their places. The work is Heaven's; men must act for it!*

3. 'From Heaven are the (social) relationships with their several duties; we are charged with (the enforcement of) those five duties;—and lo! we have the five courses of honourable conduct¹. From Heaven are the (social) distinctions with their several ceremonies; from us come the observances of those five ceremonies;—and lo! they appear in

¹ The five duties are those belonging to the five relationships, which are the constituents of society;—those between husband and wife, father and son, ruler and subject, elder brother and younger, friend and friend.

regular practice¹. When (sovereign and ministers show) a common reverence and united respect for these, lo! the moral nature (of the people) is made harmonious. Heaven graciously distinguishes the virtuous;—are there not the five habiliments, five decorations of them²? Heaven punishes the guilty;—are there not the five punishments, to be severally used for that purpose? The business of government!—ought we not to be earnest in it? ought we not to be earnest in it? *

‘Heaven hears and sees as our people hear and see; Heaven brightly approves and displays its terrors as our people brightly approve and would awe;—such connexion is there between the upper and lower (worlds). How reverent ought the masters of territories to be!’ *

4. Kào-yáo said, ‘My words are in accordance with reason, and may be put in practice.’ Yü said, ‘Yes, your words may be put in practice, and crowned with success.’ Kào-yáo added, ‘(As to that) I do not know, but I wish daily to be helpful. May (the government) be perfected!’

BOOK IV. THE YÎ AND Kĭ.

Yî and Kĭ, the names of Shun’s Forester and Minister of Agriculture, both of whom receive their appointments in Book i, occur near the commencement of this Book, and occasion is thence taken to give its title to the whole. But without good reason; for these worthies do not appear at all as interlocutors

¹ The five ceremonies are here those belonging to the distinctions of rank in connexion with the five constituent relations of society.

² See in next Book, ch. 1.

in it. Yü is the principal speaker; the Book belongs to the class of 'Counsels.'

To Yŷ there is, of course, assigned an ancient and illustrious descent; what is of more importance, is that the lords of *K'in*, who finally superseded the kings of *K'au*, traced their lineage to him. *K'hî* was the name of *K'î*, the character for the latter term meaning 'Millet,' and *K'hî* was so styled from his labours in teaching the people to sow and reap, so that *K'î* became equivalent to 'Minister of Agriculture.'

The contents of the Book have been divided into three chapters.

The first gives a conversation between Shun and Yü. Yü relates his own diligence and achievements as a model to Shun, and gives him various admonitions, while Shun insists on what his ministers should be, and wherein he wished them to help him. In the second chapter, Khwei, the Minister of Music, makes his appearance; it has no apparent connexion with the former. In the third, Shun and K'áo-yáo sing to each other on the mutual relation of the sovereign and his ministers.

I. The Tŷ said, 'Come Yü, you also must have excellent words (to bring before me).' Yü did obeisance, and said, 'Oh! what can I say, O Tŷ, (after K'áo-yáo)? I can (only) think of maintaining a daily assiduity.' K'áo-yáo said, 'Alas! will you describe it?' Yü replied, 'The inundating waters seemed to assail the heavens, and in their vast extent embraced the hills and overtopped the great mounds, so that the people were bewildered and overwhelmed. I mounted my four conveyances¹, and all along the hills hewed down the trees, at the same time, along with Yŷ, showing the multitudes how to get flesh to eat. I (also) opened passages for the streams (throughout the) nine (provinces), and conducted them to the four seas. I deepened (more-over) the channels and canals, and conducted them to the streams, sowing (grain), at the same time,

¹ See the Introduction, pp. 16, 17.

along with *Ki*, and showing the multitudes how to procure the food of toil, (in addition to) the flesh meat. I urged them (further) to exchange what they had for what they had not, and to dispose of their accumulated stores. (In this way) all the people got grain to eat, and the myriad regions began to come under good rule.' *Kão-yáo* said, 'Yes, we ought to model ourselves after your excellent words.'

Yü said, 'Oh! carefully maintain, O *Ti*, the throne which you occupy.' The *Ti* replied, 'Yes;' and *Yü* went on, 'Find your repose in your (proper) resting-point. Attend to the springs of things; study stability; and let your assistants be the upright:—then shall your movements be grandly responded to, (as if the people only) waited for your will. Thus you will brightly receive (the favour of) God;—will not Heaven renew its appointment of you, and give you blessing?' *

The *Ti* said, 'Alas! what are ministers?—are they not (my) associates? What are associates?—are they not (my) ministers?' *Yü* replied, 'Yes;' and the *Ti* went on, 'My ministers constitute my legs and arms, my ears and eyes. I wish to help and support my people;—you give effect to my wishes. I wish to spread the influence (of my government) through the four quarters;—you act as my agents. I wish to see the emblematic figures of the ancients,—the sun, the moon, the stars, the mountain, the dragons, and the flowery fowl (= the pheasant), which are depicted (on the upper garment); the temple cups, the pondweed, the flames, the grains of rice, the hatchet, and the symbol of distinction, which are embroidered (on the lower garment),—(I wish to see all these) fully displayed

in the five colours, so as to form the (ceremonial) robes;—it is yours to see them clearly (for me). I wish to hear the six pitch-tubes, the five notes (determined by them), and the eight kinds of musical instruments (regulated again by these), examining thereby the virtues and defects of government, according as (the odes that) go forth (from the court, set to music), and come in (from the people), are ordered by those five notes;—it is yours to hear them (for me). When I am doing wrong, it is yours to correct me;—do not follow me to my face, and, when you have retired, have other remarks to make. Be reverent, ye associates, who are before and behind and on each side of me! As to all the obstinately stupid and calumniating talkers, who are found not to be doing what is right, are there not—the target to exhibit (their true character)¹, the scourge to make them recollect, and the book of remembrance²? Do we not wish them to live along with us? There are also the masters (of music) to receive their compositions, (set them to music), and continually publish them (as corrected by themselves). If they become reformed they are to be received and employed; if they do not, let the terrors (of punishment) overtake them.'

¹ Archery was anciently made much of in China, and supposed to be a test of character. Unworthy men would not be found hitting frequently, and observing the various rules of the exercise. Confucius more than once spoke of archery as a discipline of virtue; see *Analects*, III, xvi.

² In the *Official Book of Kâu*, the heads of districts are required to keep a register of the characters of the people. *Shun's Book of Remembrance* would be a record on wood or cloth. The reference implies the use of writing.

Yü said, 'So far good! But let your light shine, O Tt, all under heaven, even to every grassy corner of the sea-shore, and throughout the myriad regions the most worthy of the people will all (wish) to be your ministers. Then, O Tt, you may advance them to office. They will set forth, and you will receive, their reports; you will make proof of them according to their merits; you will confer chariots and robes according to their services. Who will then dare not to cultivate a humble virtue? who will dare not to respond to you with reverence? If you, O Tt, do not act thus, all (your ministers) together will daily proceed to a meritless character.'

'Be not haughty like *Kû* of Tan¹, who found his pleasure only in indolence and dissipation, and pursued a proud oppressive course. Day and night without ceasing he was thus. He would make boats go where there was no water. He introduced licentious associates into his family. The consequence was that he brought the prosperity of his house to an end. I took warning from his course. When I married in Thû-shan², (I remained with my wife only the days) *hsin*, *zăn*, *kwei*, and *kiâ*. When (my son) *Kht* was wailing and weeping, I did not regard him, but kept planning with all my might my labour on the land. (Then) I assisted in completing the five Tenures³, extending over 5000 *lî*⁴; (in appointing) in the provinces twelve Tutors, and in establishing

¹ This was the son of Yáo. He must have been made lord of some principality, called Tan.

² Yü married the daughter of the lord of Thû-shan, a principality in the present department of Făng-yung, An-hui.

³ See in the Tribute of Yü, Part II.

⁴ The *lî* is what is called the Chinese mile, generally reckoned to be 360 paces.

in the regions beyond, reaching to the four seas, five Presidents. These all pursue the right path, and are meritorious; but there are still (the people of) Mião, who obstinately refuse to render their service. Think of this, O Tï.' The Tï said, 'That my virtue is followed is the result of your meritorious services so orderly displayed. And now Kão-yáo, entering respectfully into your arrangements, is on every hand displaying the (various) punishments, as represented, with entire intelligence.'

2. Khwei said, 'When the sounding-stone is tapped or struck with force, and the lutes are strongly swept or gently touched, to accompany the singing, the progenitors (of the Tï) come (to the service),* the guest of Yü¹ is in his place, and all the princes show their virtue in giving place to one another. (In the court) below (the hall) there are the flutes and hand-drums, which join in at the sound of the rattle, and cease at that of the stopper, when the organ and bells take their place. (This makes) birds and beasts fall moving. When the nine parts of the service, as arranged by the Tï, have all been performed, the male and female phoenix come with their measured gambolings (into the court).'

Khwei said, 'Oh! when I smite the (sounding-) stone, or gently strike it, the various animals lead on one another to dance², and all the chiefs of the official departments become truly harmonious.'

¹ Kû of Tan.

² These last words of Khwei have already appeared in Book i, ch. 5. They are more in place here, though this second chapter has no apparent connexion with what precedes. 'The stone' is the sonorous stone formed, often in the shape of a carpenter's square, into a musical instrument, still seen everywhere in China.

3. The Tî on this made a song, saying, 'We must deal cautiously with the favouring appointment of Heaven, at every moment and in the smallest particular.' * He then sang,

'When the members (work) joyfully,
The head rises (grandly);
And the duties of all the offices are fully discharged!'

Kão-yâo did obeisance with his head to his hands and then to the ground, and with a loud and rapid voice said, 'Think (O Tî). It is yours to lead on and originate things. Pay careful attention to your laws (in doing so). Be reverential! and often examine what has been accomplished (by your officers). Be reverential!' With this he continued the song,

'When the head is intelligent,
The members are good;
And all affairs will be happily performed!'

Again he continued the song,

'When the head is vexatious,
The members are idle;
And all affairs will go to ruin!'

The Tî said, 'Yes, go and be reverently (attentive to your duties).'

PART III. THE BOOKS OF HSIÂ.

BOOK I. THE TRIBUTE OF YÜ.

HSIÂ is the dynastic designation under which Yü and his descendants held the throne for 439 years (B. C. 2205-1767). On the conclusion of his labours, according to what was the universally accepted tradition in the *Kâu* period, Yü was appointed by Yâo to be earl of Hsiâ, a small principality in Ho-nan, identified with the present Yü-tâu, department Khâi-fâng, which thus still retains the name of Yü.

It has been repeatedly said in the Introduction that the Tribute of Yü describes what was done before the death of Yâo. The reason why it got its place as the first of the Books of Hsiâ was, no doubt, because the merit set forth in it was the ground of Yü's advancement to the throne.

Altogether the Books of Hsiâ are properly no more than three;—a fact which shows that in so early a period the duty of the recorder was little exercised, or that the destruction of its monuments in the course of time was nearly complete. We may assume that it was in consequence of both of these things that, when the collection of the *Shû* was made, only three documents of Hsiâ were found, to go into it.

The word 'Tribute' in the name of this first Book is not to be understood only in the sense of a contribution paid by one nation to another in acknowledgment of subjection, but also as the contribution of revenue paid by subjects to their proper ruler. The term, moreover, gives a very inadequate idea of the contents, which describe generally the labours of Yü in remedying the disasters occasioned by the inundation with which he had to cope, and how he then defined the boundaries of the different provinces, made other important territorial divisions, and determined the quality of the soil in each province, and the proportion of revenue it should pay, with other particulars. The Book, if we could fully credit it, would be a sort of domesday book of China in the twenty-third century

B.C., in the compass of a few pages. In the classification of the Books of the Shū, according to their subject-matter, this is rightly considered as a Canon. The first section of it is divided into one short introductory chapter, and nine others, each containing the account of one province.

Section 1.

1. Yü divided the land. Following the course of the hills, he cut down the trees. He determined the highest hills and largest rivers (in the several regions).

2. With respect to *K'ī K'âu*¹, he did his work at Hû-khâu, and took effective measures at (the mountains) Liang and *K'hi*. Having repaired the works on Thâi-yüan, he proceeded on to the south of (mount) Yo. He was successful with his labours on Tan-hwâi, and went on to the cross-flowing stream of Kang.

The soil of this province was whitish and mellow. Its contribution of revenue was the highest of the highest class, with some proportion of the second. Its fields were the average of the middle class.

¹ *K'ī K'âu* embraced the present provinces of Shan-hsî, K'ih-lî, the three most northern departments of Ho-nan, and the western portion of Lião-tung. It had the Ho—what we call the Yellow river—on three sides of it. On the west was all that part of the Ho which forms the dividing line between Shen-hsî and Shan-hsî. At the south-western corner of Shan-hsî, the Ho turns to the east: and in Yü's time it flowed eastwards to about the place where K'ih-lî, Shan-tung, and Ho-nan all touch, forming the southern boundary of *K'ī K'âu*. Thence it ran north and east, till its waters entered the present gulph of K'ih-lî, forming, so far, the eastern boundary of the province. The northern boundary must be left undefined.

It would be foreign to the object of the present publication of the Shū, and take too much space, to give notes on the details of Yü's operations in *K'ī K'âu* and the other provinces.

The (waters of the) Hăng and Wei were brought to their proper channels, and Tâ-lü was made capable of cultivation.

The wild people of the islands (brought) dresses of skins (i. e. fur dresses); keeping close on the right to the rocks of Kieh, they entered the Ho.

3. Between the Kî and the Ho was Yen Kâu¹.

The nine branches of the Ho were made to keep their proper channels. Lêi-hsiâ was made a marsh, in which (the waters of) the Yung and the 3ü were united. The mulberry grounds were made fit for silkworms, and then (the people) came down from the heights, and occupied the grounds (below).

The soil of this province was blackish and rich; the grass in it was luxuriant, and the trees grew high. Its fields were the lowest of the middle class. Its contribution of revenue was fixed at what would just be deemed the correct amount; but it was not required from it, as from the other provinces, till after it had been cultivated for thirteen years. Its articles of tribute were varnish and silk, and, in baskets, woven ornamental fabrics.

They floated along the Kî and Thâ, and so reached the Ho.

4. The sea and (mount) Tâi were the boundaries of Khing Kâu².

¹ Yen Kâu was a small province, having the Ho on the north, the Kî on the south, the gulph of Kih-lî on the east, and Yü Kâu, Yü's seventh province, on the west. It embraced the department of Tâ-ming, with portions of those of Ho-kien and Thien-king, in Kih-lî, and the department of Tung-khang, with portions of those of Kî-nan and Yen-kâu, in Shan-tung.

² Khing Kâu, having mount Tâi and Hsü Kâu (the next province) on the west and south, Yen Kâu and the sea on the north-west and the north, and the sea on the east and south,

(The territory of) Yü-t was defined ; and the Wei and 3ze were made to keep their (old) channels.

Its soil was whitish and rich. Along the shore of the sea were wide tracts of salt land. Its fields were the lowest of the first class, and its contribution of revenue the highest of the second. Its articles of tribute were salt, fine cloth of dolichos fibre, productions of the sea of various kinds ; with silk, hemp, lead, pine trees, and strange stones, from the valleys of Tái. The wild people of Lái were taught tillage and pasturage, and brought in their baskets the silk from the mountain mulberry tree.

They floated along the Wăn, and so reached the K1.

5. The sea, mount Tái, and the Hwâi were (the boundaries of) Hsü Kâu¹.

The Hwâi and the Î (rivers) were regulated. The (hills) Măng and Yü were made fit for cultivation. (The waters of) Tâ-yeh were confined (so as to form

would be still smaller than Yen Kâu, and contain the three departments of K'ing-kâu, Lái-kâu, and Têng-kâu, with the western portion of that of K'î-nan, in Shan-tung. From the text we should never suppose that it passed across the sea which washes the north and east of Shan-tung, and extended indefinitely into Lião-tung and Corla. This, however, is the view of many Chinese geographers.

¹ The western boundary of Hsü Kâu, which is not given in the text, was Yü Kâu, and part of K'ing Kâu. It embraced the present department of Hsü-kâu, the six districts—Tháo-yüan, K'ing-ho, An-tung, Hsü-k'ien, Sui-ning, and Kan-yü, department of Hwâi-an, with Phei Kâu and Hái Kâu,—all in Kiang-sü ; the whole of Yen-kâu department, Tung-phing Kâu and the south of Phing-yin district in the department of Thái-an, the department of Î-kâu, and portions of those of K'î-nan and K'ing-kâu,—all in Shan-tung ; with the four districts Hwâi-yüan, Wû-ho, Hung, and Ling-pi, department of Făng-yang, with Sze Kâu and Hsü Kâu,—all in An-hui.

a marsh); and (the tract of) Tung-yüan was successfully brought under management.

The soil of this province was red, clayey, and rich. Its grass and trees grew more and more bushy. Its fields were the second of the highest class; its contribution of revenue was the average of the second. Its articles of tribute were—earth of five different colours, variegated pheasants from the valleys of mount Yü, the solitary dryandra from the south of mount Yt, and the sounding-stones that (seemed to) float on the (banks of the) Sze. The wild tribes about the Hwâi brought oyster-pearls and fish, and their baskets full of deep azure and other silken fabrics, chequered and pure white.

They floated along the Hwâi and the Sze, and so reached the Ho.

6. The Hwâi and the sea formed (the boundaries of) Yang Kâu¹.

The (lake of) Phăng-lt was confined to its proper limits, and the sun-birds (= the wild geese) had places

¹ The Hwâi was the boundary of Yang Kâu on the north, and we naturally suppose that the other boundary mentioned, the sea, should be referred to the south of the province. If it were really so, Yang Kâu must have extended along the coast as far as Cochin-China, and not a few Chinese scholars argue that it did so. But that no southern boundary of the province is mentioned may rather be taken as proving that when this Book was compiled, the country south of the Kiang—the present Yang-ze—was unknown.

Along the greater part of its course, the province was continuous on the west with K'ing Kâu, and in the north-west with Yü Kâu. We may safely assign to it the greater portion of An-hui, and a part of the department of Hwang-kâu, in Hû-pei. All this would be the northern portion of the province. How far it extended southwards into Kê-kiang and Kiang-hsî, it is impossible to say.

to settle on. The three *Kiang* were led to enter the sea, and it became possible to still the marsh of *Kăn*. The bamboos, small and large, then spread about; the grass grew thin and long, and the trees rose high; the soil was miry.

The fields of this province were the lowest of the lowest class; its contribution of revenue was the highest of the lowest class, with a proportion of the class above. Its articles of tribute were gold, silver, and copper; *yâo* and *khwăn* stones; bamboos, small and large; (elephants') teeth, hides, feathers, hair, and timber. The wild people of the islands brought garments of grass, with silks woven in shell-patterns in their baskets. Their bundles contained small oranges and pummeloës,—rendered when specially required.

They followed the course of the *Kiang* and the sea, and so reached the *Hwâi* and the *Sze*.

7. (Mount) *King* and the south of (mount) *Hăng* formed (the boundaries of) *King Kâu*¹.

The *Kiang* and the *Han* pursued their (common) course to the sea, as if they were hastening to court. The nine *Kiang* were brought into complete order. The *Tho* and *Khien* (streams) were conducted by

¹ Mount *King*, which bounded *King Kâu* on the north, is in the department of *Hsiang-yang*, *Hû-pei*, and is called the southern *King*, to distinguish it from another mountain of the same name farther north in *Yung Kâu*. Mount *Hăng*, its southern boundary, is 'the southern mountain' of the Canon of *Shun* in *Hăng-kâu* department, *Hû-nan*. *Yang Kâu* was on the east, and the country on the west was almost unknown. *King Kâu* contained the greater portion of the present provinces of *Hû-pei* and *Hû-nan*, and parts also of *Kwei-kâu* and *Sze-khuan*. Some geographers also extend it on the south into *Kwang-tung* and *Kwang-hsî*, which is very unlikely.

their proper channels. The land in (the marsh of) Yün (became visible), and (the marsh of) Măng was made capable of cultivation.

The soil of this province was miry. Its fields were the average of the middle class; and its contribution of revenue was the lowest of the highest class. Its articles of tribute were feathers, hair, (elephants') teeth, and hides; gold, silver, and copper; *kün* trees, wood for bows, cedars, and cypresses; grindstones, whetstones, flint stones to make arrow-heads, and cinnabar; and the *kün* and *lû* bamboos, with the *hû* tree, (all good for making arrows)—of which the Three Regions were able to contribute the best specimens. The three-ribbed rush was sent in bundles, put into cases. The baskets were filled with silken fabrics, azure and deep purple, and with strings of pearls that were not quite round. From the (country of the) nine *Kiang*, the great tortoise was presented when specially required (and found).

They floated down the *Kiang*, the *Tho*, the *Kkien*, and the *Han*, and crossed (the country) to the *Lo*, whence they reached the most southern part of the *Ho*.

8. The *King* (mountain) and the *Ho* were (the boundaries of) *Yü Kâu*¹.

The *Î*, the *Lo*, the *Khan*, and the *Kien* were conducted to the *Ho*. The (marsh of) *Yung-po* was

¹ *Yü Kâu* was the central one of *Yü's* nine divisions of the country, and was conterminous, for a greater or less distance, with all of them, excepting *Khing Kâu*, which lay off in the east by itself. It embraced most of the present *Ho-nan*, stretching also into the east and south, so as to comprehend parts of *Shan-tung* and *Hû-pei*.

confined within its proper limits. The (waters of that of) Ko were led to (the marsh of) Mǎng-k'ô.

The soil of this province was mellow; in the lower parts it was (in some places) rich, and (in others) dark and thin. Its fields were the highest of the middle class; and its contribution of revenue was the average of the highest class, with a proportion of the very highest. Its articles of tribute were varnish, hemp, fine cloth of dolichos fibre, and the bæhmerea. The baskets were full of chequered silks, and of fine floss silk. Stones for polishing sounding-stones were rendered when required.

They floated along the Lo, and so reached the Ho.

9. The south of (mount) Hwâ and the Black-water were (the boundaries of) Liang K'âu¹.

The (hills) Min and Po were made capable of cultivation. The Tho and K'ien streams were conducted by their proper channels. Sacrifices were offered to (the hills) Zhâi and Mâng on the regulation (of the country about them).* (The country of) the wild tribes about the Ho was successfully operated on.

¹ Liang K'âu was an extensive province, and it is a remarkable fact that neither the dominions of the Shang nor the K'âu dynasty, which followed Hsiâ, included it. Portions of it were embraced in the Yü and Yung provinces of K'âu, but the greater part was considered as wild, savage territory, beyond the limits of the Middle Kingdom. It is difficult to believe that the great Yü operated upon it, as this chapter would seem to indicate. The Hwâ at its north-eastern corner is the western mountain of Shun. The Black-water, or 'the K'iang of the Golden Sands,' is identified with the present Lû. The province extended over most of the present Sze-k'üan, with parts of Shen-hsi and Kan-sü. I can hardly believe, as many do, that it extended far into Yün-nan and Kwei-k'au.

The soil of this province was greenish and light. Its fields were the highest of the lowest class; and its contribution of revenue was the average of the lowest class, with proportions of the rates immediately above and below. Its articles of tribute were—the best gold, iron, silver, steel, flint stones to make arrow-heads, and sounding-stones; with the skins of bears, foxes, and jackals, and (nets) woven of their hair.

From (the hill of) Hst-*k'ing* they came by the course of the Hwan; floated along the *K'hien*, and then crossed (the country) to the Mien; passed to the Wei, and (finally) ferried across the Ho.

10. The Black-water and western Ho were (the boundaries of) Yung *K'âu*¹.

The Weak-water was conducted westwards. The *K'ing* was led to mingle its waters with those of the Wei. The *K'hi* and the *K'hi* were next led in a similar way (to the Wei), and the waters of the Fêng found the same receptacle.

(The mountains) *K'ing* and *K'hi* were sacrificed to.* (Those of) *Kung-nan* and *K'hiun-wû* (were also regulated), and (all the way) on to Niáo-shû. Successful measures could now be taken with the plains and swamps, even to (the marsh of) *K'û-yeh*. (The country of) San-wei was made habitable, and the (affairs of the) people of San-miáo were greatly arranged.

¹ The Black-water, which was the western boundary of Yung *K'âu*, was a different river from that which, with the same name, ran along the south of Liang *K'âu*. Yung *K'âu* was probably the largest of Yü's provinces, embracing nearly all the present provinces of Shen-hsi and Kan-sü, and extending indefinitely northwards to the Desert.

The soil of the province was yellow and mellow. Its fields were the highest of the highest class, and its contribution of revenue the lowest of the second. Its articles of tribute were the *khiu* jade and the lin, and (the stones called) lang-kan.

Past *Ki-shih* they floated on to Lung-măn on the western Ho. They then met on the north of the Wei (with the tribute-bearers from other quarters).

Hair-cloth and skins (were brought from) Khwăn-lun, Hsi-kih, and *Kkü-sâu*;—the wild tribes of the west (all) coming to (submit to Yü's) arrangements.

Section 2.

The division of the Book into two sections is a convenient arrangement, but modern, and not always followed. The former section gives a view of Yü's labours in each particular province. This gives a general view of the mountain ranges of the country, and of the principal streams; going on to other labours, subsequently, as was seen in the Introduction, ascribed to Yü,—his conferring lands and surnames, and dividing the whole territory into five domains. The contents are divided into five chapters:—the first, describing the mountains; the second, describing the rivers; the third, containing a summary of all the labours of Yü thus far mentioned; the fourth, relating his other labours; and the fifth, celebrating Yü's fame, and the completion of his work.

1. (Yü) surveyed and described (the hills), beginning with *Khien* and *Khi* and proceeding to mount *King*; then, crossing the Ho, Hû-khâu, and Lêi-shâu, going on to *Thái-yo*. (After these came) *Ti-kû* and *Hsi-khăng*, from which he went on to *Wang-wû*; (then there were) *Thái-hang* and mount *Hăng*, from which he proceeded to the rocks of *Kieh*, where he reached the sea.

(South of the Ho, he surveyed) *Hsi-khing*, *Kü-yü*,

and Nião-shû, going on to Thâi-hwâ; (then) Hsiung-r, Wâi-fang, and Thung-pâi, from which he proceeded to Pei-wei.

He surveyed and described Po-*khung*, going on to (the other) mount *King*; and Nêi-fang, from which he went on to Tâ-pieh.

(He did the same with) the south of mount Min, and went on to mount Hăng. Then crossing the nine *Kiang*, he proceeded to the plain of Fû-*khien*.

2. He traced the Weak-water as far as the Ho-lî (mountains), from which its superfluous waters went away among the moving sands.

He traced the Black-water as far as San-wei, from which it (went away to) enter the southern sea.

He traced the Ho from Kî-shih as far as Lung-măn; and thence, southwards, to the north of (mount) Hwâ; eastward then to Tî-*khû*; eastward (again) to the ford of Măng; eastward (still) to the junction of the Lo; and then on to Tâ-pei. (From this the course was) northwards, past the *Kiang*-water, on to Tâ-lü; north from which the river was divided, and became the nine Ho, which united again, and formed the Meeting Ho, when they entered the sea.

From Po-*khung* he traced the Yang, which, flowing eastwards, became the Han. Farther east it became the water of 3hang-lang; and after passing the three Dykes, it went on to Tâ-pieh, southwards from which it entered the *Kiang*. Eastward still, and whirling on, it formed the marsh of Phăng-lî; and from that its eastern flow was the northern *Kiang*, as which it entered the sea.

From mount Min he traced the *Kiang*, which, branching off to the east, formed the Tho; eastward again, it reached the Lî, passed the nine *Kiang*, and

went on to Tung-ling; then flowing east, and winding to the north, it joined (the Han) with its eddying movements. From that its eastern flow was the middle *Kiang*, as which it entered the sea.

He traced the Yen water, which, flowing eastward, became the *Ki*, and entered the Ho. (Thereafter) it flowed out, and became the Yung (marsh). Eastward, it issued forth on the north of *Tháo-khiu*, and flowed farther east to (the marsh of) Ko; then it went north-east, and united with the Wán; thence it went north, and (finally) entered the sea on the east.

He traced the Hwái from the hill of Thung-pái. Flowing east, it united with the Sze and the *Í*, and (still) with an eastward course entered the sea.

He traced the Wei from (the hill) *Niáo-shû-thung-shüeh*. Flowing eastward, it united with the Fêng, and eastwards again with the *King*. Farther east still, it passed the *Khi* and the *Khü*, and entered the Ho.

He traced the Lo from (the hill) *Hsiung-r*. Flowing to the north-east, it united with the *Kien* and the *Khan*, and eastwards still with the *Í*. Then on the north-east it entered the Ho.

3. (Thus), throughout the nine provinces a similar order was effected:—the grounds along the waters were everywhere made habitable; the hills were cleared of their superfluous wood and sacrificed to;* the sources of the rivers were cleared; the marshes were well banked; and access to the capital was secured for all within the four seas.

The six magazines (of material wealth) were fully attended to; the different parts of the country were subjected to an exact comparison, so that con-

tribution of revenue could be carefully adjusted according to their resources. (The fields) were all classified with reference to the three characters of the soil; and the revenues for the Middle Region were established.

4. He conferred lands and surnames. (He said), 'Let me set the example of a reverent attention to my virtue, and none will act contrary to my conduct.'

Five hundred *li* formed the Domain of the Sovereign. From the first hundred they brought as revenue the whole plant of the grain; from the second, the ears, with a portion of the stalk; from the third, the straw, but the people had to perform various services; from the fourth, the grain in the husk; and from the fifth, the grain cleaned.

Five hundred *li* (beyond) constituted the Domain of the Nobles. The first hundred *li* was occupied by the cities and lands of the (sovereign's) high ministers and great officers; the second, by the principalities of the barons; and the (other) three hundred, by the various other princes.

Five hundred *li* (still beyond) formed the Peace-securing Domain. In the first three hundred, they cultivated the lessons of learning and moral duties; in the other two, they showed the energies of war and defence.

Five hundred *li* (remoter still) formed the Domain of Restraint. The (first) three hundred were occupied by the tribes of the *Î*; the (other) two hundred, by criminals undergoing the lesser banishment.

Five hundred *li* (the most remote) constituted the Wild Domain. The (first) three hundred were

occupied by the tribes of the Man; the (other) two hundred, by criminals undergoing the greater banishment.

5. On the east, reaching to the sea; on the west, extending to the moving sands; to the utmost limits of the north and south:—his fame and influence filled up (all within) the four seas. Yü presented the dark-coloured symbol of his rank, and announced the completion of his work.

BOOK II. THE SPEECH AT KAN.

WITH this Book there commence the documents of the Shū that may be regarded, as I have said in the Introduction, as contemporaneous with the events which they describe. It is the first of the 'Speeches,' which form one class of the documents of the classic.

The text does not say who the king mentioned in it was, but the prevalent tradition has always been that he was *K'hi*, the son and successor of Yü. Its place between the Tribute of Yü and the next Book belonging to the reign of Thái Khang, *K'hi*'s son, corroborates this view.

Kan is taken as the name of a place in the southern border of the principality of Hû, with the lord of which *K'hi* fought. The name of Hû itself still remains in the district so called of the department Hsi-an, in Shen-hsi.

The king, about to engage in battle with a rebellious vassal, assembles his generals and troops, and addresses them. He declares obscurely the grounds of the expedition which he had undertaken, and concludes by stimulating the soldiers to the display of courage and observance of order by promises of reward and threats of punishment.

There was a great battle at Kan. (Previous to it), the king called together the six nobles, (the leaders of his six hosts), and said, 'Ah! all ye who

are engaged in my six hosts, I have a solemn announcement to make to you.

'The lord of Hû wildly wastes and despises the five elements (that regulate the seasons), and has idly abandoned the three acknowledged commencements of the year¹. On this account Heaven is about to destroy him, and bring to an end his appointment (to Hû); and I am now reverently executing the punishment appointed by Heaven.*

'If you, (the archers) on the left², do not do your work on the left, it will be a disregard of my orders. If you, (the spearmen) on the right², do not do your work on the right, it will be a disregard of my orders. If you, charioteers², do not observe the rules for the management of your horses, it will be a disregard of my orders. You who obey my orders, shall be rewarded before (the spirits of) my ancestors; and you who disobey my orders, shall be put to death before the altar of the spirits of the land, and I will also put to death your children.*'

¹ The crimes of the lord of Hû are here very obscurely stated. With regard to the second of them, we know that Hsiâ commenced its year with the first month of spring, Shang a month earlier, and Kâu about mid-winter. It was understood that every dynasty should fix a new month for the beginning of the year, and the dynasty of K'in actually carried its first month back into our November. If the lord of Hû claimed to begin the year with another month than that which Yü had fixed, he was refusing submission to the new dynasty. No doubt, the object of the expedition was to put down a dangerous rival.

² The chariots were the principal part of an ancient Chinese army; it is long before we read of cavalry. A war-chariot generally carried three. The driver was in the centre; on his left was an archer, and a spearman occupied the place on his right. They all wore mail.

BOOK III. THE SONGS OF THE FIVE SONS.

This Book ranks in that class of the documents of the Shū which goes by the name of 'Instructions.' Though the form of it be poetical, the subject-matter is derived from the Lessons left by Yü for the guidance of his posterity.

Thái Khang succeeded to his father in B.C. 2188, and his reign continues in chronology to 2160. His character is given here in the introductory chapter. *K'hiung*, the principality of Í who took the field against him, is identified with the sub-department of Tê-Kâu, department K'í-nan, Shan-tung. There is a tradition that Í, at an early period of his life, was lord of a state in the present Ho-nan. This would make his movement against Thái Khang, 'south of the Ho,' more easy for him. The name of Thái Khang remains in the district so called of the department *K'ăn-kâu*, Ho-nan. There, it is said, he died, having never been able to recross the Ho.

In his song the king's first brother deplores how he had lost the affections of the people; the second speaks of his dissolute extravagance; the third mourns his loss of the throne; the fourth deplores his departure from the principles of Yü, and its disastrous consequences; and the fifth is a wail over the miserable condition of them all.

1. Thái Khang occupied the throne like a personator of the dead¹. By idleness and dissipation he extinguished his virtue, till the black-haired people all wavered in their allegiance. He, however, pursued his pleasure and wanderings without any

¹ The character that here as a verb governs the character signifying 'throne' means properly 'a corpse,' and is often used for the personator of the dead, in the sacrificial services to the dead which formed a large part of the religious ceremonies of the ancient Chinese. A common definition of it is 'the semblance of the spirit,'=the image into which the spirit entered. Thái Khang was but a personator on the throne, no better than a sham sovereign.

self-restraint. He went out to hunt beyond the Lo, and a hundred days elapsed without his returning. (On this) Î, the prince of *K'ziung*, taking advantage of the discontent of the people, resisted (his return) on (the south of) the Ho. The (king's) five brothers had attended their mother in following him, and were waiting for him on the north of the Lo; and (when they heard of Î's movement), all full of dissatisfaction, they related the Cautions of the great Yü in the form of songs.

2. The first said,

'It was the lesson of our great ancestor :—
 The people should be cherished,
 And not looked down upon.
 The people are the root of a country;
 The root firm, the country is tranquil.
 When I look at all under heaven,
 Of the simple men and simple women,
 Any one may surpass me.
 If the One man err repeatedly¹,
 Should dissatisfaction be waited for till it appears?
 Before it is seen, it should be guarded against.
 In my dealing with the millions of the people,
 I should feel as much anxiety as if I were driving
 six horses with rotten reins.
 The ruler of men—
 How should he be but reverent (of his duties)?'

The second said,

'It is in the Lessons :—
 When the palace is a wild of lust,
 And the country is a wild for hunting;

¹ Any king, in the person of Yü, may be understood to be the speaker.

When spirits are liked, and music is the delight ;
When there are lofty roofs and carved walls ;—
The existence of any one of these things
Has never been but the prelude to ruin.'

The third said,

'There was the lord of Tháo and Thang¹,
Who possessed this region of Kí.
Now we have fallen from his ways,
And thrown into confusion his rules and laws ;—
The consequence is extinction and ruin.'

The fourth said,

Brightly intelligent was our ancestor,
Sovereign of the myriad regions.
He had canons, he had patterns,
Which he transmitted to his posterity.
The standard stone and the equalizing quarter
Were in the royal treasury.
Wildly have we dropt the clue he gave us,
Overturning our temple, and extinguishing our
sacrifices.'*

The fifth said,

'Oh ! whither shall we turn ?
The thoughts in my breast make me sad.
All the people are hostile to us ;
On whom can we rely ?
Anxieties crowd together in our hearts ;
Thick as are our faces, they are covered with blushes.
We have not been careful of our virtue ;
And though we repent, we cannot overtake the
past.'

¹ The lord of Tháo and Thang is Yáo, who was lord of the principalities of Tháo and Thang, but of which first and which last is uncertain, before his accession to the throne. Kí is the Kí Káu of the Tribute of Yü.

BOOK IV. THE PUNITIVE EXPEDITION OF YIN.

THIS Book is another of the 'Speeches' of the Shû, belonging to the reign of Kung Khang, a brother of Thái Khang, the fourth of the kings of Shang (B. C. 2159-2147).

Hsî and Ho, the principal ministers of the Board of Astronomy, descended from those of the same name in the time of Yáo, had given themselves over to licentious indulgence in their private cities, and grossly neglected their duties. Especially had they been unobservant of an eclipse of the sun in autumn. The king considered them worthy of death, and commissioned the marquis of Yin to execute on them the sentence of his justice. Where Yin was is not now known.

The principal part of the Book consists of the speech made by the marquis to his troops.

1. When Kung Khang commenced his reign over all within the four seas, the marquis of Yin was commissioned to take charge of the (king's) six hosts. (At this time) the Hsî and Ho had neglected the duties of their office, and were abandoned to drink in their (private) cities; and the marquis of Yin received the king's charge to go and punish them.

2. He made an announcement to his hosts, saying, 'Ah! ye, all my men, there are the well-counselled instructions of the sage (founder of our dynasty), clearly verified in their power to give stability and security:—"The former kings were carefully attentive to the warnings of Heaven¹,* and their ministers observed the regular laws (of their offices). All the officers (moreover) watchfully did their duty to

¹ That is, here, such warnings as were supposed to be conveyed by eclipses and other unusual celestial phenomena.

assist (the government), and their sovereign became entirely intelligent." Every year, in the first month of spring, the herald, with his wooden-tongued bell, goes along the roads¹, (proclaiming), "Ye officers able to instruct, be prepared with your admonitions. Ye workmen engaged in mechanical affairs, remonstrate on the subjects of your employments. If any of you do not attend with respect (to this requirement), the country has regular punishments for you."

' Now here are the Hst and Ho. They have allowed their virtue to be subverted, and are besotted by drink. They have violated the duties of their office, and left their posts. They have been the first to let the regulating of the heavenly (bodies) get into disorder, putting far from them their proper business. On the first day of the last month of autumn, the sun and moon did not meet harmoniously in Fang². The blind musicians beat their drums; the inferior officers galloped, and the common people (employed about the public offices) ran about³. The Hst and the Ho, however, as if they were (mere) personators of the dead in their offices, heard nothing and knew nothing;—so stupidly went they astray (from their duties) in the matter of the heavenly appearances, and rendered themselves liable to the death appointed by the former kings. The statutes of government say, "When they anticipate the time, let them be put to death without mercy; when (their

¹ A similar practice existed in the *K'au* dynasty.

² See the Introduction, p. 13.

³ Similar observances are still practised on occasion of an eclipse of the sun. See Biot's *Etudes sur l'Astronomie Indienne et Chinoise*, pp. 357-360.

reckoning) is behind the time, let them be put to death without mercy."

'Now I, with you all, am entrusted with the execution of the punishment appointed by Heaven.* Unite your strength, all of you warriors, for the royal House. Give me your help, I pray you, reverently to carry out the dread charge of the Son of Heaven.

'When the fire blazes over the ridge of Khwăn¹, gems and stones are burned together; but if a minister of Heaven exceed in doing his duty, the consequences will be fiercer than blazing fire. While I destroy, (therefore), the chief criminals, I will not punish those who have been forced to follow them; and those who have long been stained by their filthy manners will be allowed to renovate themselves.

'Oh! when sternness overcomes compassion, things are surely conducted to a successful issue. When compassion overcomes sternness, no merit can be achieved. All ye, my warriors, exert yourselves, and take warning, (and obey my orders)!'

¹ Khwăn is perhaps a part of the Khwăn-lun mountain in the west of the Ko-ko-nor, where the Ho has its sources. The speaker evidently thought of it as volcanic.

PART IV. THE BOOKS OF SHANG.

BOOK I. THE SPEECH OF THANG.

SHANG was the name under which the dynasty that superseded Hsiâ (B. C. 1766) held the kingdom for fully 300 years. Yin then began to be used as well as Shang, and the dynasty was called indifferently Shang or Yin, and sometimes Yin-Shang by a combination of the two names. The ruling House traced its origin into the remote times of antiquity, through Hsieh, whose appointment by Shun to be Minister of Instruction is related in the Canon of Shun. For his services Hsieh was invested with the principality of Shang, corresponding to the present small department of the same name in Shen-hsî. From Hsieh to Thang, the founder of the dynasty, there are reckoned fourteen generations, and we find Thang, when he first becomes prominent in history, a long way from the ancestral fief, in 'the southern Po,' corresponding to the present district of Shang-khiu, department Kwei-teh, Ho-nan. The title of the dynasty, however, was derived from the original Shang.

There were in the Shû, when the collection was formed, thirty-one documents of Shang in forty Books, of which only eleven remain in seventeen Books, two of them containing each three parts or sections. The Speech of Thang, that is now the first Book in the Part, was originally only the sixth. Thang was the designation of the hero, whose surname, dating from Hsieh, was 3ze, and name Lî. Thang may be translated, 'the Glorious One.' His common style in history is as K'hang Thang, 'Thang the Completer,' or 'Thang the Successful.'

He had summoned his people to take the field with him against Kieh, the cruel and doomed sovereign of Hsiâ, and finding them backward to the enterprise, he sets forth in this Book his reasons for attacking the tyrant, argues against their reluctance, using in the end both promises and threats to induce them to obey his orders.

The king said, 'Come, ye multitudes of the people, listen all to my words. It is not I, the little child¹, who dare to undertake a rebellious enterprise; but for the many crimes of the sovereign of Hsiâ, Heaven has given the charge to destroy him.*

'Now, ye multitudes, you are saying, "Our prince does not compassionate us, but (is calling us) away from our husbandry to attack and punish Hsiâ." I have indeed heard (these) words of you all; (but) the sovereign of Hsiâ is guilty, and, as I fear God, I dare not but punish him.*

'Now you are saying, "What are the crimes of Hsiâ to us?" The king of Hsiâ in every way exhausts the strength of his people, and exercises oppression in the cities of Hsiâ. His multitudes are become entirely indifferent (to his service), and feel no bond of union (to him). They are saying, "When wilt thou, O sun, expire? We will all perish with thee²." Such is the course of (the sovereign) of Hsiâ, and now I must go (and punish him).

'Assist, I pray you, me, the One man, to carry out the punishment appointed by Heaven. I will greatly reward you. On no account disbelieve me;—I will not eat my words. If you do not obey the words which I have thus spoken to you, I will put

¹ 'The little child' is a designation used humbly of themselves by the kings of Shang and Kâu. It is given also to them and others by such great ministers as Î Yin and the duke of Kâu.

² Kieh, it is said, had on one occasion, when told of the danger he was incurring by his cruelties, pointed to the sun, and said that as surely as the sun was in the heavens, so firm was he on the throne.

your children to death with you ;—you shall find no forgiveness.'

BOOK II. THE ANNOUNCEMENT OF KUNG-HUI.

THIS Book is the first of the 'Announcements,' which form a large class of the documents in the Shū. They are distinguished from the Speeches, as being made in a general assembly, or published, for the information of all, whereas the Speeches were made to an army.

Kung-hui, of an old family, whose surname was Zǎn, with its seat in the territory of Hsieh, corresponding to the present district of Thang, department Yen-káu, Shan-tung, was a minister of Thang. Thang has been successful against Kieh, and dethroned him, but is haunted by some feeling of remorse, and afraid that what he has done may be appealed to in future ages as an apology for rebellion. This gives occasion to the Announcement, in which Kung-hui vindicates the proceeding of the king, showing, first, that he had only obeyed the guidance of Heaven, and, then, that men consented with Heaven in the matter. He concludes with various counsels addressed to the king.

1. When Thang the Successful was keeping Kieh in banishment in Nan-kháo¹, he had a feeling of shame on account of his conduct, and said, 'I am afraid that in future ages men will fill their mouths with me, (as an apology for their rebellious proceedings.)'

2. On this Kung-hui made the following announcement: 'Oh! Heaven gives birth to the people with (such) desires, that without a ruler they must fall into all disorders; and Heaven again gives birth

¹ Nan-kháo is identified with the present district of Kháo, department Lô-káu, An-hui.

to the man of intelligence to regulate them.* The sovereign of Hsiâ had his virtue all-obsured, and the people were (as if they had fallen) amid mire and (burning) charcoal. Heaven hereupon gifted (our) king with valour and prudence, to serve as a sign and director to the myriad regions, and to continue the old ways of Yü. You are now (only) following the proper course, honouring and obeying the appointment of Heaven. The king of Hsiâ was an offender, falsely and calumniously alleging the sanction of supreme Heaven, to spread abroad his commands among the people. On this account God viewed him with disapprobation, caused our Shang to receive his appointment, and employed (you) to enlighten the multitudes (of the people).’ *

3. ‘Contemners of the worthy and parasites of the powerful,—many such followers he had indeed; (but) from the first our country was to the sovereign of Hsiâ like weeds among the springing corn, and blasted grains among the good. (Our people), great and small; were in constant apprehension, fearful though they were guilty of no crime. How much more was this the case, when our (prince’s) virtues became a theme (eagerly) listened to! Our king did not approach to (dissolute) music and women; he did not seek to accumulate property and wealth. To great virtue he gave great offices, and to great merit great rewards. He employed others as if (their excellences) were his own; he was not slow to change his errors. Rightly indulgent and rightly benevolent, from the display (of such virtue), confidence was reposed in him by the millions of the people.

‘When the earl of Ko¹ showed his enmity to the provision-carriers, the work of punishment began with Ko. When it went on in the east, the wild tribes of the west murmured; when it went on in the south, those of the north murmured:—they said, “Why does he make us alone the last?” To whatever people he went, they congratulated one another in their families, saying, “We have waited for our prince; our prince is come, and we revive.” The people’s honouring our Shang is a thing of long existence.’

4. ‘Show favour to the able and right-principled (among the princes), and aid the virtuous; distinguish the loyal, and let the good have free course. Absorb the weak, and punish the wilfully blind; take their states from the disorderly, and deal summarily with those going to ruin. When you (thus) accelerate the end of what is (of itself) ready to perish, and strengthen what is itself strong to live, how will the states all flourish! When (a sovereign’s) virtue is daily being renewed, he is cherished throughout the myriad regions; when his mind is full (only) of himself, he is abandoned by the nine branches of his kindred. Exert yourself, O king, to make your virtue (still more) illustrious, and set up (the standard of) the Mean before the people. Order your affairs

¹ Ko was a principality corresponding to the present district of Ning-ling, department of Kwei-teh, Ho-nan. It was thus near the southern Po, which belonged to Thang. Mencius tells us (III, ii, ch. 3) that Thang sent a multitude of his people to assist the farmers of Ko, about the poor produce of which their chief had lamented to him. That chief, however, instead of showing any gratitude, surprised and robbed those who were carrying provisions from Po to the labourers in the field, and committed various atrocities upon them. This aroused Thang’s indignation, and he made him the first object of his punitive justice.

by righteousness; order your heart by propriety;—so shall you transmit a grand example to posterity. I have heard the saying, “He who finds instructors for himself, comes to the supreme dominion; he who says that others are not equal to himself, comes to ruin. He who likes to put questions, becomes enlarged; he who uses only his own views, becomes smaller (than he was).” Oh! he who would take care for the end must be attentive to the beginning. There is establishment for the observers of propriety, and overthrow for the blinded and wantonly indifferent. To revere and honour the path prescribed by Heaven is the way ever to preserve the favouring appointment of Heaven.’*

BOOK III. THE ANNOUNCEMENT OF THANG.

THANG had made an end of the dynasty of Hsiâ, and returned to Po, when he issued this Announcement, which may be considered as a solemn inauguration of the new dynasty. He shows how he had taken possession of the throne in reverent submission to the will of Heaven, what appreciation he had of the duties devolving on him, and the spirit in which he would discharge them. In the end he calls on the princes and the people to sympathize and co-operate with him.

1. When the king returned from vanquishing Hsiâ and came to Po, he made a grand announcement to the myriad regions.

2. The king said, ‘Ah! ye multitudes of the myriad regions, listen clearly to the announcement of me, the One man¹. The great God has conferred

¹ ‘The One man’ has occurred before, in the Songs of the Five Sons, as a designation of the sovereign. It continues to be so to the present day.

(even) on the inferior people a moral sense, compliance with which would show their nature invariably right.* To make them tranquilly pursue the course which it would indicate is the work of the sovereign.

‘The king of Hsiâ extinguished his virtue, and played the tyrant, extending his oppression over you, the people of the myriad regions. Suffering from his cruel injuries, and unable to endure the worm-wood and poison, you protested with one accord your innocence to the spirits of heaven and earth.* The way of Heaven is to bless the good, and make the bad miserable. It sent down calamities on (the House of) Hsiâ, to make manifest its guilt. Therefore I, the little child, charged with the decree of Heaven and its bright terrors, did not dare to forgive (the criminal). I presumed to use a dark-coloured victim-bull, and, making clear announcement to the Spiritual Sovereign in the high heavens¹, requested leave to deal with the ruler of Hsiâ as a criminal.* Then I sought for the great Sage², with whom I might unite my strength, to request the favour (of Heaven) for you, my multitudes. High Heaven truly showed its favour to the inferior people, and the criminal has been degraded and subjected. What Heaven appoints is without error ;—brilliantly (now), like the blossoming of plants and trees, the millions of the people show a true reviving.’ *

3. ‘It is given to me, the One man, to secure the

¹ For ‘the Spiritual Sovereign in the high heavens,’ we have in the Confucian Analects, XX, 1, professing to quote this passage, ‘the most great and Sovereign God.’

² ‘The great Sage’ must be Î Yin, Thang’s chief adviser and minister, who appears prominently in the next Book.

harmony and tranquillity of your states and clans ; and now I know not whether I may not offend against (the Powers) above and below.* I am fearful and trembling, as if I were in danger of falling into a deep abyss. Throughout all the regions that enter on a new life under me, do not, (ye princes), follow lawless ways ; make no approach to insolence and dissoluteness ; let every one be careful to keep his statutes ;—that so we may receive the favour of Heaven.* The good in you I will not dare to keep concealed ; and for the evil in me I will not dare to forgive myself. I will examine these things in harmony with the mind of God.* When guilt is found anywhere in you who occupy the myriad regions, let it rest on me, the One man¹. When guilt is found in me, the One man, it shall not attach to you who occupy the myriad regions.

‘Oh ! let us attain to be sincere in these things, and so we shall likewise have a (happy) consummation.’

¹ There was a tradition in the *K'au* dynasty, given with variations by Hsün-ze, Sze-mâ K'ien, and others, which may be quoted to illustrate these noble sentiments of Thang. For seven years after his accession to the throne, B. C. 1766–1760, there was a great drought and famine. It was suggested at last that some human being should be offered in sacrifice to Heaven, and prayer made for rain. Thang said, ‘If a man must be the victim, I will be he.’ He fasted, cut off his hair and nails, and in a plain carriage, drawn by white horses, clad in rushes, in the guise of a sacrificial victim, he proceeded to a forest of mulberry trees, and there prayed, asking to what error or crime of his the calamity was owing. He had not done speaking when a copious rain fell.

BOOK IV. THE INSTRUCTIONS OF Î.

THANG died in B.C. 1754 or 1753, and was succeeded, so far as the evidence of the Shū goes, by his grandson, known as Thái Kĩa. The chief minister of Thang had been Î Yin, who delivers these Instructions to his young sovereign soon after his accession. Î was a great and wise man, 'a great sage,' as Thang calls him in the last Book, and is classed by Mencius among other celebrated ministers as 'the one most inclined to take office.' He reasons thus:—'Heaven's plan with mankind is that they who are first informed should instruct those who are later in being informed, and they who first apprehend principles should instruct those who are later in doing so.' He thought he was one of the former class, and a fire burned within him, impelling him to seek for office with a view to benefit the ignorant and erring. There were many legends about him in the times of K'âu. He was surnamed Î, from having been born near the river of that name, an affluent of the Ho. His name is said to have been Kih, and also Â-hăng (see the beginning of next Book). Yin was his designation. Thang had, probably, entrusted to him the guardianship of his grandson, and so he now went over the history of the kingdom from Yü, till it was transferred from the line of Hsiâ to that of Shang, celebrated the virtues of Thang and his government, and warned the young king of the fate that he must incur, if he neglected the instructions given to him.

1. In the twelfth month of the first year, on (the day) Yt-k'âu, Î Yin sacrificed to the former king, and presented the heir-king reverently before (the shrine of) his grandfather.* All the princes from the domain of the nobles and the royal domain were present; all the officers (also), each continuing to discharge his particular duties, were there to receive the orders of the chief minister. Î Yin then clearly described the complete virtue of the Meritorious Ancestor for the instruction of the (young) king.

2. He said, 'Oh! of old the former kings of Hsiâ cultivated earnestly their virtue, and then there were no calamities from Heaven. The spirits of the hills and rivers likewise were all in tranquillity; and the birds and beasts, the fishes and tortoises, all enjoyed their existence according to their nature.* But their descendant did not follow (their example), and great Heaven sent down calamities, employing the agency of our (ruler) who was in possession of its favouring appointment.* The attack (on Hsiâ) may be traced to (the orgies in) Ming-thiâu¹, but our (rise) began in Po. Our king of Shang brilliantly displayed his sagely prowess; for oppression he substituted his generous gentleness; and the millions of the people gave him their hearts. Now your Majesty is entering on the inheritance of his virtue;—all depends on (how) you commence your reign. To set up love, it is for you to love (your relations); to set up respect, it is for you to respect (your elders). The commencement is in the family and the state; the consummation is in (all within) the four seas.'

3. 'Oh! the former king began with careful attention to the bonds that hold men together. He listened to expostulation, and did not seek to resist it; he conformed to (the wisdom of) the ancients; occupying the highest position, he displayed intelligence; occupying an inferior position, he displayed his loyalty; he allowed (the good qualities of) the men (whom he employed), and did

¹ Ming-thiâu was a place not far from the capital of K'ieh (in the present district of An-yî, Hâi K'âu, Shan-hsi). He had a palace there, where the vilest orgies were celebrated that alienated the minds of the people from him,

not seek that they should have every talent ; in the government of himself, he seemed to think that he could never (sufficiently) attain. It was thus he arrived at the possession of the myriad regions.—How painstaking was he in these things !

‘ He extensively sought out wise men, who should be helpful to you, his descendant and heir. He laid down the punishments for officers, and warned those who were in authority, saying, “ If you dare to have constant dancing in your palaces, and drunken singing in your chambers,—that is called the fashion of sorcerers ; if you dare to set your hearts on wealth and women, and abandon yourselves to wandering about or to the chase,—that is called the fashion of extravagance ; if you dare to despise sage words, to resist the loyal and upright, to put far from you the aged and virtuous, and to seek the company of procacious youths,—that is called the fashion of disorder. Now if a high noble or officer be addicted to one of these three fashions with their ten evil ways¹, his family will surely come to ruin ; if the prince of a country be so addicted, his state will surely come to ruin. The minister who does not (try to) correct (such vices in the sovereign) shall be punished with branding.” These rules were minutely inculcated (also) on the sons of officers and nobles in their lessons.’

4. ‘ Oh ! do you, who now succeed to the throne, revere (these warnings) in your person. Think of

¹ The ‘ ten evil ways ’ are those mentioned in connexion with the three evil fashions ;—two under the sorcerers’ fashion, and four under each of the other two fashions.

them!—sacred counsels of vast importance, admirable words forcibly set forth! (The ways) of God are not invariable:—on the good-doer he sends down all blessings, and on the evil-doer he sends down all miseries.* Do you but be virtuous, be it in small things (or in large), and the myriad regions will have cause for rejoicing. If you be not virtuous, be it in large things (or in small), it will bring the ruin of your ancestral temple.'

BOOK V. THE THÂI KIÃ.

THIS Book also belongs to the class of 'Lessons or Instructions,' and is called 'the Thâi Kiã,' because the Instructions were addressed to the young monarch so named. It is divided into three sections or parts. Î Yin finds the young sovereign disobedient to his counsels, and proceeds to a high-handed measure. He removes him from his palace and companions, and keeps him in a sort of easy confinement, near the grave of his grandfather, all the period of mourning; and Thâi Kiã becomes sincerely penitent and virtuous. This is related in the first section. In the second, Î Yin brings the king back with honour to Po, to undertake the duties of the government, and congratulates him on his reformation. The king responds suitably, and asks the minister to continue to afford him his counsels, which the other at once proceeds to do. The third section is all occupied with further and important counsels.

Section 1.

1. The king, on succeeding to the throne, did not follow (the advice of) Â-hăng¹. (Â-hăng or) Î Yin

¹ Â-hăng, it is said by Sze-mâ K'ien, was the name of Â. Others make it the title of the chief minister under the dynasty of Shang, = 'the Support and Steelyard,' 'the Buttress and Director.'

then made the following writing¹:—‘The former king kept his eye continually on the bright requirements of Heaven, and so he maintained the worship of the spirits of heaven and earth, of those presiding over the land and the grain, and of those of the ancestral temple;—all with a sincere reverence.* Heaven took notice of his virtue, and caused its great appointment to light on him, that he should soothe and tranquillize the myriad regions.* I, Yin, then gave my assistance to my sovereign in the settlement of the people; and thus it is that you, O heir-king, have received the great inheritance. I have seen it myself in Hsiâ with its western capital², that when its rulers went through a prosperous course to the end, their ministers also did the same, and afterwards, when their successors could not attain to such a consummation, neither did their ministers. Take warning, O heir-king. Reverently use your sovereignty. If you do not play the sovereign, as the name requires, you will disgrace your grandfather.’

2. The king would not think (of these words), nor listen to them. On this Î Yin said, ‘The former king, before it was light, sought to have large and clear views, and then sat waiting for the dawn (to carry them into practice). He (also) sought on every side for men of ability and virtue, to instruct and guide his posterity. Do not frustrate his charge (to me), and bring on yourself your own overthrow. Be careful to strive after the virtue

¹ This is the first direct statement in the Shû of a communication made in writing.

² An-yî, the capital of Hsiâ, might be described as ‘western,’ from the standpoint of Po.

of self-restraint, and cherish far-reaching plans. Be like the forester, who, when he has adjusted the spring, goes to examine the end of the arrow, whether it be placed according to rule, and then lets go; reverently determine your aim, and follow the ways of your grandfather. Thus I shall be delighted, and be able to show to all ages that I have discharged my trust.'

3. The king was not yet able to change (his course). Î Yin said (to himself), 'This is (real) unrighteousness, and is becoming by practice (a second) nature. I cannot bear to be near (so) disobedient (a person). I will build (a place) in the palace at Thung¹, where he can be in silence near (the grave of) the former king. This will be a lesson which will keep him from going astray all his life.' The king went (accordingly) to the palace at Thung, and dwelt during the period of mourning. In the end he became sincerely virtuous.

Section 2.

1. On the first day of the twelfth month of his third year, Î Yin escorted the young king in the royal cap and robes back to Po. (At the same time) he made the following writing:—

'Without the sovereign, the people cannot have that guidance which is necessary to (the comfort of) their lives; without the people, the sovereign would have no sway over the four quarters (of the kingdom).

¹ Thung was the place where Thang's tomb was; probably in the present district of Yung-ho, department of Phû-kâu, Shan-hsi. The site or supposed site of the grave there was washed away in an overflow of the Fân river under the Yüan dynasty, and a stone coffin was removed to another position, near which a royal tomb has been built.

Great Heaven has graciously favoured the House of Shang, and granted to you, O young king, at last to become virtuous.* This is indeed a blessing that will extend without limit to ten thousand generations.'

2. The king did obeisance with his face to his hands and his head to the ground, saying, 'I, the little child, was without understanding of what was virtuous, and was making myself one of the unworthy. By my desires I was setting at nought all rules of conduct, and violating by my self-indulgence all rules of propriety, and the result must have been speedy ruin to my person. Calamities sent by Heaven may be avoided, but from calamities brought on by one's self there is no escape.* Heretofore I turned my back on the instructions of you, my tutor and guardian ;—my beginning has been marked by incompetency. Let me still rely on your correcting and preserving virtue, keeping this in view that my end may be good !'

3. Î Yin did obeisance with his face to his hands and his head on the ground, and said, 'To cultivate his person, and by being sincerely virtuous, bring (all) below to harmonious concord with him ;—this is the work of the intelligent sovereign. The former king was kind to the distressed and suffering, as if they were his children, and the people submitted to his commands,—all with sincere delight. Even in the states of the neighbouring princes, (the people) said, "We are waiting for our sovereign ; when our sovereign comes, we shall not suffer the punishments (that we now do)."

'O king, zealously cultivate your virtue. Regard (the example of) your meritorious grandfather. At no time allow yourself in pleasure and idleness. In

worshipping your ancestors, think how you can prove your filial piety ;* in receiving your ministers, think how you can show yourself respectful ; in looking to what is distant, try to get clear views ; have your ears ever open to lessons of virtue ;—then shall I acknowledge (and respond to) the excellence of your majesty with an untiring (devotion to your service).

Section 3.

1. Í Yin again made an announcement to the king, saying, ‘Oh! Heaven has no (partial) affection ;—only to those who are reverent does it show affection.* The people are not constant to those whom they cherish ;—they cherish (only) him who is benevolent. The spirits do not always accept the sacrifices that are offered to them ;—they accept only the sacrifices of the sincere.* A place of difficulty is the Heaven-(conferred) seat. When there are (those) virtues, good government is realized ; when they are not, disorder comes. To maintain the same principles as those who secured good government will surely lead to prosperity ; to pursue the courses of disorder will surely lead to ruin. He who at last, as at first, is careful as to whom and what he follows is a truly intelligent sovereign. The former king was always zealous in the reverent cultivation of his virtue, so that he was the fellow of God¹.* Now, O king, you have entered on the inheritance of his excellent line ;—fix your inspection on him.’

2. ‘(Your course must be) as when in ascending

¹ This phrase is used, as here, with reference to the virtue of a sovereign, making him as it were the mate of God, ruling on earth as He rules above ; and with reference to the honours paid to a departed sovereign, when he is associated with God in the great sacrificial services.

high you begin from where it is low, and when in travelling far you begin from where it is near. Do not slight the occupations of the people ;—think of their difficulties. Do not yield to a feeling of repose on your throne ;—think of its perils. Be careful for the end at the beginning. When you hear words that are distasteful to your mind, you must enquire whether they be not right ; when you hear words that accord with your own views, you must enquire whether they be not contrary to what is right. Oh ! what attainment can be made without anxious thought ? what achievement can be made without earnest effort ? Let the One man be greatly good, and the myriad regions will be rectified by him.'

3. 'When the sovereign does not with disputatious words throw the old rules of government into confusion, and the minister does not, for favour and gain, continue in an office whose work is done,—then the country will lastingly and surely enjoy happiness.'

BOOK VI.

THE COMMON POSSESSION OF PURE VIRTUE.

THIS is the last of the 'Instructions' of Í Yin ;—addressed, like those of the last two Books, to Thái Kíá, but at a later period when the great minister wished to retire from the toils of administration. He now disappears from the stage of history, though according to Sze-má K'ien, and a notice in the Preface to the Shū, he lived on to B. C. 1713, the eighth year of Thái Kíá's son and successor.

In this Book, his subject is 'Pure or Single-eyed Virtue,' and the importance of it to the ruler of the kingdom. He dwells on the fall of K'ieh through his want of this virtue, and the elevation of Thang through his possession of it ; treats generally on its nature and results ; and urges the cultivation of it on Thái Kíá.

1. Í Yin, having returned the government into

the hands of his sovereign, and being about to announce his retirement, set forth admonitions on the subject of virtue.

2. He said, 'Oh! it is difficult to rely on Heaven ;—its appointments are not constant.* (But if the sovereign see to it that) his virtue be constant, he will preserve his throne; if his virtue be not constant, the nine provinces will be lost by him. The king of Hsiâ could not maintain the virtue (of his ancestors) unchanged, but contemned the spirits and oppressed the people. Great Heaven no (longer) extended its protection to him. It looked out among the myriad regions to give its guidance to one who should receive its favouring appointment, fondly seeking (a possessor of) pure virtue, whom it might make lord of all the spirits.* Then there were I, Yin, and Thang, both possessed of pure virtue, and able to satisfy the mind of Heaven. He received (in consequence) the bright favour of Heaven, so as to become possessor of the multitudes of the nine provinces, and proceeded to change Hsiâ's commencement of the year. It was not that Heaven had any private partiality for the lord of Shang ;—it simply gave its favour to pure virtue.* It was not that Shang sought (the allegiance of) the lower people ;—the people simply turned to pure virtue. Where (the sovereign's) virtue is pure, his enterprizes are all fortunate ; where his virtue is wavering and uncertain, his enterprizes are all unfortunate. Good and evil do not wrongly befall men, but Heaven sends down misery or happiness according to their conduct.' *

3. 'Now, O young king, you are newly entering on your (great) appointment,—you should be seeking to

make new your virtue. At last, as at first, have this as your one object, so shall you make a daily renovation. Let the officers whom you employ be men of virtue and ability, and let the ministers about you be the right men. The minister, in relation to (his sovereign) above him, has to promote his virtue, and, in relation to the (people) beneath him, has to seek their good. How hard must it be (to find the proper man)! what careful attention must be required! (Thereafter) there must be harmony (cultivated with him), and a oneness (of confidence placed in him).

‘There is no invariable model of virtue;—a supreme regard to what is good gives the model of it. There is no invariable characteristic of what is good that is to be supremely regarded;—it is found where there is a conformity to the uniform consciousness (in regard to what is good). (Such virtue) will make the people with their myriad surnames all say, “How great are the words of the king!” and also, “How single and pure is the king’s heart!” It will avail to maintain in tranquillity the rich possession of the former king, and to secure for ever the (happy) life of the multitudes of the people.’

4. ‘Oh! (to retain a place) in the seven-shrined temple¹ of ancestors is a sufficient witness of virtue.* To be acknowledged as chief by the myriad heads of families is a sufficient evidence of one’s government.

¹ It is beyond a doubt that the ancestral temple of the kings of Kâu contained seven shrines or seven small temples, for the occupancy of which, by the spirit-tablets of such and such kings, there were definite rules, as the line of sovereigns increased. It would appear from the text that a similar practice prevailed in the time of the Shang dynasty.

The sovereign without the people has none whom he can employ ; and the people without the sovereign have none whom they can serve. Do not think yourself so large as to deem others small. If ordinary men and women do not find the opportunity to give full development to their ability, the people's lord will be without the proper aids to complete his merit.'

BOOK VII. THE PAN-KĀNG.

PAN-KĀNG was the seventeenth sovereign in the line of Thang. From Thái Kĩá to him, therefore, there was a space of 321 years, which are a gap in the history of the Shang dynasty, so far as the existing documents of the Shû are concerned. When the collection was complete, there were seven other documents between 'the Common Possession of Pure Virtue' and 'the Pan-kāng,' but the latest of them belonged to the reign of 3û-yí, B.C. 1525-1507.

The reign of Pan-kāng extended from B. C. 1401 to 1374, and is remarkable as that in which the dynasty began to be called Yin, instead of Shang. The Book belongs to the class of 'Announcements,' and is divided into three sections.

The contents centre round the removal of the capital from the north of the Ho to Yin on the south of it. The king saw that the removal was necessary, but had to contend with the unwillingness of the people to adopt such a step, and the opposition of the great families. The first section relates how he endeavoured to vindicate the measure, and contains two addresses, to the people and to those in high places, respectively, designed to secure their cordial co-operation. The second section brings before us the removal in progress, but there continue to be dissatisfactions, which the king endeavours to remove by a long and earnest defence of his course. The third section opens with the removal accomplished. The new city has been founded, and the plan of it laid out. The king makes a fresh appeal to the people and chiefs, to forget all their heart-burnings, and join with him in building up in the new capital a great destiny for the dynasty.

Section 1.

1. Pan-kǎng wished to remove (the capital) to Yin¹, but the people would not go to dwell there. He therefore appealed to all the discontented, and made the following protestations. 'Our king, (3û-yî), came, and fixed on this (Kǎng for his capital). He did so from a deep concern for our people, and not because he would have them all die, where they cannot (now) help one another to preserve their lives. I have consulted the tortoise-shell, and obtained the reply—"This is no place for us." When the former kings had any (important) business, they gave reverent heed to the commands of Heaven.* In a case like this especially they did not indulge (the wish for) constant repose,—they did not abide ever in the same city. Up to this time (the capital has been) in five regions². If we do not follow (the example) of these old times, we shall be refusing to acknowledge that Heaven is making an end of our dynasty (here);—how little can it be said of us that we are following the meritorious course of the former kings! As from the stump of a felled tree there are sprouts and shoots, Heaven will perpetuate its decree in our favour in this new city;—the great inheritance of the former kings will be continued and renewed, and tranquillity will be secured to the four quarters (of the kingdom).' *

¹ The removal was probably necessitated by an inundation of the Ho. Kǎng had been fixed on by 3û-yî for his capital. The Yin to which Pan-kǎng removed was in the present district of Yen-sze, department Ho-nan, Ho-nan.

² This fact—the frequent change of capital—does not give us a great idea of the stability and resources of the Shang dynasty.

2. Pan-käng, in making the people aware of his views, began with those who were in (high) places, and took the constantly-recurring circumstances of former times to lay down the right law and measure (for the present emergency), saying, 'Let none of you dare to suppress the remonstrances of the poor people.' The king commanded all to come to him in the courtyard (of his palace).

The king spoke to this effect :—'Come, all of you ; I will announce to you my instructions. Take counsel how to put away your (selfish) thoughts. Do not with haughty (disregard of me) follow after your own ease. Of old, our former kings planned like me how to employ the men of old families to share in (the labours of) government. When they wished to proclaim and announce what was to be attended to, these did not conceal the royal views ; and on this account the kings greatly respected them. They did not exceed the truth (in their communications with the people), and on this account the people became greatly changed (in their views). Now, (however), you keep clamouring, and get the confidence (of the people) by alarming and shallow speeches ;—I do not know what you are wrangling about. (In this movement) I am not myself abandoning my proper virtue, but you conceal the goodness of my intentions, and do not stand in awe of me, the One man. I see you as clearly as one sees a fire ; but I, likewise, by my undecided plans, have produced your error.

'When the net has its line, there is order and not confusion ; and when the husbandman labours upon his fields, and reaps with all his might, there is the (abundant) harvest. If you can put away your

(selfish) thoughts, and bestow real good upon the people, reaching (also) to your own relatives and friends, you may boldly venture to make your words great, and say that you have accumulated merit. But you do not fear the great evils which (through our not removing) are extending far and near; (you are like) idle husbandmen, who yield themselves to ease, and are not strong to toil and labour on their acres, so that they cannot get their crop of millets. You do not speak in a spirit of harmony and goodness to the people, and are only giving birth to bitter evils for yourselves. You play the part of destroyers and authors of calamity, of villains and traitors, to bring down misery on your own persons. You set the example of evil, and must feel its smart;—what will it avail you (then) to repent? Look at the poor people;—they are still able to look to one another and give expression to their remonstrances, but when they begin to speak, you are ready with your extravagant talk;—how much more ought you to have me before your eyes, with whom it is to make your lives long or short! Why do you not report (their words) to me, but go about to excite one another by empty speeches, frightening and involving the multitudes in misery? When a fire is blazing in the flames so that it cannot be approached, can it still be beaten out? So, it will not be I who will be to blame, that you all cause dispeace in this way, (and must suffer the consequences.)

‘*K’ih Zǎn*¹ has said, “In men we seek those of old families; in vessels, we do not seek old ones,

¹ Who *K’ih Zǎn* was is not known. The general opinion is, that he was an ancient historiographer. A *K’au Zǎn* is introduced in a similar way in the Confucian Analects, XVI, 1.

but new." Of old, the kings, my predecessors, and your forefathers and fathers shared together the ease and labours (of the government);—how should I dare to lay undeserved afflictions on you? For generations the toils of your (fathers) have been approved, and I will not conceal your goodness. Now when I offer the great sacrifices to my predecessors, your forefathers are present to share in them.* (They all observe) the happiness I confer and the sufferings I inflict, and I cannot dare to reward virtue that does not exist.

'I have announced to you the difficulties (of the intended movement), being bent on it, like an archer (whose only thought is to hit). Do not you despise the old and experienced, and do not make little of the helpless and young. Seek every one long continuance in this (new city), which is to be your abode; exert yourselves and put out your strength (in furthering the removal), and listen to the plans of me, the One man. I will make no distinction between men as being more distantly or more nearly related to me;—the criminal (in this matter) shall die the death, and the good-doer shall have his virtue distinguished. The prosperity of the country (ought to) come from you all. If it fail of prosperity, that must arise from me, the One man, erring in the application of punishment. Be sure, all of you, to make known this announcement. From this time forward, attend respectfully to your business; have (the duties of) your offices regularly adjusted; bring your tongues under the rule of law:—lest punishment come upon you, when repentance will be of no avail.'

Section 2.

1. Pan-kǎng arose, and (was about to) cross the Ho with the people, moving (to the new capital). Accordingly, he addressed himself to those of them who were (still) dissatisfied, and made a full announcement to their multitudes, to induce a sincere acquiescence (in the measure). They all attended, and (being charged) to take no liberties in the royal courtyard, he called them near, and said, 'Listen clearly to my words, and do not disregard my commands.

'Oh! of old time my royal predecessors cherished, every one and above every other thing, a respectful care of the people, who (again) upheld their sovereign with a mutual sympathy. Seldom was it that they were not superior to any (calamitous) time sent by Heaven. When great calamities came down on Yin, the former kings did not fondly remain in their place. What they did was with a view to the people's advantage, and therefore they moved (their capitals). Why do you not reflect that I, according to what I have heard of the ancient sovereigns, in my care of you and acting towards you, am only wishing to rejoice with you in a common repose? It is not that any guilt attaches to you, so that (this movement) should be like a punishment. If I call upon you to cherish this new city, it is simply on your account, and as an act of great accordance with your wishes. My present undertaking to remove with you, is to give repose and stability to the country. You, (however), have no sympathy with the anxieties of my mind; but you all keep a great

reserve in declaring your minds, (when you might) respectfully think by your sincerity to move me, the One man. You only exhaust and distress yourselves. The case is like that of sailing in a boat ;—if you do not cross the stream (at the proper time), you will destroy all the cargo. Your sincerity does not respond to mine, and we are in danger of going together to destruction. You, notwithstanding, will not examine the matter ;—though you anger yourselves, what cure will that bring ?

‘ You do not consult for a distant day, nor think of the calamity that must befall you (from not removing). You greatly encourage one another in what must prove to your sorrow. Now you have the present, but you will not have the future ;—what prolongation of life can you look for from above ? My measures are forecast to prolong your (lease of) life from Heaven ;—do I force you by the terrors of my power ? My object is to support and nourish you all. I think of my ancestors, (who are now) the spiritual sovereigns ;* when they made your forefathers toil (on similar occasions it was only for their good), and I would be enabled in the same way greatly to nourish you and cherish you.’

2. ‘ Were I to err in my government, and remain long here, my high sovereign, (the founder of our dynasty), would send down on me great punishment for my crime, and say, “ Why do you oppress my people ? ”* If you, the myriads of the people, do not attend to the perpetuation of your lives, and cherish one mind with me, the One man, in my plans, the former kings will send down on you great punishment for your crime, and say, “ Why do you not agree with our young grandson, but go on to forfeit

your virtue?" When they punish you from above, you will have no way of escape.* Of old, my royal predecessors made your ancestors and fathers toil (only for their good). You are equally the people whom I (wish to) cherish. But your conduct is injurious;—it is cherished in your hearts. Whereas my royal predecessors made your ancestors and fathers happy, they, your ancestors and fathers, will (now) cut you off and abandon you, and not save you from death.* Here are those ministers of my government, who share with me in the offices (of the kingdom);—and yet they (only think of hoarding up) cowries and gems. Their ancestors and fathers earnestly represent (their course) to my high sovereign, saying, "Execute great punishments on our descendants." So do they advise my high sovereign to send down great calamities (on those men).'*

3. 'Oh! I have now told you my unchangeable purpose;—do you perpetually respect (my) great anxiety; let us not get alienated and removed from one another; share in my plans and thoughts, and think (only) of following me; let every one of you set up the true rule of conduct in his heart. If there be bad and unprincipled men, precipitously or carelessly disrespectful (to my orders), and taking advantage of this brief season to play the part of villains or traitors, I will cut off their noses, or utterly exterminate them. I will leave none of their children. I will not let them perpetuate their seed in this new city.

'Go! preserve and continue your lives. I will now transfer you (to the new capital), and (there) establish your families for ever.'

Section 3.

1. Pan-käng having completed the removal, and settled the places of residence, proceeded to adjust the several positions (of all classes at an assembly); and then he soothed and comforted the multitudes, saying to them, 'Do not play nor be idle, but exert yourselves to build (here) a great destiny (for us).

'Now I have disclosed my heart and belly, my reins and bowels, and fully declared to you, my people, all my mind. I will not treat any of you as offenders; and do not you (any more) help one another to be angry, and form parties to defame me, the One man.

'Of old, my royal predecessor, (Thang), that his merit might exceed that of those who were before him, proceeded to the hill-site¹. Thereby he removed our evils, and accomplished admirable good for our country. Now you, my people, were by (your position) dissipated and separated, so that you had no abiding place. (And yet) you asked why I was troubling your myriads and requiring you to remove. But God, being about to renew the virtuous service of my high ancestor, and secure the good order of our kingdom, I, with the sincere and respectful (of my ministers), felt a reverent care for the lives of the people, and have made a lasting settlement in (this) new city.*

'I, a youth, did not neglect your counsels;— I (only) used the best of them. Nor did any of

¹ It is supposed that this 'hill-site' of Thang was the same as that which Pan-käng had fixed on, but this does not clearly appear in the text.

you presumptuously oppose the decision of the tortoise-shell;—so we are here to enlarge our great inheritance.’*

2. ‘Oh! ye chiefs of regions, ye heads of departments, all ye, the hundreds of officers, would that ye had a sympathy (with my people)! I will exert myself in the choice and guiding of you;—do ye think reverently of my multitudes. I will not employ those who are fond of enriching themselves; but will use and revere those who are vigorously, yet reverently, labouring for the lives and increase of the people, nourishing them and planning for their enduring settlement.

‘I have now brought forward and announced to you my mind, whom I approve and whom I disallow;—let none of you but reverence (my will). Do not seek to accumulate wealth and precious things, but in fostering the life of the people, seek to find your merit. Reverently display your virtue in behalf of the people. For ever maintain this one purpose in your hearts.’

BOOK VIII. THE CHARGE TO YÜEH.

AFTER Pan-käng came the reigns of Hsião-hsin and Hsião-yî, of which we have no accounts in the Shû. Hsião-yî was followed by Wû-ting (B. C. 1324–1264), to the commencement of whose reign this Book, in three sections, belongs. His name is not in it, but that he is the king intended appears from the prefatory notice, and the Confucian Analects, XIV, xliii. The Book is the first of the ‘Charges’ of the Shû. They relate the designation by the king of some officer to a particular charge or to some fief, with the address delivered by him on the occasion. Here the charge is to Yüeh, in the first section, on his appointment to be

chief minister. In the other two sections Yüeh is the principal speaker, and not the king. They partake more of the nature of the 'Counsels.' Yüeh had been a recluse, living in obscurity. The king's attention was drawn to him in the manner related in the Book, and he was discovered in Fû-yen, or amidst 'the Craggs of Fû,' from which he was afterwards called Fû Yüeh, as if Fû had been his surname.

The first section tells us how the king met with Yüeh, and appointed him to be his chief minister, and how Yüeh responded to the charge that he received. In the second section, Yüeh counsels the king on a variety of points, and the king responds admiringly. In the third, the king introduces himself as a pupil at the feet of Yüeh, and is lectured on the subject of enlarging his knowledge. In the end the king says that he looks to Yüeh as another Î Yin, to make him another Thang.

Section 1.

1. The king passed the season of sorrow in the mourning shed for three years¹, and when the period of mourning was over, he (still) did not speak (to give any commands). All the ministers remonstrated with him, saying, 'Oh! him who is (the first) to apprehend we pronounce intelligent, and the intelligent man is the model for others. The Son of Heaven rules over the myriad regions, and all the officers look up to and reverence him. They are the king's words which form the commands (for them). If he do not speak, the ministers have no way to receive their orders.' On this the king made a writing, for their information, to the following effect:—'As it is mine to serve as the

¹ A young king, mourning for his father, had to 'afflict' himself in various ways for twenty-five months, nominally for three years. Among other privations, he had to exchange the comforts of a palace for a rough shed in one of the courtyards. During the time of mourning, the direction of affairs was left to the chief minister,

director for the four quarters (of the kingdom), I have been afraid that my virtue is not equal to (that of my predecessors), and therefore have not spoken. (But) while I was reverently and silently thinking of the (right) way, I dreamt that God gave me a good assistant who should speak for me.* He then minutely recalled the appearance (of the person whom he had seen), and caused search to be made for him everywhere by means of a picture. Yüeh, a builder in the wild country of Fû-yen, was found like to it.

2. On this the king raised and made (Yüeh) his prime minister, keeping him (also) at his side.

He charged him, saying, 'Morning and evening present your instructions to aid my virtue. Suppose me a weapon of steel;—I will use you for a whetstone. Suppose me crossing a great stream;—I will use you for a boat with its oars. Suppose me in a year of great drought;—I will use you as a copious rain. Open your mind, and enrich my mind. (Be you) like medicine, which must distress the patient, in order to cure his sickness. (Think of me) as one walking barefoot, whose feet are sure to be wounded, if he do not see the ground.

'Do you and your companions all cherish the same mind to assist your sovereign, that I may follow my royal predecessors, and tread in the steps of my high ancestor, to give repose to the millions of the people. Oh! respect this charge of mine;—so shall you bring your work to a (good) end.'

3. Yüeh replied to the king, saying, 'Wood by the use of the line is made straight, and the sovereign who follows reproof is made sage. When the sovereign can (thus) make himself sage, his ministers,

without being specially commanded, anticipate his orders;—who would dare not to act in respectful compliance with this excellent charge of your Majesty?’

Section 2.

1. Yüeh having received his charge, and taken the presidency of all the officers, he presented himself before the king, and said, ‘Oh! intelligent kings act in reverent accordance with the ways of Heaven. The founding of states and the setting up of capitals, the appointing of sovereign kings, of dukes and other nobles, with their great officers and heads of departments, were not designed to minister to the idleness and pleasures (of one), but for the good government of the people. It is Heaven which is all-intelligent and observing;—let the sage (king) take it as his pattern.* Then his ministers will reverently accord with him, and the people consequently will be well governed.

‘It is the mouth that gives occasion for shame; they are the coat of mail and helmet that give occasion to war. The upper robes and lower garments (for reward should not be lightly taken from) their chests; before spear and shield are used, one should examine himself. If your Majesty will be cautious in regard to these things, and, believing this about them, attain to the intelligent use of them, (your government) will in everything be excellent. Good government and bad depend on the various officers. Offices should not be given to men because they are favourites, but only to men of ability. Dignities should not be conferred on men of evil practices, but only on men of worth.

‘Anxious thought about what will be best should precede your movements, which also should be taken at the time proper for them. Indulging the consciousness of being good is the way to lose that goodness; being vain of one’s ability is the way to lose the merit it might produce.

‘For all affairs let there be adequate preparation;—with preparation there will be no calamitous issue. Do not open the door for favourites, from whom you will receive contempt. Do not be ashamed of mistakes, and (go on to) make them crimes. Let your mind rest in its proper objects, and the affairs of your government will be pure. Officiousness in sacrificing is called irreverence;* and multiplying ceremonies leads to disorder. To serve the spirits acceptably (in this way) is difficult.’*

2. The king said, ‘Excellent! your words, O Yüeh, should indeed be put in practice (by me). If you were not so good in counsel, I should not have heard these rules for my conduct.’ Yüeh did obeisance with his head to the ground, and said, ‘It is not the knowing that is difficult, but the doing. (But) since your Majesty truly knows this, there will not be the difficulty, and you will become really equal in complete virtue to our first king. Wherein I, Yüeh, refrain from speaking (what I ought to speak), the blame will rest with me.’

Section 3.

1. The king said, ‘Come, O Yüeh. I, the little one, first learned with Kan Pan¹. Afterwards I lived

¹ From Part V, xvi, 2, we learn that Kan Pan was a great minister of Wû-ting. It is supposed that he had been minister to Wû-ting’s father, and died during the king’s period of mourning.

concealed among the rude countrymen, and then I went to (the country) inside the Ho, and lived there¹. From the Ho I went to Po;—and the result has been that I am unenlightened. Do you teach me what should be my aims. Be to me as the yeast and the malt in making sweet spirits, as the salt and the prunes in making agreeable soup. Use various methods to cultivate me; do not cast me away;—so shall I attain to practise your instructions.'

Yüeh said, 'O king, a ruler should seek to learn much (from his ministers), with a view to establish his affairs; but to learn the lessons of the ancients is the way to attain this. That the affairs of one, not making the ancients his masters, can be perpetuated for generations, is what I have not heard.

'In learning there should be a humble mind and the maintenance of a constant earnestness;—in such a case (the learner's) improvement will surely come. He who sincerely cherishes these things will find all truth accumulating in his person. Teaching is the half of learning; when a man's thoughts from first to last are constantly fixed on learning, his virtuous cultivation comes unperceived.

'Survey the perfect pattern of our first king;—so shall you for ever be preserved from error. Then shall I be able reverently to meet your views, and on every side to look out for men of eminence to place in the various offices.'

2. The king said, 'Oh! Yüeh, that all within the four

¹ We do not know the events of Wü-ting's early life sufficiently to explain his language here. His living concealed among the rude people of the country, and then crossing to the north of the Ho, was owing probably to troubles in the kingdom.

seas look up to my virtue is owing to you. As his legs and arms form the man, so does a good minister form the sage (king). Formerly, there was the first premier of our dynasty, Páo-hăng¹, who raised up and formed its royal founder. He said, "If I cannot make my sovereign like Yáo or Shun, I shall feel ashamed in my heart, as if I were beaten in the market-place." If any common man did not get (all he should desire), he said, "It is my fault." (Thus) he assisted my meritorious ancestor, so that he became equal to great Heaven.* Do you give your intelligent and preserving aid to me, and let not Â-hăng engross all the good service to the House of Shang.

'The sovereign should share his government with none but worthy officers. The worthy officer should accept his support from none but the proper sovereign. May you now succeed in making your sovereign a (true) successor of the founder of his line, and in securing the lasting happiness of the people!'

Yüeh did obeisance with his head to the ground, and said, 'I will venture to respond to, and display abroad, your Majesty's excellent charge.'

BOOK IX. THE DAY OF THE SUPPLEMENTARY SACRIFICE TO KÂO 3UNG.

KÂO 3UNG was the title given to Wû-ting, after his death, in the ancestral temple. A supplementary sacrifice was offered on the day following the regular and more solemn service. What special idea was connected with it, it would be difficult to say;

¹ Styled Â-hăng in the beginning of 'the Thái-kiâ.' Páo-hăng = 'the Protector and Steelyard.'

but at the close of it, the representatives or personators of the dead in the sacrifice of the preceding day were all feasted.

The title of this short Book leaves it uncertain whether the sacrifice was offered to Wû-ting or by him. The prefatory notice proceeds on the former view. Many critics of great intelligence decide for the latter, which a renewed consideration of the text has induced me to adopt. The king then is 3û-kâng, Wû-ting's son. Something irregular or excessive in his sacrificing to his father was the thing which his monitor 3û Kî wished to censure, taking occasion to do so from the incident mentioned in the first sentence.

On the day of the supplementary sacrifice of Kâo Bung, there appeared a crowing pheasant¹. 3û Kî said, 'To rectify this affair, the king must first be corrected.' He delivered accordingly a lesson to the king, saying, 'In its inspection of men below, Heaven's first consideration is of their righteousness, and it bestows on them (accordingly) length of years or the contrary.* It is not Heaven that cuts short men's lives; they bring them to an end themselves. Some men who have not complied with virtue will yet not acknowledge their offences, and when Heaven has by evident tokens charged them to correct their conduct, they still say, "What are these things to us?"

'Oh! your Majesty's business is to care reverently for the people. And all (your ancestors) were the heirs of (the kingdom by the gift of) Heaven;—in attending to the sacrifices (to them), be not so excessive in those to your father.'*

¹ Sze-mâ K'ien, after the prefatory notice, says that the pheasant sat on the ear—one of the handles—of a tripod.

BOOK X.

THE CHIEF OF THE WEST'S CONQUEST OF LÎ.

THE reigns of seven more kings of Yin or Shang have passed, and this Book brings us to the time of Kâu-hsin or Shâu, its last sovereign, B.C. 1154-1123. The House of Kâu begins to come to the front, for 'the Chief of the West' was one of the acknowledged founders of the Kâu dynasty;—whether K'hang, known as king Wăn, or his son Fâ, known as king Wû, is uncertain. K'hang's father, the duke of Kâu in the present department of Făng-hsiang, Shen-hsî, had been appointed Chief of the West, that is, of all the western portion of the kingdom, embracing Yü's provinces of Yung, Liang, and King. The same jurisdiction descended to his son and grandson. The state of Lî, the conquest of which is mentioned, was in the present department of Lû-an, Shan-hsî, within the royal domain, so that the Chief of the West was no longer confining himself to the west, but threatening the king himself.

30 Î, a loyal officer, hears of the conquest of Lî, and hurries away to inform the king and warn him of the danger threatening the dynasty through his evil conduct. The king gives no heed to his remonstrances, and 30 Î retires, sighing over the ruin, which he sees is not to be averted.

The Book is classed, it would be hard to tell why, among the 'Announcements.'

The Chief of the West having subdued Lî, 30 Î was afraid, and hastened to report it to the king.

He said, 'Son of Heaven, Heaven is bringing to an end the dynasty of Yin; * the wisest men and the shell of the great tortoise do not presume to know anything fortunate for it.* It is not that the former kings do not aid us, the men of this later time; * but by your dissoluteness and sport you are bringing on the end yourself. On this account Heaven has cast us off, and there are no good harvests to supply us with food.* Men have no regard to their

heavenly nature, and pay no obedience to the statutes (of the kingdom). (Yea), our people now all wish (the dynasty) to perish, saying, "Why does not Heaven send down its indignation? Why does not (some one with) its great appointment make his appearance? What has the present king to do with us?"'

The king said, 'Oh! was not my birth in accordance with the appointment of Heaven (in favour of my House)?' (On this) 卅 一 年 returned (to his own city), and said, 'Your crimes, which are many, are registered above, and can you still appeal to the appointment of Heaven in your favour? * Yin will perish very shortly. As to all your deeds, can they but bring ruin on your country?'

BOOK XI. THE COUNT OF WEI.

THE conversation recorded here—called, like the last Book, and with as little reason, an 'Announcement'—is referred to B. C. 1123, the year in which the dynasty of Shang perished.

Wei was a principality in the royal domain, corresponding to the present district of Lû-~~h~~äng, department Lû-an, Shan-hsi, the lords of which were counts. The count who appears here was, most probably, an elder brother of the king, and by the same mother, who was, however, only a concubine when the count was born, but raised to be queen before the birth of Kâu-hsin. Saddened with the thought of the impending ruin of the dynasty, the count seeks the counsel of two other high nobles, and asks them to tell him what was to be done. One of them replies to him in still stronger language about the condition and prospects of the kingdom, and concludes by advising the count to make his escape, and declaring that he himself would remain at his post, and share in the unavoidable ruin.

1. The Count of Wei spoke to the following effect:—‘Grand-Master and Junior-Master¹, (the House of) Yin, we may conclude, can no longer exercise rule over the four quarters (of the kingdom). The great deeds of our founder were displayed in former ages, but by our maddened indulgence in spirits, we have destroyed (the effects of) his virtue in these after-times. (The people of) Yin, small and great, are given to highway robberies, villainies, and treachery. The nobles and officers imitate one another in violating the laws, and there is no certainty that criminals will be apprehended. The smaller people (consequently) rise up, and commit violent outrages on one another. Yin is now sinking in ruin;—its condition is like that of one crossing a stream, who can find neither ford nor bank. That Yin should be hurrying to ruin at the present pace!’

He added, ‘Grand-Master and Junior-Master, we are manifesting insanity. The most venerable members of our families are withdrawn to the wilds; and you indicate no course (to be taken), but (only) tell me of the impending ruin;—what is to be done?’

2. The Grand-Master made about the following reply:—‘O son of our (former) king, Heaven in anger is sending down calamities, and wasting the country of Yin.* Hence has arisen that mad indulgence in spirits. (The king) has no reverence

¹ For high ministers with these titles under the *K'au* dynasty, see next Part, Book xx. The individuals whom the count of Wei consulted were probably the count of *K'î* and *Pi-kan*, who are classed with him in the Confucian Analects, XVIII, 1.

for things which he ought to reverence, but does despite to the venerable aged, the men who have long been in office. The people of Yin will now steal even the pure and perfect victims devoted to the spirits of heaven and earth ; * and their conduct is connived at, and though they proceed to eat the victims, they suffer no punishment. (On the other hand), when I look down and survey the people of Yin, the methods by which they are governed are hateful exactions, which call forth outrages and hatred ;—and this without ceasing. Such crimes equally belong to all in authority, and multitudes are starving with none to whom to appeal. Now is the time of Shang's calamity ;—I will arise and share in its ruin. When ruin overtakes Shang, I will not be the servant (of another House). (But) I tell you, O king's son, to go away, as being the course (for you). Formerly I injured you by what I said ; if you do not (now) go away, our (sacrifices) will entirely perish. Let us rest quietly (in our several parts), and each present himself to the former kings¹ (as having done so).* I do not think of making my escape.'

¹ It is understood that the former king, the father of both *K'hi* and *K'au-hsin*, had wished to leave the throne to *K'hi*, and that the Grand-Master had advocated such a measure ;—thereby injuring *K'hi* when it did not take effect, through making *K'au-hsin* jealous of him.

PART V. THE BOOKS OF K'AU.

BOOK I. THE GREAT DECLARATION.

K'au is the dynastic designation under which king Wû and his descendants possessed the throne from B. C. 1122 to 256, a period of 867 years. They traced their lineage up to K'hi, who was Minister of Agriculture under Shun. He was invested with the principality of Thái, the present district of Fû-fang, department of Făng-hsiang, Shen-hsi. Long afterwards Than-fû, claiming to be one of his descendants, appears in B. C. 1326, founding the state of K'au, near mount K'hi, in the same department of Făng-hsiang. This Than-fû was the great-grandfather of king Wû. The family surname was K'i.

When the collection of the Shû was complete, it contained thirty-eight different documents of the K'au dynasty, of which twenty-eight remain, twenty of them being of undisputed genuineness.

This first Book, 'the Great Declaration,' is one of the contested portions; and there is another form of it, that takes the place of this in some editions. It has appeared in the Introduction that the received text of the Shû was formed with care, and that everything of importance in the challenged Books is to be found in quotations from them, while the collection was complete, that have been gathered up by the industry of scholars.

King Wû, having at last taken the field against K'au-hsin, the tyrant of Shang, made three speeches to his officers and men, setting forth the reasons for his enterprise, and urging them to exert themselves with him in the cause of humanity and Heaven. They are brought together, and constitute 'the Great Declaration.'

'In the first Part,' says a Chinese critic, 'king Wû addresses himself to the princes and nobles of inferior rank; in the second, to their hosts; and in the third, to his officers. The ruling idea in the first is the duty of the sovereign,—what he ought to be

and to do; with this it begins and ends. There is not the same continuity of thought in the second, but the will and purpose of Heaven is the principal thing insisted on. The last Part shows the difference between the good sovereign and the bad, and touches on the consent that there is between Heaven and men. There is throughout an unsparing exhibition of the wickedness of *K'au-hsin*.

Section 1.

In the spring of the thirteenth year¹ there was a great assembly at *Mâng-king*². The king said, 'Ah! ye hereditary rulers of my friendly states, and all ye my officers, managers of my affairs, hearken clearly to my declaration.

'Heaven and earth is the parent of all creatures; and of all creatures man is the most highly endowed.* The sincerely intelligent (among men) becomes the great sovereign; and the great sovereign is the parent of the people. But now, *Shâu*, the king of Shang, does not reverence Heaven above, and inflicts calamities on the people below.* Abandoned to drunkenness and reckless in lust, he has dared to exercise cruel oppression. He has extended the punishment of offenders to all their relatives. He has put men into offices on the hereditary principle. He has made it his pursuit to have palaces, towers, pavilions, embankments, ponds, and all other extravagances, to the most painful injury of you, the myriads of the people. He has burned and roasted the loyal and good. He has ripped up pregnant

¹ The thirteenth year is reckoned from king *Wû*'s succeeding to his father as 'the Chief of the West.'

² *Mâng-king*, or 'the Ford of *Mâng*,' is still the name of a district in the department of *Ho-nan*, *Ho-nan*.

women. Great Heaven was moved with indignation, and charged my deceased father Wăn to display its terrors; but (he died) before the work was completed.*

‘On this account, I, Fâ, the little child, have by means of you, the hereditary rulers of my friendly states, contemplated the government of Shang; but Shâu has no repentant heart. He sits squatting on his heels, not serving God nor the spirits of heaven and earth, neglecting also the temple of his ancestors, and not sacrificing in it.* The victims and the vessels of millet all become the prey of wicked robbers, and still he says, “The people are mine; the (heavenly) appointment is mine,” never trying to correct his contemptuous mind.*

‘Heaven, for the help of the inferior people, made for them rulers, and made for them instructors, that they might be able to be aiding to God, and secure the tranquillity of the four quarters (of the kingdom). In regard to who are criminals and who are not, how dare I give any allowance to my own wishes?*

‘“Where the strength is the same, measure the virtue of the parties; where the virtue is the same, measure their righteousness.” Shâu has hundreds of thousands and myriads of officers, but they have hundreds of thousands and myriads of minds; I have (but) three thousand officers, but they have one mind. The iniquity of Shang is full. Heaven gives command to destroy it. If I did not obey Heaven, my iniquity would be as great.*

‘I, the little child, early and late am filled with apprehensions. I have received the command of my deceased father Wăn; I have offered special sacrifice to God; I have performed the due ser-

vices to the great earth; and I lead the multitude of you to execute the punishment appointed by Heaven.* Heaven compassionates the people. What the people desire, Heaven will be found to give effect to.* Do you aid me, the One man, to cleanse for ever (all within) the four seas. Now is the time!—It should not be lost.'

Section 2.

On (the day) Wû-wû¹, the king halted on the north of the Ho. When all the princes with their hosts were assembled, the king reviewed the hosts, and made the following declaration:—'Oh! ye multitudes of the west, hearken all to my words.

'I have heard that the good man, doing good, finds the day insufficient; and that the evil man, doing evil, also finds the day insufficient. Now Shâu, the king of Shang, with strength pursues his lawless way. He has driven away the time-worn sires, and cultivates intimacies with wicked men. Dissolute, intemperate, reckless, oppressive, his ministers have become assimilated to him; and they form combinations and contract animosities, and depend on their power to exterminate one another. The innocent cry to Heaven. The odour of such a state is felt on high.*

'Heaven loves the people, and the sovereign should reverently carry out (this mind of) Heaven. Kieh, the sovereign of Hsiâ, would not follow the

¹ In Book iii we are told that Wû commenced his march to attack Kâu-hsin, on Kwei-*ki*, the 2nd day of the moon. Calculating on to the day Wû-wû, we find that it was the 28th day of the same moon.

example of Heaven, but sent forth his poisonous injuries through the states of the kingdom:—Heaven therefore gave its aid to Thang the Successful, and charged him to make an end of the appointment of Hsiâ.* But the crimes of Shâu exceed those of Kieh. He has degraded from office the greatly good man¹; he has behaved with cruel tyranny to his reprover and helper². He says that with him is the appointment of Heaven; he says that a reverent care of his conduct is not worth observing; he says that sacrifice is of no use; he says that tyranny is no harm.* The beacon for him to look to was not far off;—it was that king of Hsiâ. It would seem that Heaven is going by means of me to rule the people. My dreams coincide with my divinations; the auspicious omen is double.* My attack on Shang must succeed.

‘Shâu has hundreds of thousands and millions of ordinary men, divided in heart and divided in practice;—I have of ministers, able to govern, ten men³, one in heart and one in practice. Though he has his nearest relatives with him, they are not like my virtuous men. Heaven sees as my people see; Heaven hears as my people hear.* The people are blaming me, the One man, for my delay;—I must now go forward. My military prowess is displayed, and I enter his territories to take the wicked tyrant. My punishment (of evil) will be great, and more glorious than that executed by Thang. Rouse ye,

¹ The count of Wei.

² Pî-kan.

³ Confucius tells us, in the *Analects*, VIII, xx, that one of these ten was a woman; but whether the lady was Wû's wife or mother is disputed.

my heroes! Do not think that he is not to be feared;—better think that he cannot be withstood. (His) people stand in trembling awe of him, as if the horns were falling from their heads. Oh! unite your energies, unite your hearts;—so shall you forthwith surely accomplish the work, to last for all ages!’

Section 3.

The time was on the morrow, when the king went round his six hosts in state, and made a clear declaration to all his officers. He said, ‘Oh! my valiant men of the west, from Heaven are the illustrious courses of duty, of which the (several) requirements are quite plain. And now Shâu, the king of Shang, treats with contemptuous slight the five regular (virtues), and abandons himself to wild idleness and irreverence. He has cut himself off from Heaven, and brought enmity between himself and the people.*

‘He cut through the leg-bones of those who were wading in the morning¹; he cut out the heart of the worthy man². By the use of his power, killing and murdering, he has poisoned and sickened all within the four seas. His honours and confidence are given to the villainous and bad. He has driven from him his instructors and guardians. He has thrown to the winds the statutes and penal laws. He has imprisoned and enslaved the upright officer³. He neglects the sacrifices to heaven and earth. He

¹ This was in winter. Observing some people then wading through a stream, K’au-hsin caused their legs to be cut through at the shank-bone, that he might see their marrow.

* Pî-kan.

³ The count of K’hi; see Book iv.

has discontinued the offerings in the ancestral temple. He makes contrivances of wonderful device and extraordinary cunning to please his wife¹.—God will no longer indulge him, but with a curse is sending down on him this ruin.* Do ye with untiring zeal support me, the One man, reverently to execute the punishment appointed by Heaven. The ancients have said, "He who soothes us is our sovereign; he who oppresses us is our enemy." This solitary fellow Shâu, having exercised great tyranny, is your perpetual enemy. (It is said again), "In planting (a man's) virtue, strive to make it great; in putting away (a man's) wickedness, strive to do it from the roots." Here I, the little child, by the powerful help of you, all my officers, will utterly exterminate your enemy. Do you, all my officers, march forward with determined boldness to sustain your prince. Where there is much merit, there shall be large reward; where you do not so advance, there shall be conspicuous disgrace.

'Oh! (the virtue of) my deceased father Wăn was like the shining of the sun and moon. His brightness extended over the four quarters of the land, and shone signally in the western region. Hence it is that our Kâu has received (the allegiance of) many states. If I subdue Shâu, it will not be from my prowess, but from the faultless (virtue of) my deceased father Wăn. If Shâu subdue me, it will not be from any fault of my deceased father Wăn, but because I, the little child, am not good.'

¹ The notorious Tâ-*hi*, the accounts of whose shameless wickedness and atrocious cruelties almost exceed belief.

BOOK II. THE SPEECH AT MŪ.

It is the morning of the day of battle, for which the king has prepared his host by the three speeches of the last Book. Once more he addresses his confederate princes, his officers, and his men. He sets forth more briefly the intolerable wickedness of Shâu, and instructs and warns his troops how they are to behave in the fight.

Mû was in the south of the present district of *Khî*, department Wei-hui, Ho-nan, a tract of open country stretching into the district of *Kî*, and at no great distance from the capital of Shâu.

1. The time was the grey dawn of the day *Kiâ-ze*. On that morning the king came to the open country of Mû, in the borders of Shang, and addressed his army. In his left hand he carried a battle-axe, yellow with gold, and in his right he held a white ensign, which he waved, saying, 'Far are ye come, ye men of the western regions!' He added, 'Ah! ye hereditary rulers of my friendly states; ye managers of affairs,—the Ministers of Instruction, of War, and of Works; the great officers subordinate to these, and the many other officers; the master of my body-guards; the captains of thousands and captains of hundreds; and ye, O men of Yung, Shû, Kiang, Mào, Wei, Lû, Phang, and Pho¹, lift up your lances, join your shields, raise your spears:— I have a speech to make.'

¹ These are the names of eight different tribes or confederations of tribes of the south and west. We are to look for their sites in Sze-khüan, Yün-nan, and Hû-pei. They were, no doubt, an important portion of Wû's army, but only as auxiliaries. It is too much to ascribe, as some have done, the overthrow of Shang to an irruption of barbarous people from the west.

2. The king (then) said, 'The ancients have said, "The hen does not announce the morning. The crowing of a hen in the morning (indicates) the subversion of the family." Now Shâu, the king of Shang, follows only the words of his wife. In his blindness he has neglected the sacrifices which he ought to offer, and makes no response (for the favours that he has received);* he has also cast off his paternal and maternal relations, not treating them properly. They are only the vagabonds from all quarters, loaded with crimes, whom he honours and exalts, whom he employs and trusts, making them great officers and high nobles, so that they can tyrannize over the people, and exercise their villainies in the cities of Shang.

'Now, I, Fâ, am simply executing respectfully the punishment appointed by Heaven.* In to-day's business do not advance more than six or seven steps, and then stop and adjust your ranks;—my brave men, be energetic! Do not exceed four blows, five blows, six blows, or seven blows, and then stop and adjust your ranks;—my brave men, be energetic! Display a martial bearing. Be like tigers and panthers, like bears and grisly bears,—(here) in the borders of Shang. Do not rush on those who fly (to us in submission), but receive them to serve our western land;—my brave men, be energetic! If you be not energetic (in all these matters), you will bring destruction on yourselves.'

BOOK III.

THE SUCCESSFUL COMPLETION OF THE WAR.

I HAVE divided this Book into three chapters:—one, consisting of brief historical notes of the commencement and close of Wû's expedition; a second, giving the address (or a part of it) delivered by Wû to his nobles and officers on occasion, we may suppose, of their recognition of him as king, and his confirming some of them in their old states or appointments, and giving new ones to others; the third again historical, and relating several incidents of the battle between Wû and Shâu, and going on to subsequent events and important governmental measures of the new dynasty.

Most Chinese critics hold that portions of the Book are lost, and that the paragraphs of it are, besides, erroneously arranged. In what division of the documents of the Shû it should be classified, it is not easy to say. It is more like a 'Canon' than anything else.

1. In the first month, the day *Zăn-khăn* immediately followed the end of the moon's waning. The next day was *Kwei-kî*, when the king, in the morning, marched from *Kâu*¹ to attack and punish Shang. In the fourth month, at the first appearance of the moon, the king came from Shang to *Făng*², when he hushed all the movements of war, and proceeded to cultivate the arts of peace. He sent back his horses to the south of mount *Hwâ*,

¹ *Kâu* is, probably, Wû's capital, called *Hão*, about ten miles south of the present district city of *Khang-an*, and not quite so far from his father's capital of *Făng*. The river *Făng* ran between them.

² In *Făng* there was the ancestral temple of the lords of *Kâu*, and thither from the capital of Shang, Wû now repaired for the purpose of sacrificing.

and let loose his oxen in the open country of Tháo-lin¹, showing to all under heaven that he would not use them (again).

On the day Ting-wei, he sacrificed in the ancestral temple of K'áu, when (the princes) of the royal domain, and of the Tien, Hâu, and Wei domains, all hurried about, carrying the dishes.* The third day after was K'ang-hsü, when he presented a burnt-offering to Heaven, and worshipped towards the hills and rivers, solemnly announcing the successful completion of the war.*

After the moon began to wane, the hereditary princes of the various states, and all the officers, received their appointments from K'áu².

2. The king spoke to the following effect :—‘Oh ! ye host of princes, the first of our kings³ founded his state, and commenced (the enlargement of) its territory. Kung Liú⁴ was able to consolidate the services of his predecessor. But it was the king Thái who laid the foundations of the royal inheritance. The king K'í was diligent for the royal House ; and my deceased father, king Wăn, completed his merit, and grandly received the appoint-

¹ The country about the hill of Mû-niû or Khwâ-fû, in the south-east of the present department of Thung-kâu. Tháo-lin may be translated ‘Peach-forest.’

² The new dynasty of K'áu was now fully inaugurated.

³ By ‘the first of our kings,’ we must understand K'í, Shun’s Minister of Agriculture ; and his state was that of Thái.

⁴ Kung Liú, perhaps ‘duke Liú,’ appears in Pin, the present Pin K'áu of Shen-hsi, about the beginning of the eighteenth century B. C., reviving the fallen fortunes of the House of K'í. History is then silent about the family for more than four centuries, when we find Than-fû, called here ‘king Thái,’ founding the state of K'áu.

ment of Heaven, to soothe the regions of our great land.* The great states feared his strength ; the small states thought fondly of his virtue. In nine years, however, the whole kingdom was not united under his rule, and it fell to me, the little child, to carry out his will.

' Detesting the crimes of Shang, I announced to great Heaven and the sovereign Earth, to the famous hill¹ and the great river¹ by which I passed, saying, "I, Fâ, the principled, king of Kâu by a long descent, am about to administer a great correction to Shang. Shâu, the present king of Shang, is without principle, cruel and destructive to the creatures of Heaven, injurious and tyrannical to the multitudes of the people, lord of all the vagabonds under heaven, who collect about him as fish in the deep, and beasts in the prairie. I, the little child, having obtained (the help of) virtuous men, presume reverently to comply with (the will of) God, and make an end of his disorderly ways.* Our flowery and great land, and the tribes of the south and north, equally follow and consent with me. Reverently obeying the determinate counsel of Heaven, I pursue my punitive work to the east, to give tranquillity to its men and women. They meet me with their baskets full of dark-coloured and yellow silks, thereby showing (the virtues) of us, the kings of Kâu. Heaven's favours stir them up, so that they come with their allegiance to our great state of Kâu. And now, ye spirits, grant me your aid, that I may relieve the millions of the people, and nothing turn out to your shame." ' *

¹ Probably mount Hwâ and the Ho.

3. On the day Wû-wû, the army crossed the ford of Mâng, and on Kwei-hâi it was drawn up in array in the borders of Shang, waiting for the gracious decision of Heaven. On *Kiâ-ze*, at early dawn, Shâu led forward his troops, (looking) like a forest, and assembled them in the wild of Mû. But they offered no opposition to our army. Those in the front inverted their spears, and attacked those behind them, till they fled; and the blood flowed till it floated the pestles of the mortars. Thus did (king Wû) once don his armour, and the kingdom was grandly settled. He overturned the (existing) rule of Shang, and made government resume its old course. He delivered the count of *Khi* from prison, and raised a mound over the grave of Pi-kan. He bowed forward to the cross-bar of his carriage at the gate of Shang Yung's village¹. He dispersed the treasures of the Stag Tower², and distributed the grain of *Kü-khião*³, thus conferring great gifts on all within the four seas, so that the people joyfully submitted to him.

He arranged the nobles in five orders⁴, assigning the territories to them according to a threefold

¹ Shang Yung must have been some worthy in disgrace with Shâu, and living in the retirement of his village.

² The Stag Tower was the name of a place in the present department of Wei-hui, Ho-nan, where Shâu had accumulated great treasures. He fled to it after his defeat, and burned himself to death; but it would appear he had not succeeded in consuming at the same time all his wealth.

³ *Kü-khião* was in the present district of *Khi-kâu*, department Kwang-phing, *Khi-lí*, where Shâu had collected great stores of grain.

⁴ Dukes, marquises, earls, counts, and barons.

scale¹. He gave offices only to the worthy, and employments only to the able. He attached great importance to the people's being taught the duties of the five relations of society, and to measures for ensuring a sufficient supply of food, attention to the rites of mourning, and to sacrifices.* He showed the reality of his truthfulness, and proved clearly his righteousness. He honoured virtue, and rewarded merit. Then he had only to let his robes fall down, and fold his hands, and the kingdom was orderly ruled.

BOOK IV. THE GREAT PLAN.

THE Great Plan, ordinarily classed among the 'Counsels' or among the 'Instructions' of the Shû, might as well have a place among the 'Canons.' It is a remarkable production, and though it appears among the documents of the K'au dynasty, there is claimed for the substance of it a much greater antiquity. According to the introductory sentences, king Wû, the founder of K'au, obtained it from the count of K'hi in the same year, the thirteenth of his dignity as Chief of the West, that he took the field against the tyrant of Shang. The count of K'hi, it is understood, was the Grand-Master at the court of Shang, who appears in the concluding Book of the last Part. He says there, that, when ruin overtook the House of Shang, he would not be the servant of another dynasty. Accordingly, he refused to acknowledge the sovereignty of king Wû, who had delivered him from the prison in which he had been confined by K'au-hsin, and fled—or purposed perhaps to flee—to Corea. Wû respected and admired his fidelity to the fallen dynasty, and invested him with that territory. He then, it is said, felt constrained to appear at the court of K'au, when the king consulted

¹ Dukes and marquises had the same amount of territory assigned to them, and counts and barons also.

him on the principles of government; and the result was that he communicated to him this Great Plan, with its nine divisions. When we read the Book, we see that it belonged originally to the time of Hsiâ, and that the larger portion of it should be ascribed to the Great Yü, and was as old, indeed, as the reign of Yáo. How it had come into the possession of the count of *K'hi* we cannot tell. Nor does it appear how far the language of it should be ascribed to him. That the larger portion of it had come down from the times of Hsiâ is not improbable. The use of the number nine and other numbers, and the naming of the various divisions of the Plan, are in harmony with Yü's style and practice in his Counsels in the second Part of our Classic, and in the second Part also of the Tribute of Yü. We are told in the introductory sentences, that Heaven or God gave the Plan with its divisions to Yü. To explain the way in which the gift was made, there is a tradition about a mysterious tortoise that appeared in the waters of the Lo, bearing well-defined marks on its back from one to nine, and that thereupon Yü determined the meaning of those marks and of their numbers, and completed the nine divisions of the Plan. Of this legend, however, it is not necessary to speak in connexion with the Shū, which does not mention it; it will come up in connexion with the translation of the Yü King.

The Great Plan means the great model for the government of the nation,—the method by which the people may be rendered happy and tranquil, in harmony with their condition, through the perfect character of the king, and his perfect administration of government.

P. Gaubil says that the Book is a treatise at once of physics, astrology, divination, morals, politics, and religion, and that it has a sufficiently close resemblance to the work of Ocellus the Lucanian. There is a shadowy resemblance between the Great Plan and the curious specimen of Pythagorean doctrine which we have in the treatise on the Universe; but the dissimilarities are still greater and more numerous. More especially are the differences between the Greek mind, speculative, and the Chinese mind, practical, apparent in the two works. Where the Chinese writer loses himself in the sheerest follies of his imagining, he yet gropes about for a rule to be of use in the conduct of human affairs.

The whole of the treatise is divided into three chapters. The first is introductory, and relates how the Great Plan with its

nine divisions was at first made known to Yü, and came at this time to be communicated to king Wü; the second contains the names of the nine divisions of the Plan; and in the third we have a description of the several divisions. 'The whole,' says a Chinese writer, 'exhibits the great model for the government of the nation.' The fifth or middle division on royal perfection is the central one of the whole, about which the Book revolves. The four divisions that precede it show how this royal perfection is to be accomplished, and the four that follow show how it is to be maintained.

1. In the thirteenth year¹, the king went to enquire of the count of *K'hi*, and said to him, 'Oh! count of *K'hi*, Heaven, (working) unseen, secures the tranquillity of the lower people, aiding them to be in harmony with their condition². I do not know how the unvarying principles (of its method in doing so) should be set forth in due order.'

The count of *K'hi* thereupon replied, 'I have heard that in old time Khwăn dammed up the inundating waters, and thereby threw into disorder the arrangement of the five elements. God was consequently roused to anger, and did not give him the Great Plan with its nine divisions, and thus the unvarying principles (of Heaven's method) were allowed to go to ruin.* Khwăn was therefore

¹ See the commencement of Book i.

² Khung Ying-tâ of the Thang dynasty says on this:—'The people have been produced by supreme Heaven, and both body and soul are Heaven's gift. Men have thus the material body and the knowing mind, and Heaven further assists them, helping them to harmonize their lives. The right and the wrong of their language, the correctness and errors of their conduct, their enjoyment of clothing and food, the rightness of their various movements;—all these things are to be harmonized by what they are endowed with by Heaven.'

kept a prisoner till his death, and his son Yü rose up (and entered on the same undertaking). To him Heaven gave the Great Plan with its nine divisions, and the unvarying principles (of its method) were set forth in their due order.*

2. '(Of those divisions) the first is called "the five elements;" the second, "reverent attention to the five (personal) matters;" the third, "earnest devotion to the eight (objects of) government;" the fourth, "the harmonious use of the five dividers of time;" the fifth, "the establishment and use of royal perfection;" the sixth, "the discriminating use of the three virtues;" the seventh, "the intelligent use of (the means for) the examination of doubts;" the eighth, "the thoughtful use of the various verifications;" the ninth, "the hortatory use of the five (sources of) happiness, and the awing use of the six (occasions of) suffering."'

3. i. 'First, of the five elements¹.—The first is

¹ Gaubil gives here 'les cinq hing,' without translating the Chinese term. English sinologists have got into the habit of rendering it by 'elements,' but it hardly seems possible to determine what the Chinese mean by it. We intend by 'elements' 'the first principles or ingredients of which all things are composed.' The Pythagoreans, by their four elements of earth, water, air, and fire, did not intend so much the nature or essence of material substances, as the forms under which matter is actually presented to us. The character hsing, meaning 'to move,' 'to be in action,' shows that the original conception of the Chinese is of a different nature; and it is said in the Khang-hsi Dictionary, 'The five hsing move and revolve between heaven and earth, without ever ceasing, and hence they are named.' The editors of the latest imperial edition of the Shû say, 'Distributed through the four seasons, they make "the five dividers of time;" exhibited in prognostications, they give rise to divination by the tortoise-shell and the reeds; having lodgment in the human body, they produce "the five personal matters;" moved by good fortune and bad, they

water ; the second is fire ; the third, wood ; the fourth, metal ; and the fifth, earth. (The nature of) water is to soak and descend ; of fire, to blaze and ascend ; of wood, to be crooked and straight ; of metal, to yield and change ; while (that of) earth is seen in seed-sowing and in-gathering. That which soaks and descends becomes salt ; that which blazes and ascends becomes bitter ; that which is crooked and straight becomes sour ; that which yields and changes becomes acrid ; and from seed-sowing and in-gathering comes sweetness.'

ii. 'Second, of the five (personal) matters ¹.—The first is the bodily demeanour ; the second, speech ; the third, seeing ; the fourth, hearing ; the fifth, thinking. (The virtue of) the bodily appearance is respectfulness ; of speech, accordance (with reason) ; of seeing, clearness ; of hearing, distinctness ; of thinking, perspicaciousness. The respectfulness becomes manifest in gravity ; accordance (with reason), in orderliness ; the clearness, in wisdom ; the distinctness, in deliberation ; and the perspicaciousness, in sageness.'

iii. 'Third, of the eight (objects of) government ².—

produce "the various verifications ;" communicated to organisms, they produce the different natures, hard and soft, good and evil ; working out their results in the changes of those organisms, they necessitate—here benevolence and there meanness, here longevity and there early death :—all these things are from the operation of the five hsing. But if we speak of them in their simplest and most important character, they are what man's life depends on, what the people cannot do without.' After all this, I should still be sorry to be required to say what the five hsing are.

¹ These five 'matters' are represented as being in the human person what the five hsing are in nature. Demeanour is the human correspondence of water, speech that of fire, &c.

² Medhurst calls the eight (objects of) government 'the eight

The first is food ; the second, wealth and articles of convenience ; the third, sacrifices ; the fourth, (the business of) the Minister of Works ; the fifth, (that of) the Minister of Instruction ; the sixth, (that of) the Minister of Crime ; the seventh, the observances to be paid to guests ; the eighth, the army.'

iv. 'Fourth, of the five dividers of time¹.—The first is the year (or the planet Jupiter) ; the second, the moon ; the third, the sun ; the fourth, the stars and planets, and the zodiacal spaces ; and the fifth, the calendaric calculations.'

v. 'Fifth, of royal perfection².—The sovereign, having established (in himself) the highest degree and pattern of excellence, concentrates in his own person the five (sources of) happiness, and proceeds to diffuse them, and give them to the multitudes of the people. Then they, on their part, embodying your perfection, will give it (back) to you, and secure the preservation of it. Among all the multitudes of the people there will be no unlawful confederacies, and among men (in office) there will be no bad and selfish combinations ;—let the sovereign

regulators,' and Gaubil calls them '*les huit règles du gouvernement*.' The phrase means the eight things to be attended to in government,—its objects and departments.

¹ 'The five dividers of time' are with Medhurst 'the five arrangers,' and with Gaubil '*les cinq périodes*.' This division of the Great Plan is substantially the same as Yáo's instructions to his astronomers.

² By 'royal perfection' we are to understand the sovereign when he is, or has made himself, all that he ought to be. 'Perfection' is 'the utmost point,' the extreme of excellence, realized in the person of the sovereign, guiding his administrative measures, and serving as an example and attractive influence to all below, both ministers and people.

establish in (himself) the highest degree and pattern of excellence.

‘Among all the multitudes of the people there will be those who have ability to plan and to act, and who keep themselves (from evil):—do you keep such in mind; and there will be those who, not coming up to the highest point of excellence, yet do not involve themselves in evil:—let the sovereign receive such. And when a placid satisfaction appears in their countenances, and they say, “Our love is fixed on virtue,” do you then confer favours on them;—those men will in this way advance to the perfection of the sovereign. Do not let him oppress the friendless and childless, nor let him fear the high and distinguished. When men (in office) have ability and administrative power, let them be made still more to cultivate their conduct; and the prosperity of the country will be promoted. All (such) right men, having a competency, will go on in goodness. If you cannot cause them to have what they love in their families, they will forthwith proceed to be guilty of crime. As to those who have not the love of virtue, although you confer favours (and emoluments) on them, they will (only) involve you in the guilt of employing the evil.

‘Without deflection, without unevenness,
Pursue the royal righteousness.
Without selfish likings,
Pursue the royal way.
Without selfish dislikings,
Pursue the royal path.
Avoid deflection, avoid partiality;—
Broad and long is the royal way.

Avoid partiality, avoid deflection ;—
Level and easy is the royal way.
Avoid perversity, avoid one-sidedness ;—
Correct and straight is the royal way.
(Ever) seek for this perfect excellence,
(Ever) turn to this perfect excellence.'

He went on to say, 'This amplification of the royal perfection contains the unchanging (rule), and is the (great) lesson ;—yea, it is the lesson of God.* All the multitudes of the people, instructed in this amplification of the perfect excellence, and carrying it into practice, will thereby approximate to the glory of the Son of Heaven, and say, "The Son of Heaven is the parent of the people, and so becomes the sovereign of all under the sky."'

vi. 'Sixth, of the three virtues¹.—The first is correctness and straightforwardness ; the second, strong rule ; and the third, mild rule. In peace and tranquillity, correctness and straightforwardness (must sway) ; in violence and disorder, strong rule ; in harmony and order, mild rule. For the reserved and retiring there should be (the stimulus of) the strong rule ; for the high(-minded) and distinguished, (the restraint of) the mild rule.

'It belongs only to the sovereign to confer dignities and rewards, to display the terrors of majesty, and to receive the revenues (of the kingdom). There should be no such thing as a minister's conferring dignities or rewards, displaying the terrors of majesty, or receiving the revenues. Such

¹ 'The three virtues' are not personal attributes of the sovereign, but characteristics of his rule, the varied manifestations of the perfection described in the preceding division.

a thing is injurious to the clans, and fatal to the states (of the kingdom); smaller affairs are thereby managed in a one-sided and perverse manner, and the people fall into assumptions and excesses.'

vii. 'Seventh, of the (means for the) examination of doubts¹.—Officers having been chosen and appointed for divining by the tortoise-shell and the

¹ The practice of divination for the satisfaction of doubts was thus used in China from the earliest times. In the Counsels of Yü, p. 50, that sage proposes to Shun to submit the question of who should be his successor on the throne to divination, and Shun replies that he had already done so. Gaubil says that according to the Great Plan divination was only used in doubtful cases; but if such was the practice of the sages, diviners and soothsayers must have formed, as they do now, a considerable and influential class in society. The old methods of divination have fallen into disuse, and we do not know how far other methods are employed and sanctioned by the government. Those old methods were by means of the tortoise-shell, and the stalks of the *K'hi* plant. 'The tortoise,' says K'ü Hsi, 'after great length of years becomes intelligent; and the *K'hi* plant will yield, when a hundred years old, a hundred stalks from one root, and is also a spiritual and intelligent thing. The two divinations were in reality a questioning of spiritual beings, the plant and the shell being employed, because of their mysterious intelligence, to indicate their intimations. The way of divination by the shell was by the application of fire to scorch it till the indications appeared on it; and that by the stalks of the plant was to manipulate in a prescribed way forty-nine of them, eighteen different times, till the diagrams were formed.'

The outer shell of the tortoise was removed, leaving the inner portion on which were the marks of the lines of the muscles of the creature. This was smeared with a black pigment, and, fire being applied beneath, the pigment was examined, and according as it had been variously dried by the heat, presented the indications mentioned in the text. The *K'hi* plant was probably the *Achillea millefolium*. It is cultivated largely on the mound over the grave of Confucius. I brought from that two bundles of the dried stalks in 1873.

stalks of the Achillea, they are to be charged (on occasion) to execute their duties. (In doing this), they will find (the appearances of) rain, of clearing up, of cloudiness, of want of connexion, and of crossing; and the inner and outer diagrams. In all (the indications) are seven;—five given by the shell, and two by the stalks; and (by means) of these any errors (in the mind) may be traced out. These officers having been appointed, when the divination is proceeded with, three men are to interpret the indications, and the (consenting) words of two of them are to be followed.*

‘When you have doubts about any great matter, consult with your own mind; consult with your high ministers and officers; consult with the common people; consult the tortoise-shell and divining stalks. If you, the shell, the stalks, the ministers and officers, and the common people, all agree about a course, this is what is called a great concord, and the result will be the welfare of your person and good fortune to your descendants. If you, the shell, and the stalks agree, while the ministers, and officers, and the common people oppose, the result will be fortunate. If the ministers and officers, with the shell and stalks, agree, while you and the common people oppose, the result will be fortunate. If the common people, the shell, and the stalks agree, while you, with the ministers and officers, oppose, the result will be fortunate. If you and the shell agree, while the stalks, with the ministers and officers, and the common people, oppose, internal operations will be fortunate, and external undertakings unlucky. When the shell and stalks are both opposed to the views of men, there will be

good fortune in being still, and active operations will be unlucky.*

viii. 'Eighth, of the various verifications¹.—They are rain, sunshine, heat, cold, wind, and seasonableness. When the five come, all complete, and each in its proper order, (even) the various plants will be richly luxuriant. Should any one of them be either excessively abundant or excessively deficient, there will be evil.*

'There are the favourable verifications²:—namely,

¹ P. Gaubil renders by 'les apparences' the characters which I have translated 'the various verifications,' observing that he could not find any word which would cover the whole extent of the meaning. He says, 'In the present case, the character signifies meteors, phenomena, appearances, but in such sort that these have relation to some other things with which they are connected;—the meteor or phenomenon indicates some good or some evil. It is a kind of correspondency which is supposed, it appears, to exist between the ordinary events of the life of men and the constitution of the air, according to the different seasons;—what is here said supposes—I know not what physical speculation of those times. It is needless to bring to bear on the text the interpretation of the later Chinese, for they are full of false ideas on the subject of physics. It may be also that the count of *Khî* wanted to play the physicist on points which he did not know.' There seems to underlie the words of the count that feeling of the harmony between the natural and spiritual worlds, which occurs at times to most men, and strongly affects minds under deep religious thought or on the wings of poetic rapture, but the way in which he endeavours to give the subject a practical application can only be characterised as grotesque.

² Compare with this what is said above on the second division of the Plan, 'the five (personal) matters.' It is observed here by *Shâi K'ân*, the disciple of *K'ü Hsî*, and whose commentary on the *Shû* has, of all others, the greatest authority:—'To say that on occasion of such and such a personal matter being realized, there will be the favourable verification corresponding to it, or that, on occasion of the failure of such realization, there will be the corresponding

of gravity, which is emblemed by seasonable rain ; of orderliness, emblemed by seasonable sunshine ; of wisdom, emblemed by seasonable heat ; of deliberation, emblemed by seasonable cold ; and of sageness, emblemed by seasonable wind. There are (also) the unfavourable verifications :—namely, of recklessness, emblemed by constant rain ; of assumption, emblemed by constant sunshine ; of indolence, emblemed by constant heat ; of hastiness, emblemed by constant cold ; and of stupidity, emblemed by constant wind.’ *

He went on to say, ‘ The king should examine the (character of the whole) year ; the high ministers and officers (that of) the month ; and the inferior officers (that of) the day. If, throughout the year, the month, the day, there be an unchanging seasonableness, all the grains will be matured ; the measures of government will be wise ; heroic men will stand forth distinguished ; and in the families (of the people) there will be peace and prosperity. If, throughout the year, the month, the day, the seasonableness be interrupted, the various kinds of grain will not be matured ; the measures of government will be dark and unwise ; heroic men will be kept in

unfavourable verification, would betray a pertinacious obtuseness, and show that the speaker was not a man to be talked with on the mysterious operations of nature. It is not easy to describe the reciprocal meeting of Heaven and men. The hidden springs touched by failure and success, and the minute influences that respond to them :—who can know these but the man that has apprehended all truth ? ’ This is in effect admitting that the statements in the text can be of no practical use. And the same thing is admitted by the latest imperial editors of the Shū on the use which the text goes on to make of the thoughtful use of the verifications by the king and others.

obscurity; and in the families (of the people) there will be an absence of repose.

‘By the common people the stars should be examined. Some stars love wind, and some love rain. The courses of the sun and moon give winter and summer. The way in which the moon follows the stars gives wind and rain.’

ix. ‘Ninth, of the five (sources of) happiness¹.—The first is long life; the second, riches; the third, soundness of body and serenity of mind; the fourth, the love of virtue; and the fifth, fulfilling to the end the will (of Heaven).* Of the six extreme evils, the first is misfortune shortening the life; the second, sickness; the third, distress of mind; the fourth, poverty; the fifth, wickedness; the sixth, weakness².’

BOOK V. THE HOUNDS OF LÜ.

Lü was the name of one of the rude tribes of the west, lying beyond the provinces of Kâu. Its situation cannot be more exactly defined. Its people, in compliment to king Wû, and impressed by a sense of his growing power, sent to him some of their hounds, and he having received them, or intimated that he would do so, the Grand-Guardian remonstrated with him, showing that to receive such animals would be contrary to precedent, dangerous to the virtue of the sovereign, and was not the way to deal with outlying tribes and nations. The Grand-Guardian, it is supposed, was the duke of Shão, author of the Announcement which forms the twelfth Book of this Part. The Book is one of the ‘Instructions’ of the Shû.

¹ It is hardly possible to see how this division enters into the scheme of the Great Plan.

² ‘Wickedness’ is, probably, boldness in what is evil, and ‘weakness,’ feebleness of will in what is good.

1. After the conquest of Shang, the way being open to the nine tribes of the Î¹ and the eight of the Man¹, the western tribe of Lü sent as tribute some of its hounds, on which the Grand-Guardian made 'the Hounds of Lü,' by way of instruction to the king.

2. He said, 'Oh ! the intelligent kings paid careful attention to their virtue, and the wild tribes on every side acknowledged subjection to them. The nearer and the more remote all presented the productions of their countries,—in robes, food, and vessels for use. The kings then displayed the things thus drawn forth by their virtue, (distributing them) to the (princes of the) states of different surnames from their own, (to encourage them) not to neglect their duties. The (more) precious things and pieces of jade they distributed among their uncles in charge of states, thereby increasing their attachment (to the throne). The recipients did not despise the things, but saw in them the power of virtue.

'Complete virtue allows no contemptuous familiarity. When (a ruler) treats superior men with such familiarity, he cannot get them to give him all their hearts ; when he so treats inferior men, he cannot get them to put forth for him all their strength. Let him keep from being in bondage to his ears and eyes, and strive to be correct in all his measures. By trifling intercourse with men, he ruins his virtue ; by finding his amusement in things (of mere pleasure),

¹ By 'the nine Î and eight Man' we are to understand generally the barbarous tribes lying round the China of Kâu. Those tribes are variously enumerated in the ancient books. Generally the Î are assigned to the east, the Zung to the west, the Tî to the north, and the Man to the south.

he ruins his aims. His aims should repose in what is right; he should listen to words (also) in their relation to what is right.

‘When he does not do what is unprofitable to the injury of what is profitable, his merit can be completed. When he does not value strange things to the contemning things that are useful, his people will be able to supply (all that he needs). (Even) dogs and horses that are not native to his country he will not keep. Fine birds and strange animals he will not nourish in his state. When he does not look on foreign things as precious, foreigners will come to him; when it is real worth that is precious to him, (his own) people near at hand will be in a state of repose.

‘Oh! early and late never be but earnest. If you do not attend jealously to your small actions, the result will be to affect your virtue in great matters;—in raising a mound of nine fathoms, the work may be unfinished for want of one basket (of earth). If you really pursue this course (which I indicate), the people will preserve their possessions, and the throne will descend from generation to generation.’

BOOK VI. THE METAL-BOUND COFFER.

A CERTAIN chest or coffer, that was fastened with bands of metal, and in which important state documents were deposited, plays an important part among the incidents of the Book, which is therefore called ‘the Metal-bound Coffe.’ To what class among the documents of the Shû it should be assigned is doubtful.

King Wû is very ill, and his death seems imminent. His brother, the duke of Kâu, apprehensive of the disasters which such an

event would occasion to their infant dynasty, conceives the idea of dying in his stead, and prays to 'the three kings,' their immediate progenitors, that he might be taken and king Wû left. Having done so, and divined that he was heard, he deposits the prayer in the metal-bound coffer. The king gets well, and the duke is also spared; but five years later, Wû does die, and is succeeded by his son, a boy only thirteen years old. Rumours are spread abroad that the duke has designs on the throne, and he withdraws for a time from the court. At length, in the third year of the young king, Heaven interposes. He has occasion to open the coffer, and the prayer of the duke is found. His devotion to his brother and to the interests of their family is brought to light. The boy-monarch weeps because of the unjust suspicions he had harboured, and welcomes the duke back to court, amid unmistakeable demonstrations of the approval of Heaven.

The whole narrative is a very pleasing episode in the history of the times. It divides itself naturally into two chapters:—the first, ending with the placing the prayer in the coffer; and the second, detailing how it was brought to light, and the consequences of the discovery.

It is in this Book that we first meet in the Shū with the duke of Kâu, a name in Chinese history only second to that of Confucius. He was the legislator and consolidator of the dynasty of Kâu, equally mighty in words and in deeds,—a man of counsel and of action. Confucius regarded his memory with reverence, and spoke of it as a sign of his own failing powers, that the duke of Kâu no longer appeared to him in his dreams. He was the fourth son of king Wăn; his name was Tan, and he had for his appanage the territory of Kâu, where Than-fû, canonized by him as king Thái, first placed the seat of his family in B.C. 1327, and hence he is commonly called 'the duke of Kâu.'

1. Two years after the conquest of Shang¹, the king fell ill, and was quite disconsolate. The two (other great) dukes² said, 'Let us reverently consult

¹ B.C. 1121.

² These were the duke of Sháo, to whom the preceding Book is ascribed, and Thái-kung, who became the first of the lords of K'hi.

the tortoise-shell about the king;' but the duke of *Kâu* said, 'You must not so distress our former kings¹.' He then took the business on himself, and reared three altars of earth on the same cleared space; and having made another altar on the south of these, and facing the north, he took there his own position. Having put a round symbol of jade (on each of the three altars), and holding in his hands the lengthened symbol (of his own rank), he addressed the kings *Thái*, *Ki*, and *Wăn*.*

The (grand) historiographer had written on tablets his prayer, which was to this effect:—'A. B., your great descendant, is suffering from a severe and violent disease;—if you three kings have in heaven the charge of (watching over) him, (Heaven's) great son, let me Tan be a substitute for his person². I was lovingly obedient to my father; I am possessed of many abilities and arts, which fit me to serve spiritual beings. Your great descendant, on the other hand, has not so many abilities and arts as I, and is not so capable of serving spiritual beings. And moreover he was appointed in the hall of God to extend his aid all over the kingdom, so that he might establish your descendants in this lower earth. The people of the four quarters all stand in reverent

¹ He negatives their proposal, having determined to take the whole thing on himself.

² Two things are here plain:—first, that the duke of *Kâu* offered himself to die in the room of his brother; and second, that he thought that his offer might somehow be accepted through the intervention of the great kings, their progenitors. He proceeds to give his reasons for making such an offer, which are sufficiently interesting. It was hardly necessary for Chinese scholars to take the pains they have done to free the duke from the charge of boasting in them.

awe of him. Oh! do not let that precious Heaven-conferred appointment fall to the ground, and (all the long line of) our former kings will also have one in whom they can ever rest at our sacrifices.* I will now seek for your determination (in this matter) from the great tortoise-shell. If you grant me (my request), I will take these symbols and this mace, and return and wait for your orders. If you do not grant it, I will put them by¹.*

The duke then divined with the three tortoise-shells, and all were favourable. He opened with a key the place where the (oracular) responses were kept, and looked at them, and they also were favourable. He said, 'According to the form (of the prognostic) the king will take no injury. I, the little child, have got the renewal of his appointment from the three kings, by whom a long futurity has been consulted for. I have now to wait for the issue. They can provide for our One man.'^{*}

When the duke returned, he placed the tablets (of the prayer) in a metal-bound coffer², and next day the king got better.

2. (Afterwards), upon the death of king Wû, (the duke's) elder brother, he of Kwan, and his younger brothers, spread a baseless report through the king-

¹ I suppose that the divination took place before the altars, and that a different shell was used to ascertain the mind of each king. The oracular responses would be a few lines, kept apart by themselves, and consulted, on occasion, according to certain rules which have not come down to the present day.

² Many scholars think that it was this coffer which contained the oracles of divination mentioned above. It may have been so; but I rather suppose it to have been different, and a special chest in which important archives of the dynasty, to be referred to on great emergencies, were kept.

dom, to the effect that the duke would do no good to the (king's) young son. On this the duke said to the two (other great) dukes, 'If I do not take the law (to these men), I shall not be able to make my report to the former kings¹.' *

He resided (accordingly) in the east for two years², when the criminals were taken (and brought to justice). Afterwards he made a poem to present to the king, and called it 'the Owl³.' The king on his part did not dare to blame the duke.

In the autumn, when the grain was abundant and ripe, but before it was reaped, Heaven sent a great storm of thunder and lightning, along with wind, by which the grain was all broken down, and great trees torn up. The people were greatly terrified; and the king and great officers, all in their caps of state, proceeded to open the metal-bound coffer and examine the writings in it, where they found the words of the duke when he took on himself the business of being a substitute for king Wû. The two (great) dukes and the king asked the historiographer and all the other officers (acquainted with the transaction) about the thing, and they replied, 'It was really thus; but ah! the duke charged us that we

¹ Wû died in B. C. 1116, and was succeeded by his son Sung, who is known in history as king K'ang, or 'the Completer.' He was at the time only thirteen years old, and his uncle, the duke of K'au, acted as regent. The jealousy of his elder brother Hsien, 'lord of Kwan,' and two younger brothers, was excited, and they spread the rumour which is referred to, and entered into a conspiracy with the son of the tyrant of Shang, to overthrow the new dynasty.

² These two years were spent in military operations against the revoltors.

³ See the Book of Poetry, Part I, xv, Ode 2.

should not presume to speak about it.' The king held the writing in his hand, and wept, saying, 'We need not (now) go on reverently to divine. Formerly the duke was thus earnest for the royal House, but I, being a child, did not know it. Now Heaven has moved its terrors to display his virtue. That I, the little child, (now) go with my new views and feelings to meet him, is what the rules of propriety of our kingdom require.'*

The king then went out to the borders (to meet the duke), when Heaven sent down rain, and, by virtue of a contrary wind, the grain all rose up. The two (great) dukes gave orders to the people to take up the trees that had fallen and replace them. The year then turned out very fruitful.*

BOOK VII. THE GREAT ANNOUNCEMENT.

THIS 'Great Announcement' was called forth by the emergency referred to in the second chapter of the last Book. The prefatory notice says, 'When king Wû had deceased, the three overseers and the wild tribes of the Hwâi rebelled. The duke of Kâu acted as minister for king K'hang, and having purposed to make an end of the House of Yin (or Shang), he made 'the Great Announcement.' Such was the occasion on which the Book was composed. The young king speaks in it the words and sentiments of the duke of Kâu; and hence the style in which it commences, 'The king speaks to the following effect.'

The young sovereign speaks of the responsibility lying on him to maintain the kingdom gained by the virtues and prowess of his father, and of the senseless movements of the House of Shang to regain its supremacy. He complains of the reluctance of many of the princes and high officers to second him in putting down revolt, and proclaims with painful reiteration the support and assurances of success which he has received from the divining shell. His traitorous uncles, who were confederate with the son of the tyrant of Shang, are only alluded to.

1. The king speaks to the following effect :—‘ Ho ! I make a great announcement to you, (the princes of) the many states, and to you, the managers of my affairs.—We are unpitied, and Heaven sends down calamities on our House, without the least intermission¹.* It greatly occupies my thoughts that I, so very young, have inherited this illimitable patrimony with its destinies and domains. I cannot display wisdom and lead the people to prosperity ; and how much less should I be able to reach the knowledge of the decree of Heaven !* Yes, I who am but a little child am in the position of one who has to go through a deep water ;—I must go and seek where I can cross over. I must diffuse the elegant institutions of my predecessor and display the appointment which he received (from Heaven) ;—so shall I not be forgetful of his great work. Nor shall I dare to restrain the majesty of Heaven in sending down its inflictions (on the criminals)².’ *

2. ‘The Tranquillizing king³ left to me the great precious tortoise-shell, to bring into connexion with me the intelligence of Heaven. I divined by it, and it told me that there would be great trouble in the region of the west⁴, and that the western people would not be still⁴.* Accordingly we have these senseless movements. Small and reduced as Yin

¹ With reference, probably, to the early death of his father, and the revolt that followed quickly upon it.

² The duke had made up his mind that he would deal stern justice even on his own brothers.

³ King Wû.

⁴ The troubles arose in the east, and not in the west. We do not know the facts in the state of the kingdom sufficiently to explain every difficulty in these Books. Perhaps the oracular response had been purposely ambiguous.

now is, (its prince) greatly dares to take in hand its (broken) line. Though Heaven sent down its terrors (on his House), yet knowing of the evils in our kingdom, and that the people are not tranquil, he says, "I will recover (my patrimony);" and so (he wishes to) make our *Kâu* a border territory again.

'One day there was a senseless movement, and the day after, ten men of worth appeared among the people, to help me to go forward to restore tranquillity and perpetuate the plans (of my father)¹. The great business I am engaging in will (thus) have a successful issue. I have divined (also) by the tortoise-shell, and always got a favourable response.* Therefore I tell you, the princes of my friendly states, and you, the directors of departments, my officers, and the managers of my affairs,—I have obtained a favourable reply to my divinations. I will go forward with you from all the states, and punish those vagabond and transported ministers of Yin.'

3. '(But) you the princes of the various states, and you the various officers and managers of my affairs, all retort on me, saying, "The hardships will be great, and that the people are not quiet has its source really in the king's palace and in the mansions of the princes in that (rebellious) state². We little ones, and the old and reverend men as well, think the expedition ill-advised;—why does your Majesty not go contrary to the divinations?" I, in my youth, (also) think continually of these hardships, and say,

¹ Who these 'ten men of worth' were, we do not know, nor the circumstances in which they came forward to help the government.

² Here is an allusion, as plain as the duke could permit himself to make, to the complicity of his brothers in the existing troubles.

Alas! these senseless movements will deplorably afflict the wifeless men and widows! But I am the servant of Heaven, which has assigned me this great task, and laid the hard duty on my person.* I therefore, the young one, do not pity myself; and it would be right in you, the many officers, the directors of departments, and the managers of my affairs, to comfort me, saying, "Do not be distressed with sorrow. We shall surely complete the plans of your Tranquillizing father."

'Yes, I, the little child, dare not disregard the charge of God¹.* Heaven, favourable to the Tranquillizing king, gave such prosperity to our small country of K'áu. The Tranquillizing king divined and acted accordingly, and so he calmly received his (great) appointment. Now when Heaven is (evidently) aiding the people, how much more should we follow the indications of the shell! Oh! the clearly intimated will of Heaven is to be feared:—it is to help my great inheritance!'

4. The king says, 'You, who are the old ministers, are fully able to remember the past; you know how great was the toil of the Tranquillizing king. Where Heaven (now) shuts up (our path) and distresses us, is the place where I must accomplish my work;—I dare not but do my utmost to complete the plans of the Tranquillizing king. It is on this account that I use such efforts to remove the doubts and carry forward the inclinations of the princes of my friendly states. And Heaven assists me with sincere expressions (of sympathy), which I have ascertained among

¹ Probably the charge understood to be conveyed by the result of the divinations spoken of above.

the people ;—how dare I but aim at the completion of the work formerly begun by the Tranquillizer ? Heaven, moreover, is thus toiling and distressing the people ;—it is as if they were suffering from disease ; how dare I allow (the appointment) which my predecessor, the Tranquillizer, received, to be without its happy fulfilment ?' *

The king says, ' Formerly, at the initiation of this expedition, I spoke of its difficulties, and thought of them daily. But when a deceased father, (wishing) to build a house, had laid out the plan, if his son be unwilling to raise up the hall, how much less will he be willing to complete the roof ! Or if the father had broken up the ground, and his son be unwilling to sow the seed, how much less will he be willing to reap the crop ! In such a case could the father, (who had himself) been so reverently attentive (to his objects), have been willing to say, " I have a son who will not abandon his patrimony ?"—How dare I therefore but use all my powers to give a happy settlement to the great charge entrusted to the Tranquillizing king ? If among the friends of an elder brother or a deceased father there be those who attack his son, will the elders of the people encourage (the attack), and not (come to the) rescue ?'

5. The king says, ' Oh ! take heart, ye princes of the various states, and ye managers of my affairs. The enlightening of the country was from the wise, even from the ten men¹ who obeyed and knew the

¹ 'The ten men' here can hardly be the 'ten men of worth' above in the second chapter. We must find them rather in the 'ten virtuous men, one in heart and one in practice, capable of good,' mentioned by king Wû, in the second Part of the Great Declaration.

charge of God,* and the real assistance given by Heaven. At that time none of you presumed to change the rules (prescribed by the Tranquillizing king). And now when Heaven is sending down calamity on the country of Kâu, and the authors of these great distresses (make it appear on a grand scale as if) the inmates of a house were mutually to attack one another, you are without any knowledge that the decree of Heaven is not to be changed!*

‘I ever think and say, Heaven in destroying Yin was doing husbandman’s work¹;—how dare I but complete the work on my fields? Heaven will thereby show its favour to my predecessor, the Tranquillizer. How should I be all for the oracle of divination, and presume not to follow (your advice)?* I am following the Tranquillizer, whose purpose embraced all within the limits of the land. How much more must I proceed, when the divinations are all favourable! It is on these accounts that I make this expedition in force to the east. There is no mistake about the decree of Heaven. The indications given by the tortoise-shell are all to the same effect.’*

BOOK VIII. THE CHARGE TO THE COUNT OF WEI.

THE count of Wei was the principal character in the eleventh Book of the last Part, from which it appeared that he was a brother of the tyrant Kâu-hsin. We saw how his friends advised him to withdraw from the court of Shang, and save

¹ That is, thorough work,—clearing the ground of weeds, and not letting their roots remain.

himself from the destruction that was impending over their House. He had done so, and king Wû had probably continued him in the possession of his appanage of Wei, while Wû-kǎng, the son of the tyrant, had been spared, and entrusted with the duty of continuing the sacrifices to the great Thang and the other sovereigns of the House of Shang. Now that Wû-kǎng has been punished with death for his rebellion, the duke of K'áu summons the count of Wei to court, and in the name of king K'hang invests him with the dukedom of Sung, corresponding to the present department of Kwei-teh, Ho-nan, there to be the representative of the line of the departed kings of Shang.

The king speaks to the following effect:—‘Ho! eldest son of the king of Yin, examining into antiquity, (I find) that the honouring of the virtuous (belongs to their descendants) who resemble them in worth, and (I appoint) you to continue the line of the kings your ancestors, observing their ceremonies and taking care of their various relics. Come (also) as a guest to our royal House¹, and enjoy the prosperity of our kingdom, for ever and ever without end.

‘Oh! your ancestor, Thang the Successful, was reverent and sage, (with a virtue) vast and deep. The favour and help of great Heaven lighted upon him, and he grandly received its appointment, to soothe the people by his gentleness, and remove the wicked oppressions from which they were suffering.* His achievements affected his age, and his virtue was transmitted to his posterity. And you are the one who pursue and cultivate his plans;—this praise

¹ Under the dynasty of K'áu, the representatives of the two previous dynasties of Shang and Hsiâ were distinguished above the other princes of the kingdom, and denominated ‘guests’ of the sovereign, coming to his court and assisting in the services in his ancestral temple, nearly on a footing of equality with him.

has belonged to you for long. Reverently and carefully have you discharged your filial duties ; gravely and respectfully you behave to spirits and to men.* I admire your virtue, and pronounce it great and not to be forgotten. God will always enjoy your offerings ; the people will be reverently harmonious (under your sway).* I raise you therefore to the rank of high duke, to rule this eastern part of our great land¹.

‘ Be reverent. Go and diffuse abroad your instructions. Be carefully observant of your robes and (other accompaniments of) your appointment²; follow and observe the proper statutes ;—so as to prove a bulwark to the royal House. Enlarge (the fame of) your meritorious ancestor ; be a law to your people ;—so as for ever to preserve your dignity. (So also) shall you be a help to me, the One man ; future ages will enjoy (the benefit of) your virtue ; all the states will take you for a pattern ;—and thus you will make our dynasty of *Kâu* never weary of you.

‘ Oh ! go, and be prosperous. Do not disregard my charge.’

¹ Sung lay east from Făng and Hào, the capitals of Wăn and Wû, which were in the present department of Hsî-an, Shen-hsî.

² Meaning probably that he was to bear in mind that, however illustrious his descent, he was still a subject of the king of *Kâu*.

BOOK IX.

THE ANNOUNCEMENT TO THE PRINCE OF KHANG.

Of the ten sons of king Wăn, the ninth was called Fāng, and is generally spoken of as Khang Shŭ, or 'the uncle, (the prince of) Khang.' We must conclude that Khang was the name of Fāng's appanage, somewhere in the royal domain. This Book contains the charge given to him on his appointment to be marquis of Wei (the Chinese name is quite different from that of the appanage of the count of Wei), the chief city of which was K'ao-ko, that had been the capital of K'au-hsin. It extended westward from the present Khâi K'au, department Tâ-ming, K'ih-lî, to the borders of the departments of Wei-hui and Hwâi-k'ing, Ho-nan.

The Book is called an 'Announcement,' whereas it properly belongs to the class of 'Charges.' Whether the king who speaks in it, and gives the charge be Wû, or his son king K'hang, is a point on which there is much difference of opinion among Chinese critics. The older view that the appointment of Fāng to be marquis of Wei, and ruler of that part of the people who might be expected to cling most tenaciously to the memory of the Shang dynasty, took place after the death of Wû-k'ang, the son of the tyrant, and was made by the duke of K'au, in the name of king K'hang, is on the whole attended with the fewer difficulties.

The first paragraph, which appears within brackets, does not really belong to this Book, but to the thirteenth, where it will be found again. How it got removed from its proper place, and prefixed to the charge to the prince of Khang, is a question on which it is not necessary to enter. The key-note of the whole charge is in what is said, at the commencement of the first of the five chapters into which I have divided it, about king Wăn, that 'he was able to illustrate his virtue and be careful in the use of punishments.' The first chapter celebrates the exhibition of these two things given by Wăn, whereby he laid the foundations of the great destiny of his House, and set an example to his descendants. The second inculcates on Fāng how he should illustrate his virtue, as the basis of his good government of the people entrusted to him. The third inculcates on him how he should be careful in the use of

punishments, and sets forth the happy effects of his being so. The fourth insists on the influence of virtue, as being superior in government to that of punishment, and how punishments should all be regulated by the ruler's virtue. The last chapter winds the subject up with a reference to the uncertainty of the appointments of Heaven, and their dependance for permanence on the discharge of the duties connected with them by those on whom they have lighted.

[On the third month, when the moon began to wane, the duke of *Kâu* commenced the foundations, and proceeded to build the new great city of Lo, of the eastern states. The people from every quarter assembled in great harmony. From the *Hâu*, *Tien*, *Nan*, *Shâi*, and *Wei* domains, the various officers stimulated this harmony of the people, and introduced them to the business there was to be done for *Kâu*. The duke encouraged all to diligence, and made a great announcement about the performance (of the works).]

1. The king speaks to this effect :—‘ Head of the princes¹, and my younger brother², little one², *Făng*, it was your greatly distinguished father, the king *Wăn*, who was able to illustrate his virtue and be careful in the use of punishments. He did not dare to treat with contempt (even) wifeless men and widows. He employed the employable, and revered the reverend; he was terrible to those who needed to be awed :—so getting distinction among the people. It was thus he laid the foundations of (the sway of) our small portion of the kingdom³, and the one

¹ *Făng* had, no doubt, been made chief or leader of all the feudal lords in one of the *Kâu* or provinces of the kingdom.

² The duke of *Kâu*, though speaking in the name of king *Khăng*, yet addresses *Făng* from the standpoint of his own relation to him.

³ Referring to the original principality of *Kâu*.

or two (neighbouring) regions were brought under his improving influence, until throughout our western land all placed in him their reliance. The fame of him ascended up to the high God, and God approved. Heaven accordingly gave a grand charge to king Wăn, to exterminate the great (dynasty of) Yin, and grandly receive its appointment, so that the various countries belonging to it and their peoples were brought to an orderly condition.* Then your unworthy elder brother¹ exerted himself; and thus it is that you Făng, the little one, are here in this eastern region.'

2. The king says, 'Oh! Făng, bear these things in mind. Now (your success in the management of) the people will depend on your reverently following your father Wăn;—do you carry out his virtuous words which you have heard, and clothe yourself with them. (Moreover), where you go, seek out among (the traces of) the former wise kings of Yin what you may use in protecting and regulating their people. (Again), you must in the remote distance study the (ways of) the old accomplished men of Shang, that you may establish your heart, and know how to instruct (the people). (Further still), you must search out besides what is to be learned of the wise kings of antiquity, and employ it in tranquilizing and protecting the people. (Finally), enlarge (your thoughts) to (the comprehension of all) heavenly (principles), and virtue will be richly displayed in your person, so that you will not render nugatory the king's charge.'

¹ Is it strange that the duke should thus speak of king Wû? Should we not think the better of him for it?

The king says, 'Oh! Fǎng, the little one, be respectfully careful, as if you were suffering from a disease. Awful though Heaven be, it yet helps the sincere.* The feelings of the people can for the most part be discerned; but it is difficult to preserve (the attachment of) the lower classes. Where you go, employ all your heart. Do not seek repose, nor be fond of ease and pleasure. I have read the saying,—“Dissatisfaction is caused not so much by great things, or by small things, as by (a ruler's) observance of principle or the reverse, and by his energy of conduct or the reverse.” Yes, it is yours, O little one,—it is your business to enlarge the royal (influence), and to protect the people of Yin in harmony with their feelings. Thus also shall you assist the king, consolidating the appointment of Heaven, and renovating the people.’*

3. The king says, 'Oh! Fǎng, deal reverently and intelligently in your infliction of punishments. When men commit small crimes, which are not mischances, but purposed, they of themselves doing what is contrary to the laws intentionally, though their crimes be but small, you may not but put them to death. But in the case of great crimes, which were not purposed, but from mischance and misfortune, accidental, if the transgressors confess their guilt without reserve, you must not put them to death.’

The king says, 'Oh! Fǎng, there must be the orderly regulation (of this matter). When you show a great discrimination, subduing (men's hearts), the people will admonish one another, and strive to be obedient. (Deal firmly yet tenderly with evil), as if it were a disease in your own person, and the people

will entirely put away their faults. (Deal with them) as if you were protecting your own infants, and the people will be tranquil and orderly. It is not you, O Fǎng, who (can presume to) inflict a (severe) punishment or death upon a man;—do not, to please yourself, so punish a man or put him to death.' Moreover, he says, 'It is not you, O Fǎng, who (can presume to inflict a lighter punishment), cutting off a man's nose or ears;—do not, to please yourself, cause a man's nose or ears to be cut off.'

The king says, 'In things beyond (your immediate supervision), have laws set forth which the officers may observe, and these should be the penal laws of Yin which were rightly ordered.' He also says, 'In examining the evidence in (criminal) cases, reflect upon it for five or six days, yea, for ten days or three months. You may then boldly come to a decision in such cases¹.'

The king says, 'In setting forth the business of the laws, the punishments will be determined by (what were) the regular laws of Yin. But you must see that those punishments, and (especially) the penalty of death, be righteous. And you must not let them be warped to agree with your own inclinations, O Fǎng. Then shall they be entirely accordant with right, and you may say, "They are properly ordered;" yet you must say (at the same time), "Perhaps they are not yet entirely accordant with right." Yes, though you are the little one, who has a heart like you, O Fǎng? My heart and my virtue are also known to you.

¹ This is supposed to refer to a case where guilt would involve death, so that there could be no remedying a wrong decision.

‘All who of themselves commit crimes, robbing, stealing, practising villainy and treachery, and who kill men or violently assault them to take their property, being reckless and fearless of death;—these are abhorred by all.’

The king says, ‘O Fǎng, such great criminals are greatly abhorred, and how much more (detestable) are the unfilial and unbrotherly!—as the son who does not reverently discharge his duty to his father, but greatly wounds his father’s heart, and the father who can (no longer) love his son, but hates him; as the younger brother who does not think of the manifest will of Heaven, and refuses to respect his elder brother, and the elder brother who does not think of the toil of their parents in bringing up their children, and is very unfriendly to his junior. If we who are charged with government do not treat parties who proceed to such wickedness as offenders, the laws (of our nature) given by Heaven to our people will be thrown into great disorder and destroyed. You must resolve to deal speedily with such according to the penal laws of king Wǎn, punishing them severely and not pardoning.

‘Those who are disobedient (to natural principles) are to be thus subjected to the laws;—how much more the officers employed in your state as the instructors of the youth, the heads of the official departments, and the smaller officers charged with their several commissions, when they propagate other lessons, seeking the praise of the people, not thinking (of their duty), nor using (the rules for their offices), but distressing their ruler! These lead on (the people) to wickedness, and are an abomination to me. Shall they be let alone? Do you

speedily, according to what is right, put them to death.

‘And you will be yourself ruler and president ;— if you cannot manage your own household, with your smaller officers, and the heads of departments in the state, but use only terror and violence, you will greatly set aside the royal charge, and be trying to regulate your state contrary to virtue. You must in everything reverence the statutes, and proceed by them to the happy rule of the people. There were the reverence of king Wăn and his caution ;—in proceeding by them to the happy rule of the people, say, “If I could only attain to them—.” So will you make me, the One man, to rejoice.’

4. The king says, ‘O Făng, when I think clearly of the people, I see that they should be led (by example) to happiness and tranquillity. I think of the virtue of the former wise kings of Yin, whereby they tranquillized and regulated the people, and rouse myself to make it my own. Moreover, the people now are sure to follow a leader. If one do not lead them, he cannot be said to exercise a government in their state.’

The king says, ‘O Făng, I cannot dispense with the inspection (of the ancients), and I make this declaration to you about virtue in the use of punishments. Now the people are not quiet ; they have not yet stilled their minds ; notwithstanding my leading of them, they have not come to accord (with my government). I clearly consider that severe as are the inflictions of Heaven on me, I dare not murmur. The crimes (of the people), though they were not great or many, (would all be chargeable on me), and how much more shall this be said

when the report of them goes up so manifestly to heaven!

The king says, 'Oh! Fǎng, be reverent! Do not what will cause murmurings; and do not use bad counsels and uncommon ways. With the determination of sincerity, give yourself to imitate the active virtue (of the ancients). Hereby give repose to your mind, examine your virtue, send far forward your plans; and thus by your generous forbearance you will make the people repose in what is good, and I shall not have to blame you or cast you off.'

5. The king says, 'Oh! you, Fǎng, the little one, (Heaven's) appointments are not unchanging.* Think of this, and do not make me deprive you of your dignity. Make illustrious the charge which you have received; exalt (the instructions) which you have heard, and tranquillize and regulate the people accordingly.'

The king speaks to this effect: 'Go, Fǎng. Do not disregard the statutes you should reverence; hearken to what I have told you;—so shall you among the people of Yin enjoy (your dignity), and hand it down to your posterity.'

BOOK X.

THE ANNOUNCEMENT ABOUT DRUNKENNESS.

THIS Announcement was, like the last, made to Fǎng, the prince of Khang, about the time when he was invested with the principality of Wei. Mention has often been made in previous documents of the Shû of the drunken debauchery of Kieh as the chief cause of the downfall of the dynasty of Hsiâ, and of the same vice in K'au-hsin, the last of the kings of

Shang. The people of Shang had followed the example of their sovereign, and drunkenness, with its attendant immoralities, characterised both the highest and lowest classes of society. One of Fāng's most difficult tasks in his administration would be, to correct this evil habit, and he is called in this Book to the undertaking. He is instructed in the proper use and the allowable uses of spirits; the disastrous consequences of drunkenness are set forth; and he is summoned to roll back the flood of its desolation from his officers and people.

I have divided the Book into two chapters:—the one preliminary, showing the original use and the permissible uses of ardent spirits; the other, showing how drunkenness had proved the ruin of the Shang dynasty, and how they of K'âu, and particularly Fāng in Wei, should turn the lesson to account.

The title might be translated—'The Announcement about Spirits,' but the cursory reader would most readily suppose that the discourse was about Spiritual Beings. The Chinese term K'îu, that is here employed, is often translated by wine, but it denotes, it seems to me, ardent spirits. As Gaubil says, 'We have here to do with *le vin du riz*, the art of which was discovered, according to most writers, in the time of Yü, the founder of the first dynasty. The grape was not introduced to China till that of the first Han.'

[Since the above sentences were in manuscript, the Rev. Dr. Edkins of Pekin has stated at a meeting of the North-China branch of the Royal Asiatic Society, and in a letter to myself (April 24th), that he has lately investigated the question whether the K'îu of the ancient Chinese was spirits or not, and found that distillation was first known in China in the Mongol or Yüan dynasty (A. D. 1280–1367), so that the Arabs must have the credit of the invention; that the process in making K'îu was brewing, or nearly so, but, as the term beer is inadmissible in a translation of the classics, he would prefer to use the term wine; and that K'îu with Sh'áo ('fired,' 'ardent') before it, means spirits, but without Sh'áo, it means wine.

If the whole process of Dr. Edkins' investigation were before me, I should be glad to consider it, and not hesitate to alter my own view, if I saw reason to do so. Meanwhile, what he says makes me glad that I adopted 'the Announcement about Drunkenness' as the title of this chapter. It is drunkenness, by whatever liquor occasioned, that the king of K'âu condemns and denounces.

What we commonly understand by wine is never intended by *Kîu* in the Chinese classics, and therefore I cannot use that term. After searching as extensively as I could do in this country, since I received Dr. Edkins' letter, I have found nothing to make me think that the Chinese term is not properly translated by 'spirits.'

Dr. Williams, in his Syllabic Dictionary of the Chinese Language (Shanghai, 1874), gives this account of *Kîu* :—'Liquor; it includes spirits, wine, beer, and other drinks. The Chinese make no wine, and chiefly distil their liquors, and say that *Tû Khang*, a woman of the *Tî* tribes, first made it.' This account is to a considerable extent correct. The Chinese distil their liquors. I never saw beer or porter of native production among them, though according to Dr. Edkins they had been brewing 'or nearly so' for more than 3000 years. Among his examples of the use of *Kîu*, Williams gives the combinations of 'red *Kîu*' for claret, 'white *Kîu*' for sherry, and 'pf (simply phonetical) *Kîu*' for beer, adding that they 'are all terms of foreign origin.' What he says about the traditional account of the first maker of *Kîu* is not correct. It is said certainly that this was *Tû Khang*, but who he was, or when he lived, I have never been able to discover. Some identify him with *Î-tî*, said by Williams to have been 'a woman of the *Tî* tribes.' The attributing of the invention to *Î-tî* is probably an independent tradition. We find it in the 'Plans of the Warring States' (ch. xiv, art. 10), a work covering about four centuries from the death of Confucius :—'Anciently, the daughter of the *Tî* ordered *Î-tî* to make *Kîu*. She admired it, and presented some to *Yü*, who drank it, and found it pleasant. He then discarded *Î-tî*, and denounced the use of such generous *Kîu*, saying, "In future ages there are sure to be those who by *Kîu* will lose their states." According to this tradition intoxicating *Kîu* was known in the time of *Yü*—in the twenty-third century B. C. The daughter of the *Tî* would be *Yü*'s wife, and *Î-tî* would probably be their cook. It does not appear as the name of a woman, or one from the wild *Tî* tribes.

With regard to the phrase *Shâo Kîu*, said to be the proper term for ardent spirits, and unknown in China till the *Yüan* dynasty, a reference to the *Khang-hsi* Tonic Thesaurus of the language will show instances of its use as early at least as the *Thang* dynasty (A. D. 618–906).]

1. The king speaks to the following effect :—'Do

you clearly make known my great commands in the country of Mei¹.

‘When your reverent father, the king Wăn, laid the foundations of our kingdom in the western region, he delivered announcements and cautions to (the princes of) the various regions, and to all his (high) officers, with their assistants, and the managers of affairs, saying, morning and evening, “At sacrifices spirits should be employed.”* When Heaven was sending down its favouring decree, and laying the foundations of (the eminence of) our people, (spirits) were used only at the great sacrifices. When Heaven sends down its terrors, and our people are thereby greatly disorganized and lose their virtue, this may be traced invariably to their indulgence in spirits; yea, the ruin of states, small and great, (by these terrors), has been caused invariably by their guilt in the use of spirits².

¹ There is a place called ‘the village of Mei,’ in the north of the present district of *K’hi*, department Wei-hui, Ho-nan;—a relic of the ancient name of the whole territory. The royal domain of Shang, north from the capital, was all called Mei. Fāng’s principality of Wei must have embraced most of it.

² Kû Hsî says upon the meaning of the expressions ‘Heaven was sending down its favouring decree’ (its order to make *Kiû*, as he understood the language), and ‘when Heaven sends down its terrors,’ in this paragraph :—‘Kang Nan-hsien has brought out the meaning of these two statements much better than any of the critics who went before him, to the following effect :—*Kiû* is a thing intended to be used in offering sacrifices and in entertaining guests;—such employment of it is what Heaven has prescribed. But men by their abuse of *Kiû* come to lose their virtue, and destroy their persons;—such employment of it is what Heaven has annexed its terrors to. The Buddhists, hating the use of things where Heaven sends down its terrors, put away as well the use of them which Heaven has prescribed. It is not so with us of the learned (i.e. the Confucian or orthodox) school;—we only put

‘ King Wăn admonished and instructed the young nobles, who were charged with office or in any employment, that they should not ordinarily use spirits; and throughout all the states, he required that such should drink spirits only on occasion of sacrifices, and that then virtue should preside so that there might be no drunkenness¹.’

He said, ‘ Let my people teach their young men that they are to love only the productions of the soil, for so will their hearts be good. Let the young also hearken wisely to the constant instructions of their fathers; and let them look at all virtuous actions, whether great or small, in the same light (with watchful heed).

‘ (Ye people of) the land of Mei, if you can employ your limbs, largely cultivating your millets, and hastening about in the service of your fathers and elders; and if, with your carts and oxen, you traffic diligently to a distance, that you may thereby filially minister to your parents; then, when your parents are happy, you may set forth your spirits clear and strong, and use them².

‘ Hearken constantly to my instructions, all ye my (high) officers and ye heads of departments, all ye, my noble chiefs;—when ye have largely done your

away the use of things to which Heaven has annexed its terrors, and the use of them, of which it approves, remains as a matter of course.’

¹ In sacrificing, the fragrant odour of spirits was supposed to be acceptable to the Beings worshipped. Here the use of spirits seems to be permitted in moderation to the worshippers after the sacrifices. Observe how king Wăn wished to guard the young from acquiring the habit of drinking spirits.

² Here is another permissible use of spirits;—at family feasts, with a view especially to the comfort of the aged.

duty in ministering to your aged, and serving your ruler, ye may eat and drink freely and to satiety. And to speak of greater things:—when you can maintain a constant, watchful examination of yourselves, and your conduct is in accordance with correct virtue, then may you present the offerings of sacrifice,* and at the same time indulge yourselves in festivity. In such case you will indeed be ministers doing right service to your king, and Heaven likewise will approve your great virtue, so that you shall never be forgotten in the royal House.’*

2. The king says, ‘O Fǎng, in our western region, the princes of states, and the young (nobles), sons of the managers of affairs, who in former days assisted king Wǎn, were all able to obey his lessons, and abstain from excess in the use of spirits; and so it is that I have now received the appointment which belonged to Yin.’

The king says, ‘O Fǎng, I have heard it said, that formerly the first wise king of Yin manifested a reverential awe of the bright principles of Heaven and of the lower people, acting accordingly, steadfast in his virtue, and holding fast his wisdom.* From him, Thang the Successful, down to Tt-yí¹, all completed their royal virtue and revered their chief ministers, so that their managers of affairs respectfully discharged their helping duties, and dared not to allow themselves in idleness and pleasure;—how much less would they dare to indulge themselves in drinking! Moreover, in the exterior domains, (the princes of) the Hâu, Tien,

¹ Tt-yí was the father of Kâu-hsin, the twenty-seventh Shang sovereign. The sovereigns between Thang and him had not all been good, but the duke of Kâu chooses here to say so.

Nan, and Wei (states)¹, with their presiding chiefs ; and in the interior domain, all the various officers, the directors of the several departments, the inferior officers and employés, the heads of great houses, and the men of distinguished name living in retirement, all eschewed indulgence in spirits. Not only did they not dare to indulge in them, but they had not leisure to do so, being occupied with helping to complete the sovereign's virtue and make it more illustrious, and helping the directors of affairs reverently to attend to his service.

'I have heard it said likewise, that the last successor of those kings was addicted to drink, so that no charges came from him brightly before the people, and he was (as if) reverently and unchangingly bent on doing and cherishing what provoked resentment. Greatly abandoned to extraordinary lewdness and dissipation, for pleasure's sake he sacrificed all his majesty. The people were all sorely grieved and wounded in heart ; but he gave himself wildly up to drink, not thinking of restraining himself, but continuing his excess, till his mind was frenzied, and he had no fear of death. His crimes (accumulated) in the capital of Shang ; and though the extinction of the dynasty (was imminent), this gave him no concern, and he wrought not that any sacrifices of fragrant virtue might ascend to Heaven.* The rank odour of the people's resentments, and the drunkenness of his herd of creatures, went loudly up on high, so that Heaven sent down ruin on Yin,

¹ These were the first, second, third, and fifth domains or territorial divisions of the land under K'áu, counting back from the royal domain. It appears here that an arrangement akin to that of K'áu had been made in the time of Shang.

and showed no love for it,—because of such excesses. There is not any cruel oppression of Heaven; people themselves accelerate their guilt, (and its punishment.)’*

The king says, ‘O Fǎng, I make you this long announcement, not (for the pleasure of doing so); but the ancients have said, “Let not men look into water; let them look into the glass of other people.” Now that Yin has lost its appointment, ought we not to look much to it as our glass, (and learn) how to secure the repose of our time? I say to you,—Strenuously warn the worthy ministers of Yin, and (the princes) in the Hâu, the Tien, the Nan, and the Wei domains; and still more your friends, the great Recorder and the Recorder of the Interior, and all your worthy ministers, the heads of great Houses; and still more those whom you serve, with whom you calmly discuss matters, and who carry out your measures; and still more those who are, as it were, your mates,—your Minister of War who deals with the rebellious, your Minister of Instruction who is like a protector to the people, and your Minister of Works who settles the boundaries; and above all, do you strictly keep yourself from drink.

‘If you are informed that there are companies that drink together, do not fail to apprehend them all, and send them here to K’âu, where I may put them to death. As to the ministers and officers of Yin who were led to it and became addicted to drink, it is not necessary to put them to death (at once);—let them be taught for a time. If they follow these (lessons of mine), I will give them bright distinction. If they disregard my lessons, then I, the One man, will show them no pity. As

they cannot change their way, they shall be classed with those who are to be put to death.'

The king says, 'O Fǎng, give constant heed to my admonitions. If you do not rightly manage the officers, the people will continue lost in drunkenness.'

BOOK XI. THE TIMBER OF THE ROTTLEA.

'THE wood of the ʒze tree'—the *Rottlera Japonica*, according to Dr. Williams—is mentioned in the Book, and was adopted as the name for it. The ʒze was esteemed a very valuable tree for making articles of furniture and for the carver's art. The title perhaps intimates that the administrator of government ought to go about his duties carefully and skilfully, as the cabinet-maker and carver deal with their materials.

The Book is wanting in unity. Divided into two chapters, the first may be taken as a charge to 'the prince of Khang.' He is admonished of his duty to promote a good understanding between the different classes in his state, and between them all and the sovereign; and that, in order to this, his rule must be gentle, eschewing the use of punishments. The second chapter is of a different character, containing not the charges of a sovereign, but the admonitions or counsels of a minister, loyally cautioning him, and praying for the prosperity of his reign. We might suppose them the response of Fǎng to the previous charge, but the text does not indicate the introduction of a new speaker.

1. The king says, 'O Fǎng, to secure a good understanding between the multitudes of his people and his ministers (on the one hand), and the great families (on the other); and (again) to secure the same between all the subjects under his charge, and the sovereign:—is the part of the ruler of a state.

'If you regularly, in giving out your orders, say, "My instructors whom I am to follow, my Minister of Instruction, my Minister of War, and my Minister

of Works; my heads of departments, and all ye, my officers, I will on no account put any to death oppressively¹—. Let the ruler also set the example of respecting and encouraging (the people), and these will (also) proceed to respect and encourage them. Then let him go on, in dealing with villainy and treachery, with murderers and harbourers of criminals, to exercise clemency (where it can be done), and these will likewise do the same with those who have assaulted others and injured their property. When sovereigns appointed overseers (of states), they did so in order to the government of the people, and said to them, “Do not give way to violence or oppression, but go on to show reverent regard for the friendless, and find helping connexions for (destitute) women².” Deal with all according to this method, and cherish them. And when sovereigns gave their injunctions to the rulers of states, and their managers of affairs, what was their charge? It was that they should lead (the people) to the enjoyment of plenty and peace. Such was the way of the kings from of old. An overseer is to eschew the use of punishments.’

(The king) says, ‘As in the management of a field, when the soil has been all laboriously turned up, they have to proceed by orderly arrangements to make its boundaries and water-courses; as in building a house, after all the toil on its walls, they have to plaster and thatch it; as in working with the wood of the rottlera, when the toil of the coarser and finer operations has been completed, they have

¹ The sentence here is incomplete. Many of the critics confess that the text is unintelligible to them.

² It is difficult to say what the exact meaning here is.

to apply the paint of red and other colours;—(so do you finish for me the work which I have begun in the state of Wei.)’

2. Now let your majesty say, ‘The former kings diligently employed their illustrious virtue, and produced such attachment by their cherishing (of the princes), that from all the states they brought offerings, and came with brotherly affection from all quarters, and likewise showed their virtue illustrious. Do you, O sovereign, use their methods to attach (the princes), and all the states will largely come with offerings. Great Heaven having given this Middle Kingdom with its people and territories to the former kings, do you, our present sovereign, display your virtue, effecting a gentle harmony among the deluded people, leading and urging them on;—so (also) will you comfort the former kings, who received the appointment (from Heaven).’*

‘Yes, make these things your study. I say so simply from my wish that (your dynasty) may continue for myriads of years, and your descendants always be the protectors of the people.’

BOOK XII.

THE ANNOUNCEMENT OF THE DUKE OF SHÂO.

SHÂO was the name of a territory within the royal domain, corresponding to the present district of Hwan-khû, Kiang Kâu, Shan-hsi. It was the appanage of Shih, one of the ablest of the men who lent their aid to the establishment of the dynasty of Kâu. He appears in this Book as the Grand-Guardian at the court of king Khäng, and we have met with him before in

the Hounds of Lü and the Metal-bound Coffer. He is introduced here in connexion with one of the most important enterprises of the duke of Kâu, the building of the city of Lo, not very far from the present city of Lo-yang, in Ho-nan, as a new and central capital of the kingdom. King Wû had conceived the idea of such a city; but it was not carried into effect till the reign of his son, and is commonly assigned to K'hang's seventh year, in B.C. 1109.

Shih belonged to the royal House, and of course had the surname K'î. He is styled the duke of Shão, as being one of the 'three dukes,' or three highest officers of the court, and also the chief of Shão, all the country west of Shen being under him, as all the east of it was under the duke of Kâu. He was invested by Wû with the principality of 'the Northern Yen,' corresponding to the present department of Shun-thien, K'ih-li, which was held by his descendants fully nine hundred years. It was in Lo—while the building of it was proceeding—that he composed this Book, and sent it by the hands of the duke of Kâu to their young sovereign.

The whole may be divided into three chapters. The first contains various information about the arrangements for the building of Lo, first by the duke of Shão, and then by the duke of Kâu; and about the particular occasion when the former recited the counsels which he had composed, that they might be made known to the king. These form the second chapter. First, it sets forth the uncertainty of the favour of Heaven, and urges the king to cultivate the 'virtue of reverence,' in order to secure its permanence, and that he should not neglect his aged and experienced ministers. It speaks next of the importance and difficulty of the royal duties, and enforces the same virtue of reverence by reference to the rise and fall of the previous dynasties. Lastly, it sets forth the importance, at this early period of his reign, of the king's at once setting about the reverence which was thus described. There is a concluding chapter, where the duke gives expression to his loyal and personal feelings for the king, and the purpose to be served by the offerings, which he was then sending to the court.

The burden of the Announcement is 'the virtue of reverence.' Let the king only feel how much depended on his attending reverently to his duties, and all would be well. The people would love and support the dynasty of Kâu, and Heaven would smile upon and sustain it.

1. In the second month, on the day Yt-wei, six days after full moon, the king proceeded in the morning from *Kâu* to Făng¹. (Thence) the Grand-Guardian went before the duke of *Kâu* to survey the locality (of the new capital); and in the third month, on the day Wû-shăn, the third day after the first appearance of the moon on Ping-wû, he came in the morning to Lo. He divined by the tortoise-shell about the (several) localities, and having obtained favourable indications, he set about laying out the plan (of the city).* On Kăng-hsü, the third day after, he led the people of Yin to prepare the various sites on the north of the Lo; and this work was completed on K'ia-yin, the fifth day after.

On Yt-máo, the day following, the duke of *Kâu* came in the morning to Lo, and thoroughly inspected the plan of the new city. On Ting-sze, the third day after, he offered two bulls as victims in the (northern and southern) suburbs²; and on the morrow, Wû-wû, at the altar to the spirit of the land in the new city, he sacrificed a bull, a ram, and a boar.* After seven days, on K'ia-ze, in the morning, from his written (specifications) he gave their several orders to the people of Yin, and to the presiding chiefs of the princes from the Hâu, Tien, and Nan domains. When the people of Yin had thus received their orders, they arose and entered with vigour on their work.

(When the work was drawing to a completion),

¹ That is, from Wû's capital of Háo to king Wăn's at Făng.

² By the addition to the text here of 'northern and southern,' I intimate my opinion that the duke of *Kâu* offered two sacrifices, one to Heaven at the altar in the southern suburb, and one to Earth in the northern suburb.

the Grand-Guardian went out with the hereditary princes of the various states to bring their offerings (for the king)¹; and when he entered again, he gave them to the duke of K'âu, saying, 'With my hands to my head and my head to the ground, I present these to his Majesty and your Grace². Announcements for the information of the multitudes of Yin must come from you, with whom is the management of affairs.'

2. 'Oh! God (dwelling in) the great heavens has changed his decree respecting his great son and the great dynasty of Yin. Our king has received that decree. Unbounded is the happiness connected with it, and unbounded is the anxiety:—Oh! how can he be other than reverent?*

'When Heaven rejected and made an end of the decree in favour of the great dynasty of Yin, there were many of its former wise kings in heaven.* The king, however, who had succeeded to them, the last of his race, from the time of his entering into their appointment, proceeded in such a way as at last to keep the wise in obscurity and the vicious in office. The poor people in such a case, carrying their children and leading their wives, made their moan to Heaven. They even fled away, but were apprehended again. Oh! Heaven had compassion on the people of the four quarters; its favouring

¹ These 'offerings' were the 'presents of introduction,' which the feudal princes brought with them to court, when they were to have audience of the king. This has led many critics to think that the king was now in Lo, which was not the case.

² The original text here is difficult and remarkable;—intended probably to indicate that the king's majesty was revered in the person of the duke of K'âu, who was regent.

decree lighted on our earnest (founders). Let the king sedulously cultivate the virtue of reverence.*

‘Examining the men of antiquity, there was the (founder of the) Hsiâ dynasty. Heaven guided (his mind), allowed his descendants (to succeed him), and protected them.* He acquainted himself with Heaven, and was obedient to it. But in process of time the decree in his favour fell to the ground.* So also is it now when we examine the case of Yin. There was the same guiding (of its founder), who corrected (the errors of Hsiâ), and (whose descendants) enjoyed the protection (of Heaven). He (also) acquainted himself with Heaven, and was obedient to it.* But now the decree in favour of him has fallen to the ground. Our king has now come to the throne in his youth;—let him not slight the aged and experienced, for it may be said of them that they have studied the virtuous conduct of the ancients, and have matured their counsels in the sight of Heaven.

‘Oh! although the king is young, yet he is the great son (of God).* Let him effect a great harmony with the lower people, and that will be the blessing of the present time. Let not the king presume to be remiss in this, but continually regard and stand in awe of the perilous (uncertainty) of the people’s (attachment).

‘Let the king come here as the vice-gerent of God, and undertake (the duties of government) in this centre of the land.* Tan¹ said, “Now that this great city has been built, from henceforth he may

¹ Tan was the name of the duke of Kâu, and his brother duke here refers to him by it, in accordance with the rule that ‘ministers

be the mate of great Heaven, and reverently sacrifice to (the spirits) above and beneath; from henceforth he may from this central spot administer successful government." Thus shall the king enjoy the favouring regard (of Heaven) all-complete, and the government of the people will now be prosperous.*

'Let the king first subdue to himself those who were the managers of affairs under Yin, associating them with the managers of affairs for our *Kâu*. This will regulate their (perverse) natures, and they will make daily advancement. Let the king make reverence the resting-place (of his mind);—he must maintain the virtue of reverence.

'We should by all means survey the dynasties of Hsiâ and Yin. I do not presume to know and say, "The dynasty of Hsiâ was to enjoy the favouring decree of Heaven just for (so many) years," nor do I presume to know and say, "It could not continue longer."* The fact simply was, that, for want of the virtue of reverence, the decree in its favour prematurely fell to the ground. (Similarly), I do not presume to know and say, "The dynasty of Yin was to enjoy the favouring decree of Heaven just for (so many) years," nor do I presume to know and say, "It could not continue longer."* The fact simply was, that, for want of the virtue of reverence, the decree in its favour fell prematurely to the ground. The king has now inherited the decree,—the same decree, I consider, which belonged to those two dynasties. Let him seek to inherit (the virtues

should be called by their names in the presence of the sovereign.' King *Khâng*, indeed, was not now really present in Lo, but he was represented by his uncle, the regent.

of) their meritorious (sovereigns);—(let him do this especially) at this commencement of his duties.

‘Oh! it is as on the birth of a son, when all depends on (the training of) his early life, through which he may secure his wisdom in the future, as if it were decreed to him. Now Heaven may have decreed wisdom (to the king); it may have decreed good fortune or bad; it may have decreed a (long) course of years;—we only know that now is with him the commencement of his duties. Dwelling in this new city, let the king now sedulously cultivate the virtue of reverence. When he is all-devoted to this virtue, he may pray to Heaven for a long-abiding decree in his favour. *

‘In the position of king, let him not, because of the excesses of the people in violation of the laws, presume also to rule by the violent infliction of death;—when the people are regulated gently, the merit (of government) is seen. It is for him who is in the position of king to overtop all with his virtue. In this case the people will imitate him throughout the kingdom, and he will become still more illustrious.

‘Let the king and his ministers labour with a mutual sympathy, saying, “We have received the decree of Heaven, and it shall be great as the long-continued years of Hsiâ;—yea, it shall not fail of the long-continued years of Yin.” I wish the king, through (the attachment of) the lower people, to receive the long-abiding decree of Heaven.’*

3. (The duke of Shâo) then did obeisance with his hands to his head and his head to the ground, and said, ‘I, a small minister, presume, with the king’s (heretofore) hostile people and all their officers,

and with his (loyal) friendly people, to maintain and receive his majesty's dread command and brilliant virtue. That the king should finally obtain the decree all-complete, and that he should become illustrious,—this I do not presume to labour for. I only bring respectfully these offerings to present to his majesty, to be used in his prayers to Heaven for its long-abiding decree.' *

BOOK XIII. THE ANNOUNCEMENT CONCERNING LO.

THE matters recorded in this Book are all connected, more or less nearly, with Lo, the new capital, the arrangements for the building of which are related at the commencement of the last Book. According to the summary of the contents given by the commentator 3hâi K'ân, 'The arrangements for the building having been made, the duke of K'âu sent a messenger to inform the king of the result of his divinations. The historiographer recorded this as the Announcement about Lo, and at the same time related a dialogue between the king and his minister, and how the king charged the duke to remain at Lo, and conduct the government of it.' Passing over the commencing paragraph, which I have repeated here from the ninth Book, 3hâi divides all the rest into seven chapters. Ch. 1 contains the duke's message concerning his divinations; and the next gives the king's reply. Ch. 3 is occupied with instructions to the king about the measures which he should pursue on taking up his residence at Lo. In ch. 4, the king charges the duke to remain at Lo, and undertake its government. In ch. 5, the duke responds, and accepts the charge, dwelling on the duties which the king and himself would have to perform. Ch. 6 relates the action of the duke in reference to a message and gift from the king intended for his special honour. In ch. 7, the historiographer writes of sacrifices offered by the king in Lo, and a proclamation that he issued, and tells how long the duke continued in his government;—showing how the duke began the city and completed it, and how king K'äng, after offering the sacrifices and inaugurating the government, returned to Hão, and did not, after all, make his capital at Lo.

Many critics make much to do about the want of historical order in the Book, and suppose that portions have been lost, and other portions transposed; but the Book may be explained without resorting to so violent a supposition.

[In the third month, when the moon began to wane, the duke of *Kâu* commenced the foundations and proceeded to build the new great city of *Lo* of the eastern states. The people from every quarter assembled in great harmony. From the *Hâu*, *Tien*, *Nan*, *Zhài*, and *Wei* domains, the various officers stimulated this harmony of the people, and introduced them to the business that was to be done for *Kâu*. The duke encouraged all to diligence, and made a great announcement about the performance (of the works)¹.]

1. The duke of *Kâu* did obeisance with his hands to his head and his head to the ground², saying, 'Herewith I report (the execution of my commission) to my son, my intelligent sovereign. The king appeared as if he would not presume to be present at Heaven's founding here the appointment (of our dynasty), and fixing it, whereupon I followed the (Grand-)Guardian, and made a great survey of this eastern region, hoping to found the place where he should become the intelligent sovereign of the people. On the day *Yt-máo*, I came in the morning to this capital of *Lo*. I (first) divined by the shell concerning (the ground about) the *Lt*-water on the north of the *Ho*. I then divined concerning the east of the *K'ien*-water, and the west of the *K'han*, when the (ground near the) *Lo* was indicated. Again I

¹ See the introductory note to Book ix.

² In sending his message to the king, the duke does obeisance as if he were in the presence of his majesty. The king responds with a similar ceremony.

divined concerning the east of the *Khan*-water, when the (ground near the) Lo was also indicated. I (now) send a messenger with a map, and to present the (result of the) divinations.’*

2. The king did obeisance with his hands to his head and his head to the ground, saying, ‘The duke did not presume not to acknowledge reverently the favour of Heaven, and has surveyed the locality where our *Kâu* may respond to that favour. Having settled the locality, he has sent his messenger to show me the divinations, favourable and always auspicious. We two must together sustain the responsibility. He has made provision for me (and my successors), for myriads and tens of myriads of years, there reverently to acknowledge the favour of Heaven.* With my hands to my head and my head to the ground, (I receive) his instructive words.’

3. The duke of *Kâu* said¹, ‘Let the king at first employ the ceremonies of Yin, and sacrifice in the new city,* doing everything in an orderly way, but without display. I will marshal all the officers to attend you from *Kâu*, merely saying that probably there will be business to be done (in sacrificing). Let the king instantly issue an order to the effect that the most meritorious (ministers) shall have the first place in the sacrifices; and let him also say in an order, “You, in whose behalf the above order is issued, must give me your assistance with sincere earnestness.” Truly display the record of merits, for

¹ We must suppose that the duke of *Kâu*, after receiving the reply to his message, had himself returned to *Hão*, to urge upon the king the importance of his repairing in person to Lo, and solemnly inaugurating the new city as the capital of the kingdom.

it is you who must in everything teach the officers. My young son, can you indulge partiality? Eschew it, my young son. (If you do not), the consequence hereafter will be like a fire, which, a spark at first, blazes up, and by and by cannot be extinguished. Let your observance of the constant rules of right, and your soothing measures be like mine. Take only the officers that are in *Kâu* with you to the new city, and make them there join their (old) associates, with intelligent vigour establishing their merit, and with a generous largeness (of soul) completing (the public manners);—so shall you obtain an endless fame.'

The duke said, 'Yes, young as you are, be it yours to complete (the work of your predecessors). Cultivate (the spirit of) reverence, and you will know who among the princes (sincerely) present their offerings to you, and who do not. In connexion with those offerings there are many observances. If the observances are not equal to the articles, it must be held that there is no offering. When there is no service of the will in the offerings (of the princes), all the people will then say, "We need not (be troubled about) our offerings," and affairs will be disturbed by errors and usurpations.

'Do you, my young son, manifest everywhere my unwearied diligence, and listen to my instructions to you how to help the people to observe the constant rules of right. If you do not bestir yourself in these things, you will not be of long continuance. If you sincerely and fully carry out the course of your Directing father, and follow exactly my example, there will be no venturing to disregard your orders. Go, and be reverent. Henceforth I will study

husbandry¹. There do you generously rule our people, and there is no distance from which they will not come to you.'

4. The king spoke to this effect², 'O duke, you are the enlightener and sustainer of my youth. You have set forth the great and illustrious virtues, that I, notwithstanding my youth, may display a brilliant merit like that of Wăn and Wû, reverently responding to the favouring decree of Heaven; and harmonize and long preserve the people of all the regions, settling the multitudes (in Lo); and that I may give due honour to the great ceremony (of recording) the most distinguished (for their merits), regulating the order for the first places at the sacrifices, and doing everything in an orderly manner without display.

'But your virtue, O duke, shines brightly above and beneath, and is displayed actively throughout the four quarters. On every hand appears the deep reverence (of your virtue) in securing the establishment of order, so that you fail in nothing of the earnest lessons of Wăn and Wû. It is for me, the youth, (only) to attend reverently, early and late, to the sacrifices.'*

The king said, 'Great, O duke, has been your merit in helping and guiding me;—let it ever continue so.'

¹ By this expression the duke indicates his wish and intention now to retire from public life, and leave the government and especially the affairs of Lo in the king's hands.

² From the words of the king in this chapter, we receive the impression that they were spoken in Lo. He must have gone there with the duke from Hào. He deprecates the duke's intention to retire into private life; intimates his own resolution to return to Hào; and wishes the duke to remain in Lo, accomplishing all that was still necessary to the establishment of their dynasty.

The king said, 'O duke, let me, the little child, return to my sovereignty in *Kâu*, and I charge you, O duke, to remain behind (here). Order has been initiated throughout the four quarters of the kingdom, but the ceremonies to be honoured (by general observance) have not yet been settled, and I cannot look on your service as completed. Commence on a great scale what is to be done by your remaining here, setting an example to my officers and greatly preserving the people whom *Wăn* and *Wû* received;—by your good government you will be a help to the whole kingdom.'

The king said, 'Remain, O duke. I will certainly go. Your services are devoutly acknowledged and reverently rejoiced in. Do not, O duke, occasion me this difficulty. I on my part will not be weary in seeking the tranquillity (of the people);—do not let the example which you have afforded me be intermitted. So shall the kingdom enjoy for generations (the benefit of your virtue).'

5. The duke of *Kâu* did obeisance with his hands to his head and his head to the ground, saying, 'You have charged me, O king, to come here. I undertake (the charge), and will protect the people whom your accomplished grandfather, and your glorious and meritorious father, king *Wû*, received by the decree (of Heaven). I will enlarge the reverence which I cherish for you. (But), my son, come (frequently), and inspect this settlement. Pay great honour to (old) statutes, and to the good and wise men of *Yin*. Good government (here) will make you (indeed) the new sovereign of the kingdom, and an example of (royal) respectfulness to all your successors of *Kâu*.'

(The duke) proceeded to say, 'From this time, by the government administered in this central spot, all the states will be conducted to repose; and this will be the completion of your merit, O king.

'I, Tan, with the numerous officers and managers of affairs, will consolidate the achievements of our predecessors, in response to (the hopes of) the people. I will afford an example of sincerity to (future ministers of) *Kâu*, seeking to render complete the pattern intended for the enlightenment of you, my son, and thus to carry fully out the virtue of your accomplished grandfather.'

6. (Afterwards, on the arrival of a message and gifts from the king, the duke said¹), '(The king) has sent messengers to admonish (the people of) Yin, and with a soothing charge to me, along with two flagons of the black-millet herb-flavoured spirits, saying, "Here is a pure sacrificial gift, which with my hands to my head and my head to the ground I offer for you to enjoy its excellence!"* I dare not keep this by me, but offer it in sacrifice to king *Wăn* and king *Wû*.' (In doing so, he prayed), 'May he be obedient to, and observant of your course! Let him not bring on himself any evil or illness! Let him satisfy his descendants for myriads of years with your virtue! Let (the people of) Yin enjoy prolonged (prosperity)!'* (He also said to the messengers), 'The king has sent you to Yin,

¹ We must suppose that the king had returned to *Hão*, and now sends a message to the duke with an extraordinary gift, doing honour to him as if he were a departed spirit, continuing in heaven the guardianship of the dynasty which he had so long efficiently discharged on earth. This gives occasion for the duke to exhibit anew his humility, piety, and loyalty.

and we have received his well-ordered charges, (sufficient to direct us) for myriads of years, but let (the people) ever (be able to) observe the virtue cherished by my son.'

7. On the day Wû-khăn, the king, being in the new city¹, performed the annual winter sacrifice, offering (moreover) one red bull to king Wăn and another to king Wû.* He then ordered a declaration to be prepared, which was done by Yî² in the form of a prayer, and it simply announced the remaining behind of the duke of Kâu. The king's guests³, on occasion of the killing of the victims and offering the sacrifice, were all present. The king entered the grand apartment, and poured out the libation.* He gave a charge to the duke of Kâu to remain, and Yî, the preparer of the document, made the announcement;—in the twelfth month. (Thus) the duke of Kâu grandly sustained the decree which Wăn and Wû had received through the space of seven years⁴.

¹ The duke had asked the king to come frequently to the new city; he is there now accordingly.

² Yî was the name of the Recorder who officiated on the occasion.

³ All the princes present and assisting at the sacrifices, and especially the representatives of the previous dynasties.

⁴ These seven years are to be calculated from the seventh year of king K'hang, after the duke had served as administrator of the government seven years from the death of king Wû. Many think, however, that the 'seven years' are only those of the duke's regency.

BOOK XIV. THE NUMEROUS OFFICERS.

WE have in this Book another 'Announcement,' addressed to the people of Yin or Shang, and especially to the higher classes among them,—'the numerous officers,'—to reconcile them to their lot as subjects of the new dynasty. From the preceding two Books it appears that many of the people of Yin had been removed to the country about the Lo, before the dukes of Shāo and Kâu commenced the building of the new city. Now that the city was completed, another and larger migration of them, we may suppose, was ordered, and the duke of Kâu took occasion to issue the announcement that is here preserved.

I have divided it into four chapters. The first vindicates the kings of Kâu for superseding the line of Shang, not from ambition, but in obedience to the will of God. The second unfolds the causes why the dynasty of Yin or Shang had been set aside. The third shows how it had been necessary to remove them to Lo, and with what good intention the new capital had been built. The fourth tells how comfort and prosperity were open to their attainment at Lo, while by perseverance in disaffection they would only bring misery and ruin upon themselves.

1. In the third month, at the commencement (of the government) of the duke of Kâu in the new city of Lo, he announced (the royal will) to the officers of the Shang dynasty, saying, 'The king speaks to this effect:—"Ye numerous officers who remain from the dynasty of Yin, great ruin came down on Yin from the cessation of forbearance in compassionate Heaven, and we, the lords of Kâu, received its favouring decree.* We felt charged with its bright terrors, carried out the punishments which kings inflict, rightly disposed of the appointment of Yin, and finished (the work of) God.* Now, ye numerous officers, it was not our small state that dared to aim at the appointment belonging to Yin. But Heaven was not with (Yin), for indeed it would not

strengthen its misrule. It (therefore) helped us;—did we dare to seek the throne of ourselves? God was not for (Yin), as appeared from the mind and conduct of our inferior people, in which there is the brilliant dreadfulness of Heaven.”* * *

2. ‘I have heard the saying, “God leads men to tranquil security,”* but the sovereign of Hsiâ would not move to such security, whereupon God sent down corrections, indicating his mind to him. (K'ieh), however, would not be warned by God, but proceeded to greater dissoluteness and sloth and excuses for himself. Then Heaven no longer regarded nor heard him, but disallowed his great appointment, and inflicted extreme punishment. Then it charged your founder, Thang the Successful, to set Hsiâ aside, and by means of able men to rule the kingdom. From Thang the Successful down to Tî-yî, every sovereign sought to make his virtue illustrious, and duly attended to the sacrifices.* And thus it was that, while Heaven exerted a great establishing influence, preserving and regulating the House of Yin, its sovereigns on their part were humbly careful not to lose (the favour of) God, and strove to manifest a good-doing corresponding to that of Heaven.* But in these times, their successor showed himself greatly ignorant of (the ways of) Heaven, and much less could it be expected of him that he would be regardful of the earnest labours of his fathers for the country. Greatly abandoned to dissolute idleness, he gave no thought to the bright principles of Heaven, and the awfulness of the people.* On this account God no longer protected him, but sent down the great ruin which we have witnessed. Heaven was not with him, because he

did not make his virtue illustrious.* (Indeed), with regard to the overthrow of all states, great and small, throughout the four quarters of the kingdom, in every case reasons can be given for their punishment.'

'The king speaks to this effect:—"Ye numerous officers of Yin, the case now is this, that the kings of our *K'âu*, from their great goodness, were charged with the work of God. There was the charge to them, 'Cut off Yin.' (They proceeded to perform it), and announced the execution of their service to God. In our affairs we have followed no double aims;—ye of the royal House (of Yin) must (now simply) follow us."'*

3. "May I not say that you have been very lawless? I did not (want to) remove you. The thing came from your own city¹. When I consider also how Heaven has drawn near to Yin with so great tribulations, it must be that there was (there) what was not right."

'The king says, "Ho! I declare to you, ye numerous officers, it is simply on account of these things that I have removed you and settled you here in the west²;—it was not that I, the One man, considered it a part of my virtue to interfere with your tranquillity. The thing was from Heaven; do not offer resistance; I shall not presume to have any subsequent (charge concerning you); do not murmur against me. Ye know that your fathers of the Yin dynasty had their archives and statutes, (showing

¹ That is, your conduct in your own city.

² Lo is often called 'the eastern capital,' as being east from Hào, the capital of king Wû; but it was west from *K'ão-ko*, the capital of Yin.

how) Yin superseded the appointment of Hsiâ. Now, indeed, ye say further, '(The officers of) Hsiâ were chosen and employed in the royal court (of Shang), and had their duties among the mass of its officers.' (But) I, the One man, listen only to the virtuous, and employ them; and it was with this view that I ventured to seek you in your capital of Shang (once sanctioned by) Heaven, (and removed you here to Lo.) I thereby follow (the ancient example), and have pity on you. (Your present non-employment) is no fault of mine;—it is by the decree of Heaven."*

'The king says, "Ye numerous officers, formerly, when I came from Yen¹, I greatly mitigated the penalty and spared the lives of the people of your four states². At the same time I made evident the punishment appointed by Heaven, and removed you to this distant abode, that you might be near the ministers who had served in our honoured (capital)³, and (learn) their much obedience."

'The king says, "I declare to you, ye numerous officers of Yin, now I have not put you to death, and therefore I reiterate the declaration of my charge⁴. I have now built this great city here in

¹ Yen was the name of a territory, corresponding to the present district of *K'ü-fâu*, in Shan-tung. The wild tribe inhabiting it, had joined with *Wû-k'ang* and the king's uncles a few years before; and the crushing of the Yen had been the last act in the suppression of their rebellion.

² The royal domain of Yin, which had been allotted to *Wû-k'ang* and the king's three uncles.

³ *Hão*. There were, no doubt, at this time many ministers and officers from *Hão* in Lo; but the duke had intended that they should in the mass remove from the old to the new capital.

⁴ The charge which had been delivered on the first removal of many of them to the neighbourhood of Lo.

Lo, considering that there was no (central) place in which to receive my guests from the four quarters, and also that you, ye numerous officers, might here with zealous activity perform the part of ministers to us, with the entire obedience (ye would learn). Ye have still here, I may say, your grounds, and may still rest in your duties and dwellings. If you can reverently obey, Heaven will favour and compassionate you. If you do not reverently obey, you shall not only not have your lands, but I will also carry to the utmost Heaven's inflictions on your persons. Now you may here dwell in your villages, and perpetuate your families; you may pursue your occupations and enjoy your years in this Lo; your children also will prosper;—(all) from your being removed here."

'The king says—¹; and again he says, "Whatever I may now have spoken is on account of (my anxiety about) your residence here."'

BOOK XV. AGAINST LUXURIOUS EASE.

THE name of this Book is taken from two characters in the first sentence of it, which are the key-note of the whole. It is classified among the 'Instructions' of the Shū, and was addressed to king *K'ang* by the duke of *K'au* soon after he had resigned the administration of the government into his hands.

There are six pauses in the course of the address, which is resumed always with 'The duke of *K'au* said, "Oh."' This suggests a division into seven chapters.

In the first, the duke suggests to the king to find a rule for himself in the laborious toils that devolve on the husbandman. In the second, he refers to the long reigns of three of the Yin sovereigns,

¹ There are probably some sentences lost here.

and the short reigns of others, as illustrating how the blessing of Heaven rests on the diligent monarch. In the third, the example of their own kings, Thái, Kỉ, and Văn, is adduced with the same object. In the fourth, the duke addresses the king directly, and exhorts him to follow the pattern of king Văn, and flee from that of Kâu-hsin. In the fifth, he stimulates him, by reference to ancient precedents, to adopt his counsels, and shows the evil effects that will follow if he refuse to do so. In the sixth, he shows him, by the cases of the good kings of Yin and of king Văn, how he should have regard to the opinions of the common people, and gird himself to diligence. The seventh chapter is a single admonition that the king should lay what had been said to heart.

1. The duke of Kâu said, 'Oh! the superior man rests in this,—that he will indulge in no luxurious ease. He first understands how the painful toil of sowing and reaping conducts to ease, and thus he understands how the lower people depend on this toil (for their support). I have observed among the lower people, that where the parents have diligently laboured in sowing and reaping, their sons (often) do not understand this painful toil, but abandon themselves to ease, and to village slang, and become quite disorderly. Or where they do not do so, they (still) throw contempt on their parents, saying, "Those old people have heard nothing and know nothing."'

2. The duke of Kâu said, 'Oh! I have heard that aforetime Kung Jung, one of the kings of Yin¹, was grave, humble, reverential, and timorously cautious. He measured himself with reference to the decree of Heaven, and cherished a reverent apprehension in governing the people, not daring

¹ Kung Jung was the sacrificial title of Thái-wú, the seventh of the kings of Shang or Yin, who reigned B. C. 1637-1563.

to indulge in useless ease.* It was thus that he enjoyed the throne seventy and five years. If we come to the time of Kâo Jung¹, he toiled at first away from the court, and was among the lower people². When he came to the throne, and occupied the mourning shed, it may be said that he did not speak for three years. (Afterwards) he was (still inclined) not to speak; but when he did speak, his words were full of harmonious (wisdom). He did not dare to indulge in useless ease, but admirably and tranquilly presided over the regions of Yin, till throughout them all, small and great, there was not a single murmur. It was thus that he enjoyed the throne fifty and nine years. In the case of 3û-kiâ³, he refused to be king unrighteously, and was at first one of the lower people. When he came to the throne, he knew on what they must depend (for their support), and was able to exercise a protecting kindness towards their masses, and did not dare to treat with contempt the wifeless men and widows. Thus it was that he enjoyed the throne thirty and three years. The kings that arose after these, from their birth enjoyed ease. Enjoying ease from their birth, they did not know the painful toil of sowing and reaping, and had not heard of the hard labours of the lower people. They sought for nothing but excessive pleasure; and so not one of them had long life. They (reigned) for ten years,

¹ Kâo Jung was the sacrificial title of Wû-ting, the nineteenth sovereign of the Yin line, who reigned B.C. 1324-1266. He has already appeared in the 8th and 9th Books of Part IV.

² Compare Part IV, viii, sect. 3, ch. 1.

³ 3û-kiâ was the twenty-first of the Yin sovereigns, and reigned B.C. 1258-1226.

for seven or eight, for five or six, or perhaps (only) for three or four.'

3. The duke of *Kâu* said, 'Oh! there likewise were king *Thái* and king *Ki* of our own *Kâu*, who were humble and reverentially cautious. King *Wăn* dressed meanly, and gave himself to the work of tranquillization and to that of husbandry. Admirably mild and beautifully humble, he cherished and protected the inferior people, and showed a fostering kindness to the wifeless men and widows. From morning to mid-day, and from mid-day to sun-down, he did not allow himself leisure to eat;—thus seeking to secure the happy harmony of the myriads of the people. King *Wăn* did not dare to go to excess in his excursions or his hunting, and from the various states he would receive only the correct amount of contribution. The appointment (of Heaven) came to him in the middle of his life¹, and he enjoyed the throne for fifty years.'*

4. The duke of *Kâu* said, 'Oh! from this time forward, do you who have succeeded to the throne imitate *Wăn*'s avoiding of excess in his sight-seeing, his indulgence in ease, his excursions, his hunting; and from the myriads of the people receive only the correct amount of contribution. Do not allow yourself the leisure to say, "To-day I will indulge in pleasure." This would not be holding out a lesson to the people, nor the way to secure the favour of Heaven. Men will on the contrary be prompt to imitate you and practise evil. Become not like

¹ This can only be understood of *Wăn*'s succeeding to his father as duke of *Kâu* and chief of the West in B.C. 1185. He died in 1135, leaving it to his son *Wû* to overthrow the dynasty of *Shang*.

Shâu the king of Yin, who went quite astray, and became abandoned to drunkenness.'

5. The duke of Kâu said, 'Oh! I have heard it said that, in the case of the ancients, (their ministers) warned and admonished them, protected and loved them, taught and instructed them; and among the people there was hardly one who would impose on them by extravagant language or deceiving tricks. If you will not listen to this (and profit by it), your ministers will imitate you, and so the correct laws of the former kings, both small and great, will be changed and disordered. The people, blaming you, will disobey and rebel in their hearts;—yea, they will curse you with their mouths.'

6. The duke of Kâu said, 'Oh! those kings of Yin,—Kung Jung, Kâu Jung, and 30-*chia*, with king Wăn of our Kâu,—these four men carried their knowledge into practice. If it was told them, "The lower people murmur against you and revile you," then they paid great and reverent attention to their conduct; and with reference to the faults imputed to them they said, "Our faults are really so," thus not simply shrinking from the cherishing of anger. If you will not listen to this (and profit by it), when men with extravagant language and deceptive tricks say to you, "The lower people are murmuring against you and reviling you," you will believe them. Doing this, you will not be always thinking of your princely duties, and will not cultivate a large and generous heart. You will confusedly punish the guiltless, and put the innocent to death. There will be a general murmuring, which will be concentrated upon your person.'

7. The duke of *Kâu* said, 'Oh! let the king, who has succeeded to the throne, make a study of these things.'

BOOK XVI. THE PRINCE SHIH.

THE words 'Prince Shih' occur at the commencement of the Book, and are taken as its title. Shih was the name of the duke of Shão, the author of Book xii. To him the address or announcement here preserved was delivered, and his name is not an inappropriate title for it.

The common view of Chinese critics is that the duke of Shão had announced his purpose to withdraw from office on account of his age, when the duke of *Kâu* persuaded him to remain at his post, and that the reasons which he set before him were recorded in this Book. It may have been so, but the language is far from clearly indicating it. A few expressions, indeed, may be taken as intimating a wish that Shih should continue at court, but some violence has to be put upon them.

I have divided the whole into four chapters, but the two principal ideas in the address are these:—that the favour of Heaven can be permanently secured for a dynasty only by the virtue of its sovereigns; and that that virtue is secured mainly by the counsels and help of virtuous ministers. The ablest sovereigns of Shang are mentioned, and the ministers by whose aid it was, in a great measure, that they became what they were. The cases of Wăn and Wû of their own dynasty, similarly aided by able men, are adduced in the same way; and the speaker adverts to the services which they—the two dukes—had already rendered to their sovereign, and insists that they must go on to the end, and accomplish still greater things.

1. The duke of *Kâu* spoke to the following effect:—'Prince Shih, Heaven, unpitying, sent down ruin on Yin. Yin has lost its appointment (to the throne), which our House of *Kâu* has received. I do not dare, however, to say, as if I knew

it, "The foundation will ever truly abide in prosperity. If Heaven aid sincerity,"—¹* Nor do I dare to say, as if I knew it, "The end will issue in our misfortunes." Oh! you have said, O prince, "It depends on ourselves." I also do not dare to rest in the favour of God, not forecasting at a distance the terrors of Heaven in the present time, when there is no murmuring or disobedience among the people;*—(the issue) is with men. Should our present successor to his fathers prove greatly unable to reverence (Heaven) above and (the people) below, and so bring to an end the glory of his predecessors, could we in (the retirement of) our families be ignorant of it? The favour of Heaven is not easily preserved; Heaven is difficult to be depended on. Men lose its favouring appointment, because they cannot pursue and carry out the reverence and brilliant virtue of their forefathers.* Now I, Tan, the little child, am not able to make (the king) correct. I would simply conduct him to the glory of his fathers, and make him, who is my young charge, partaker of that.' He also said, 'Heaven is not to be trusted. Our course is only to seek the prolongation of the virtue of the Tranquillizing king, that Heaven may not find occasion to remove its favouring decree which king Wăn received.'*

2. The duke said, 'Prince Shih, I have heard that aforetime, when Thang the Successful had received the appointment (to the throne), he had with him Í Yin, making (his virtue) like that of great Heaven;* that Thái K'ia had (the same

¹ The text is here defective; or perhaps the speaker purposely left his meaning only half expressed.

Î Yin), the Páo-hăng¹; that Thái-wû² had Î Kih³ and K'ăn Hû³, through whom (his virtue) was made to affect God,* and Wû Hsien³ who regulated the royal House; that 3û-yi³ had Wû Hsien's son; and that Wû-ting had Kan Phan⁴. (These ministers) carried out (their principles), and displayed (their merit), preserving and regulating the dynasty of Yin, so that, while its ceremonies lasted, (those sovereigns), when deceased, were assessors to Heaven⁵,* and its duration extended over many years. Heaven thus determinately maintained its favouring appointment, and Shang was replenished with men. The various heads of great surnames and members of the royal House, holding employments, all held fast their virtue, and showed an anxious solicitude (for the kingdom). The smaller ministers, and the guardian princes in the Hâu and Tien domains, hurried about on their services. Thus did they all exert their virtue and aid their sovereign, so that whatever affairs he, the One man, had in hand, throughout the land, an entire faith was reposed in their justice as in the indications of the shell or the divining stalks.'*

The duke said, 'Prince Shih, Heaven gives length of days to the just and the intelligent; (it was thus

¹ See Part IV, v, sect. 1, ch. 1, where Î Yin is called Â-hăng, nearly=Páo-hăng.

² Thái-wû is the Kung 3ung of last Book. Î Kih would be a son or grandson of Î Yin. Of K'ăn Hû we know only what is stated here.

³ 3û-yi was the eleventh Yin sovereign, reigning B. C. 1525-1507. We know of Wû Hsien only that he was 3û-yi's minister.

⁴ See Part IV, viii, sect. 3, ch. 1.

⁵ That is, they were associated with Heaven in the sacrifices to it.

that those ministers) maintained and regulated the dynasty of Yin.* He who came last to the throne granted by Heaven was extinguished by its terrors. Do you think of the distant future, and we shall have the decree (in favour of *Kâu*) made sure, and its good government will be brilliantly exhibited in our newly-founded state.'

3. The duke said, 'Prince Shih, aforetime when God was inflicting calamity (on Yin), he encouraged anew the virtue of the Tranquillizing king, till at last the great favouring decree was concentrated in his person. (But) that king Wăn was able to conciliate and unite the portion of the great kingdom which we came to possess, was owing to his having (such ministers) as his brother of Kwo, Hung Yâo, San Í-shăng, Thái Tien, and Nan-kung Kwo.'

He said further, 'But for the ability of those men to go and come in his affairs, developing his constant lessons, there would have been no benefits descending from king Wăn on the people. And it also was from the determinate favour of Heaven that there were these men of firm virtue, and acting according to their knowledge of the dread majesty of Heaven, to give themselves to enlighten king Wăn, and lead him forward to his high distinction and universal rule, till his fame reached the ears of God, and he received the appointment that had been Yin's.* There were still four of those men who led on king Wû to the possession of the revenues of the kingdom, and afterwards, along with him, in great reverence of the majesty of Heaven, slew all his enemies.* These four men, moreover, made king Wû so illustrious that his glory overspread the kingdom, and (the people) universally and greatly proclaimed his

virtue. Now with me Tan, the little child, it is as if I were floating on a great stream;—with you, O Shih, let me from this time endeavour to cross it. Our young sovereign is (powerless), as if he had not yet ascended the throne. You must by no means lay the whole burden on me; and if you draw yourself up without an effort to supply my deficiencies, no good will flow to the people from our age and experience. We shall not hear the voices of the phoenixes¹, and how much less can it be thought that we shall be able to make (the king's virtue) equal (to Heaven)! ' *

The duke said, 'Oh! consider well these things, O prince. We have received the appointment to which belongs an unlimited amount of blessing, but having great difficulties attached to it. What I announce to you are counsels of a generous largeness.—I cannot allow the successor of our kings to go astray.'

4. The duke said, 'The former king laid bare his heart, and gave full charge to you, constituting you one of the guides and patterns for the people, saying, "Do you with intelligence and energy second and help the king; do you with sincerity support and convey forward the great decree. Think of the virtue of king Wăn, and enter greatly into his boundless anxieties."'

The duke said, 'What I tell you, O prince, are my sincere thoughts. O Shih, the Grand-Protector, if you can but reverently survey with me the decay and great disorders of Yin, and thence consider the

¹ As a token of the goodness of the government and the general prosperity. See Part II, iv, ch. 3.

dread majesty of Heaven (which warns) us!—Am I not to be believed that I must reiterate my words? I simply say, “The establishment (of our dynasty) rests with us two.” Do you agree with me? Then you (also) will say, “It rests with us two.” And the favour of Heaven has come to us so largely :—it should be ours to feel as if we could not sufficiently respond to it. If you can but reverently cultivate your virtue (now), and bring to light our men of eminent ability, then when you resign (your position) to some successor in a time of established security, (I will interpose no objection.)

‘Oh! it is by the earnest service of us two that we have come to the prosperity of the present day. We must both go on, abjuring all idleness, to complete the work of king Wăn, till it has grandly overspread the kingdom, and from the corners of the sea, and the sunrising, there shall not be one who is disobedient to the rule (of *Kâu*).’

The duke said, ‘O prince, have I not spoken in accordance with reason in these many declarations? I am only influenced by anxiety about (the appointment of) Heaven, and about the people.’

The duke said, ‘Oh! you know, O prince, the ways of the people, how at the beginning they can be (all we could desire); but it is the end (that is to be thought of). Act in careful accordance with this fact. Go and reverently exercise the duties of your office.’

BOOK XVII. THE CHARGE TO KUNG OF SHÀI.

SHÀI was the name of the small state or territory, which had been conferred on Tû, the next younger brother of the duke of Kâu. The name still remains in the district of Shang-ghai, department Zû-ning, Ho-nan. Tû was deprived of his state because of his complicity in the rebellion of Wû-kang; but it was subsequently restored to his son Hû by this charge. Hû is here called Kung, that term simply denoting his place in the roll of his brothers or cousins. King K'ang and Hû were cousins,—‘brothers’ according to Chinese usage of terms, and Hû being the younger of the two, was called Shài Kung, ‘the second or younger brother,—of Shài.’

The Book consists of two chapters. The former is of the nature of a preface, giving the details necessary to explain the appointment of Hû. The second contains the king's charge, delivered in his name by the duke of Kâu, directing Hû how to conduct himself, so that he might blot out the memory of his father's misdeeds, and win the praise of the king.

1. When the duke of Kâu was in the place of prime minister and directed all the officers, the (king's) uncles spread abroad an (evil) report, in consequence of which (the duke) put to death the prince of Kwan in Shang¹; confined the prince of Shài in Kwo-lin², with an attendance of seven chariots; and reduced the prince of Hwo³ to be a private man, causing his name to be erased from the registers for three years. The son of the prince

¹ The prince of Kwan—corresponding to the present K'ang Kâu, department Khai-fang, Ho-nan—was the third of the sons of king Wân, and older than the duke of Kâu. The Shang where he was put to death was probably what had been the capital of the Shang kings.

² We do not know where Kwo-lin was.

³ The name of Hwo remains in Hwo Kâu, department Phing-yang, Shan-hsi. The prince of Hwo was the eighth of Wân's sons.

of 3hâi having displayed a reverent virtue, the duke of Kâu made him a high minister, and when his father died, requested a decree from the king, investing him with the country of 3hâi.

2. 'The king speaks to this effect:—"My little child, Hû, you follow the virtue (of our ancestors), and have changed from the conduct (of your father); you are able to take heed to your ways;—I therefore appoint you to be a marquis in the east. Go to your fief, and be reverent!

"In order that you may cover the faults of your father, be loyal, be filial¹. Urge on your steps in your own way, diligent and never idle, and so shall you hand down an example to your descendants. Follow the constant lessons of your grandfather king Wăn, and be not, like your father, disobedient to the royal orders.

"Great Heaven has no partial affections;—it helps only the virtuous.* The people's hearts have no unchanging attachment;—they cherish only the kind. Acts of goodness are different, but they contribute in common to good order. Acts of evil are different, but they contribute in common to disorder. Be cautious!

"In giving heed to the beginning think of the end;—the end will then be without distress. If you do not think of the end, it will be full of distress, even of the greatest.

"Exert yourself to achieve your proper merit. Seek to be in harmony with all your neighbours.

¹ Hû's father had not been filial. When he is told to be filial, there underlies the words the idea of the solidarity of the family. His copying the example of his grandfather would be the best service he could render to his father.

Be a fence to the royal House. Live in amity with your brethren. Tranquillize and help the lower people.

“Follow the course of the Mean, and do not by aiming to be intelligent throw old statutes into confusion. Watch over what you see and hear, and do not for one-sided words deviate from the right rule. Then I, the One man, will praise you.”

‘The king says, “Oh! my little child, Hû, go, and do not idly throw away my charge.”’

BOOK XVIII. THE NUMEROUS REGIONS.

THE king has returned to his capital in triumph, having put down rebellion in the east, and specially extinguished the state or tribe of Yen. The third chapter of Book xiv contained a reference to an expedition against Yen. Critics are divided on the point of whether the expedition mentioned in this Book was the same as that, or another; and our sources of information are not sufficient to enable us to pronounce positively in the case. If we may credit what Mencius says, the Records of the Shû do not tell us a tithe of the wars carried on by the duke of Kâu to establish the new dynasty:—‘He smote Yen, and after three years put its ruler to death. He drove Fei-lien to a corner by the sea, and slew him. The states which he extinguished amounted to fifty’ (Mencius, III, ii, ch. 9).

However this point be settled, on the occasion when the announcement in this Book was delivered, a great assembly of princes and nobles—the old officers of Yin or Shang, and chiefs from many regions—was met together. They are all supposed to have been secretly, if not openly, in sympathy with the rebellion which has been trampled out, and to grudge to yield submission to the rule of Kâu. The king, by the duke of Kâu, reasons and expostulates with them. He insists on the leniency with which they had been treated in the past; and whereas they might be saying that Kâu’s overthrow of the Yin dynasty was a usurpation, he shows that it was from the will of Heaven.

The history of the nation is then reviewed, and it is made to appear that king Wû had displaced the kings of Yin or Shang, just as Thang, the founder of the Shang dynasty, had displaced those of Hsiâ. It was their duty therefore to submit to K'âu. If they did not avail themselves of its leniency, they should be dealt with in another way.

Having thus spoken, the duke turns, in the fourth of the five chapters into which I have divided the Book, and addresses the many officers of the states, and especially those of Yin, who had been removed to Lo, speaking to them, as 'the Numerous Officers,' after the style of Book xiv. Finally, he admonishes them all that it is time to begin a new course. If they do well, it will be well with them; if they continue perverse, they will have to blame themselves for the consequences.

1. In the fifth month, on the day Ting-hâi, the king arrived from Yen, and came to (Hâo), the honoured (capital of) K'âu. The duke of K'âu said, 'The king speaks to the following effect: "Ho! I make an announcement to you of the four states, and the numerous (other) regions. Ye who were the officers and people of the prince of Yin, I have dealt very leniently as regards your lives, as ye all know. You kept reckoning greatly on (some) decree of Heaven, and did not keep with perpetual awe before your thoughts (the preservation of) your sacrifices¹.*

"God sent down correction on Hsiâ, but the sovereign (only) increased his luxury and sloth, and would not speak kindly to the people. He showed himself dissolute and dark, and would not yield for a single day to the leadings of God:—this is what you have heard.* He kept reckoning on the

¹ The extinction of the sacrifices of a state was its utter overthrow. None were left—or if some might be left, none of them were permitted—to continue the sacrifices to its founder and his descendants.

decree of God (in his favour), and did not cultivate the means for the people's support.* By great inflictions of punishment also he increased the disorder of the states of Hsiâ. The first cause (of his evil course) was the internal misrule¹, which made him unfit to deal well with the multitudes. Nor did he endeavour to find and employ men whom he could respect, and who might display a generous kindness to the people; but where any of the people of Hsiâ were covetous and fierce, he daily honoured them, and they practised cruel tortures in the cities. Heaven on this sought a (true) lord for the people, and made its distinguished and favouring decree light on Thang the Successful, who punished and destroyed the sovereign of Hsiâ.* Heaven's refusal of its favour (to Hsiâ) was decided. The righteous men of your numerous regions were not permitted to continue long in their posts of enjoyment, and the many officers whom Hsiâ's (last sovereign) honoured were unable intelligently to maintain the people in the enjoyment (of their lives), but, on the contrary, aided one another in oppressing them, till of the hundred ways of securing (prosperity) they could not promote (one).

“In the case indeed of Thang the Successful, it was because he was the choice of your numerous regions that he superseded Hsiâ, and became the lord of the people. He paid careful attention to the essential virtue (of a sovereign)², in order to stimulate the people, and they on their part imitated him

¹ The vile debaucheries of which Kieh was guilty through his connexion with the notorious Mei-hsf.

² That is, to benevolence or the love of the people.

and were stimulated. From him down to Tt-yi, the sovereigns all made their virtue illustrious, and were cautious in the use of punishments;—thus also exercising a stimulating influence (over the people). When they, having examined the evidence in criminal cases, put to death those chargeable with many crimes, they exercised the same influence; and they did so also when they liberated those who were not purposely guilty. But when the throne came to your (last) sovereign, he could not with (the good will of) your numerous regions continue in the enjoyment of the favouring decree of Heaven.”’*

2. ‘Oh! the king speaks to the following effect:—“I announce and declare to you of the numerous regions, that Heaven had no set purpose to do away with the sovereign of Hsiâ or with the sovereign of Yin. But it was the case that your (last) ruler, being in possession of your numerous regions, abandoned himself to great excess, and reckoned on the favouring decree of Heaven, making trifling excuses for his conduct. And so in the case of the (last) sovereign of Hsiâ; his plans of government were not of a tendency to secure his enjoyment (of the kingdom), and Heaven sent down ruin on him, and the chief of the territory (of Shang) put an end (to the line of Hsiâ). In truth, the last sovereign of your Shang was luxurious to the extreme of luxury, while his plans of government showed neither purity nor progress, and thus Heaven sent down such ruin on him¹.*’

¹ There must have been something remarkable in the closing period of Kâu-hsin's history, to which the duke alludes in the subsequent specification of five years. We do not know the events of the times sufficiently to say what it was.

“ The wise, through not thinking, become foolish, and the foolish, by thinking, become wise. . Heaven for five years waited kindly, and forbore with the descendant (of Thang), to see if he would indeed prove himself the ruler of the people ; but there was nothing in him deserving to be regarded. Heaven then sought among your numerous regions, making a great impression by its terrors to stir up some one who would look (reverently) to it, but in all your regions there was not one deserving of its favouring regard. But there were the kings of our *Kâu*, who treated well the multitudes of the people, and were able to sustain the burden of virtuous (government). They could preside over (all services to) spirits and to Heaven.* Heaven thereupon instructed us, and increased our excellence, made choice of us, and gave us the decree of Yin, to rule over your numerous regions.” *

3. “ Why do I now presume to make (these) many declarations ? I have dealt very leniently as regards the lives of you, the people of these four states. Why do you not show a sincere and generous obedience in your numerous regions ? Why do you not aid and co-operate with the kings of our *Kâu*, to secure the enjoyment of Heaven’s favouring decree ? You now still dwell in your dwellings, and cultivate your fields ;—why do you not obey our kings, and consolidate the decree of Heaven ? The paths which you tread are continually those of disquietude ;—have you in your hearts no love for yourselves ? do you refuse so greatly to acquiesce in the ordinance of Heaven ? do you triflingly reject that decree ? do you of yourselves pursue unlawful courses, scheming (by your alleged reasons) for the

approval of upright men? I simply instructed you, and published my announcement¹; with trembling awe I secured and confined (the chief criminals):— I have done so twice and for three times. But if you do not take advantage of the leniency with which I have spared your lives, I will proceed to severe punishments, and put you to death. It is not that we, the sovereigns of Kâu, hold it virtuous to make you untr tranquil, but it is you yourselves who accelerate your crimes (and sufferings).”

4. ‘The king says, “Oh! ho! I tell you, ye many officers of the various regions, and you, ye many officers of Yin, now have ye been hurrying about, doing service to my overseers for five years. There are among you the inferior assistants, the chiefs, and the numerous directors, small and great;—see that ye all attain to the discharge of your duties. Want of harmony (in the life) rises from (the want of it in) one’s (inner) self;—strive to be harmonious. Want of concord in your families (arises from the want of it in your conduct);—strive to be harmonious. When intelligence rules in your cities, then will you be proved to be attentive to your duties. Do not be afraid, I pray you, of the evil ways (of the people); and moreover, by occupying your offices with a reverent harmony, you will find it possible to select from your cities individuals on whose assistance you can calculate. You may thus long continue in this city of Lo², cultivating your fields. Heaven will favour and compassionate you, and we,

¹ Referring probably to ‘the Great Announcement’ in Book vii.

² It would almost seem from this that the announcement was made in Lo; and some critics have argued that Lo was ‘the honoured capital’ in the first sentence.

the sovereigns of *Kâu*, will greatly help you, and confer rewards, selecting you to stand in our royal court. Only be attentive to your duties, and you may rank among our great officers."

'The king says, "Oh! ye numerous officers, if you cannot exhort one another to pay a sincere regard to my charges, it will further show that you are unable to honour your sovereign; and all the people will (also) say, 'We will not honour him.' Thus will ye be proved slothful and perverse, greatly disobedient to the royal charges. Throughout your numerous regions you will bring on yourselves the terrors of Heaven, and I will then inflict on you its punishments, removing you far from your country.'"

5. 'The king says, "I do not (wish to) make these many declarations, but it is in a spirit of awe that I lay my commands before you." He further says, "You may now make a (new) beginning. If you cannot reverently realize the harmony (which I enjoin), do not (hereafter) murmur against me.'"

BOOK XIX. THE ESTABLISHMENT OF GOVERNMENT.

THE phrase, 'the Establishment of Government,' occurs several times in the course of the Book, and is thence taken to denominate it,—appropriately enough. The subject treated of throughout, is how good government may be established.

Some Chinese critics maintain that the text as it stands is very confused, 'head and tail in disorder, and without connexion,' and various re-arrangements of it have been proposed, for which, however, there is no manuscript authority. Keeping to the received text, and dividing it into six chapters, we may adopt a summary of its contents approved by the editors of the *Shû*, which was published in the Yung-k'ang reign of the

present dynasty.—In government there is nothing more important than the employment of proper men; and when such men are being sought, the first care should be for those to occupy the three highest positions. When these are properly filled, all the other offices will get their right men, and royal government will be established. The appointment of the officers of business, of pastoral oversight, and of the law, is the great theme of the whole Book, and the concluding words of chapter 1 are its pulse,—may be felt throbbing everywhere in all the sentiments. Chapters 2 and 3 illustrate the subject from the history of the dynasties of Hsiâ and Shang; and in chapter 4 it is shown how kings Wân and Wû selected their officers, and initiated the happy state which was still continuing. In chapter 5 there is set forth the duty of the king to put away from him men of artful tongues; to employ the good, distinguished by their habits of virtue; to be always well prepared for war; and to be very careful of his conduct in the matter of litigations. Chapter 6 seems to have hardly any connexion with the rest of the Book, and is probably a fragment of one of the lost Books of the Shû, that has got tacked on to this.

The Book belongs to the class of 'Instructions,' and was made, I suppose, after the duke of Kâu had retired from his regency.

I. The duke of Kâu spoke to the following effect:—'With our hands to our heads and our heads to the ground, we make our declarations to the Son of Heaven, the king who has inherited the throne.' In such manner accordingly all (the other ministers) cautioned the king, saying, 'In close attendance on your majesty there are the regular presidents¹, the regular ministers², and the officers of justice;—the keepers of the robes (also), and the guards.' The duke of Kâu said, 'Oh! admirable are these (officers). Few, however, know to be sufficiently anxious about them.'

¹ We must understand by these the chiefs or presidents who had a certain jurisdiction over several states and their princes.

² The high ministers of Instruction, War, Works, &c.

2. 'Among the ancients who exemplified (this anxiety) there was the founder of the Hsiâ dynasty. When his House was in its greatest strength, he sought for able men who should honour God (in the discharge of their duties).^{*} (His advisers), when they knew of men thoroughly proved and trustworthy in the practice of the nine virtues¹, would then presume to inform and instruct their sovereign, saying, "With our hands to our heads and our heads to the ground, O sovereign, we would say, Let (such an one) occupy one of your high offices: Let (such an one) be one of your pastors: Let (such an one) be one of your officers of justice. By such appointments you will fulfil your duty as sovereign. If you judge by the face only, and therefrom deem men well schooled in virtue, and appoint them, then those three positions will all be occupied by unrighteous individuals." The way of Kieh, however, was not to observe this precedent. Those whom he employed were cruel men;—and he left no successor.'

3. 'After this there was Thang the Successful, who, rising to the throne, grandly administered the bright ordinances of God.^{*} He employed, to fill the three (high) positions, those who were equal to them; and those who were called possessors of the three kinds of ability² would display that ability.

¹ See chapter 2 of 'the Counsels of Kâo-yâo' in Part II.

² Some suppose that men are intended here who possessed 'the three virtues' of 'the Great Plan.' I think rather that men are intended who had talents and virtue which would make them eligible to the three highest positions. Thang had his notice fixed on such men, and was prepared to call them to office at the proper time.

He then studied them severely, and greatly imitated them, making the utmost of them in their three positions and with their three kinds of ability. The people in the cities of Shang¹ were thereby all brought to harmony, and those in the four quarters of the kingdom were brought greatly under the influence of the virtue thus displayed. Oh! when the throne came to Shâu, his character was all violence. He preferred men of severity, and who deemed cruelty a virtue, to share with him in the government of his states; and at the same time, the host of his associates, men who counted idleness a virtue, shared the offices of his court. God then sovereignly punished him, and caused us to possess the great land, enjoy the favouring decree which Shâu had (afore) received, and govern all the people in their myriad realms.' *

4. 'Then subsequently there were king Wăn and king Wû, who knew well the minds of those whom they put in the three positions, and saw clearly the minds of those who had the three grades of ability. Thus they could employ them to serve God with reverence, and appointed them as presidents and chiefs of the people. In establishing their government, the three things which principally concerned them were to find the men for (high) offices, the officers of justice, and the pastors. (They had also) the guards; the keepers of the robes; their equeries; their heads of small departments; their personal attendants; their various overseers; and their treasurers. They had their governors of the larger and smaller cities assigned in the royal domain to the

¹ That is, within the royal domain.

nobles; their men of arts¹; their overseers whose offices were beyond the court; their grand historiographers; and their heads of departments;—all good men of constant virtue.

‘(In the external states) there were the Minister of Instruction, the Minister of War, and the Minister of Works, with the many officers subordinate to them. Among the wild tribes, such as the Wei, the Lû, and the *Khăng*², in the three Po, and at the dangerous passes, they had wardens.

‘King Wăn was able to make the minds of those in the (three high) positions his own, and so it was that he established those regular officers and superintending pastors, so that they were men of ability and virtue. He would not appear himself in the various notifications, in litigations, and in precautionary measures. There were the officers and pastors (to attend to them), whom he (simply) taught to be obedient (to his wishes), and not to be disobedient. (Yea), as to litigations and precautionary measures, he (would seem as if he) did not presume to know about them. He was followed by king Wû, who carried out his work of settlement, and did not presume to supersede his righteous and virtuous men, but entered into his plans, and employed, as before, those men. Thus it was that they unitedly received this vast inheritance.’

¹ All who employed their arts in the service of the government;—officers of prayer, clerks, archers, charioteers, doctors, diviners, and the practisers of the various mechanical arts, &c.

² Compare what is said in ‘the Speech at Mû,’ ch. 1. The *Khăng* are not mentioned there. It would seem to be the name of a wild tribe. The three Po had all been capitals of the Shang kings, and their people required the special attention of the sovereigns of *Kâu*.

5. 'Oh! young son, the king, from this time forth be it ours to establish the government, appointing the (high) officers, the officers of the laws, and the pastors;—be it ours clearly to know what courses are natural to these men, and then fully to employ them in the government, that they may aid us in the management of the people whom we have received, and harmoniously conduct all litigations and precautionary measures. And let us never allow others to come between us and them. (Yea), in our every word and speech, let us be thinking of (these) officers of complete virtue, to regulate the people that we have received.

'Oh! I, Tan, have received these excellent words of others¹, and tell them all to you, young son, the king. From this time forth, O accomplished son (of Wû), accomplished grandson (of Wăn), do not err in regard to the litigations and precautionary measures;—let the proper officers manage them. From of old to the founder of Shang, and downwards to king Wăn of our Kâu, in establishing government, when they appointed (high) officers, pastors, and officers of the laws, they settled them in their positions, and allowed them to unfold their talents;—thus giving the regulation of affairs into their hands. In the kingdom, never has there been the establishment of government by the employment of artful-tongued men; (with such men), unlesioned in virtue, never can a government be distinguished in the world. From this time forth, in establishing government, make no use of artful-tongued men,

¹ Probably all the other officers or ministers referred to in ch. 1. They are there prepared to speak their views, when the duke of Kâu takes all the discoursing on himself.

but (seek for) good officers, and get them to use all their powers in aiding the government of our country. Now, O accomplished son (of Wû), accomplished grandson (of Wăn), young son, the king, do not err in the matter of litigations;—there are the officers and pastors (to attend to them).

‘Have well arranged (also) your military accoutrements and weapons, so that you may go forth beyond the steps of Yü, and traverse all under the sky, even to beyond the seas, everywhere meeting with submission:—so shall you display the bright glory of king Wăn, and render more illustrious the great achievements of king Wû¹.

‘Oh! from this time forth, may (our) future kings, in establishing the government, be able to employ men of constant virtue!’

6. The duke of *Kâu* spoke to the following effect:—‘O grand historiographer, the duke of *Sû*, the Minister of Crime, dealt reverently with all the criminal matters that came before him, and thereby perpetuated the fortunes of our kingdom. Here was an example of anxious solicitude (for future ministers), whereby they may rank with him in the ordering of the appropriate punishments².’

¹ At the close of his address to prince Shih, Book xvi, the duke of *Kâu* breaks all at once into a warlike mood, as he does here.

² I have said in the introductory note that this chapter does not seem to have any connexion with the rest of the Book. From a passage in the *30 Kwan*, under the eleventh year of duke *Khăng*, we learn that a *Sû Făn-shăng*, or *Făn-shăng* of *Sû*, was Minister of Crime to king Wû. It is probably to him that the duke here alludes.

BOOK XX. THE OFFICERS OF K'AU.

'THE Officers of K'au' contains a general outline of the official system of the K'au dynasty, detailing the names and functions of the principal ministers about the court and others, to whom, moreover, various counsels are addressed by the king who speaks in it,—no doubt, king K'äng. Chinese critics class it with the 'Instructions' of the Shŭ, but it belongs rather to the 'Announcements.'

There is no mention in it of the duke of K'au; and its date must therefore be in some year after he had retired from the regency, and resigned the government into the king's own hands.

The Book has a beginning, middle, and end, more distinctly marked than they are in many of the documents in the Shŭ. The whole is divided into five chapters. The first is introductory, and describes the condition of the kingdom, when the arrangements of the official system were announced. In the second, the king refers to the arrangements of former dynasties. In the third, he sets forth the principal offices of state, the ministers of which had their residence at court, and goes on to the arrangements for the administration of the provinces. The two other chapters contain many excellent advices to the ministers and officers to discharge their duties so that the fortunes of the dynasty might be consolidated, and no dissatisfaction arise among the myriad states.

1. The king of K'au brought the myriad regions (of the kingdom) to tranquillity; he made a tour of inspection through the Hâu and Tien tenures; he punished on all sides the chiefs who had refused to appear at court; thus securing the repose of the millions of the people, and all the (princes in the) six tenures acknowledging his virtue. He then returned to the honoured capital of K'au, and strictly regulated the officers of the administration.

2. The king said, 'It was the grand method of former times to regulate the government while there

was no confusion, and to secure the country while there was no danger.' He said, 'Yáo and Shun, having studied antiquity¹, established a hundred officers. At court, there were the General Regulator and (the President of) the Four Mountains; abroad, there were the pastors of the provinces and the princes of states. Thus the various departments of government went on harmoniously, and the myriad states all enjoyed repose. Under the dynasties of Hsiá and Shang, the number of officers was doubled, and they were able still to secure good government. (Those early) intelligent kings, in establishing their government, cared not so much about the number of the offices as about the men (to occupy them). Now I, the little child, cultivate with reverence my virtue, concerned day and night about my deficiencies; I look up to (those) former dynasties, and seek to conform to them, while I instruct and direct you, my officers.'

3. 'I appoint the Grand-Master, the Grand-Assistant, and the Grand-Guardian. These are the three Kung². They discourse about the principles

¹ It is the same phrase here, which occurs at the beginning of the Canons of Yáo and Shun, and of some other Books. It may be inferred, as P. Gaubil says, that Yáo and Shun had certain sources of knowledge, that is to say, some history of the times anterior to their own.

² That is, 'the three dukes;' but the term is here a name of office, more than of nobility, as is evident from the name of the three K'au, who were next to them. K'au was not used as a term expressing any order of nobility. It would seem to indicate that, while the men holding the office were assistant to the Kung, they yet had a distinct standing of their own. The offices of Grand-Master &c. had existed under the Shang dynasty; see Book xi, Part IV.

of reason¹ and adjust the states, harmonizing (also) and regulating the operations (in nature) of heaven and earth². These offices need not (always) be filled; there must (first) be the men for them.

‘(I appoint) the Junior Master, the Junior Assistant, and the Junior Guardian. These are called the three Kû³. They assist the Kung to diffuse widely the transforming influences, and display brightly with reverence (the powers of) heaven and earth,—assisting me, the One man.

‘(I appoint) the Prime Minister, who presides over the ruling of the (various) regions, has the general management of all the other officers, and secures uniformity within the four seas; the Minister of Instruction, who presides over the education in the states, diffuses a knowledge of the duties belonging to the five relations of society, and trains the millions of the people to obedience; the Minister of Religion, who presides over the (sacred) ceremonies of the country, regulates the services rendered to the spirits and manes, and makes a harmony between high and low⁴;* the Minister of War, who presides over the (military) administration of the

¹ Meaning, I suppose, the courses or ways, which it was right for the king, according to reason, to pursue.

² That is, probably, securing the material prosperity of the kingdom, in good seasons, &c.

³ See note 2 on the preceding page.

⁴ The name here for ‘the Minister of Religion’ is the same as that in the Canon of Shun. ‘The spirits and manes’ are ‘the spirits of heaven, earth, and deceased men.’ All festive, funeral, and other ceremonies, as well as those of sacrifices, came under the department of the Minister of Religion, who had therefore to define the order of rank and precedence. This seems to be what is meant by his ‘making a harmony between high and low.’

country, commands the six hosts, and secures the tranquillity of all the regions; the Minister of Crime, who presides over the prohibitions of the country, searches out the villainous and secretly wicked, and punishes oppressors and disturbers of the peace; and the Minister of Works, who presides over the land of the country, settles the four classes of the people, and secures at the proper seasons the produce of the ground¹.

'These six ministers with their different duties lead on their several subordinates, and set an example to the nine pastors of the provinces, enriching and perfecting the condition of the millions of the people. In six years (the lords of) the five tenures appear once at the royal court; and after a second six years, the king makes a tour of inspection in the four seasons, and examines the (various) regulations and measures at the four mountains. The princes appear before him each at the mountain of his quarter; and promotions and degradations are awarded with great intelligence.'

4. The king said, 'Oh! all ye men of virtue, my occupiers of office, pay reverent attention to your charges. Be careful in the commands you issue; for, once issued, they must be carried into effect, and cannot be retracted. Extinguish all selfish aims by your public feeling, and the people will have confidence in you, and be gladly obedient. Study antiquity as a preparation for entering on

¹ Out of these six ministers and their departments have grown the Six Boards of the Chinese Government of the present day:—the Board of Civil Office; the Board of Revenue; the Board of Rites; the Board of War; the Board of Punishment; and the Board of Works.

your offices. In deliberating on affairs, form your determinations by help (of such study), and your measures will be free from error. Make the regular statutes of (our own) dynasty your rule, and do not with artful speeches introduce disorder into your offices. To accumulate doubts is the way to ruin your plans; to be idle and indifferent is the way to ruin your government. Without study, you stand facing a wall, and your management of affairs will be full of trouble.

‘I warn you, my high ministers and officers, that exalted merit depends on the high aim, and a patrimony is enlarged only by diligence; it is by means of bold decision that future difficulties are avoided. Pride comes, along with rank, unperceived, and extravagance in the same way with emolument. Let reverence and economy be (real) virtues with you, unaccompanied with hypocritical display. Practise them as virtues, and your minds will be at ease, and you will daily become more admirable. Practise them in hypocrisy, and your minds will be toiled, and you will daily become more stupid. In the enjoyment of favour think of peril, and never be without a cautious apprehension;—he who is without such apprehension finds himself amidst what is really to be feared. Push forward the worthy, and show deference to the able; and harmony will prevail among all your officers. When they are not harmonious, the government becomes a mass of confusion. If those whom you advance be able for their offices, the ability is yours; if you advance improper men, you are not equal to your position.’

5. The king said, ‘Oh! ye (charged) with the

threefold business (of government)¹, and ye great officers, reverently attend to your departments, and conduct well the affairs under your government, so as to assist your sovereign, and secure the lasting happiness of the millions of the people;—so shall there be no dissatisfaction throughout the myriad states.'

BOOK XXI. THE KÜN-KHĀN.

KÜN-KHĀN was the successor in 'the eastern capital' of the duke of Kâu, who has now passed off the stage of the Shû, which he occupied so long. Between 'the Officers of Kâu' and this Book, there were, when the Shû was complete, two others, which are both lost. We must greatly deplore the loss of the second of them, for it contained an account of the death of the duke of Kâu, and an announcement made by king K'hang by his bier.

Who Kün-khăn, the charge to whom on entering on his important government is here preserved, really was, we are not informed. Some have supposed that he was a son of the duke of Kâu; but we may be sure, from the analogy of other charges, that if he had been so, the fact would have been alluded to in the text. Kün-khăn might be translated 'the prince Khăn,' like Kün Shih in the title of Book xvi, but we know nothing of any territory with which he was invested.

The following summary of the contents is given by a Chinese critic:—'The whole Book may be divided into three chapters. The first relates Kün-khăn's appointment to the government of the eastern capital. The concluding words, "Be reverent,"

¹ 'The threefold business of government' is the appointment of the men of office, the officers of law, and the pastors, 'the three concerns of those in the three highest positions,' as described in the last Book, ch. 4. The king, probably, intends the Kung, the Kû, and the six ministers, whose duties he has spoken of. The 'great officers' will be all the officers inferior to these in their several departments.

are emphatic, and give the key-note to all that follows. The second chapter enjoins on him to exert himself to illustrate the lessons of the duke of Kâu, and thereby transform the people of Yin. The third requires him to give full development to those lessons, and instances various particulars in which his doing so would appear ;—all illustrative of the command at the commencement, that he should be reverent.'

1. The king spake to the following effect :—
'Kün-khân, it is you who are possessed of excellent virtue, filial and respectful. Being filial, and friendly with your brethren, you can display these qualities in the exercise of government. I appoint you to rule this eastern border. Be reverent.'

2. 'Formerly, the duke of Kâu acted as teacher and guardian of the myriads of the people, who cherish (the remembrance of) his virtue. Go and with sedulous care enter upon his charge; act in accordance with his regular ways, and exert yourself to illustrate his lessons ;—so shall the people be regulated. I have heard that he said, "Perfect government has a piercing fragrance, and influences the spiritual intelligences.* It is not the millet which has the piercing fragrance; it is bright virtue." Do you make this lesson of the duke of Kâu your rule, being diligent from day to day, and not presuming to indulge in luxurious ease. Ordinary men, while they have not yet seen a sage, (are full of desire) as if they should never get a sight of him; and after they have seen him, they are still unable to follow him. Be cautioned by this! You are the wind; the inferior people are the grass. In revolving the plans of your government, never hesitate to acknowledge the difficulty of the subject. Some things have to be abolished, and some new things to be enacted ;—

going out and coming in, seek the judgment of your people about them, and, when there is a general agreement, exert your own powers of reflection. When you have any good plans or counsels, enter and lay them before your sovereign in the palace. Thereafter, when you are acting abroad in accordance with them, say, "This plan or this view is all due to our sovereign." Oh! if all ministers were to act thus, how excellent would they be, and how distinguished!

3. The king said, '*Kün-khăn*, do you give their full development to the great lessons of the duke of *Kâu*. Do not make use of your power to exercise oppression; do not make use of the laws to practise extortion. Be gentle, but with strictness of rule. Promote harmony by the display of an easy forbearance.

'When any of the people of Yin are amenable to punishment, if I say "Punish," do not you therefore punish; and if I say "Spare," do not you therefore spare. Seek the due middle course. Those who are disobedient to your government, and uninfluenced by your instructions, you will punish, remembering that the end of punishment is to make an end of punishing. Those who are inured to villainy and treachery, those who violate the regular duties of society, and those who introduce disorder into the public manners:—those three classes you will not spare, though their particular offences be but small.

'Do not cherish anger against the obstinate, and dislike them. Seek not every quality in one individual. You must have patience, and you will be successful; have forbearance, and your virtue will

be great. Mark those who discharge their duties well, and also mark those who do not do so, (and distinguish them from one another.) Advance the good, to induce those who may not be so to follow (their example).

'The people are born good, and are changed by (external) things,* so that they resist what their superiors command, and follow what they (themselves) love. Do you but reverently observe the statutes, and they will be found in (the way of) virtue; they will thus all be changed, and truly advance to a great degree of excellence. Then shall I, the One man, receive much happiness, and your excellent services will be famous through long ages!'

BOOK XXII. THE TESTAMENTARY CHARGE.

THIS Book brings us to the closing act of the life of king *K'hang*, whose reign, according to the current chronology, lasted thirty-seven years, ending in B.C. 1079. From the appointment of *Kün-khân* to his death, the king's history is almost a blank. The only events chronicled by *Sze-mâ K'ien* are a coinage of round money with a square hole in the centre,—the prototype of the present cash; and an enactment about the width and length in which pieces of silk and cloth were to be manufactured.

King *K'hang*, feeling that his end is near, calls his principal ministers and other officers around his bed, and commits his son *K'ao* to their care and guidance. The record of all these things and the dying charge form a chapter that ends with the statement of the king's death. The rest of the Book forms a second chapter, in which we have a detailed account of the ceremonies connected with the publication of the charge, and the accession of *K'ao* to the throne. It is an interesting account of the ways of that distant time on such occasions.

1. In the fourth month, when the moon began to wane, the king was indisposed. On the day *K'ia-*

ize, he washed his hands and face; his attendants put on him his cap and robes¹; (and he sat up), leaning on a gem-adorned bench². He then called together the Grand-Guardian Shih, the earls of Zui and Thung, the duke of Pî, the marquis of Wei, the duke of Mão, the master of the warders, the master of the guards, the heads of the various departments, and the superintendents of affairs³.

The king said, 'Oh! my illness has greatly increased, and it will soon be over with me. The malady comes on daily with more violence, and maintains its hold. I am afraid I may not find (another opportunity) to declare my wishes about my successor, and therefore I (now) lay my charge upon you with special instructions. The former rulers, our kings Wăn and Wû, displayed in succession their equal glory, making sure provision for the support of the people, and setting forth their

¹ The king's caps or crowns and robes were many, and for each there was the appropriate occasion. His attendants, no doubt, now dressed king *K'häng* as the rules of court fashions required.

² In those days they sat on the ground upon mats; and for the old or infirm benches or stools were placed, in front of them, to lean forward on. The king had five kinds of stools variously adorned. That with gems was the most honourable.

³ The Grand-Guardian Shih, or the duke of Shão, and the other five dignitaries were, no doubt, the six ministers of the 20th Book. Zui is referred to the present district of *K'áo-yî*, department Hsî-an; and Thung to *Hwâ Kâu*, department Thung-kâu;—both in Shen-hsî. The earl of Zui, it is supposed, was Minister of Instruction, and he of Thung Minister of Religion. Pî corresponded to the present district of *K'hang-an*, department Hsî-an. The duke of Pî was Minister of War, called Duke or Kung, as Grand-Master. It is not known where Mão was. The lord of it was Minister of Works, and Grand-Assistant. The marquis of Wei,—see on Book ix. He was now, it is supposed, Minister of Crime.

instructions. (The people) accorded a practical submission, without any opposition, and the influence (of their example and instructions) extended to Yin, and the great appointment (of Heaven) was secured*. After them, I, the stupid one, received with reverence the dread (decree) of Heaven, and continued to keep the great instructions of Wăn and Wú, not daring blindly to transgress them.*

‘Now Heaven has laid affliction on me, and it seems as if I should not again rise or be myself. Do you take clear note of these my words, and in accordance with them watch reverently over my eldest son Kào, and greatly assist him in the difficulties of his position. Be kind to those who are far off, and help those who are near. Promote the tranquillity of the states, small and great, and encourage them (to well-doing). I think how a man has to govern himself in dignity and with decorum;—do not you allow Kào to proceed heedlessly on the impulse of improper motives.’ Immediately on receiving this charge, (the ministers and others) withdrew. The tent¹ was then carried out into

¹ The tent had been prepared when the king sent for his ministers and officers to give them his last charge, and set up outside his chamber in the hall where he was accustomed to hold ‘the audience of government.’ He had walked or been carried to it, and then returned to his apartment when he had expressed his last wishes, while the tent—the curtains and canopy—was carried out into the courtyard.

The palace was much more long or deep than wide, consisting of five series of buildings continued one after another, so that, if all the gates were thrown open, one could walk in a direct line from the first gate to the last. The different parts of it were separated by courts that embraced a large space of ground, and were partly open overhead. The gates leading to the different parts had their particular names, and were all fronting

the court; and on the next day, (being) *Yi-khâu*, the king died.

2. The Grand-Guardian then ordered *Kung Hwan*¹ and *Nan-Kung Mão*¹ to instruct *Lü Kí*, the marquis of *Khí*², with two shield-and-spearmen, and a hundred guards, to meet the prince *Káo* outside the south gate³, and conduct him to (one of) the side-apartments (near to that where the king lay), there to be as chief mourner⁴.

On the day *Ting-mão*, (two days after the king's death), he ordered (the charge) to be recorded on

the south. Outside the second was held 'the outer levee,' where the king received the princes and officers generally. Outside the fifth was held 'the audience of government,' when he met his ministers to consult with them on the business of the state. Inside this gate were the buildings which formed the private apartments, in the hall leading to which was held 'the inner audience,' and where the sovereign feasted those whom he designed specially to honour. Such is the general idea of the ancient palace given by *Kü Hsí*. The gateways included a large space, covered by a roof, supported on pillars.

¹ We know nothing more of these officers but what is here related.

² The marquis of *Khí* was the son of *Thái-kung*, a friend and minister of king *Wán*, who had been enfeoffed by king *Wû* with the state of *Khí*, embracing the present department of *Khing-kâu*, in *Shan-tung*, and other territory. His place at court was that of master of the guards.

³ All the gates might be called 'south gates.' It is not certain whether that intended here was the outer gate of all, or the last, immediately in front of the hall, where the king had given his charge. Whichever it was, the meeting *Káo* in the way described was a public declaration that he had been appointed successor to the throne.

⁴ 'The mourning shed,' spoken of in Part IV, viii, ch. 1, had not yet been set up, and the apartment here indicated—on the east of the hall of audience—was the proper one for the prince to occupy in the mean time.

tablets, and the forms (to be observed in publishing it). Seven days after, on Kwei-yü, as chief (of the west) and premier, he ordered the (proper) officers to prepare the wood (for all the requirements of the funeral)¹.

The salvage men² set out the screens³, ornamented with figures of axes, and the tents. Between the window (and the door), facing the south, they placed the (three)fold mat of fine bamboo splints, with its striped border of white and black silk, and the usual bench adorned with different-coloured gems. In the side-space on the west, which faced the east, they placed the threefold rush mat, with its variegated border, and the usual bench adorned with beautiful shells. In the side-space on the east, which faced the west, they placed the threefold mat of fine grass, with its border of painted silk, and the usual bench carved, and adorned with gems. Before the western side-chamber, and facing the south, they placed the threefold mat of fine bamboo, with its dark mixed border, and the usual lacquered bench⁴.

¹ On the seventh day after his death the king had been shrouded and put into his coffin. But there were still the shell or outer coffin, &c., to be provided.

² These 'salvage men' were, I suppose, natives of the wild Tí tribes, employed to perform the more servile offices about the court. Some of them, we know, were enrolled among the guards.

³ The screens were ornamented with figures of axe-heads, and placed behind the king, under the canopy that overshadowed him.

⁴ All these arrangements seem to have been made in the hall where king K'äng had delivered his charge. He had been accustomed to receive his guests at all the places where the tents, screens, and mats were now set. It was presumed he would be present in spirit at the ceremony of proclaiming his son, and

(They set forth) also the five pairs of gems (or jade), and the precious things of display. There were the red knife, the great lessons, the large round-and-convex symbol of jade, and the rounded and pointed maces,—all in the side-space on the west; the large piece of jade, the pieces contributed by the wild tribes of the east, the heavenly sounding-stone, and the river-Plan,—all in the side-space on the east; the dancing habits of Yin, the large tortoise-shell, and the large drum,—all in the western apartment; the spear of Tûi, the bow of Ho, and the bamboo arrows of *Khui*,—all in the eastern apartment¹.

The grand carriage was by the guests' steps, facing (the south); the next was by the eastern (or host's) steps, facing (the south). The front carriage was placed before the left lobby, and the one that followed it before the right lobby².

making known to him his dying charge; and as they could not tell at what particular spot the spirit would be, they made all the places ready for it.

¹ The western and eastern apartments were two rooms, east and west of the hall, forming part of the private apartments, behind the side rooms, and of large dimensions. The various articles enumerated were precious relics, and had been favourites with king *Khâng*. They were now displayed to keep up the illusion of the king's still being present in spirit. 'They were set forth,' it is said, 'at the ancestral sacrifices to show that the king could preserve them, and at the ceremony of announcing a testamentary charge to show that he could transmit them.' About the articles themselves it is not necessary to append particular notes. They perished thousands of years ago, and the accounts of them by the best scholars are little more than conjectural.

² The royal carriages were of five kinds, and four of them at least were now set forth inside the last gate, that everything might again be done, as when the king was alive. On the west side of the hall were the guests' steps (or staircase), by which visitors

Two men in brownish leather caps, and holding three-cornered halberts, stood inside the gate leading to the private apartments. Four men in caps of spotted deer-skin, holding spears with blades upturned from the base of the point, stood, one on each side of the steps east and west, and near to the platform of the hall. One man in a great officer's cap, and holding an axe, stood in the hall, (near the steps) at the east (end). One man in a great officer's cap, and holding an axe of a different pattern, stood in the hall, (near the steps) at the west end. One man in a great officer's cap, and holding a lance, stood at the front and east of the hall, close by the steps. One man in a great officer's cap, and holding a lance of a different pattern, stood in the corresponding place on the west. One man in a great officer's cap, and holding a pointed weapon, stood by the steps on the north side of the hall.

The king, in a linen cap and the variously figured skirt, ascended by the guests' steps, followed by the high ministers, (great) officers, and princes of states, in linen caps and dark-coloured skirts¹. Arrived in the hall, they all took their (proper) places. The Grand-Guardian, the Grand-Historiographer, and the Minister of Religion were all in

ascended, and on the east were those used by the host himself. If one of the royal carriages was absent on this occasion, it must have been that used in war, as not being appropriate at such a time.

¹ All was now ready for the grand ceremony, and the performers, in their appropriate mourning and sacrificial array, take their places in the hall. *K'iao* is here for the first time styled 'king;' but still he goes up by the guests' steps, not presuming to ascend by the others, while his father's corpse was in the hall.

linen caps and red skirts. The Grand-Guardian bore the great mace. The Minister of Religion bore the cup and the mace-cover. These two ascended by the steps on the east¹. The Grand-Historiographer bore the testamentary charge. He ascended by the guests' steps (on the west), and advanced to the king with the tablets containing the charge, and said, 'Our royal sovereign, leaning on the gem-adorned bench, declared his last charge, and commanded you to continue (the observance of) the lessons, and to take the rule of the kingdom of *Káu*, complying with the great laws, and securing the harmony of all under the sky, so as to respond to and display the bright instructions of *Wăn* and *Wû*.'

The king twice bowed (low), and then arose, and replied, 'I am utterly insignificant and but a child, how should I be able to govern the four quarters (of the kingdom) with a corresponding reverent awe of the dread majesty of Heaven!'^{*} He then received the cup and the mace-cover. Thrice he slowly and reverently advanced with a cup of spirits (to the east of the coffin); thrice he sacrificed (to the spirit of his father);^{*} and thrice he put the cup down. The Minister of Religion said, 'It is accepted'².^{*}

¹ The Grand-Guardian and the Minister of Religion ascended by the eastern steps, because the authority of king *K'hang* was in their persons, to be conveyed by the present ceremony to his son. 'The great mace' was one of the emblems of the royal sovereignty, and 'the cup' also must have been one that only the king could use. 'The mace-cover' was an instrument by which the genuineness of the symbols of their rank conferred on the different princes was tested.

² According to *Khung Ying-tâ*, when the king received the record of the charge, he was standing at the top of the eastern steps, a little eastwards, with his face to the north. The Historiographer stood by king *K'hang*'s coffin, on the south-west of it, with his face

The Grand-Guardian received the cup, descended the steps, and washed his hands¹. He then took another cup, (placed it on) a half-mace which he carried, and repeated the sacrifice².* He then gave the cup to one of the attendants of the Minister of Religion, and did obeisance. The king returned the obeisance. The Grand-Guardian took a cup again, and poured out the spirits in sacrifice.* He then just tasted the spirits, returned to his place, gave the cup to the attendant, and did obeisance. The king returned the obeisance. The Grand-Guardian descended from the hall, after which the various (sacrificial) articles were removed, and the princes all went out at the temple gate³ and waited.

to the east. There he read the charge, after which the king bowed twice, and the Minister of Religion, on the south-west of the king, presented the cup and mace-cover. The king took them, and, having given the cover in charge to an attendant, advanced with the cup to the place between the pillars where the sacrificial spirits were placed. Having filled a cup, he advanced to the east of the coffin, and stood with his face to the west; then going to the spot where his father's spirit was supposed to be, he sacrificed, pouring out the spirits on the ground, and then he put the cup on the bench appropriated for it. This he repeated three times. At the conclusion the Minister of Religion conveyed to him a message from the spirit of his father, that his offering was accepted.

¹ Preparatory, that is, to his offering a sacrifice.

² That is, probably, repeated the sacrifice to the spirit of king *Khâng*, as if to inform him that his charge had been communicated to his son. The half-mace was used as a handle for the sacrificial cup. This ceremony appears to have been gone through twice. The Grand-Guardian's bowing was to the spirit of king *Khâng*, and the new king returned the obeisance for his father.

³ Meaning the fifth or last gate of the palace. The private apartments had for the time, through the presence of the coffin and by the sacrifices, been converted into a sort of ancestral temple.

BOOK XXIII.

THE ANNOUNCEMENT OF KING KHANG.

KHANG was the honorary sacrificial title conferred on K'ao, the son and successor of king K'hang. His reign lasted from B.C. 1078 to 1053. Khang, as an honorary title, has various meanings. In the text it probably denotes—'Who caused the people to be tranquil and happy.'

Immediately on his accession to the throne, as described in the last Book, king Khang made the Announcement which is here recorded. Indeed the two Books would almost seem to form only one, and as such they appeared in the Shû of Fû, as related in the Introduction.

The princes, with whose departure from the inner hall of the palace the last Book concludes, are introduced again to the king in the court between the fourth and fifth gates, and do homage to him after their fashion, cautioning also and advising him about the discharge of his high duties. He responds with the declaration which has given name to the Book, referring to his predecessors, and asking the assistance of all his hearers, that his reign may be a not unworthy sequel of theirs. With this the proceedings terminate, and the king resumes his mourning dress which he had put off for the occasion. The whole thus falls into three chapters.

1. The king came forth and stood (in the space) within the fourth gate of the palace, when the Grand-Guardian led in the princes of the western regions by the left (half) of the gate, and the duke of Pi those of the eastern regions by the right (half)¹. They then all caused their teams of light bay horses, with their manes and tails dyed red, to be exhibited;—and, (as the king's) guests, lifted up their rank-symbols, and (the other) presents (they had brought)²,

¹ See note on these ministers, p. 235.

² These presents were in addition to the teams of horses exhibited in the courtyard;—silks and lighter productions of their various territories.

saying, 'We your servants, defenders (of the throne), venture to bring the productions of our territories, and lay them here.' (With these words) they all did obeisance twice, laying their heads on the ground. The king, as the righteous successor to the virtue of those who had gone before him, returned their obeisance.

The Grand-Guardian and the earl of Zui, with all the rest, then advanced and bowed to each other, after which they did obeisance twice, with their heads to the ground, and said, 'O Son of Heaven, we venture respectfully to declare our sentiments. Great Heaven altered its decree which the great House of Yin had received, and Wăn and Wû of our Kâu grandly received the same, and carried it out, manifesting their kindly government in the western regions. His recently ascended majesty,* rewarding and punishing exactly in accordance with what was right, fully established their achievements, and transmitted this happy state to his successors. Do you, O king, now be reverent. Maintain your armies in great order, and do not allow the rarely equalled appointment of our high ancestors to come to harm.'*

2. The king spoke to the following effect:—'Ye princes of the various states, chiefs of the Hâu, Tien, Nan, and Wei domains, I, K'ao, the One man, make an announcement in return (for your advice). The former rulers, Wăn and Wû, were greatly just and enriched (the people). They did not occupy themselves to find out people's crimes. Pushing to the utmost and maintaining an entire impartiality and sincerity, they became gloriously illustrious all under heaven. Then they had officers brave as bears and

grisly bears, and ministers of no double heart, who (helped them) to maintain and regulate the royal House. Thus (did they receive) the true favouring decree from God, and thus did great Heaven approve of their ways, and give them the four quarters (of the land).^{*} Then they appointed and set up principalities, and established bulwarks (to the throne), for the sake of us, their successors. Now do ye, my uncles¹, I pray you, consider with one another, and carry out the service which the dukes, your predecessors, rendered to my predecessors. Though your persons be distant, let your hearts be in the royal House. Enter thus into my anxieties, and act in accordance with them, so that I, the little child, may not be put to shame.'

3. The dukes and all the others, having heard this charge, bowed to one another, and hastily withdrew. The king put off his cap, and assumed again his mourning dress.

BOOK XXIV. THE CHARGE TO THE DUKE OF PĪ.

THE king who delivers the charge in this Book was Khang, and the only events of his reign of twenty-six years of which we have any account in the Shû and in Sze-mâ K'ien are it and the preceding announcement.

Book xxi relates the appointment of K'ün-khân, by king K'hang, to the charge which was now, on his death, entrusted to the duke of PĪ, who is mentioned at the commencement of 'the Testamentary Charge.' By the labours of the duke of K'âu and K'ün-khân a considerable change had been effected in the character of the people of Yin, who had been transferred to the new capital and its neighbourhood; and king Khang now

¹ Meaning the various princes, and especially those bearing the same surname as himself.

appoints the duke of Pî to enter into and complete their work.

After an introductory paragraph, the charge, in three chapters, occupies all the rest of the Book. The first of them speaks of what had been accomplished, and the admirable qualities of the duke which fitted him to accomplish what remained to be done. The second speaks of the special measures which were called for by the original character and the altered character of the people. The third dwells on the importance of the charge, and stimulates the duke, by various considerations, to address himself to fulfil it effectually.

1. In the sixth month of his twelfth year, the day of the new moon's appearance was Kǎng-wû, and on Zǎn-shǎn, the third day after, the king walked in the morning from the honoured capital of Kâu to Fǎng¹, and there, with reference to the multitudes of Kǎng-kâu², gave charge to the duke of Pî³ to protect and regulate the eastern border.

2. The king spoke to the following effect :—
'Oh! Grand-Master, it was when Wǎn and Wû had diffused their great virtue all under heaven, that they therefore received the appointment which Yin had enjoyed.* The duke of Kâu acted as assistant to my royal predecessors, and tranquillized and established their kingdom. Cautiously did he deal with the refractory people of Yin, and removed them to the city of Lo, that they might be quietly near the royal House, and be transformed by its

¹ That is, he went from Hào, founded by king Wû, to Fǎng the capital of Wǎn. The king wished to give his charge in the temple of king Wǎn, because the duke of Pî had been one of his ministers.

² Kǎng-kâu was a name of the new or 'lower' capital of Lo, perhaps as giving 'completion,' or full establishment to the dynasty.

³ The duke of Pî had succeeded the duke of Kâu, in the office of Grand-Master, under king Kǎng.

lessons. Six and thirty years have elapsed¹; the generation has been changed; and manners have altered. Through the four quarters of the land there is no occasion for anxiety, and I, the One man, enjoy repose.

‘The prevailing ways now tend to advancement and now to degeneracy, and measures of government must be varied according to the manners (of the time). If you (now) do not manifest your approval of what is good, the people will not be led to stimulate themselves in it. But your virtue, O duke, is strenuous, and you are cautiously attentive to the smallest things. You have been helpful to and brightened four reigns²; with deportment all correct leading on the inferior officers, so that there is not one who does not reverently take your words as a law. Your admirable merits were many (and great) in the times of my predecessors; I, the little child, have but to let my robes hang down, and fold my hands, while I look up for the complete effect (of your measures).’

3. The king said, ‘Oh! Grand-Master, I now reverently charge you with the duties of the duke of *Káu*. Go! Signalize the good, separating the bad from them; give tokens of your approbation in their neighbourhoods³, making it ill for the evil by such distinction of the good, and thus establishing the influence and reputation (of their virtue). When the people will not obey your lessons and statutes,

¹ Probably, from the death of the duke of *Káu*.

² Those of *Wán*, *Wú*, *K’áng*, and the existing reign of *Khang*.

³ Setting up, that is, some conspicuous monument, with an inscription testifying his approbation. All over China, at the present day, such testimonials are met with.

mark off the boundaries of their hamlets, making them fear (to do evil), and desire (to do good). Define anew the borders and frontiers, and be careful to strengthen the guard-posts through the territory, in order to secure tranquillity (within) the four seas. In measures of government to be consistent and constant, and in proclamations a combination of completeness and brevity, are valuable. There should not be the love of what is extraordinary. Among the customs of Shang was the flattery of superiors; sharp-tonguedness was the sign of worth. The remains of these manners are not yet obliterated. Do you, O duke, bear this in mind. I have heard the saying, "Families which have for generations enjoyed places of emolument seldom observe the rules of propriety. They become dissolute, and do violence to virtue, setting themselves in positive opposition to the way of Heaven. They ruin the formative principles of good; encourage extravagance and display; and tend to carry all (future ages) on the same stream with them." Now the officers of Yin had long relied on the favour which they enjoyed. In the confidence of their prideful extravagance they extinguished their (sense of) righteousness. They displayed before men the beauty of their robes, proud, licentious, arrogant, and boastful;—the natural issue was that they should end in being thoroughly bad. Although their lost minds have (in a measure) been recovered, it is difficult to keep them under proper restraint. If with their property and wealth they can be brought under the influence of instruction, they may enjoy lengthened years, virtue, and righteousness!—these are the great lessons. If you do not follow

in dealing with them these lessons of antiquity, wherein will you instruct them?’

4. The king said, ‘Oh! Grand-Master, the security or the danger of the kingdom depends on those officers of Yin. If you are not (too) stern with them nor (too) mild, their virtue will be truly cultivated. The duke of *Kâu* exercised the necessary caution at the beginning (of the undertaking); *Kün-khân* displayed the harmony proper to the middle of it; and you, O duke, can bring it at last to a successful issue. You three princes will have been one in aim, and will have equally pursued the proper way. The penetrating power of your principles, and the good character of your measures of government, will exert an enriching influence on the character of the people, so that the wild tribes, with their coats buttoning on the left¹, will all find their proper support in them, and I, the little child, will long enjoy much happiness. Thus, O duke, there in *Khăng-kâu* will you establish for ever the power (of *Kâu*), and you will have an inexhaustible fame. Your descendants will follow your perfect pattern, governing accordingly.

‘Oh! do not say, “I am unequal to this;” but exert your mind to the utmost. Do not say, “The people are few;” but attend carefully to your business. Reverently follow the accomplished achievements of the former kings, and complete the excellence of the government of your predecessors.’

¹ Confucius once praised Kwan Kung, a great minister of *Khî*, in the seventh century B.C., for his services against the wild tribes of his time, saying, that but for him they in China would be wearing their hair dishevelled, and buttoning the lappets of their coats on the left side. See *Analects*, XIV, xviii. The long robes and jackets of the Chinese generally stretch over on the right side of the chest, and are there buttoned.

BOOK XXV. THE KÜN-YÂ.

ACCORDING to the note in the Preface to the Shŭ, the charge delivered in this Book to Kün-yâ, or possibly 'the prince Yâ,' was by king Mû; and its dictum is not challenged by any Chinese critic. The reign of king Khâo, who succeeded to Khang, is thus passed over in the documents of the Shŭ. Mû was the son and successor of Khâo, and reigned from B.C. 1001 to 947.

Kün-yâ's surname is not known. He is here appointed to be Minister of Instruction, and as it is intimated that his father and grandfather had been in the same office, it is conjectured that he was the grandson of the earl of Zui, who was Minister of Instruction at the beginning of the reign of king Khang.

The Book is short, speaking of the duties of the office, and stimulating Yâ to the discharge of them by considerations drawn from the merits of his forefathers, and the services which he would render to the dynasty and his sovereign.

1. The king spoke to the following effect:—
 'Oh! Kün-yâ, your grandfather and your father, one after the other, with a true loyalty and honesty, laboured in the service of the royal House, accomplishing a merit that was recorded on the grand banner¹. I, the little child, have become charged by inheritance with the line of government transmitted from Wăn and Wû, from Khăng and Khang; I also keep thinking of their ministers who aided them in the good government of the kingdom; the trembling anxiety of my mind makes me feel as if I were treading on a tiger's tail, or walking upon spring ice. I now give you charge to assist me;

¹ The grand banner was borne aloft when the king went to sacrifice. There were figures of the sun and moon on it, and dragons lying along its breadth, one over the other, head above tail. The names of meritorious ministers were inscribed on it during their lifetime, preparatory to their sharing in the sacrifices of the ancestral temple after their death.

be as my limbs to me, as my heart and backbone. Continue their old service, and do not disgrace your grandfather and father.

‘Diffuse widely (the knowledge of) the five invariable relations (of society), and reverently seek to produce a harmonious observance of the duties belonging to them among the people. If you are correct in your own person, none will dare to be but correct. The minds of the people cannot attain to the right mean (of duty);—they must be guided by your attaining to it. In the heat and rains of summer, the inferior people may be described as murmuring and sighing. And so it is with them in the great cold of winter. How great are their hardships! Think of their hardships in order to seek to promote their ease; and the people will be tranquil. Oh! how great and splendid were the plans of king Wăn! How greatly were they carried out by the energy of king Wû! All in principle correct, and deficient in nothing, they are for the help and guidance of us their descendants. Do you with reverence and wisdom carry out your instructions, enabling me to honour and follow the example of my (immediate) predecessors, and to respond to and display the bright decree conferred on Wăn and Wû;—so shall you be the mate of your by-gone fathers.’

2. The king spoke to the following effect:—
‘Kün-yä, do you take for your rule the lessons afforded by the courses of your excellent fathers. The good or the bad order of the people depends on this. You will thus follow the practice of your grandfather and father, and make the good government of your sovereign illustrious.’

BOOK XXVI. THE CHARGE TO *K'hiung*.

THE charge recorded here, like that in the last Book, is assigned to king Mû. It was delivered on the appointment of a *K'hiung* or Po-*k'hiung* (that is, the eldest *K'hiung*, the eldest brother in his family) to be High Chamberlain. Of this *K'hiung* we know nothing more than we learn from the Shŭ. He was no high dignitary of state. That the charge to him found a place in the Shŭ, we are told, shows how important it was thought that men in the lowest positions, yet coming into contact with the sovereign, should possess correct principles and an earnest desire for his progress in intelligence and virtue.

King Mû represents himself as conscious of his own incompetencies, and impressed with a sense of the high duties devolving on him. His predecessors, much superior to himself, were yet greatly indebted to the aid of the officers about them ;—how much more must this be the case with him !

He proceeds to appoint *K'hiung* to be the High Chamberlain, telling him how he should guide correctly all the other servants about the royal person, so that none but good influences should be near to act upon the king ;—telling him also the manner of men whom he should employ, and the care he should exercise in the selection of them.

The king spoke to the following effect :—‘ Po-*k'hiung*, I come short in virtue, and have succeeded to the former kings, to occupy the great throne. I am fearful, and conscious of the peril (of my position). I rise at midnight, and think how I can avoid falling into errors. Formerly Wăn and Wû were endowed with all intelligence, august and sage, while their ministers, small and great, all cherished loyalty and goodness. Their servants, charioteers, chamberlains, and followers were all men of correctness ; morning and evening waiting on their sovereign’s wishes, or supplying his deficiencies. (Those kings), going out and coming in, rising up and sitting

down, were thus made reverent. Their every warning or command was good. The people yielded a reverent obedience, and the myriad regions were all happy. But I, the One man, am destitute of goodness, and really depend on the officers who have places about me to help my deficiencies, applying the line to my faults, and exhibiting my errors, thus correcting my bad heart, and enabling me to be the successor of my meritorious predecessors.

‘Now I appoint you to be High Chamberlain, to see that all the officers in your department and my personal attendants are upright and correct, that they strive to promote the virtue of their sovereign, and together supply my deficiencies. Be careful in selecting your officers. Do not employ men of artful speech and insinuating looks, men whose likes and dislikes are ruled by mine, one-sided men and flatterers; but employ good men. When these household officers are correct, the sovereign will be correct; when they are flatterers, the sovereign will consider himself a sage. His virtue or his want of it equally depends on them. Cultivate no intimacy with flatterers, nor get them to do duty for me as my ears and eyes;—they will lead their sovereign to disregard the statutes of the former kings. If you choose the men not for their personal goodness, but for the sake of their bribes, their offices will be made of no effect, your great want of reverence for your sovereign will be apparent, and I will hold you guilty.’

The king said, ‘Oh! be reverent! Ever help your sovereign to follow the regular laws of duty (which he should exemplify).’

BOOK XXVII.

THE MARQUIS OF LÜ ON PUNISHMENTS.

THE charge or charges recorded in this Book were given in the hundredth year of the king's age. The king, it is again understood, was Mû; and the hundredth year of his age would be B. C. 952. The title of the Book in Chinese is simply 'Lü's Punishments,' and I conclude that Lü, or the marquis of Lü, was a high minister who prepared, by the king's orders, a code of punishments for the regulation of the kingdom, in connexion with the undertaking, or the completion, of which the king delivered to his princes and judges the sentiments that are here preserved.

The common view is that Lü is the name of a principality, the marquis of which was Mû's Minister of Crime. Where it was is not well known, and as the Book is quoted in the *Lî Kî* several times under the title of 'Fû on Punishments,' it is supposed that Lü and Fû (a small marquisate in the present Ho-nan) were the same.

The whole Book is divided into seven chapters. The first is merely a brief introduction, the historiographer's account of the circumstances in which king Mû delivered his lessons. Each of the other chapters begins with the words, 'The king said.' The first two of them are an historical resumé of the lessons of antiquity on the subject of punishments, and an inculcation on the princes and officers of justice to give heed to them, and learn from them. The next two tell the princes of the diligence and carefulness to be employed in the use of punishments, and how they can make punishments a blessing. The fourth chapter treats principally of the commutation or redemption of punishments, and has been very strongly condemned by critics and moralists. They express their surprise that such a document should be in the Shû, and, holding that the collection was made by Confucius, venture to ask what the sage meant by admitting it. There is, in fact, no evidence that the redemption of punishments on the scale here laid down, existed in China before Mû's time. It has entered, however, into the penal code of every subsequent dynasty. Great official corruption and depravation of the general morality would seem to be inseparable from such a system. The fifth chapter returns again to the

reverence with which punishments should be employed; and the sixth and last is addressed to future generations, and directs them to the ancient models, in order that punishments may never be but a blessing to the kingdom.

A Chinese critic says that throughout the Book 'virtue' and 'exact adaptation' are the terms that carry the weight of the meaning. Virtue must underlie the use of punishments, of which their exact adaptation will be the manifestation.

1. In reference to the charge to (the marquis of) Lü:—When the king had occupied the throne till he reached the age of a hundred years, he gave great consideration to the appointment of punishments, in order to deal with (the people of) the four quarters.

2. The king said, 'According to the teachings of ancient times, *K'ih Yü* was the first to produce disorder, which spread among the quiet, orderly people, till all became robbers and murderers, owl-like and yet self-complacent in their conduct, traitors and villains, snatching and filching, dissemblers and oppressors¹.

'Among the people of Miáo, they did not use the power of goodness, but the restraint of punishments. They made the five punishments engines of oppression², calling them the laws. They

¹ *K'ih Yü*, as has been observed in the Introduction, p. 27, is the most ancient name mentioned in the *Shü*, and carries us back, according to the Chinese chronologists, nearly to the beginning of the twenty-seventh century B. C. P. Gaubil translates the characters which appear in the English text here as 'According to the teachings of ancient times' by 'Selon les anciens documents,' which is more than the Chinese text says.—It is remarkable that at the commencement of Chinese history, Chinese tradition placed a period of innocence, a season when order and virtue ruled in men's affairs.

² I do not think it is intended to say here that 'the five punishments' were invented by the chiefs of the Miáo; but only that

slaughtered the innocent, and were the first also to go to excess in cutting off the nose, cutting off the ears, castration, and branding. All who became liable to those punishments were dealt with without distinction, no difference being made in favour of those who could offer some excuse. The people were gradually affected by this state of things, and became dark and disorderly. Their hearts were no more set on good faith, but they violated their oaths and covenants. The multitudes who suffered from the oppressive terrors, and were (in danger of) being murdered, declared their innocence to Heaven. God surveyed the people, and there was no fragrance of virtue arising from them, but the rank odour of their (cruel) punishments.*

‘The great Tî¹ compassionated the innocent multitudes that were (in danger of) being murdered, and made the oppressors feel the terrors of his majesty. He restrained and (finally) extinguished the people of Miáo, so that they should not con-

these used them excessively and barbarously. From two passages in the Canon of Shun, we conclude that that monarch was acquainted with ‘the five great inflictions or punishments,’ and gave instructions to his minister Káo-yáo as to their use.

¹ Here is the name—Hwang Tî—by which the sovereigns of China have been styled from B.C. 221, since the emperor of K’in, on his extinction of the feudal states, enacted that it should be borne by himself and his descendants. I have spoken of the meaning of Tî and of the title Hwang Tî in the note on the translation of the Shū appended to the Preface. There can be no doubt that it was Shun whom king Mû intended by the name. A few sentences further on, the mention of Po-î and Yü leads us to the time subsequent to Yáo, and there does not appear to be any change of subject in the paragraph. We get from this Book a higher idea of the power of the Miáo than from the Books of Part II.

tinue to future generations. Then he commissioned *Khung* and *Lî*¹ to make an end of the communications between earth and heaven; and the descents (of spirits) ceased¹. From the princes down to the

¹ *Khung* and *Lî* are nowhere met with in the previous parts of the *Shû*, nor in any other reliable documents of history, as officers of *Shun*. *Zhâi K'ân* and others would identify them with the *Hsi* and *Ho* of the Canon of *Yâo*, and hold those to have been descended from a *Khung* and a *Lî*, supposed to belong to the time of *Shâo Hâo* in the twenty-sixth century B.C.

Whoever they were, the duty with which they were charged was remarkable. In the *Narratives of the States* (a book of the *K'au* dynasty), we find a conversation on it, during the lifetime of Confucius, between king *K'iao* of *K'û* (B.C. 515-489) and one of his ministers, called *Kwan Yî-fû*. 'What is meant,' asked the king, 'by what is said in one of the Books of *K'au* about *Khung* and *Lî*, that they really brought it about that there was no intercourse between heaven and earth? If they had not done so, would people have been able to 'ascend to heaven?'' The minister replied that that was not the meaning at all, and gave his own view of it at great length, to the following effect.—Anciently, the people attended to the discharge of their duties to one another, and left the worship of spiritual beings—the seeking intercourse with them, and invoking and effecting their descent on earth—to the officers who were appointed for that purpose. In this way things proceeded with great regularity. The people minded their own affairs, and the spirits minded theirs. Tranquillity and prosperity were the consequence. But in the time of *Shâo Hâo*, through the lawlessness of *K'î-lî*, a change took place. The people intruded into the functions of the regulators of the spirits and their worship. They abandoned their duties to their fellow men, and tried to bring down spirits from above. The spirits themselves, no longer kept in check and subjected to rule, made their appearance irregularly and disastrously. All was confusion and calamity, when *Kwan Hsü* (B.C. 2510-2433) took the case in hand. He appointed *Khung*, the Minister of the South, to the superintendency of heavenly things, to prescribe the laws for the spirits, and *Lî*, the Minister of Fire, to the superintendency of earthly things, to prescribe the rules for the people. In this way both spirits and people were

inferior officers, all helped with clear intelligence (the spread of) the regular principles of duty, and the solitary and widows were no longer overlooked. The great Tî with an unprejudiced mind carried his enquiries low down among the people, and the solitary and widows laid before him their complaints against the Mião. He awed the people by the majesty of his virtue, and enlightened them by its brightness. He thereupon charged the three princely (ministers)¹ to labour with compassionate anxiety in the people's behalf. Po-f delivered his statutes to prevent the people from rendering themselves obnoxious to punishment; Yü reduced to order the water and the land, and presided over the naming of the hills and rivers; Kî spread abroad a knowledge of agriculture, and (the people) extensively cultivated the admirable grains. When the three princes had accomplished their work, it was abundantly well with the people. The Minister of Crime² exercised among them the restraint of

brought back to their former regular courses, and there was no unhallowed interference of the one with the other. This was the work described in the text. But subsequently the chief of San-miào showed himself a Kîu-lî redivivus, till Yáo called forth the descendants of K'ung and Lî, who had not forgotten the virtue and functions of their fathers, and made them take the case in hand again.

According to Yî-fû's statements K'ung's functions were those of the Minister of Religion, and Lî's those of the Minister of Instruction; but Hsî and Ho were simply Ministers of Astronomy and the Calendar, and their descendants continue to appear as such in the Shû to the reign of Kung Khang, long after we know that men of other families were appointed to the important ministries of K'ung and Lî.

¹ Those immediately mentioned,—Po-f, Yü, and Kî. See the Canon of Shun and other Books of Part II.

² Káo-yáo.

punishment in exact adaptation to each offence, and taught them to reverence virtue. The greatest gravity and harmony in the sovereign, and the greatest intelligence in those below him, thus shining forth to all quarters (of the land), all were rendered diligent in cultivating their virtue. Hence, (if anything more were wanted), the clear adjudication of punishments effected the regulation of the people, and helped them to observe the regular duties of life. The officers who presided over criminal cases executed the law (fearlessly) against the powerful, and (faithfully) against the wealthy. They were reverent and cautious. They had no occasion to make choice of words to vindicate their conduct. The virtue of Heaven was attained to by them; from them was the determination of so great a matter as the lives (of men). In their low sphere they yet corresponded (to Heaven) and enjoyed (its favour).’ *

3. The king said, ‘Ah! you who direct the government and preside over criminal cases through all the land, are you not constituted the shepherds of Heaven?’ * To whom ought you now to look as your pattern? Is it not to Po-ti, spreading among the people his lessons to avert punishments? And from whom ought you now to take warning? Is it not from the people of Miáo, who would not examine into the circumstances of criminal cases, and did not make choice of good officers that should see to the right apportioning of the five punishments, but chose the violent and bribe-snatchers, who determined and administered them, so as to oppress the innocent, until God would no longer hold them guiltless, and sent down calamity on

Miao, when the people had no plea to allege in mitigation of their punishment, and their name was cut off from the world?'*

4. The king said, 'Oh! lay it to heart. My uncles, and all ye, my brethren and cousins, my sons and my grandsons¹, listen all of you to my words, in which, it may be, you will receive a most important charge. You will only tread the path of satisfaction by being daily diligent;—do not have occasion to beware of the want of diligence. Heaven, in its wish to regulate the people, allows us for a day to make use of punishments.* Whether crimes have been premeditated, or are unpremeditated, depends on the parties concerned;—do you (deal with them so as to) accord with the mind of Heaven, and thus serve me, the One man. Though I would put them to death, do not you therefore put them to death; though I would spare them, do not you therefore spare them. Reverently apportion the five punishments, so as fully to exhibit the three virtues². Then shall I, the One man, enjoy felicity; the people will look to you as their sure dependance; the repose of such a state will be perpetual.'

5. The king said, 'Ho! come, ye rulers of states and territories³, I will tell you how to make punishments a blessing. It is yours now to give repose to the people;—what should you be most concerned

¹ Meaning all the princes of the same surname as himself. As he was a hundred years old, there might well be among them those who were really his sons and grandsons.

² 'The three virtues' are those of the Great Plan; those of 'correctness and straightforwardness,' of 'strong government,' and of 'mild government.'

³ Meaning all the princes;—of the king's own and other surnames.

about the choosing of? Should it not be the proper men? What should you deal with the most reverently? Should it not be punishments? What should you calculate the most carefully? Should it not be to whom these will reach?

‘When both parties are present, (with their documents and witnesses) all complete, let the judges listen to the fivefold statements that may be made¹. When they have examined and fully made up their minds on those, let them adjust the case to one of the five punishments. If the five punishments do not meet it, let them adjust it to one of the five redemption-fines; and if these, again, are not sufficient for it, let them reckon it among the five cases of error².

‘In (settling) the five cases of error there are evils (to be guarded against);—being warped by the influence of power, or by private grudge, or by female solicitation, or by bribes, or by applications. Any one of these things should be held equal to the crime (before the judges). Do you carefully examine, and prove yourselves equal to (every difficulty).

‘When there are doubts as to the infliction of any of the five punishments, that infliction should be forborne. When there are doubts as to the

¹ That is, the statements, with the evidence on both sides, whether incriminating or exculpating. They are called fivefold, as the case might have to be dealt with by one or other of ‘the five punishments.’

² That is, the offences of inadvertence. What should ensue on the adjudication of any case to be so ranked does not appear. It would be very leniently dealt with, and perhaps pardoned. In ‘the Counsels of Yü,’ Káo-yáo says to Shun, ‘You pardon inadvertent offences however great.’

infliction of any of the five fines, it should be forborne. Do you carefully examine, and prove yourselves equal to overcome (every difficulty). When you have examined and many things are clear, yet form a judgment from studying the appearance of the parties. If you find nothing out on examination, do not listen (to the case any more). In everything stand in awe of the dread majesty of Heaven.*

‘When, in a doubtful case, the punishment of branding is forborne, the fine to be laid on instead is 600 ounces (of copper); but you must first have satisfied yourselves as to the crime. When the case would require the cutting off the nose, the fine must be double this;—with the same careful determination of the crime. When the punishment would be the cutting off the feet, the fine must be 3000 ounces;—with the same careful determination of the crime. When the punishment would be castration¹, the fine must be 3600 ounces;—with the same determination. When the punishment would be death, the fine must be 6000 ounces;—with the same determination. Of crimes that may be redeemed by the fine in lieu of branding there are 1000; and the same number of those that would otherwise incur cutting off the nose. The fine in lieu of cutting off the feet extends to 500 cases; that in lieu of castration, to 300; and that in lieu of death, to 200. Altogether, set against the five punishments, there are 3000 crimes. (In the case of others not exactly defined), you must class them with the (next) higher or (next) lower offences, not

¹ Or solitary confinement in the case of a female.

admitting assumptive and disorderly pleadings, and not using obsolete laws. Examine and act lawfully, judging carefully, and proving yourselves equal (to every difficulty).

‘Where the crime should incur one of the higher punishments, but there are mitigating circumstances, apply to it the next lower. Where it should incur one of the lower punishments, but there are aggravating circumstances, apply to it the next higher. The light and heavy fines are to be apportioned (in the same way) by the balance of circumstances. Punishments and fines should (also) be light in one age, and heavy in another. To secure uniformity in this (seeming) irregularity, there are certain relations of things (to be considered), and the essential principle (to be observed).

‘The chastisement of fines is short of death, yet it will produce extreme distress. They are not (therefore) persons of artful tongues who should determine criminal cases, but really good persons, whose awards will hit the right mean. Examine carefully where there are any discrepancies in the statements; the view which you were resolved not to follow, you may see occasion to follow; with compassion and reverence settle the cases; examine carefully the penal code, and deliberate with all about it, that your decisions may be likely to hit the proper mean and be correct;—whether it be the infliction of a punishment or a fine, examining carefully and mastering every difficulty. When the case is thus concluded, all parties will acknowledge the justice of the sentence; and when it is reported, the sovereign will do the same. In sending up reports of cases, they must be full and complete.

If a man have been tried on two counts, his two punishments (must be recorded).'

6. The king said, 'Oh! let there be a feeling of reverence. Ye judges and princes, of the same surname with me, and of other surnames, (know all) that I speak in much fear. I think with reverence of the subject of punishment, for the end of it is to promote virtue. Now Heaven, wishing to help the people, has made us its representatives here below.* Be intelligent and pure in hearing (each) side of a case. The right ordering of the people depends on the impartial hearing of the pleas on both sides;—do not seek for private advantage to yourselves by means of those pleas. Gain (so) got by the decision of cases is no precious acquisition; it is an accumulation of guilt, and will be recompensed with many judgments:—you should ever stand in awe of the punishment of Heaven.* It is not Heaven that does not deal impartially with men, but men ruin themselves. If the punishment of Heaven were not so extreme, nowhere under the sky would the people have good government.'

7. The king said, 'Oh! ye who shall hereafter inherit (the dignities and offices of) the present time, to whom are ye to look for your models? Must it not be to those who promoted the virtue belonging to the unbiassed nature of the people? I pray you give attention to my words. The wise men (of antiquity) by their use of punishments obtained boundless fame. Everything relating to the five punishments exactly hit with them the due mean, and hence came their excellence. Receiving from your sovereigns the good multitudes, behold in the case of those men punishments made felicitous!'

BOOK XXVIII.

THE CHARGE TO THE MARQUIS WÂN.

THE king to whom this charge is ascribed was Phing (B. C. 770-719).

Between him and Mû there was thus a period of fully two centuries, of which no documents are, or ever were, in the collection of the Shû. The time was occupied by seven reigns, the last of which was that of Nieh, known as king Yü, a worthless ruler, and besotted in his attachment to a female favourite, called Pão-sze. For her sake he degraded his queen, and sent their son, Î-khiû, to the court of the lord of Shăn, her father, 'to learn good manners.' The lord of Shăn called in the assistance of some barbarian tribes, by which the capital was sacked, and the king slain; and with him ended the sway of 'the Western Kâu.' Several of the feudal princes went to the assistance of the royal House, drove away the barbarians, brought back Î-khiû from Shăn, and hailed him as king. He is known as king Phing, 'the Tranquillizer.' His first measure was to transfer the capital from the ruins of Hào to Lo, thus fulfilling at length, but under disastrous circumstances, the wishes of the duke of Kâu; and from this time (B. C. 770) dates the history of 'the Eastern Kâu.'

Among king Phing's early measures was the rewarding the feudal lords to whom he owed his throne. The marquis of K'in was one of them. His name was K'hiû, and that of Î-ho, by which he is called in the text, is taken as his 'style,' or designation assumed by him on his marriage. Wân, 'the Accomplished,' was his sacrificial title. The lords of K'in were descended from king Wû's son, Yü, who was appointed marquis of Thang, corresponding to the present department of Thái-yüan, in Shan-hsi. The name of Thang was afterwards changed into K'in. The state became in course of time one of the largest and most powerful in the kingdom.

The charge in this Book is understood to be in connexion with Wân's appointment to be president or chief of several of the other princes. The king begins by celebrating the virtues and happy times of kings Wân and Wû, and the services rendered by the worthy ministers of subsequent reigns. He contrasts with this the misery and distraction of his own times, deploring his want of wise counsellors and helpers, and praising the

marquis for the services which he had rendered. He then concludes with the special charge by which he would reward the prince's merit in the past, and stimulate him to greater exertions in the future.

1. The king spoke to the following effect:—
'Uncle Î-ho, how illustrious were Wăn and Wû! Carefully did they make their virtue brilliant, till it rose brightly on high, and the fame of it was widely diffused here below. Therefore God caused his favouring decree to light upon king Wăn.* There were ministers also (thereafter), who aided and illustriously served their sovereigns, following and carrying out their plans, great and small, so that my fathers sat tranquilly on the throne.

'Oh! an object of pity am I, who am (but as) a little child. Just as I have succeeded to the throne, Heaven has severely chastised me.* Through the interruption of the (royal) bounties that ceased to descend to the inferior people, the invading barbarous tribes of the west have greatly (injured) our kingdom. Moreover, among the managers of my affairs there are none of age and experience and distinguished ability in their offices. I am (thus) unequal (to the difficulties of my position), and say to myself, "My grand-uncles and uncles, you ought to compassionate my case." Oh! if there were those who could establish their merit in behalf of me, the One man, I might long enjoy repose upon the throne.

'Uncle Î-ho, you render still more glorious your illustrious ancestor. You were the first to imitate the example of Wăn and Wû, collecting (the scattered powers), and continuing (the all but broken line of) your sovereign. Your filial piety goes back

to your accomplished ancestor, (and is equal to his.) You have done much to repair my (losses), and defend me in my difficulties, and of you, being such, I am full of admiration.'

2. The king said, 'Uncle Í-ho, return home, survey your multitudes, and tranquillize your state. I reward you with a jar of spirits, distilled from the black millet, and flavoured with odoriferous herbs¹, with a red bow, and a hundred red arrows²; with a black bow, and a hundred black arrows; and with four horses. Go, my uncle. Show kindness to those that are far off, and help those who are near at hand; cherish and secure the repose of the inferior people; do not idly seek your ease; exercise an inspection and (benign) compassion in your capital (and all your borders);—thus completing your illustrious virtue.'

BOOK XXIX. THE SPEECH AT PÍ.

THE Speech at Pí carries us back from the time of Phing to that of king K'häng. In the Preface to the Shû it is attributed to Po-k'in, the son of the duke of K'âu; and there is a general acquiescence of tradition and critics in this view. We may account for its position out of the chronological order from

¹ Compare king K'häng's gift to the duke of K'âu, in the Announcement concerning Lo, ch. 6.

² The conferring on a prince of a bow and arrows, invested him with the power of punishing throughout the states within his jurisdiction all who were disobedient to the royal commands, but not of taking life without first reporting to the court. The gift was also a tribute to the merit of the receiver. See the Book of Poetry, II, iii, ode 1.

the Book's being the record not of any royal doings, but of the words of the ruler of a state.

The speech has reference to some military operations against the wild tribes on the Hwâi river and in other parts of the province of Hsü; and we have seen that they were in insurrection many times during the reign of K'hang. We thus cannot tell exactly the year in which the speech was delivered. Po-khin presided over his state of Lû for the long period of fifty-three years, and died B. C. 1063.

The name of Pî is retained in the district still so called of the department of Í-kâu. At first it was an independent territory, but attached to Lû, and under the jurisdiction of its marquises, by one of whom it had been incorporated with Lû before the time of Confucius.

Po-khin appears at the head of his host, approaching the scene of active operations. Having commanded silence, he issues his orders, first, that the soldiers shall have their weapons in good order; next, that the people of the country shall take care of the oxen and horses of the army; further, that the troops on no account leave their ranks or go astray; and finally, he names the day when he will commence operations against the enemy, and commands all the requisite preparations to be made.

The duke said, 'Ah! ye men, make no noise, but listen to my commands. We are going (to punish) those wild tribes of the Hwâi and of Hsü, which have risen up together.

'Have in good repair your buff coats and helmets; have the laces of your shields well secured;—presume not to have any of them but in perfect order. Prepare your bows and arrows; temper your lances and spears; sharpen your pointed and edged weapons;—presume not to have any of them but in good condition.

'We must now largely let the oxen and horses loose, and not keep them in enclosures;—(ye people), do you close your traps and fill up your pitfalls, and do not presume to injure any of the animals (so let loose). If any of them be injured,

you shall be dealt with according to the regular punishments.

‘When the horses or cattle are seeking one another, or when your followers, male or female, abscond, presume not to leave the ranks to pursue them. But let them be carefully returned. I will reward you (among the people) who return them according to their value. But if you leave your places to pursue them, or if you who find them do not restore them, you shall be dealt with according to the regular punishments.

‘And let none of you presume to commit any robbery or detain any creature that comes in your way, to jump over enclosures and walls to steal (people’s) horses or oxen, or to decoy away their servants or female attendants. If you do so, you shall be dealt with according to the regular punishments.

‘On the day *Kíá-hsü* I will take action against the hordes of *Hsü*;—prepare the roasted grain and other provisions, and presume not to have any deficiency. If you have, you shall suffer the severest punishment. Ye men of *Lû*, from the three environing territories and the three tracts beyond¹,

¹ Outside the capital city was an environing territory called the *Kíáo*, and beyond the *Kíáo* was the *Sui*. The *Kíáo* of the royal domain was divided again into six *Hsiang*, which furnished the six royal hosts, while the *Sui* beyond furnished subsidiary hosts. The *Kíáo* and *Sui* of a large state furnished three hosts, and if need were, subsidiary battalions. The language of the text is equivalent, I conceive, simply to ‘ye men of the army of *Lû*’; but, as P. Gaubil observes, it is difficult at the present day to get correct ideas of what is meant by the designations, and to account for the mention of three *Kíáo* and three *Sui*.

be ready with your posts and planks. On *Kiâ-hsü* I will commence my intrenchments;—dare not but be provided with a supply of these. (If you be not so provided), you shall be subjected to various punishments, short only of death. Ye men of *Lû*, from the three environing territories and the three tracts beyond, be ready with the forage, and do not dare to let it be other than abundant. (If you do), you shall suffer the severest punishment.'

BOOK XXX.

THE SPEECH OF (THE MARQUIS OF) *KHIN*.

THE state of *Khin*, at the time to which this speech belongs, was one of the most powerful in the kingdom, and already giving promise of what it would grow to. Ultimately, one of its princes overthrew the dynasty of *Kâu*, and brought feudal China to an end. Its earliest capital was in the present district of *Khâng-shui*, *Khin Kâu*, *Kan-sû*.

Khin and *Kin* were engaged together in B. C. 631 in besieging the capital of *Käng*, and threatened to extinguish that state. The marquis of *Khin*, however, was suddenly induced to withdraw his troops, leaving three of his officers in friendly relations with the court of *Käng*, and under engagement to defend the state from aggression. These men played the part of spies in the interest of *Khin*, and in B. C. 629, one of them, called *Khi-jze*, sent word that he was in charge of one of the gates, and if an army were sent to surprise the capital, *Käng* might be added to the territories of *Khin*. The marquis—known in history as duke *Mû*—laid the matter before his counsellors. The most experienced of them—*Pâi-lî Hsî* and *Khien-shû*—were against taking advantage of the proposed treachery; but the marquis listened rather to the promptings of ambition; and the next year he sent a large force, under his three ablest commanders, hoping to find *Käng* unprepared for any resistance. The attempt, however, failed; and the army, on its way back to

K'hin, was attacked by the forces of *K'in*, and sustained a terrible defeat. It was nearly annihilated, and the three commanders were taken prisoners.

The marquis of *K'in* was intending to put these captives to death, but finally sent them to *K'hin*, that duke Mû might himself sacrifice them to his anger for their want of success. Mû, however, did no such thing. He went from his capital to meet the disgraced generals, and comforted them, saying that the blame of their defeat was due to himself, who had refused to listen to the advice of his wise counsellors. Then also, it is said, he made the speech here preserved for the benefit of all his ministers, describing the good and bad minister, and the different issues of listening to them, and deploring how he had himself foolishly rejected the advice of his aged counsellors, and followed that of new men ;—a thing which he would never do again.

The duke¹ said, 'Ah ! my officers, listen to me without noise. I solemnly announce to you the most important of all sayings. (It is this which) the ancients have said, " Thus it is with all people,—they mostly love their ease. In reproving others there is no difficulty, but to receive reproof, and allow it to have free course,—this is difficult." The sorrow of my heart is, that the days and months have passed away, and it is not likely they will come again, (so that I might pursue a different course.)

' There were my old counsellors².—I said, " They will not accommodate themselves to me," and I hated them. There were my new counsellors, and I would for the time give my confidence to them³. So indeed it was with me ; but hereafter I will

¹ The prince of *K'hin* was only a marquis ; but the historiographers or recorders of a state always gave their ruler the higher title. This shows that this speech is taken from the chronicles of *K'hin*.

² Pâi-lî Hsi and *K'hien-shû*.

³ *K'hi-jze* and others.

take advice from the men of yellow hair, and then I shall be free from error. That good old officer!—his strength is exhausted, but I would rather have him (as my counsellor). That dashing brave officer!—his shooting and charioteering are faultless, but I would rather not wish to have him. As to men of quibbles, skilful at cunning words, and able to make the good man change his purposes, what have I to do to make much use of them?

‘I have deeply thought and concluded.—Let me have but one resolute minister, plain and sincere, without other ability, but having a straightforward mind, and possessed of generosity, regarding the talents of others as if he himself possessed them; and when he finds accomplished and sage men, loving them in his heart more than his mouth expresses, really showing himself able to bear them:—such a minister would be able to preserve my descendants and people, and would indeed be a giver of benefits.

‘But if (the minister), when he finds men of ability, be jealous and hates them; if, when he finds accomplished and sage men, he oppose them and does not allow their advancement, showing himself really not able to bear them:—such a man will not be able to protect my descendants and people; and will he not be a dangerous man?

‘The decline and fall of a state may arise from one man. The glory and tranquillity of a state may also arise from the goodness of one man.’

THE RELIGIOUS VIEWS AND PRACTICES OF
THE WRITERS AND THEIR TIMES.

THE SHIH KING

OR

BOOK OF POETRY.

INTRODUCTION.

CHAPTER I.

THE NAME AND CONTENTS OF THE CLASSIC.

1. Among the Chinese classical books next after the Shû in point of antiquity comes the Shih or Book of Poetry.

The character Shû¹, as formed by the combination of The meaning of the character Shih. two others, one of which signified 'a pencil,' and the other 'to speak,' supplied, we saw, in its structure, an indication of its primary significance, and furnished a clue to its different applications. The character Shih² was made on a different principle,—that of phonetical formation, in the peculiar sense of these words when applied to a large class of Chinese terms. The significative portion of it is the character for 'speech,' but the other half is merely phonetical, enabling us to approximate to its pronunciation or name. The meaning of the compound has to be learned from its usage. Its most common significations are 'poetry,' 'a poem, or poems,' and 'a collection of poems.' This last is its meaning when we speak of the Shih or the Shih King.

The earliest Chinese utterance that we have on the subject of poetry is that in the Shû by the ancient Shun, when he said to his Minister of Music, 'Poetry is the expression of earnest thought, and singing is the prolonged

¹書

²詩

utterance of that expression.' To the same effect is the language of a Preface to the Shih, sometimes ascribed to Confucius, and certainly older than our Christian era:— 'Poetry is the product of earnest thought. Thought cherished in the mind becomes earnest; then expressed in words, it becomes poetry. The feelings move inwardly, and are embodied in words. When words are insufficient for them, recourse is had to sighs and exclamations. When sighs and exclamations are insufficient for them, recourse is had to the prolonged utterance of song. When this again is insufficient, unconsciously the hands begin to move and the feet to dance. . . . To set forth correctly the successes and failures (of government), to affect Heaven and Earth, and to move spiritual beings, there is no readier instrument than poetry.'

Rhyme, it may be added here, is a necessary accompaniment of poetry in the estimation of the Chinese. Only in a very few pieces of the Shih is it neglected.

2. The Shih King contains 305 pieces and the titles of The contents of the Shih. six others. The most recent of them are assigned to the reign of king Ting of the Kâu dynasty, B. C. 606 to 586, and the oldest, forming a group of only five, to the period of the Shang dynasty which preceded that of Kâu, B. C. 1766 to 1123. Of those five, the latest piece should be referred to the twelfth century B. C., and the most ancient may have been composed five centuries earlier. All the other pieces in the Shih have to be distributed over the time between Ting and king Wăn, the founder of the line of Kâu. The distribution, however, is not equal nor continuous. There were some reigns of which we do not have a single poetical fragment.

The whole collection is divided into four parts, called the Kwo Făng, the Hsiăo Yă, the Tâ Yă, and the Sung.

The Kwo Făng, in fifteen Books, contains 160 pieces, nearly all of them short, and descriptive of manners and events in several of the feudal states of Kâu. The title has been translated by The Manners of the Different States, 'Les Mœurs des Royaumes,' and, which I prefer, by Lessons from the States.

The Hsiáo Yâ, or Lesser Yâ, in eight Books, contains seventy-four pieces and the titles of six others, sung at gatherings of the feudal princes, and their appearances at the royal court. They were produced in the royal territory, and are descriptive of the manners and ways of the government in successive reigns. It is difficult to find an English word that shall fitly represent the Chinese Yâ as here used. In his Latin translation of the Shih, P. Lacharme translated Hsiáo Yâ by '*Quod rectum est, sed inferiore ordine,*' adding in a note :—'*Siáo Yâ, latine Parvum Rectum, quia in hac Parte mores describuntur, recti illi quidem, qui tamen nonnihil a recto deflectunt.*' But the manners described are not less correct or incorrect, as the case may be, than those of the states in the former Part or of the kingdom in the next. I prefer to call this Part '*Minor Odes of the Kingdom,*' without attempting to translate the term Yâ.

The Tâ Yâ or Greater Yâ, in three Books, contains thirty-one pieces, sung on great occasions at the royal court and in the presence of the king. P. Lacharme called it '*Magnum Rectum (Quod rectum est superiore ordine).*' But there is the same objection here to the use of the word '*correct*' as in the case of the pieces of the previous Part. I use the name '*Major Odes of the Kingdom.*' The greater length and dignity of most of the pieces justify the distinction of the two Parts into Minor and Major.

The Sung, also in three Books, contains forty pieces, thirty-one of which belong to the sacrificial services at the royal court of Kâu; four, to those of the marquises of Lû; and five to the corresponding sacrifices of the kings of Shang. P. Lacharme denominated them correctly '*Parentales Cantus.*' In the Preface to the Shih, to which I have made reference above, it is said, '*The Sung are pieces in admiration of the embodied manifestation of complete virtue, announcing to the spiritual Intelligences their achievement thereof.*' Kû Hsi's account of the Sung was—'*Songs for the Music of the Ancestral Temple;*' and that of Kiang Yung of the present dynasty—'*Songs for the Music at Sacrifices.*' I have united these two definitions, and call the Part—'*Odes of the Temple and the Altar.*' There is

a difference between the pieces of Lû and the other two collections in this Part, to which I will call attention in giving the translation of them.

From the above account of the contents of the Shih, it will be seen that only the pieces in the last of its four Parts are professedly of a religious character. Many of those, however, in the other Parts, especially the second and third, describe religious services, and give expression to religious ideas in the minds of their authors.

3. Some of the pieces in the Shih are ballads, some are songs, some are hymns, and of others the nature can hardly be indicated by any English denomination. They have often been spoken of by the general name of odes, understanding by that term lyric poems that were set to music.

My reason for touching here on this point is the earliest account of the Shih, as a collection either already formed or in the process of formation, that we find in Chinese literature. In the Official Book of Kâu, generally supposed to be a work of the twelfth or eleventh century B. C., among the duties of the Grand Music-Master there is 'the teaching,' (that is, to the musical performers,) 'the six classes of poems:—the Fǎng; the Fû; the Pî; the Hsing; the Yâ; and the Sung.' That the collection of the Shih, as it now is, existed so early as the date assigned to the Official Book could not be; but we find the same account of it given in the so-called Confucian Preface. The Fǎng, the Yâ, and the Sung are the four Parts of the classic described in the preceding paragraph, the Yâ embracing both the Minor and Major Odes of the Kingdom. But what were the Fû, the Pî, and the Hsing? We might suppose that they were the names of three other distinct Parts or Books. But they were not so. Pieces so discriminated are found in all the four Parts, though there are more of them in the first two than in the others.

The Fû may be described as Narrative pieces, in which the writers tell what they have to say in a simple, straightforward manner, without any hidden meaning reserved in

the mind. The metaphor and other figures of speech enter into their composition as freely as in descriptive poems in any other language.

The *Pi* are Metaphorical pieces, in which the poet has under his language a different meaning from what it expresses,—a meaning which there should be nothing in that language to indicate. Such a piece may be compared to the *Æsopic fable*; but, while it is the object of the fable to inculcate the virtues of morality and prudence, an historical interpretation has to be sought for the metaphorical pieces of the *Shih*. Generally, moreover, the moral of the fable is subjoined to it, which is never done in the case of these pieces.

The *Hsing* have been called Allusive pieces. They are very remarkable, and more numerous than the metaphorical. They often commence with a couple of lines which are repeated without change, or with slight rhythmical changes, in all the stanzas. In other pieces different stanzas have allusive lines peculiar to themselves. Those lines are descriptive, for the most part, of some object or circumstance in the animal or vegetable world, and after them the poet proceeds to his proper subject. Generally, the allusive lines convey a meaning harmonizing with those which follow, where an English poet would begin the verses with *Like* or *As*. They are really metaphorical, but the difference between an allusive and a metaphorical piece is this,—that in the former the writer proceeds to state the theme which his mind is occupied with, while no such intimation is given in the latter. Occasionally, it is difficult, not to say impossible, to discover the metaphorical idea in the allusive lines, and then we can only deal with them as a sort of refrain.

In leaving this subject, it is only necessary to say further that the allusive, the metaphorical, and the narrative elements sometimes all occur in the same piece.

CHAPTER II.

THE SHIH BEFORE CONFUCIUS, AND WHAT, IF ANY,
WERE HIS LABOURS UPON IT.

1. Sze-mâ *K'hien*, in his memoir of Confucius, says:—
 'The old poems amounted to more than 3000. Confucius removed those which were only repetitions of others, and selected those which would be serviceable for the inculcation of propriety and righteousness. Ascending as high as Hsieh and Hâu-kî, and descending through the prosperous eras of Yin and Kâu to the times of decadence under kings Yü and Lî, he selected in all 305 pieces, which he sang over to his lute, to bring them into accordance with the musical style of the Sháo, the Wû, the Yâ, and the Fǎng.'

In the History of the Classical Books in the Records of the Sui Dynasty (A. D. 589 to 618), it is said:—'When royal benign rule ceased, and poems were no more collected, Kih, the Grand Music-Master of Lû, arranged in order those that were existing, and made a copy of them. Then Confucius expurgated them; and going up to the Shang dynasty, and coming down to the state of Lû, he compiled altogether 300 pieces.'

Kû Hsi, whose own standard work on the Shih appeared in A. D. 1178, declined to express himself positively on the expurgation of the odes, but summed up his view of what Confucius did for them in the following words:—

Opinion of *Kû Hsi*. 'Royal methods had ceased, and poems were no more collected. Those which were extant were full of errors, and wanting in arrangement. When Confucius returned from Wei to Lû, he brought with him the odes that he had gotten in other states, and digested them, along with those that were to be found in Lû, into a collection of 300 pieces.'

I have not been able to find evidence sustaining these

representations, and must adopt the view that, before the birth of Confucius, the Book of Poetry existed, substantially the same as it was at his death, and that while he may have somewhat altered the arrangement of its Books and pieces, the service which he rendered to it was not that of compilation, but the impulse to study it which he communicated to his disciples.

2. If we place *K'ien's* composition of the memoir of Confucius in B. C. 100, nearly four hundred years will have elapsed between the death of the sage and any statement to the effect that he expurgated previously existing poems, or compiled the collection that we now have; and no writer in the interval affirmed or implied any such things. The further statement in the Sui Records about the Music-Master of Lû is also without any earlier confirmation. But independently of these considerations, there is ample evidence to prove, first, that the poems current before Confucius were not by any means so numerous as *K'ien* says, and, secondly, that the collection of 300 pieces or thereabouts, digested under the same divisions as in the present classic, existed before the sage's time.

3. i. It would not be surprising, if, floating about and current among the people of China in the sixth century before our era, there had been more than 3000 pieces of poetry. The marvel is that such was not the case. But in the Narratives of the States, a work of the *K'au* dynasty, and ascribed by many to 30 *K'hiu-ming*, there occur quotations from thirty-one poems, made by statesmen and others, all anterior to Confucius; and of those poems there are not more than two which are not in the present classic. Even of those two, one is an ode of it quoted under another name. Further, in the 30 *Kwan*, certainly the work of *K'hiu-ming*, we have quotations from not fewer than 219 poems, of which only thirteen are not found in the classic. Thus of 250 poems current in China before the supposed compilation of the *Shih*, 236 are found in it, and only fourteen are absent. To use the words of *K'ao Yî*, a scholar of the present dynasty, 'If the poems existing in

Confucius' time had been more than 3000, the quotations of poems now lost in these two works should have been ten times as numerous as the quotations from the 305 pieces said to have been preserved by him, whereas they are only between a twenty-first and twenty-second part of the existing pieces. This is sufficient to show that *K'ien's* statement is not worthy of credit.'

ii. Of the existence of the Book of Poetry before Confucius, digested in four Parts, and much in the same order as at present, there may be advanced the following proofs:—

First. There is the passage in the Official Book of *K'âu*, quoted and discussed in the last paragraph of the preceding chapter. We have in it a distinct reference to poems, many centuries before the sage, arranged and classified in the same way as those of the existing *Shih*. Our *Shih*, no doubt, was then in the process of formation.

Second. In the ninth piece of the sixth decade of the *Shih*, Part II, an ode assigned to the time of king *Yü*, B.C. 781 to 771, we have the words,

‘They sing the *Yâ* and the *Nan*,
Dancing to their flutes without error.’

So early, therefore, as the eighth century B.C. there was a collection of poems, of which some bore the name of the *Nan*, which there is much reason to suppose were the *K'âu Nan* and the *Shão Nan*, forming the first two Books of the first Part of the present *Shih*; and of which others bore the name of the *Yâ*, being, probably, the earlier pieces that now compose a large portion of the second and third Parts.

Third. In the narratives of 30 *K'hiu-ming*, under the twenty-ninth year of duke *Hsiang*, B.C. 544, when Confucius was only seven or eight years old, we have an account of a visit to the court of *Lü* by an envoy from *Wü*, an eminent statesman of the time, and a man of great learning. We are told that as he wished to hear the music of *K'âu*, which he could do better in *Lü* than in any other state, they sang to him the odes of the *K'âu Nan* and the *Shão Nan*; those of *Phei*, *Yung*, and *Wei*; of the Royal Domain; of *Käng*; of *K'hi*; of *Pin*; of *K'kin*; of *Wei*; of

Thang; of *K'ăn*; of *Kwei*; and of *3/4ào*. They sang to him also the odes of the Minor *Yâ* and the Greater *Yâ*; and they sang finally the pieces of the *Sung*. We have thus, existing in the boyhood of Confucius, what we may call the present Book of Poetry, with its *Făng*, its *Yâ*, and its *Sung*. The only difference discernible is slight,—in the order in which the Books of the *Făng* followed one another.

Fourth. We may appeal in this matter to the words of Confucius himself. Twice in the *Analects* he speaks of the *Shih* as a collection consisting of 300 pieces¹. That work not being made on any principle of chronological order, we cannot positively assign those sayings to any particular years of Confucius' life; but it is, I may say, the unanimous opinion of Chinese critics that they were spoken before the time to which *K'ien* and *K'û Hsi* refer his special labour on the Book of Poetry.

To my own mind the evidence that has been adduced is decisive on the points which I specified. The *Shih*, arranged very much as we now have it, was current in China before the time of Confucius, and its pieces were in the mouths of statesmen and scholars, constantly quoted by them on festive and other occasions. Poems not included in it there doubtless were, but they were comparatively few. Confucius may have made a copy for the use of himself and his disciples; but it does not appear that he rejected any pieces which had been previously received into the collection, or admitted any which had not previously found a place in it.

4. The question now arises of what Confucius did for the *Shih*, if, indeed, he did anything at all. The only thing from which we can hazard an opinion on the point we have from himself. In the *Analects*, IX, xiv, he tells us:—‘I returned from Wei to *Lû*, and then the music was reformed, and the pieces in

What Confucius
did for the
Shih.

¹ In stating that the odes were 300, Confucius probably preferred to use the round number. There are, as I said in the former chapter, altogether 305 pieces, which is the number given by *Sze-mâ K'ien*. There are also the titles of six others. It is contended by *K'û Hsi* and many other scholars that these titles were only the names of tunes. More likely is the view that the text of the pieces so styled was lost after Confucius' death.

the Yâ and the Sung received their proper places.' The return from Wei to Lû took place only five years before the sage's death. He ceased from that time to take an active part in political affairs, and solaced himself with music, the study of the ancient literature of his nation, the writing of 'the Spring and Autumn,' and familiar intercourse with those of his disciples who still kept around him. He reformed the music,—that to which the pieces of the Shih were sung; but wherein the reformation consisted we cannot tell. And he gave to the pieces of the Yâ and the Sung their proper places. The present order of the Books in the Făng, slightly differing from what was common in his boyhood, may have now been determined by him. More than this we cannot say.

While we cannot discover, therefore, any peculiar and important labours of Confucius on the Shih, and we have it now, as will be shown in the next chapter, substantially as he found it already compiled to his hand, the subsequent preservation of it may reasonably be attributed to the admiration which he expressed for it, and the enthusiasm for it with which he sought to inspire his disciples. It was one of the themes on which he delighted to converse with them¹. He taught that it is from the poems that the mind receives its best stimulus². A man ignorant of them was, in his opinion, like one who stands with his face towards a wall, limited in his view, and unable to advance³. Of the two things that his son could specify as enjoined on him by the sage, the first was that he should learn the odes⁴. In this way Confucius, probably, contributed largely to the subsequent preservation of the Shih,—the preservation of the tablets on which the odes were inscribed, and the preservation of it in the memory of all who venerated his authority, and looked up to him as their master.

² Analects, XVII, x.

³ Analects, VIII, viii, XVII, ix.

⁴ Analects, XVI, xiii.

CHAPTER III.

THE SHIH FROM THE TIME OF CONFUCIUS TILL
THE GENERAL ACKNOWLEDGMENT OF THE
PRESENT TEXT.

1. Of the attention paid to the study of the Shih from the death of Confucius to the rise of the *K'in* dynasty, we have abundant evidence in the writings of his grandson 3ze-sze, of Mencius, and of Hsün *K'ing*. One of the acknowledged distinctions of Mencius is his acquaintance with the odes, his quotations from which are very numerous; and Hsün *K'ing* survived the extinction of the *K'au* dynasty, and lived on into the times of *K'in*.

From Con-
fucius to the
rise of the
K'in dynasty.

2. The Shih shared in the calamity which all the other classical works, excepting the *Yi*, suffered, when the tyrant of *K'in* issued his edict for their destruction. But I have shown, in the Introduction to the *Shû*, p. 7, that that edict was in force for less than a quarter of a century. The odes were all, or very nearly all¹, recovered; and the reason assigned for this is, that their preservation depended on the memory of scholars more than on their inscription on tablets of bamboo and on silk.

The Shih was
all recovered
after the fires
of *K'in*.

3. Three different texts of the Shih made their appearance early in the Han dynasty, known as the Shih of *Lû*, of *K'hi*, and of Han; that is, the Book of Poetry was recovered from three different quarters. Liû Hin's Catalogue of the Books in the Imperial Library of Han (B. C. 6 to 1) commences, on the Shih King, with a collection of the three texts, in twenty-eight chapters.

Three different
texts.

¹ All, in fact, unless we except the six pieces of Part II, of which we have only the titles. It is contended by Kû Hsi and others that the text of these had been lost before the time of Confucius. It may have been lost, however, after the sage's death; see note on p. 283.

i. Immediately after the mention of the general collection in the Catalogue come the titles of two works of commentary on the text of Lû. The former of them was by a Shăn Phei of whom we have some account in the Literary Biographies of Han. He was a native of Lû, and had received his own knowledge of the odes from a scholar of *Khî*, called Fâu *Khiu-po*. He was resorted to by many disciples, whom he taught to repeat the odes. When the first emperor of the Han dynasty was passing through Lû, Shăn followed him to the capital of that state, and had an interview with him. Subsequently the emperor Wû (B.C. 140 to 87), in the beginning of his reign, sent for him to court when he was more than eighty years old; and he appears to have survived a considerable number of years beyond that advanced age. The names of ten of his disciples are given, all of them men of eminence, and among them Khung An-kwo. Rather later, the most noted adherent of the school of Lû was Wei Hsien, who arrived at the dignity of prime minister (from B.C. 71 to 67), and published the Shih of Lû in Stanzas and Lines. Up and down in the Books of Han and Wei are to be found quotations of the odes, that must have been taken from the professors of the Lû recension; but neither the text nor the writings on it long survived. They are said to have perished during the *Kin* dynasty (A.D. 265 to 419). When the Catalogue of the Sui Library was made, none of them were existing.

ii. The Han Catalogue mentions five different works on the Shih of *Khî*. This text was from a Yüan Kû, a native of *Khî*, about whom we learn, from the same collection of Literary Biographies, that he was one of the great scholars of the court in the time of the emperor King (B.C. 156 to 141),—a favourite with him, and specially distinguished for his knowledge of the odes and his advocacy of orthodox Confucian doctrine. He died in the succeeding reign of Wû, more than ninety years old; and we are told that all the scholars of *Khî* who got a name in those days for their acquaintance with the Shih sprang from his school. Among his disciples was the well-

known name of Hsiâ-hâu Shih-*ch'ang*, who communicated his acquisitions to Hâu *3hang*, a native of the present Shan-tung province, and author of two of the works in the Han Catalogue. Hâu had three disciples of note, and by them the Shih of *K'hi* was transmitted to others, whose names, with quotations from their writings, are scattered through the Books of Han. Neither text nor commentaries, however, had a better fate than the Shih of Lû. There is no mention of them in the Catalogue of Sui. They are said to have perished even before the rise of the *K'in* dynasty.

iii. The text of Han was somewhat more fortunate. Hin's Catalogue contains the names of four works, all by Han Ying, whose surname is thus perpetuated
 The text of Han Ying. in the text of the Shih that emanated from him. He was a native, we are told, of Yen, and a great scholar in the time of the emperor Wăn (B.C. 179 to 155), and on into the reigns of *King* and Wû. 'He laboured,' it is said, 'to unfold the meaning of the odes, and published an Explanation of the Text, and Illustrations of the Poems, containing several myriads of characters. His text was somewhat different from the texts of Lû and *K'hi*, but substantially of the same meaning.' Of course, Han founded a school; but while almost all the writings of his followers soon perished, both the works just mentioned continued on through the various dynasties to the time of Sung. The Sui Catalogue contains the titles of his Text and two works on it; the Thang, those of his Text and his Illustrations; but when we come to the Catalogue of Sung, published under the Yüan dynasty, we find only the Illustrations, in ten books or chapters; and Âu-yang Hsiû (A.D. 1017 to 1072) tells us that in his time this was all of Han that remained. It continues entire, or nearly so, to the present day.

4. But while those three different recensions of the Shih all disappeared, with the exception of a single treatise of Han Ying, their unhappy fate was owing not more to the convulsions by which the empire was often rent, and the consequent destruction of literary monuments such as we

have witnessed in China in our own day, than to the
 A fourth text; appearance of a fourth text, which displaced
 that of Máo. them by its superior correctness, and the
 ability with which it was advocated and commented on.
 This was what is called the Text of Máo. It came into the
 field rather later than the others; but the Han Catalogue
 contains the Shih of Máo, in twenty-nine chapters, and
 a Commentary on it in thirty-nine. According to Kǎng
 Hsüan, the author of this was a native of Lû, known as
 Máo Hǎng or 'the Greater Máo,' who had been a disciple,
 we are told by Lü Teh-ming, of Hsün K'ing. The work
 is lost. He had communicated his knowledge of the Shih,
 however, to another Máo,—Máo Kang, 'the Lesser Mao,'
 who was a great scholar, at the court of king Hsien of
 Ho-kien, a son of the emperor King. King Hsien was one
 of the most diligent labourers in the recovery of the ancient
 books, and presented the text and work of Hǎng at the
 court of his father,—probably in B.C. 129. Máo Kang pub-
 lished Explanations of the Shih, in twenty-nine chapters,
 —a work which we still possess; but it was not till the
 reign of Phing (A.D. 1 to 5) that Máo's recension was re-
 ceived into the Imperial College, and took its place along
 with those of Lû, K'hi, and Han Ying.

The Chinese critics have carefully traced the line of
 scholars who had charge of Máo's Text and Explanations
 down to the reign of Phing. The names of the men and
 their works are all given. By the end of the first quarter
 of our first century we find the most famous scholars
 addicting themselves to Máo's text. The well-known Kiá
 Khwei (A.D. 30 to 101) published a work on the Meaning
 and Difficulties of Máo's Shih, having previously compiled
 a digest of the differences between its text and those of
 the other three recensions, at the command of the emperor
 Ming (A.D. 58 to 75). The equally celebrated Mã Yung
 (A.D. 79 to 166) followed with another commentary;—and
 we arrive at Kǎng Hsüan or Kǎng Khang-khǎng (A.D.
 127 to 200), who wrote a Supplementary Commentary
 to the Shih of Máo, and a Chronological Introduction to
 the Shih. The former of these two works complete, and

portions of the latter, are still extant. After the time of *K'ang* the other three texts were little heard of, while the name of the commentators on *Máo's* text speedily becomes legion. It was inscribed, moreover, on the stone tablets of the emperor *Ling* (A.D. 168 to 189). The grave of *Máo K'ang* is still shown near the village of *Jun-fû*, in the departmental district of *Ho-kien*, *Kih-li*.

5. Returning now to what I said in the second paragraph, it will be granted that the appearance of three different and independent texts, soon after the rise of the

The different
texts guarantee
the genuineness
of the recovered
Shih.

Han dynasty, affords the most satisfactory evidence of the recovery of the Book of Poetry as it had continued from the time of *Confucius*. Unfortunately, only fragments of those texts remain now; but they were, while they were current, diligently compared with one another, and with the fourth text of *Máo*, which subsequently got the field to itself. When a collection is made of their peculiar readings, so far as it can now be done, it is clear that their variations from one another and from *Máo's* text arose from the alleged fact that the preservation of the odes was owing to their being transmitted by recitation. The rhyme helped the memory to retain them, and while wood, bamboo, and silk had all been consumed by the flames of *K'in*, when the time of repression ceased, scholars would be eager to rehearse their stores. It was inevitable, and more so in China than in a country possessing an alphabet, that the same sounds when taken down by different writers should be represented by different characters.

On the whole, the evidence given above is as full as could be desired in such a case, and leaves no reason for us to hesitate in accepting the present received text of the *Shih* as a very close approximation to that which was current in the time of *Confucius*.

CHAPTER IV.

THE FORMATION OF THE COLLECTION OF THE SHIH;
HOW IT CAME TO BE SO SMALL AND INCOMPLETE;
THE INTERPRETATION AND AUTHORS OF THE PIECES;
ONE POINT OF TIME CERTAINLY INDICATED IN IT;
AND THE CONFUCIAN PREFACE.

1. It has been shown above, in the second chapter, that the Shih existed as a collection of poetical pieces before the time of Confucius¹. In order to complete this Introduction to it, it is desirable to give some account of the various subjects indicated in the heading of the present chapter.

How were the odes collected in the first place? In his Account of a Conversation concerning 'a Right Regulation of Governments for the Common Good of Mankind' (Edinburgh, 1704), p. 10, Sir Andrew Fletcher, of Saltoun, tells us the opinion of 'a very wise man,' that 'if a man were permitted to make all the ballads of a nation, he need not care who should make its laws.' A writer in the Spectator, no. 502, refers to a similar opinion as having been entertained in England earlier than the time of Fletcher. 'I have heard,' he says, 'that a minister of state in the reign of Elizabeth had all manner of books and ballads brought to him, of what kind soever, and took great notice how they took with the people; upon which he would, and certainly might, very well judge of their present dispositions, and of the most proper way of applying them according to his own purposes².'

¹ As in the case of the Shû, Confucius generally speaks of 'the Shih,' never using the name of 'the Shih King.' In the Analects, IX, xiv, however, he mentions also the Yâ and the Sung; and in XVII, x, he specifies the Kâu Nan and the Shão Nan, the first two books of the Kwo Făng. Mencius similarly speaks of 'the Shih;' and in III, i, ch. 4, he specifies 'the Sung of Lû,' Book ii of Part IV. In VI, ii, ch. 3, he gives his views of the Hsião Phan, the third ode of decade 5, Part II, and of the Khâi Fung, the seventh ode of Book iii of Part I.

² This passage from the Spectator is adduced by Sir John Davis in his treatise on the Poetry of the Chinese, p. 35.

In harmony with the views thus expressed is the theory of the Chinese scholars, that it was the duty of the ancient kings to make themselves acquainted with all the poems current in the different states, and to judge from them of the rule exercised by the several princes, so that they might minister praise or blame, reward or punishment accordingly.

The theory of the Chinese scholars about a collection of poems for governmental purposes.

The rudiments of this theory may be found in the *Shû*, in the Canon of Shun; but the one classical passage which is appealed to in support of it is in the Record of Rites, III, ii, parr. 13, 14:—'Every fifth year, the Son of Heaven made a progress through the kingdom, when the Grand Music-Master was commanded to lay before him the poems of the different states, as an exhibition of the manners and government of the people.' Unfortunately, this Book of the *Lî K'î*, the Royal Ordinances, was compiled only in the reign of the emperor Wăn of the Han dynasty (B. C. 179 to 155). The scholars entrusted with the work did their best, we may suppose, with the materials at their command. They made much use, it is evident, of Mencius, and of the *Î Lî*. The *K'âu Lî*, or the Official Book of *K'âu*, had not then been recovered. But neither in Mencius nor in the *Î Lî* do we meet with any authority for the statement before us. The *Shû* mentions that Shun every fifth year made a tour of inspection; but there were then no odes for him to examine, for to him and his minister K'ão-yáo is attributed the first rudimentary attempt at the poetic art. Of the progresses of the Hsiâ and Yin sovereigns we have no information; and those of the kings of *K'âu* were made, we know, only once in twelve years. The statement in the Royal Ordinances, therefore, was probably based only on tradition.

Notwithstanding the difficulties that beset this passage of the *Lî K'î*, I am not disposed to reject it altogether. It derives a certain amount of confirmation from the passage quoted from the Official Book of *K'âu* on p. 278, showing that in the *K'âu* dynasty there was a collection of poems, under the divisions of the Fǎng, the Yá, and the Sung,

which it was the business of the Grand Music-Master to teach the musicians of the court. It may be accepted then, that the duke of *Kâu*, in legislating for his dynasty, enacted that the poems produced in the different feudal states should be collected on occasion of the royal progresses, and lodged thereafter among the archives of the bureau of music at the royal court. The same thing, we may presume *à fortiori*, would be done, at certain other stated times, with those produced within the royal domain itself.

But the feudal states were modelled after the pattern of the royal state. They also had their music-masters, their

The music-master of the king would get the odes of each state from its music-master.

musicians, and their historiographers. The kings in their progresses did not visit each particular state, so that the Grand Music-Master could have the opportunity to collect the odes in it for himself. They met, at well-

known points, the marquises, earls, barons, &c., of the different quarters of the kingdom; there gave audience to them; adjudicated on their merits, and issued to them their orders. We are obliged to suppose that the princes were attended to the places of rendezvous by their music-masters, carrying with them the poetical compositions gathered in their several regions, to present them to their superior of the royal court. We can understand how, by means of the above arrangement, the poems of the whole kingdom were accumulated and arranged among the archives of the capital. Was there any provision for dis-

How the collected poems were disseminated throughout the states.

seminating thence the poems of one state among all the others? There is sufficient evidence that such dissemination was effected in some way. Throughout the Narratives of the States, and the details of *30 K'hiu-ming* on the history of the Spring and Autumn, the officers of the states generally are presented to us as familiar not only with the odes of their particular states, but with those of other states as well. They appear equally well acquainted with all the Parts and Books of our present *Shih*; and we saw how the whole of it was sung over to *K'î K'â* of *Wû*, when he visited the court of *Lâ* in the boyhood of Confucius. There was,

probably, a regular communication from the royal court to the courts of the various states of the poetical pieces that for one reason or another were thought worthy of preservation. This is nowhere expressly stated, but it may be contended for by analogy from the accounts which I have given, in the Introduction to the *Shû*, pp. 4, 5, of the duties of the royal historiographers or recorders.

2. But if the poems produced in the different states were thus collected in the capital, and thence again disseminated throughout the kingdom, we might conclude that the collection would have been far more extensive and complete than

How the *Shih*
is so small and
incomplete.

we have it now. The smallness of it is to be accounted for by the disorder into which the kingdom fell after the lapse of a few reigns from king *Wû*. Royal progresses ceased when royal government fell into decay, and then the odes were no more collected¹. We have no account of any progress of the kings during the *Khûn K'hiû* period. But before that period there is a long gap of nearly 150 years between kings *K'hang* and *Î*, covering the reigns of *Khang*, *K'áo*, *Mû*, and *Kung*, if we except two doubtful pieces among the Sacrificial Odes of *K'áu*. The reign of *Hsiáo*, who succeeded to *Î*, is similarly uncommemorated; and the latest odes are of the time of *Ting*, when 100 years of the *Khûn K'hiû* period had still to run their course. Many odes must have been made and collected during the 140 and more years after king *K'hang*. The probability is that they perished during the feeble reigns of *Î* and the three monarchs who followed him. Then came the long and vigorous reign of *Hsüan* (B. C. 827 to 782), when we may suppose that the ancient custom of collecting the poems was revived. After him all was in the main decadence and confusion. It was probably in the latter part of his reign that *K'ang-khâo*, an ancestor of Confucius, obtained from the Grand Music-Master at the court of *K'áu* twelve of the sacrificial odes of the previous dynasty, as will be related under the Sacrificial Odes of *Shang*, with which he returned to *Sung*,

¹ See Mencius, IV, ii, ch. 21.

which was held by representatives of the line of Shang. They were used there in sacrificing to the old Shang kings; yet seven of the twelve were lost before the time of the sage.

The general conclusion to which we come is, that the existing Shih is the fragment of various collections made during the early reigns of the kings of K'au, and added to at intervals, especially on the occurrence of a prosperous rule, in accordance with the regulation that has been preserved in the *Lî K'î*. How it is that we have in Part I odes of comparatively few of the states into which the kingdom was divided, and that the odes of those states extend only over a short period of their history:—for these things we cannot account further than by saying that such were the ravages of time and the results of disorder. We can only accept the collection as it is, and be thankful for it. How long before Confucius the collection was closed we cannot tell.

3. The conclusions which I have thus sought to establish concerning the formation of the Shih as a collection have an important bearing on the interpretation of many of the pieces. The remark of Sze-mâ K'ien that 'Confucius selected those pieces which would be serviceable for the inculcation of propriety and righteousness' is as erroneous as the other, that he selected 305 pieces out of more than 3000. The sage merely studied and taught the pieces which he found existing, and the collection necessarily contained odes illustrative of bad government as well as of good, of licentiousness as well as of a pure morality. Nothing has been such a stumbling-block in the way of the reception of K'û Hsi's interpretation of the pieces as the readiness with which he attributes a licentious meaning to many of those in the seventh Book of Part I. But the reason why the kings had the odes of the different states collected and presented to them was, 'that they might judge from them of the manners of the people,' and so come to a decision regarding the government and morals of their rulers. A student and translator of the odes has simply to allow them

Bearing of these
views on the
interpretation of
particular
pieces.

selected those pieces which would be serviceable for the inculcation of propriety and righteousness' is as erroneous as the other, that he selected 305 pieces out of more than

to speak for themselves, and has no more reason to be surprised by references to vice in some of them than by the language of virtue in many others. Confucius said, indeed, in his own enigmatical way, that the single sentence, 'Thought without depravity,' covered the whole 300 pieces¹; and it may very well be allowed that they were collected and preserved for the promotion of good government and virtuous manners. The merit attaching to them is that they give us faithful pictures of what was good and what was bad in the political state of the country, and in the social, moral, and religious habits of the people.

The pieces were of course made by individuals who possessed the gift, or thought that they possessed the gift,

The writers of
the odes.

of poetical composition. Who they were we could tell only on the authority of the pieces themselves, or of credible historical accounts, contemporaneous with them or nearly so. It is not worth our while to question the opinion of the Chinese critics who attribute very many of them to the duke of Kâu, to whom we owe so much of the fifth Part of the Shû. There is, however, independent testimony only to his composition of a single ode,—the second of the fifteenth Book in Part I². Some of the other pieces in that Part, of which the historical interpretation may be considered as sufficiently fixed, are written in the first person; but the author may be personating his subject.

In Part II, the seventh ode of decade 2 was made by a Kiâ-fû, a noble of the royal court, but we know nothing more about him; the sixth of decade 6, by a eunuch styled Măng-jze; and the sixth of decade 7, from a concurrence of external testimonies, should be ascribed to duke Wû of Wei, B. C. 812 to 758.

In the third decade of Part III, the second piece was composed by the same duke Wû; the third by an earl of Zui in the royal domain; the fourth must have been made by one of king Hsüan's ministers, to express the king's

¹ Analects, II, ii.

² See the Shû, V, vi, par. 2.

feelings under the drought that was exhausting the kingdom; and the fifth and sixth claim to be the work of Yin K'î-fû, one of Hsüan's principal officers.

4. The ninth ode of the fourth Book, Part II, gives us a note of time that enables us to fix the year of its composition in a manner entirely satisfactory, and proves also the correctness, back to that date, of the ordinary Chinese chronology. The piece is one of a group which their contents lead us to refer to the reign of king Yü, the son of Hsüan, B.C. 781 to 771. When we examine the chronology of his period, it is said that in his sixth year, B.C. 776, there was an eclipse of the sun. Now the ode commences:—

'At the conjunction (of the sun and moon) in the tenth month, on the first day of the moon, which was Hsin-mão, the sun was eclipsed.'

This eclipse is verified by calculation as having taken place in B.C. 776, on August 29th, the very day and month assigned to it in the poem.

5. In the Preface which appeared along with Máo's text of the Shih, the occasion and authorship of many of the odes are given; but I do not allow much weight to its testimony. It is now divided into the Great Preface and the Little Preface; but Máo himself made no such distinction between its parts. It will be sufficient for me to give a condensed account of the views of K'ü Hsi on the subject:—

'Opinions of scholars are much divided as to the authorship of the Preface. Some ascribe it to Confucius; some to (his disciple) 3ze-hsiâ; and some to the historiographers of the states. In the absence of clear testimony it is impossible to decide the point, but the notice about Wei Hung (first century) in the Literary Biographies of Han¹ would seem to make it clear that the Preface was

¹ The account is this: 'Hung became the disciple of Hsieh Man-ming, who was famous for his knowledge of Máo's Shih; and he afterwards made the Preface to it, remarkable for the accuracy with which it gives the meaning of the pieces in the Fāng and the Yâ, and which is now current in the world.'

his work. We must take into account, however, on the other hand, the statement of *Kǎng Khang - khang*, that the Preface existed as a separate document when Máo appeared with his text, and that he broke it up, prefixing to each ode the portion belonging to it. The natural conclusion is, that the Preface had come down from a remote period, and that Hung merely added to it, and rounded it off. In accordance with this, scholars generally hold that the first sentences in the introductory notices formed the original Preface, which Máo distributed, and that the following portions were subsequently added.

‘This view may appear reasonable; but when we examine those first sentences themselves, we find that some of them do not agree with the obvious meaning of the odes to which they are prefixed, and give only rash and baseless expositions. Evidently, from the first, the Preface was made up of private speculations and conjectures on the subject-matter of the odes, and constituted a document by itself, separately appended to the text. Then on its first appearance there were current the explanations of the odes that were given in connexion with the texts of *Lû*, *K’i*, and *Han Ying*, so that readers could know that it was the work of later hands, and not give entire credit to it. But when Máo no longer published the Preface as a separate document, but each ode appeared with the introductory notice as a portion of the text, this seemed to give it the authority of the text itself. Then after the other texts disappeared and Máo’s had the field to itself, this means of testing the accuracy of its prefatory notices no longer existed. They appeared as if they were the production of the poets themselves, and the odes seemed to be made from them as so many themes. Scholars handed down a faith in them from one to another, and no one ventured to express a doubt of their authority. The text was twisted and chiseled to bring it into accordance with them, and no one would undertake to say plainly that they were the work of the scholars of the Han dynasty.’

There is no western sinologist, I apprehend, who will

not cordially concur with me in the principle of *K'ü Hsi* that we must find the meaning of the poems in the poems themselves, instead of accepting the interpretation of them given by we know not whom, and to follow which would reduce many of them to absurd enigmas.

THE SHIH KING.

ODES OF THE TEMPLE AND THE ALTAR.

It was stated in the Introduction, p. 278, that the poems in the fourth Part of the Shih are the only ones that are professedly religious; and there are some even of them, it will be seen, which have little claim on internal grounds to be so considered. I commence with them my selections from the Shih for the Sacred Books of the Religions of the East. I will give them all, excepting the first two of the Praise Odes of Lû, the reason for omitting which will be found, when I come to that division of the Part.

The Odes of the Temple and the Altar are, most of them, connected with the ancestral worship of the sovereigns of the Shang and K'âu dynasties, and of the marquises of Lû. Of the ancestral

The ancestral
worship of
the common
people.

worship of the common people we have almost no information in the Shih. It was binding, however, on all, and two utterances of Confucius may be given in illustration of this. In the eighteenth chapter of the Doctrine of the Mean, telling how the duke of K'âu, the legislator of the dynasty so called, had 'completed the virtuous course of Wăn and Wû, carrying up the title of king to Wăn's father and grandfather, and sacrificing to the dukes before them with the royal ceremonies,' he adds, 'And this rule he extended to the feudal princes, the great officers, the other officers, and the common people. In the mourning and other duties rendered to a deceased father or mother, he allowed no difference between the noble and the mean.' Again, his summary in the tenth chapter of the Hsiâo King, of the duties

of filial piety, is the following :—‘A filial son, in serving his parents, in his ordinary intercourse with them, should show the utmost respect; in supplying them with food, the greatest delight; when they are ill, the utmost solicitude; when mourning for their death, the deepest grief; and when sacrificing to them, the profoundest solemnity. When these things are all complete, he is able to serve his parents.’

Of the ceremonies in the royal worship of ancestors, and perhaps on some other occasions, we have much information in the pieces of this Part, and in many others in the second and third Parts. They were preceded by fasting and various purifications

The royal
worship of
ancestors.

on the part of the king and the parties who were to assist in the performance of them. There was a great concourse of the feudal princes, and much importance was attached to the presence among them of the representatives of former dynasties; but the duties of the occasion devolved mainly on the princes of the same surname as the royal House. Libations of fragrant spirits were made, especially in the *Kâu* period, to attract the Spirits, and their presence was invoked by a functionary who took his place inside the principal gate. The principal victim, a red bull in the temple of *Kâu*, was killed by the king himself, using for the purpose a knife to the handle of which small bells were attached. With this he laid bare the hair, to show that the animal was of the required colour, inflicted the wound of death, and cut away the fat, which was burned along with southernwood to increase the incense and fragrance. Other victims were numerous, and the fifth ode of the second decade, Part II, describes all engaged in the service as greatly exhausted with what they had to do, flaying the carcasses, boiling the flesh, roasting it, broiling it, arranging it on trays and stands, and setting it forth. Ladies from the palace are present to give their assistance; music peals; the cup goes round. The description is that of a feast as much as of a sacrifice; and in fact, those great seasonal occasions were what we might call grand family reunions, where the dead and the living met, eating and drinking together, where the living worshipped the dead, and the dead blessed the living.

This characteristic of these ceremonies appeared most strikingly in the custom which required that the departed ancestors should be represented by living relatives of the same surname, chosen according to certain rules that are not mentioned in the *Shih*. These took for the time the place of the dead, received the

honours which were due to them, and were supposed to be possessed by their spirits. They ate and drank as those whom they personated would have done; accepted for them the homage rendered by their descendants; communicated their will to the principal in the service, and pronounced on him and on his line their benediction, being assisted in this point by a mediating priest, as we may call him for want of a more exact term. On the next day, after a summary repetition of the ceremonies of the sacrifice, those personators of the dead were specially feasted, and, as it is expressed in the second decade of Part III, ode 4, 'their happiness and dignity were made complete.' We have an allusion to this strange custom in Mencius (VI, i, ch. 5), showing how a junior member of a family, when chosen to represent one of his ancestors, was for the time exalted above his elders, and received the demonstrations of reverence due to the ancestor.

When the sacrifice to ancestors was finished, the king feasted his uncles and younger brothers or cousins, that is, all the princes and nobles of the same surname with himself, in another apartment. The musicians who had discoursed with instrument and voice during the worship and entertainment of the ancestors, followed the convivial party 'to give their soothing aid at the second blessing.' The viands that had been provided, we have seen, in great abundance, were brought in from the temple, and set forth anew. The guests ate to the full and drank to the full, and at the conclusion they all did obeisance, while one of them declared the satisfaction of the Spirits, and assured the king of their favour to him and his posterity, so long as they did not neglect those observances. During the feast the king showed particular respect to those among his relatives who were aged, filled their cups again and again, and desired 'that their old age might be blessed, and their bright happiness ever increased.'

The above sketch of the seasonal sacrifices to ancestors shows that they were intimately related to the duty of filial piety, and were designed mainly to maintain the unity of the family connexion. There was implied in them a belief in the continued existence of the spirits of the departed; and by means of them the ancestors of the kings were raised to the position of the Tutelary spirits of the dynasty; and the ancestors of each family became its Tutelary spirits. Several of the pieces in Part IV are appropriate, it will be observed, to sacrifices offered to some

one monarch. They would be used on particular occasions connected with his achievements in the past, or when it was supposed that his help would be valuable in contemplated enterprises. With regard to all the ceremonies of the ancestral temple, Confucius gives the following account of the purposes which they were intended to serve, hardly adverting to their religious significance, in the nineteenth chapter of the Doctrine of the Mean :—‘ By means of them they distinguished the royal kindred according to their order of descent. By arranging those present according to their rank, they distinguished the more noble and the less. By the apportioning of duties at them, they made a distinction of talents and worth. In the ceremony of general pledging, the inferiors presented the cup to their superiors, and thus something was given to the lowest to do. At the (concluding) feast places were given according to the hair, and thus was marked the distinction of years.’

The Shih does not speak of the worship which was paid to God, unless it be incidentally. There were two grand occasions on which it was rendered by the sovereign,—the summer and winter solstices. These two sacrifices were offered on different altars, that in winter being often described as offered to Heaven, and that in summer to Earth; but we have the testimony of Confucius, in the nineteenth chapter of the Doctrine of the Mean, that the object of them both was to serve Shang-Ti. Of the ceremonies on these two occasions, however, I do not speak here, as there is nothing said about them in the Shih. But there were other sacrifices to God, at stated periods in the course of the year, of at least two of which we have some intimation in the pieces of this fourth Part. The last in the first decade of the Sacrificial Odes of Kâu is addressed to Hâu Kî as having proved himself the correlate of Heaven, in teaching men to cultivate the grain which God had appointed for the nourishment of all. This was appropriate to a sacrifice in spring, offered to God to seek His blessing on the agricultural labours of the year, Hâu Kî, as the ancestor of the House of Kâu, being associated with Him in it. The seventh piece of the same decade again was appropriate to a sacrifice to God in autumn, in the Hall of Light, at a great audience to the feudal princes, when king Wăn was associated with Him as being the founder of the dynasty of Kâu.

With these preliminary observations to assist the reader in understanding the pieces in this Part, I proceed to give—

I. THE SACRIFICIAL ODES OF SHANG.

THESE odes of Shang constitute the last Book in the ordinary editions of the Shih. I put them here in the first place, because they are the oldest pieces in the collection. There are only five of them.

The sovereigns of the dynasty of Shang occupied the throne from B.C. 1766 to 1123. They traced their lineage to Hsieh, who appears in the Shû as Minister of Instruction to Shun. By Yâo or by Shun, Hsieh was invested with the principality of Shang, corresponding to the small department which is so named in Shen-hsi. Fourteenth in descent from him came Thien-yî, better known as K'ang Thang, or Thang the Successful, who dethroned the last descendant of the line of Hsiâ, and became the founder of a new dynasty. We meet with him first at a considerable distance from the ancestral fief (which, however, gave name to the dynasty), having as his capital the southern Po, which seems correctly referred to the present district of Shang-k'hiu, in the department of Kwei-teh, Ho-nan. Among the twenty-seven sovereigns who followed Thang, there were three especially distinguished:—Thái K'ia, his grandson and successor (B.C. 1753 to 1721), who received the title of Thái Jung; Thái Mâu (B.C. 1637 to 1563), canonized as Kung Jung; and Wû-ting (B.C. 1324 to 1266), known as K'ao Jung. The shrines of these three sovereigns and that of Thang retained their places in the ancestral temple ever after they were first set up, and if all the sacrificial odes of the dynasty had been preserved, most of them would have been in praise of one or other of the four. But it so happened that at least all the odes of which Thái Jung was the subject were lost; and of the others we have only the small portion that has been mentioned above.

Of how it is that we have even these, we have the following account in the Narratives of the States, compiled, probably, by a contemporary of Confucius. The count of Wei was made duke of Sung by king Wû of K'au, as related in the Shû, V, viii, there to continue the sacrifices of the House of Shang; but the government of Sung fell subsequently into disorder, and the memorials of the dynasty were lost. In the time of duke T'ai (B.C. 799 to 766), one of his ministers, K'ang-khâu, an ancestor of Confucius, received from the Grand Music-Master at the court of K'au twelve

of the sacrificial odes of Shang with which he returned to Sung, where they were used in sacrificing to the old Shang kings. It is supposed that seven of these were lost subsequently, before the collection of the Shih was formed.

ODE 1. THE NÂ¹.

APPROPRIATE TO A SACRIFICE TO THANG, THE FOUNDER OF THE SHANG DYNASTY, DWELLING ESPECIALLY ON THE MUSIC AND THE REVERENCE WITH WHICH THE SACRIFICE WAS PERFORMED.

We cannot tell by which of the kings of Shang the sacrifice here referred to was first performed. He is simply spoken of as 'a descendant of Thang.' The ode seems to have been composed by some one, probably a member of the royal House, who had taken part in the service.

How admirable! how complete! Here are set our hand-drums and drums. The drums resound harmonious and loud, To delight our meritorious ancestor².

The descendant of Thang invites him with this music, That he may soothe us with the realization of our thoughts³. Deep is the sound of our hand-

¹ The piece is called the Nâ, because a character so named is an important part of the first line. So generally the pieces in the Shih receive their names from a character or phrase occurring in them. This point will not be again touched on.

² The 'meritorious ancestor' is Thang. The sacrifices of the Shang dynasty commenced with music; those of the Kâu with libations of fragrant spirits;—in both cases with the same object, to attract the spirit, or spirits, sacrificed to, and secure their presence at the service. K'ăn Hào (Ming dynasty) says, 'The departed spirits hover between heaven and earth, and sound goes forth, filling the region of the air. Hence in sacrificing, the people of Yin began with a performance of music.'

³ The *Lí Kî*, XXIV, i, parr. 2, 3, tells us, that the sacrificer, as preliminary to the service, had to fast for some days, and to think of the person of his ancestor,—where he had stood and sat, how he had smiled and spoken, what had been his cherished aims,

drums and drums; Shrilly sound the flutes; All harmonious and blending together, According to the notes of the sonorous gem. Oh! majestic is the descendant of Thang; Very admirable is his music.

The large bells and drums fill the ear; The various dances are grandly performed¹. We have the admirable visitors², Who are pleased and delighted.

From of old, before our time, The former men set us the example;—How to be mild and humble from morning to night, And to be reverent in discharging the service.

May he regard our sacrifices of winter and autumn³, (Thus) offered by the descendant of Thang!

ODE 2. THE LIEH 30.

PROBABLY LIKE THE LAST ODE, APPROPRIATE TO A SACRIFICE TO THANG, DWELLING ON THE SPIRITS, THE SOUP, AND THE GRAVITY OF THE SERVICE, AND ON THE ASSISTING PRINCES.

Neither can we tell by which of the kings of Shang this ode was first used. *K'ü Hsi* says that the object of the sacrifice was Thang. The Preface assigns it to *Thái Mậu*, the *K'ung Jung*, or second of the three 'honoured ones.' But there is not a

pleasures, and delights; and on the third day he would have a complete image of him in his mind's eye. Then on the day of sacrifice, when he entered the temple, he would seem to see him in his shrine, and to hear him, as he went about in the discharge of the service. This line seems to indicate the realization of all this.

¹ Dancing thus entered into the service as an accompaniment of the music. Two terms are employed; one denoting the movements appropriate to a dance of war, the other those appropriate to a dance of peace.

² The visitors would be the representatives of the lines of *Hsiâ*, *Shun*, and *Yáo*.

³ Two of the seasonal sacrifices are thus specified, by synecdoche, for all the four.

word in praise of *Kung Jung*, and the 'meritorious ancestor' of the first line is not to be got over. Still more clearly than in the case of the former ode does this appear to have been made by some one who had taken part in the service, for in line 4 he addresses the sacrificing king as 'you.'

Ah! ah! our meritorious ancestor! Permanent are the blessings coming from him, Repeatedly conferred without end;—They have come to you in this place.

The clear spirits are in our vessels, And there is granted to us the realization of our thoughts. There are also the well-tempered soups, Prepared beforehand, with the ingredients rightly proportioned. By these offerings we invite his presence, without a word, Without (unseemly) contention (among the worshippers). He will bless us with the eyebrows of longevity, With the grey hair and wrinkled face in unlimited degree.

With the naves of their wheels bound with leather, and their ornamented yokes, With the eight bells at their horses' bits all tinkling, (The princes) come to assist at the offerings¹. We have received the appointment in all its greatness, And from Heaven is our prosperity sent down, Fruitful years of great abundance. (Our ancestor) will come and enjoy (our offerings), And confer on us happiness without limit.

May he regard our sacrifices of winter and autumn, (Thus) offered by the descendant of Thang!

¹ These lines are descriptive of the feudal princes, who were present and assisted at the sacrificial service. The chariot of each was drawn by four horses yoked abreast, two insides and two outsides, on each side of the bits of which small bells were attached.

ODE 3. THE HSÜAN NIÃO.

APPROPRIATE TO A SACRIFICE IN THE ANCESTRAL TEMPLE OF SHANG;—
INTENDED SPECIALLY TO DO HONOUR TO THE KING WŪ-TING.

If this ode were not intended to do honour to Wŭ-ting, the K'ao Jung of Shang, we cannot account for the repeated mention of him in it. K'ü Hsü, however, in his note on it, says nothing about Wŭ-ting, but simply that the piece belonged to the sacrifices in the ancestral temple, tracing back the line of the kings of Shang to its origin, and to its attaining the sovereignty of the kingdom. Not at all unlikely is the view of K'ang Hsüan, that the sacrifice was in the third year after the death of Wŭ-ting, and offered to him in the temple of Hsieh, the ancestor of the Shang dynasty.

Heaven commissioned the swallow, To descend
and give birth to (the father of our) Shang¹. (His
descendants) dwelt in the land of Yin, and became
great. (Then) long ago God appointed the martial
Thang, To regulate the boundaries throughout the
four quarters (of the kingdom).

(In those) quarters he appointed the princes,
And grandly possessed the nine regions². The

¹ The father of Shang is Hsieh, who has already been mentioned. The mother of Hsieh was a daughter of the House of the ancient state of Sung, and a concubine of the ancient ruler Khü (B. C. 2435). According to Mâu, she accompanied Khü, at the time of the vernal equinox, when the swallow made its appearance, to sacrifice and pray to the first match-maker, and the result was the birth of Hsieh. Sze-má K'ien and K'ang make Hsieh's birth more marvellous:—The lady was bathing in some open place, when a swallow made its appearance, and dropt an egg, which she took and swallowed; and from this came Hsieh. The editors of the imperial edition of the Shih, of the present dynasty, say we need not believe the legends;—the important point is to believe that the birth of Hsieh was specially ordered by Heaven.

² 'The nine regions' are the nine provinces into which Yü divided the kingdom.

first sovereign of Shang¹ Received the appointment without any element of instability in it, And it is (now) held by the descendant of Wû-ting².

The descendant of Wû-ting Is a martial sovereign, equal to every emergency. Ten princes, (who came) with their dragon-emblazoned banners, Bear the large dishes of millet.

The royal domain of a thousand li Is where the people rest; But the boundaries that reach to the four seas commence there.

From the four seas³ they come (to our sacrifices); They come in multitudes. K'ing has the Ho for its outer border⁴. That Yin⁵ should have received the appointment (of Heaven) was entirely right;—(Its sovereign) sustains all its dignities.

ODE 4. THE K'ANG FA.

CELEBRATING HsIEH, THE ANCESTOR OF THE HOUSE OF SHANG;
HSIANG-THŪ, HIS GRANDSON; THANG, THE FOUNDER OF THE DYNASTY;
AND I-YIN, THANG'S CHIEF MINISTER AND ADVISER.

It does not appear on occasion of what sacrifice this piece was made. The most probable view is that of Mào, that it was the

¹ That is, Thang.

² If this ode were used, as K'ang supposes, in the third year after Wû-ting's death, this 'descendant' would be his son 3û-k'ang, B. C. 1265 to 1259.

³ This expression, which occurs also in the Shû, indicates that the early Chinese believed that their country extended to the sea, east, west, north, and south.

⁴ K'ü Hsî says he did not understand this line; but there is ground in the 3o Kwan for our believing that K'ing was the name of a hill in the region where the capital of Shang was.

⁵ We saw in the Shû that the name Shang gave place to Yin after the time of Pan-k'ang, B. C. 1401 to 1374. Wû-ting's reign was subsequent to that of Pan-k'ang.

'great Tî sacrifice,' when the principal object of honour would be the ancient Khû, the father of Hsieh, with Hsieh as his correlate, and all the kings of the dynasty, with the earlier lords of Shang, and their famous ministers and advisers, would have their places at the service. I think this is the oldest of the odes of Shang.

Profoundly wise were (the lords of) Shang, And long had there appeared the omens (of their dignity).

When the waters of the deluge spread vast abroad, Yü arranged and divided the regions of the land, And assigned to the exterior great states their boundaries, With their borders extending all over (the kingdom). (Even) then the chief of Sung was beginning to be great, And God raised up the son (of his daughter), and founded (the line of) Shang¹.

The dark king exercised an effective sway². Charged with a small state, he commanded success; Charged with a large state, he commanded success³. He followed his rules of conduct without error; Wherever he inspected (the people), they responded (to his instructions)⁴. (Then came) Hsiang-thû all ardent⁵, And all within the four seas, beyond (the middle regions), acknowledged his restraints.

¹ This line refers to the birth of Hsieh, as described in the previous ode, and his being made lord of Shang.

² It would be hard to say why Hsieh is here called 'the dark king.' There may be an allusion to the legend about the connexion of the swallow,—'the dark bird,'—with his birth. He never was 'a king;' but his descendants here represented him as such.

³ All that is meant here is, that the territory of Shang was enlarged under Hsieh.

⁴ There is a reference here to Hsieh's appointment by Shun to be Minister of Instruction.

⁵ Hsiang-thû appears in the genealogical lists as grandson of Hsieh. We know nothing of him but what is related here.

The favour of God did not leave (Shang), And in Thang was found the fit object for its display. Thang was not born too late, And his wisdom and reverence daily advanced :—Brilliant was the influence of his character (on Heaven) for long. God he revered, And God appointed him to be the model for the nine regions.

He received the rank-tokens of the states, small and large, Which depended on him like the pendants of a banner :—So did he receive the blessing of Heaven. He was neither violent nor remiss, Neither hard nor soft. Gently he spread his instructions abroad, And all dignities and riches were concentrated in him.

He received the tribute of the states, small and large, And he supported them as a strong steed (does its burden) :—So did he receive the favour of Heaven. He displayed everywhere his valour, Unshaken, unmoved, Unterrified, unscared :—All dignities were united in him.

The martial king displayed his banner, And with reverence grasped his axe. It was like (the case of) a blazing fire which no one can repress. The root, with its three shoots, Could make no progress, no growth¹. The nine regions were effectually secured by Thang. Having smitten (the princes of) Wei and Kû, He dealt with (him of) Kün-wû and with K'ieh of Hsiâ.

Formerly, in the middle of the period (before

¹ By 'the root' we are to understand Thang's chief opponent, K'ieh, the last king of Hsiâ. K'ieh's three great helpers were 'the three shoots,'—the princes of Wei, Kû, and Kün-wû; but the exact sites of their principalities cannot be made out.

Thang), There was a time of shaking and peril¹.
But truly did Heaven (then) deal with him as a son,
And sent him down a high minister, Namely,
Â-hăng², Who gave his assistance to the king of
Shang.

ODE 5. THE YIN WŪ.

CELEBRATING THE WAR OF WŪ-TING AGAINST K'ING-K'ĤŪ, ITS SUCCESS,
AND THE GENERAL HAPPINESS AND VIRTUE OF HIS REIGN;—MADE,
PROBABLY, WHEN A SPECIAL AND PERMANENT TEMPLE WAS BUILT
FOR HIM AS THE 'HIGH AND HONOURED' KING OF SHANG.

The concluding lines indicate that the temple was made on the occasion which I thus assign to it. After Wū-ting's death, his spirit-tablet would be shrined in the ancestral temple, and he would have his share in the seasonal sacrifices; but several reigns would elapse before there was any necessity to make any other arrangement, so that his tablet should not be removed, and his share in the sacrifices not be discontinued. Hence the composition of the piece has been referred to the time of Tî-yî, the last but one of the kings of Shang.

Rapid was the warlike energy of (our king of)
Yin, And vigorously did he attack K'ing-K'ĤŪ³.

¹ We do not know anything of this time of decadence in the fortunes of Shang between Hsieh and Thang.

² Â-hăng is Î Yin, who plays so remarkable a part in the Shû, IV, Books iv, v, and vi.

³ K'ing, or K'ĤŪ, or K'ing-K'ĤŪ, as the two names are combined here, was a large and powerful half-savage state, having its capital in the present Wû-pei. So far as evidence goes, we should say, but for this ode, that the name of K'ĤŪ was not in use till long after the Shang dynasty. The name K'ing appears several times in 'the Spring and Autumn' in the annals of duke K'wang (B.C. 693 to 662), and then it gives place to the name K'ĤŪ in the first year of duke Hsî (B.C. 659), and subsequently disappears itself altogether. In consequence of this some critics make this piece out to have been composed under the K'au dynasty. The point cannot be fully cleared up; but on the whole I accept the words of the ode as sufficient proof against the silence of other documents.

Boldly he entered its dangerous passes, And brought the multitudes of *K'ing* together, Till the country was reduced under complete restraint:—Such was the fitting achievement of the descendant of Thang!

'Ye people,' (he said), 'of *K'ing-K'ü*, Dwell in the southern part of my kingdom. Formerly, in the time of Thang the Successful, Even from the *K'iang* of *Ti*¹, They dared not but come with their offerings; (Their chiefs) dared not but come to seek acknowledgment²:—Such is the regular rule of Shang.'

Heaven had given their appointments (to the princes), But where their capitals had been assigned within the sphere of the labours of *Yü*, For the business of every year they appeared before our king³, (Saying), 'Do not punish nor reprove us; We have not been remiss in our husbandry.'

When Heaven by its will is inspecting (the kingdom), The lower people are to be feared. (Our king) showed no partiality (in rewarding), no excess (in punishing); He dared not to allow himself in indolence:—So was his appointment (established)

¹ The *Ti K'iang*, or *K'iang* of *Ti*, still existed in the time of the Han dynasty, occupying portions of the present Kan-sü.

² The chiefs of the wild tribes, lying beyond the nine provinces of the kingdom, were required to present themselves once in their lifetime at the royal court. The rule, in normal periods, was for each chief to appear immediately after he had succeeded to the headship of his tribe.

³ The feudal lords had to appear at court every year. They did so, we may suppose, at the court of *Wü-ting*, the more so because of his subjugation of *K'ing-K'ü*.

over the states, And he made his happiness grandly secure.

The capital of Shang was full of order, The model for all parts of the kingdom. Glorious was (the king's) fame; Brilliant his energy. Long lived he and enjoyed tranquillity, And so he preserves us, his descendants.

We ascended the hill of *K'ing*¹, Where the pines and cypresses grew symmetrical. We cut them down and conveyed them here; We reverently hewed them square. Long are the projecting beams of pine; Large are the many pillars. The temple was completed,—the tranquil abode (of the martial king of Yin).

II. THE SACRIFICIAL ODES OF KÂU.

IN this division we have thirty-one sacrificial odes of Kâu, arranged in three decades, the third of which, however, contains eleven pieces. They belong mostly to the time of king Wăn, the founder of the Kâu dynasty, and to the reigns of his son and grandson, kings Wû and K'ăng. The decades are named from the name of the first piece in each.

The First Decade, or that of *K'ing Miào*.

ODE 1. THE *KHING* MIÃO.

CELEBRATING THE REVERENTIAL MANNER IN WHICH A SACRIFICE TO KING WĂN WAS PERFORMED, AND FURTHER PRAISING HIM.

Chinese critics agree in assigning this piece to the sacrifice mentioned in the Shû, in the end of the thirteenth Book of Part V, when, the building of Lo being finished, king K'ăng came to

¹ See on the last line but two of ode 3.

the new city, and offered a red bull to Wăn, and the same to Wû. It seems to me to have been sung in honour of Wăn, after the service was completed. This determination of the occasion of the piece being accepted, we should refer it to B. C. 1108.

Oh! solemn is the ancestral temple in its pure stillness. Reverent and harmonious were the distinguished assistants¹; Great was the number of the officers²:—(All) assiduous followers of the virtue of (king Wăn). In response to him in heaven, Grandly they hurried about in the temple. Distinguished is he and honoured, And will never be wearied of among men.

ODE 2. THE WEI THIEN KIH MING.

CELEBRATING THE VIRTUE OF KING WĂN AS COMPARABLE TO THAT OF HEAVEN, AND LOOKING TO HIM FOR BLESSING IN THE FUTURE.

According to the Preface, there is an announcement here of the realization of complete peace throughout the kingdom, and some of the old critics refer the ode to a sacrifice to king Wăn by the duke of Kâu, when he had completed the statutes for the new dynasty. But there is nothing to authorize a more definite argument of the contents than I have given.

The ordinances of Heaven,—How deep are they and unintermitting! And oh! how illustrious Was the singleness of the virtue of king Wăn³!

How does he (now) show his kindness? We will receive it, Striving to be in accord with him, our

¹ These would be the princes who were assembled on the occasion, and assisted the king in the service.

² That is, the officers who took part in the libations, prayers, and other parts of the sacrifice.

³ See what 3ze-sze says on these four lines in the Doctrine of the Mean, XXVI, par. 10.

king Wăn; And may his remotest descendant be abundantly the same!

ODE 3. THE WEI K'HING.

APPROPRIATE AT SOME SACRIFICE TO KING WĂN, AND CELEBRATING HIS STATUTES.

Nothing more can, with any likelihood of truth, be said of this short piece, which moreover has the appearance of being a fragment.

Clear and to be preserved bright, Are the statutes of king Wăn. From the first sacrifice (to him), Till now when they have issued in our complete state, They have been the happy omen of (the fortunes of) K'au.

ODE 4. THE LIEH WĂN.

A SONG IN PRAISE OF THE PRINCES WHO HAVE ASSISTED AT A SACRIFICE, AND ADMONISHING THEM.

The Preface says that this piece was made on the occasion of king K'häng's accession to the government, when he thus addressed the princes who had assisted him in the ancestral temple. K'ü Hsî considers that it was a piece for general use in the ancestral temple, to be sung when the king presented a cup to his assisting guests, after they had thrice presented the cup to the representatives of the dead. There is really nothing in it to enable us to decide in favour of either view.

Ye, brilliant and accomplished princes, Have conferred on me this happiness. Your favours to me are without limit, And my descendants will preserve (the fruits of) them.

Be not mercenary nor extravagant in your states, And the king will honour you. Thinking of this

great service, He will enlarge the dignity of your successors.

What is most powerful is the being the man:—
Its influence will be felt throughout your states.
What is most distinguished is the being virtuous:—
It will secure the imitation of all the princes. Ah!
the former kings cannot be forgotten!

ODE 5. THE THIEN 30.

APPROPRIATE TO A SACRIFICE TO KING THÂI.

We cannot tell what the sacrifice was; and the Preface, indeed, says that the piece was used in the seasonal sacrifices to all the former kings and dukes of the House of *Kâu*. King *Thái* was the grandfather of king *Wăn*, and, before he received that title, was known as 'the ancient duke *Than-fû*.' In B.C. 1327, he moved with his followers from *Pin*, an earlier seat of his House, and settled in the plain of *Khî*, about fifty *lî* to the north-east of the present district city of *Khî-shan*, in *Shen-hsi*.

Heaven made the lofty hill¹, And king *Thái*
brought (the country about) it under cultivation.
He made the commencement with it, And king
Wăn tranquilly (carried on the work), (Till) that
rugged (mount) *Khî* Had level roads leading to it.
May their descendants ever preserve it!

ODE 6. THE HÂO THIEN YÜ KHĂNG MING.

APPROPRIATE TO A SACRIFICE TO KING KHĂNG.

Khăng was the honorary title of *Sung*, the son and successor of king *Wû*, B.C. 1115 to 1079.

Heaven made its determinate appointment, Which
our two sovereigns received². King *Khăng* did not
dare to rest idly in it, But night and day enlarged

¹ Meaning mount *Khî*.

² *Wăn* and *Wû*.

its foundations by his deep and silent virtue. How did he continue and glorify (his heritage), Exerting all his heart, And so securing its tranquillity!

ODE 7. THE WO K'ANG.

APPROPRIATE TO A SACRIFICE TO KING W'AN, ASSOCIATED WITH HEAVEN,
IN THE HALL OF AUDIENCE.

There is, happily, an agreement among the critics as to the occasion to which this piece is referred. It took place in the last month of autumn, in the Hall of Audience, called also 'the Brilliant Hall,' and 'the Hall of Light.' We must suppose that the princes are all assembled at court, and that the king receives them in this hall. A sacrifice is then presented to God, and with him is associated king W'an, the two being the fountain from which, and the channel through which, the sovereignty had come to K'au.

I have brought my offerings, A ram and a bull.
May Heaven accept them¹!

I imitate and follow and observe the statutes of king W'an, Seeking daily to secure the tranquillity of the kingdom. King W'an, the Blessor, has descended on the right, and accepted (the offerings).

Do I not, night and day, Revere the majesty of Heaven, Thus to preserve (its favour)?

ODE 8. THE SHIH M'AI.

APPROPRIATE TO KING WU'S SACRIFICING TO HEAVEN, AND TO THE SPIRITS OF THE HILLS AND RIVERS, ON A PROGRESS THROUGH THE KINGDOM, AFTER THE OVERTHROW OF THE SHANG DYNASTY.

Here again there is an agreement among the critics. We find from the *Bo Kwan* and 'the Narratives of the States,' that the

¹ This is a prayer. The worshipper, it is said, in view of the majesty of Heaven, shrank from assuming that God would certainly accept his sacrifice. He assumes, below, that king W'an does so.

piece was, when those compilations were made, considered to be the work of the duke of K'âu; and, no doubt, it was made by him soon after the accession of Wû to the kingdom, and when he was making a royal progress in assertion of his being appointed by Heaven to succeed to the rulers of Shang. The 'I' in the fourteenth line is, most probably, to be taken of the duke of K'âu, who may have recited the piece on occasion of the sacrifices, in the hearing of the assembled princes and lords.

Now is he making a progress through his states ;
May Heaven deal with him as its son !

Truly are the honour and succession come from
it to the House of K'âu. To his movements All
respond with tremulous awe. He has attracted
and given rest to all spiritual beings¹, Even to
(the spirits of) the Ho and the highest hills.
Truly is the king our sovereign lord.

Brilliant and illustrious is the House of K'âu.
He has regulated the positions of the princes ;
He has called in shields and spears ; He has re-
turned to their cases bows and arrows². I will
cultivate admirable virtue, And display it through-
out these great regions. Truly will the king pre-
serve the appointment.

¹ 'All spiritual beings' is, literally, 'the hundred spirits,' meaning the spirits presiding, under Heaven, over all nature, and especially the spirits of the rivers and hills throughout the kingdom. Those of the Ho and the lofty mountains are mentioned, because if their spirits were satisfied with Wû, those of all other mountains and hills, no doubt, were so.

² Compare with these lines the last chapter of 'the Completion of the War' in the Shû.

ODE 9. THE K'IH KING.

AN ODE APPROPRIATE IN SACRIFICING TO THE KINGS WŪ, KH'ANG, AND KHANG.

The Chinese critics differ in the interpretation of this ode, the Preface and older scholars restricting it to a sacrifice to king WŪ, while K'ü Hsî and others find reference in it, as to me also seems most natural, to K'hang and Khang, who succeeded him.

The arm of king WŪ was full of strength; Irresistible was his ardour. Greatly illustrious were K'hang and Khang¹, Kinged by God.

When we consider how K'hang and Khang Grandly held all within the four quarters (of the kingdom), How penetrating was their intelligence!

The bells and drums sound in harmony; The sounding-stones and flutes blend their notes; Abundant blessing is sent down.

Blessing is sent down in large measure. Careful and exact is all our deportment; We have drunk, and we have eaten, to the full; Our happiness and dignity will be prolonged.

ODE 10. THE SZE W'AN.

APPROPRIATE TO ONE OF THE BORDER SACRIFICES, WHEN H'AU-K'Í WAS WORSHIPPED AS THE CORRELATE OF GOD, AND CELEBRATING HIM.

H'au-k'í was the same as K'hi, who appears in Part II of the Shû, as Minister of Agriculture to Yâo and Shun, and co-operating with

¹ If the whole piece be understood only of a sacrifice to WŪ, this line will have to be translated—'How illustrious was he, who completed (his great work), and secured its tranquillity.' We must deal similarly with the next line. This construction is very forced; nor is the text clear on the view of K'ü Hsî.

Yü in his labours on the flooded land. The name Hâu belongs to him as lord of Thái; that of Kî, as Minister of Agriculture. However the combination arose, Hâu-kî became historically the name of Kî of the time of Yáo and Shun, the ancestor to whom the kings of Káu traced their lineage. He was to the people the Father of Husbandry, who first taught men to plough and sow and reap. Hence, when the kings offered sacrifice and prayer to God at the commencement of spring for his blessing on the labours of the year, they associated Hâu-kî with him at the service.

O accomplished Hâu-kî, Thou didst prove thyself the correlate of Heaven. Thou didst give grain-food to our multitudes:—The immense gift of thy goodness. Thou didst confer on us the wheat and the barley, Which God appointed for the nourishment of all. And without distinction of territory or boundary, The rules of social duty were diffused throughout these great regions.

The Second Decade, or that of K'hsan Kung.

ODE 1. THE K'HSAN KUNG.

INSTRUCTIONS GIVEN TO THE OFFICERS OF HUSBANDRY.

The place of this piece among the sacrificial odes makes us assign it to the conclusion of some sacrifice; but what the sacrifice was we cannot tell. The Preface says that it was addressed, at the conclusion of the spring sacrifice to ancestors, to the princes who had been present and taken part in the service. K'ü Hsi says nothing but what I have stated in the above argument of the piece.

Ah! ah! ministers and officers, Reverently attend to your public duties. The king has given you perfect rules;—Consult about them, and consider them.

Ah! ah! ye assistants, It is now the end of

spring¹; And what have ye to seek for? (Only) how to manage the new fields and those of the third year. How beautiful are the wheat and the barley! The bright and glorious God Will in them give us a good year. Order all our men To be provided with their spuds and hoes :—Anon we shall see the sickles at work.

ODE 2. THE Î HSI.

FURTHER INSTRUCTIONS TO THE OFFICERS OF HUSBANDRY.

Again there is a difficulty in determining to what sacrifice this piece should be referred. The Preface says it was sung on the occasions of sacrifice by the king to God, in spring and summer, for a good year. But the note on the first two lines will show that this view cannot be accepted without modification.

Oh! yes, king *K'äng*² Brightly brought himself near². Lead your husbandmen To sow their various kinds of grain, Going vigorously to work

¹ It is this line which makes it difficult to determine after what sacrifice we are to suppose these instructions to have been delivered. The year, during the Hsiâ dynasty, began with the first month of spring, as it now does in China, in consequence of Confucius having said that that was the proper time. Under the Shang dynasty, it commenced a month earlier; and during the K'au period, it ought always to have begun with the new moon preceding the winter solstice,—between our November 22 and December 22. But in the writings of the K'au period we find statements of time continually referred to the calendar of Hsiâ,—as here.

² These first two lines are all but unmanageable. The old critics held that there was no mention of king *K'äng* in them; but the text is definite on this point. We must suppose that a special service had been performed at his shrine, asking him to intimate the day when the sacrifice after which the instructions were given should be performed; and that a directing oracle had been received.

on your private fields¹, All over the thirty lî².
Attend to your ploughing, With your ten thousand
men all in pairs.

ODE 3. THE *KÂU LÛ*.

CELEBRATING THE REPRESENTATIVES OF FORMER DYNASTIES, WHO
HAD COME TO COURT TO ASSIST AT A SACRIFICE IN THE ANCESTRAL
TEMPLE.

This piece may have been used when the king was dismissing his
distinguished guests in the ancestral temple. See the intro-
ductory note to this Part, pp. 300, 301.

A flock of egrets is flying, About the marsh
there in the west³. My visitors came, With an
(elegant) carriage like those birds.

There, (in their states), not disliked, Here, (in
Kâu), never tired of;—They are sure, day and
night, To perpetuate their fame.

¹ The mention of 'the private fields' implies that there were
also 'the public fields,' cultivated by the husbandmen in common,
in behalf of the government. As the people are elsewhere intro-
duced, wishing that the rain might first fall on 'the public fields,'
to show their loyalty, so the king here mentions only 'the private
fields,' to show his sympathy and consideration for the people.

² For the cultivation of the ground, the allotments of single
families were separated by a small ditch; ten allotments, by a
larger; a hundred, by what we may call a brook; a thousand, by
a small stream; and ten thousand, by a river. The space occupied
by 10,000 families formed a square of a little more than thirty-two
lî. We may suppose that this space was intended by the round
number of thirty lî in the text. So at least *K'ang Khang-k'ang*
explained it.

³ These two lines make the piece allusive. See the Intro-
duction, p. 279.

ODE 4. THE F'ANG NIEN.

AN ODE OF THANKSGIVING FOR A PLENTIFUL YEAR.

The Preface says the piece was used at sacrifices in autumn and winter. K'û Hsî calls it an ode of thanksgiving for a good year,—without any specification of time. He supposes, however, that the thanks were given to the ancient Sh'ân-n'ang, 'the father of Agriculture,' Hâu-k'î, 'the first Husbandman,' and the spirits presiding over the four quarters of the heavens. To this the imperial editors rightly demur, saying that the blessings which the piece speaks of could come only from God.

Abundant is the year with much millet and much rice; And we have our high granaries, With myriads, and hundreds of thousands, and millions (of measures in them); For spirits and sweet spirits, To present to our forefathers, male and female, And to supply all our ceremonies. The blessings sent down on us are of every kind.

ODE 5. THE Y'Ô K'Ô.

THE BLIND MUSICIANS OF THE COURT OF K'ÂU; THE INSTRUMENTS OF MUSIC; AND THEIR HARMONY.

The critics agree in holding that this piece was made on occasion of the duke of K'âu's completing his instruments of music for the ancestral temple, and announcing the fact at a grand performance in the temple of king W'ân. It can hardly be regarded as a sacrificial ode.

There are the blind musicians; there are the blind musicians; In the court of (the temple of) K'âu¹.

¹ The blind musicians at the court of K'âu were numerous. The blindness of the eyes was supposed to make the ears more acute in hearing, and to be favourable to the powers of the voice. In the Official Book of K'âu, III, i, par. 22, the enumeration of

There are (the music-frames with their) face-boards and posts, The high toothed-edge (of the former), and the feathers stuck (in the latter); With the drums, large and small, suspended from them; And the hand-drums and sounding-stones, the instrument to give the signal for commencing, and the stopper. These being all complete, the music is struck up. The pan-pipe and the double flute begin at the same time¹.

Harmoniously blend their sounds; In solemn unison they give forth their notes. Our ancestors will give ear. Our visitors will be there;—Long to witness the complete performance.

ODE 6. THE *KHIEN*.

SUNG IN THE LAST MONTH OF WINTER, AND IN SPRING, WHEN THE KING PRESENTED A FISH IN THE ANCESTRAL TEMPLE.

Such is the argument of this piece given in the Preface, and in which the critics generally concur. In the *Lî Kî*, IV, vi, 49, it is recorded that the king, in the third month of winter, gave orders to his chief fisher to commence his duties, and went himself to see his operations. He partook of the fish first captured, but previously presented some as an offering in the back apartment of the ancestral temple. In the third month of spring, again, when the sturgeons began to make their appearance (*Lî Kî*, IV, i, 25), the king presented one in the same place. On

these blind musicians gives 2 directors of the first rank, and 4 of the second; 40 performers of the first grade, 100 of the second, and 160 of the third; with 300 assistants who were possessed of vision. But it is difficult not to be somewhat incredulous as to this great collection of blind musicians about the court of *Kâu*.

¹ All the instruments here enumerated were performed on in the open court below the hall. Nothing is said of the stringed instruments which were used in the hall itself; nor is the enumeration of the instruments in the courtyard complete.

these passages, the prefatory notice was, no doubt, constructed. Choice specimens of the earliest-caught fish were presented by the sovereign to his ancestors, as an act of duty, and an acknowledgment that it was to their favour that he and the people were indebted for the supplies of food, which they received from the waters.

Oh! in the *K'hi* and the *K'ü*, There are many fish in the warrens;—Sturgeons, large and snouted, Thyrssas, yellow-jaws, mud-fish, and carp;—For offerings, for sacrifice, That our bright happiness may be increased.

ODE 7. THE YUNG.

APPROPRIATE, PROBABLY, AT A SACRIFICE BY KING WÜ TO HIS FATHER WÄN.

From a reference in the *Analects*, III, ii, to an abuse of this ode in the time of Confucius, we learn that it was sung when the sacrificial vessels and their contents were being removed.

They come full of harmony; They are here in all gravity;—The princes assisting, While the Son of Heaven looks profound.

(He says), 'While I present (this) noble bull, And they assist me in setting forth the sacrifice, O great and august Father, Comfort me, your filial son.

'With penetrating wisdom thou didst play the man, A sovereign with the gifts both of peace and war, Giving rest even to great Heaven¹, And ensuring prosperity to thy descendants.

¹ To explain this line one commentator refers to the seventh stanza of the first piece in the Major Odes of the Kingdom, where it is said, 'God surveyed the four quarters of the kingdom, seeking for some one to give settlement and rest to the people;' and adds, 'Thus what Heaven has at heart is the settlement of the people. When they have rest given to them, then Heaven is at rest.'

'Thou comforest me with the eyebrows of longevity; Thou makest me great with manifold blessings, I offer this sacrifice to my meritorious father, And to my accomplished mother¹.'

ODE 8. THE 3ÂI HSIEN.

APPROPRIATE TO AN OCCASION WHEN THE FEUDAL PRINCES HAD BEEN ASSISTING KING KHĂNG AT A SACRIFICE TO HIS FATHER.

They appeared before their sovereign king, To seek from him the rules (they were to observe). With their dragon-emblazoned banners, flying bright, The bells on them and their front-boards tinkling, And with the rings on the ends of the reins glittering, Admirable was their majesty and splendour.

He led them to appear before his father shrined on the left², Where he discharged his filial duty, and presented his offerings;—That he might have granted to him long life, And ever preserve (his dignity). Great and many are his blessings. They are the brilliant and accomplished princes, Who cheer him with his many sources of happiness,

¹ At sacrifices to ancestors, the spirit tablets of wives were placed along with those of their husbands in their shrines, so that both shared in the honours of the service. So it is now in the imperial ancestral temple in Peking. The 'accomplished mother' here would be Thái Sze, celebrated often in the pieces of the first Book of Part I, and elsewhere.

² Among the uses of the services of the ancestral temple, specified by Confucius and quoted on p. 302, was the distinguishing the order of descent in the royal House. According to the rules for that purpose, the characters here used enable us to determine the subject of this line as king Wû, in opposition to his father Wăn.

Enabling him to perpetuate them in their brightness as pure blessing.

ODE 9. THE YÛ KHO.

CELEBRATING THE DUKE OF SUNG ON ONE OF HIS APPEARANCES
AT THE CAPITAL TO ASSIST AT THE SACRIFICE IN THE ANCESTRAL
TEMPLE OF KÂU;—SHOWING HOW HE WAS ESTEEMED AND CHERISHED
BY THE KING.

The mention of the white horses here in the chariot of the visitor sufficiently substantiates the account in the Preface that he was the famous count of Wei, mentioned in the Shu, IV, xi, and whose subsequent investiture with the duchy of Sung, as the representative of the line of the Shang kings, is also related in the Shû, V, viii. With the dynasty of Shang white had been the esteemed and sacred colour, as red was with Kâu, and hence the duke had his carriage drawn by white horses. 'The language,' says one critic, 'is all in praise of the visitor, but it was sung in the temple, and is rightly placed therefore among the Sung.' There is, in the last line, an indication of the temple in it.

The noble visitor! The noble visitor! Drawn,
like his ancestors, by white horses! The reverent
and dignified, Polished members of his suite!

The noble guest will stay (but) a night or two!
The noble guest will stay (but) two nights or four!
Give him ropes, To bind his horses¹.

I will convoy him (with a parting feast); I will
comfort him in every possible way. Adorned with
such great dignity, It is very natural that he should
be blessed.

¹ These four lines simply express the wish of the king to detain his visitor, from the delight that his presence gave him. Compare the similar language in the second ode of the fourth decade of Part II.

ODE 10. THE WŪ.

SUNG IN THE ANCESTRAL TEMPLE TO THE MUSIC REGULATING THE
DANCE IN HONOUR OF THE ACHIEVEMENTS OF KING WŪ.

This account of the piece, given in the Preface, is variously corroborated, and has not been called in question by any critic. Perhaps this brief ode was sung as a prelude to the dance, or it may be that the seven lines are only a fragment. This, indeed, is most likely, as we have several odes in the next decade, all said to have been used at the same occasion.

Oh! great wast thou, O king Wŭ, Displaying
the utmost strength in thy work. Truly accomplished was king Wăn, Opening the path for his successors. Thou didst receive the inheritance from him. Thou didst vanquish Yin, and put a stop to its cruelties;—Effecting the firm establishment of thy merit.

The Third Decade, or that of Min Yü Hsião 3ze.

ODE 1. THE MIN YÜ.

APPROPRIATE TO THE YOUNG KING KHĀNG, DECLARING HIS SENTIMENTS
IN THE TEMPLE OF HIS FATHER.

The speaker in this piece is, by common consent, king *Khāng*. The only question is as to the date of its composition, whether it was made for him, in his minority, on his repairing to the temple when the mourning for his father was completed, or after the expiration of the regency of the duke of Kâu. The words 'little child,' according to their usage, are expressive of humility and not of age. They do not enable us to determine the above point.

Alas for me, who am a little child, On whom has devolved the unsettled state! Solitary am I and full of distress. Oh! my great Father, All thy life long, thou wast filial.

Thou didst think of my great grandfather, (Seeing

him, as it were) ascending and descending in the court, I, the little child, Day and night will be as reverent.

Oh! ye great kings, As your successor, I will strive not to forget you.

ODE 2. THE FANG LO.

THE YOUNG KING TELLS OF HIS DIFFICULTIES AND INCOMPETENCIES; ASKS FOR COUNSEL TO KEEP HIM TO COPY THE EXAMPLE OF HIS FATHER; STATES HOW HE MEANT TO DO SO; AND CONCLUDES WITH AN APPEAL OR PRAYER TO HIS FATHER.

This seems to be a sequel to the former ode. We can hardly say anything about it so definite as the statement in the Preface, that it relates to a council held by *K'hang* and his ministers in the ancestral temple.

I take counsel at the beginning of my (rule),
How I can follow (the example of) my shrined father. Ah! far-reaching (were his plans), And I am not yet able to carry them out. However I endeavour to reach to them, My continuation of them will still be all-deflected. I am a little child, Unequal to the many difficulties of the state. Having taken his place, (I will look for him) to go up and come down in the court, To ascend and descend in the house. Admirable art thou, O great Father, (Condescend) to preserve and enlighten me.

ODE 3. THE KING KIH.

KING *K'hang* SHOWS HIS SENSE OF WHAT WAS REQUIRED OF HIM TO PRESERVE THE FAVOUR OF HEAVEN, A CONSTANT JUDGE; INTIMATES HIS GOOD PURPOSES; AND ASKS THE HELP OF HIS MINISTERS TO BE ENABLED TO PERFORM THEM.

Let me be reverent! Let me be reverent! (The way of) Heaven is evident, And its appointment

is not easily preserved¹. Let me not say that it is high aloft above me. It ascends and descends about our doings; It daily inspects us wherever we are.

I am a little child, Without intelligence to be reverently (attentive to my duties); But by daily progress and monthly advance, I will learn to hold fast the gleams (of knowledge), till I arrive at bright intelligence. Assist me to bear the burden (of my position), And show me how to display a virtuous conduct.

ODE 4. THE HSIÁO PÌ.

KING KHĀNG ACKNOWLEDGES THAT HE HAD ERRED, AND STATES HIS PURPOSE TO BE CAREFUL IN THE FUTURE; HE WILL GUARD AGAINST THE SLIGHT BEGINNINGS OF EVIL; AND IS PENETRATED WITH A SENSE OF HIS OWN INCOMPETENCIES.

This piece has been considered by some critics as the conclusion of the council in the ancestral temple, with which the previous two also are thought to be connected. The Preface says that the king asks in it for the assistance of his ministers, but no such request is expressed. I seem myself to see in it, with Sû K'eh and others, a reference to the suspicions which Khāng at one time, we know, entertained of the fidelity of the duke of K'au, when he was inclined to believe the rumours spread against him by his other uncles, who joined in rebellion with the son of the last king of Shang.

I condemn myself (for the past), And will be on my guard against future calamity. I will have nothing to do with a wasp, To seek for myself its painful sting. At first indeed it seemed to be

¹ The meaning is this: 'The way of Heaven is very clear, to bless the good, namely, and punish the bad. But its favour is thus dependent on men themselves, and hard to preserve.'

(but) a wren¹, But it took wing, and became a large bird. I am unequal to the many difficulties of the kingdom, And am placed in the midst of bitter experiences.

ODE 5. THE 3AI SHŪ.

THE CULTIVATION OF THE GROUND FROM THE FIRST BREAKING OF IT UP, TILL IT YIELDS ABUNDANT HARVESTS;—AVAILABLE SPECIALLY FOR SACRIFICES AND FESTIVE OCCASIONS. WHETHER INTENDED TO BE USED ON OCCASIONS OF THANKSGIVING, OR IN SPRING WHEN PRAYING FOR A GOOD YEAR, CANNOT BE DETERMINED.

The Preface says that this ode was used in spring, when the king in person turned up some furrows in the field set apart for that purpose, and prayed at the altars of the spirits of the land and the grain, for an abundant year. K'ü Hsî says he does not know on what occasion it was intended to be used; but comparing it with the fourth ode of the second decade, he is inclined to rank it with that as an ode of thanksgiving. There is nothing in the piece itself to determine us in favour of either view. It brings before us a series of pleasing pictures of the husbandry of those early times. The editors of the imperial edition say that its place in the Sung makes it clear that it was an accompaniment of some royal sacrifice. We need not controvert this; but the poet evidently singled out some large estate, and describes the labour on it, from the first bringing it under cultivation to the state in which it was before his eyes, and concludes by saying that the picture which he gives of it had long been applicable to the whole country.

They clear away the grass and the bushes; And the ground is laid open by their ploughs.

In thousands of pairs they remove the roots, Some in the low wet land, some along the dykes.

¹ The Chinese characters here mean, literally, 'peach-tree insect,' or, as Dr. Williams has it, 'peach-bug.' Another name for the bird is 'the clever wife,' from the artistic character of its nest, which would point it out as the small 'tailor bird.' But the name is applied to various small birds.

There are the master and his eldest son; His younger sons, and all their children; Their strong helpers, and their hired servants. How the noise of their eating the viands brought to them resounds! (The husbands) think lovingly of their wives; (The wives) keep close to their husbands. (Then) with their sharp ploughshares They set to work on the south-lying acres.

They sow their various kinds of grain, Each seed containing in it a germ of life.

In unbroken lines rises the blade, And, well nourished, the stalks grow long.

Luxuriant looks the young grain, And the weed-ers go among it in multitudes.

Then come the reapers in crowds, And the grain is piled up in the fields, Myriads, and hundreds of thousands, and millions (of stacks); For spirits and for sweet spirits, To offer to our ancestors, male and female, And to provide for all ceremonies.

Fragrant is their aroma, Enhancing the glory of the state. Like pepper is their smell, To give comfort to the aged.

It is not here only that there is this (abundance); It is not now only that there is such a time:—From of old it has been thus.

ODE 6. THE LIANG SZE.

PRESUMABLY, AN ODE OF THANKSGIVING IN THE AUTUMN TO THE SPIRITS OF THE LAND AND GRAIN.

Very sharp are the excellent shares, With which they set to work on the south-lying acres.

They sow their various kinds of grain, Each seed containing in it a germ of life.

There are those who come to see them, With
their baskets round and square, Containing the
provisions of millet.

With their light splint hats on their heads, They
ply their hoes on the ground, Clearing away the
smartweed on the dry land and wet.

The weeds being decayed, The millets grow
luxuriantly.

They fall rustling before the reapers. The
gathered crop is piled up solidly, High as a wall,
United together like the teeth of a comb; And
the hundred houses are opened (to receive the
grain)¹.

Those hundred houses being full, The wives and
children have a feeling of repose.

(Now) we kill this black-muzzled tawny bull²,
with his crooked horns, To imitate and hand down,
To hand down (the observances of) our ancestors.

ODE 7. THE SZE Í.

AN ODE APPROPRIATE TO THE PREPARATIONS AND PROGRESS OF A
FEAST AFTER A SACRIFICE.

The Preface and the editors of the Yung-k'hang Shih say that the
piece has reference to the entertainment given, the day after a

¹ 'The hundred houses,' or chambers in a hundred family residences, are those of the hundred families, cultivating the space which was bounded by a brook;—see note on the second ode of the preceding decade. They formed a society, whose members helped one another in their field work, so that their harvest might be said to be carried home at the same time. Then would come the threshing or treading, and winnowing, after which the grain would be brought into the houses.

² It has been observed that under the K'au dynasty, red was the

sacrifice, in the ancestral temple, to the personators of the dead, described on p. 301. *K'ü Hsi* denies this, and holds simply that it belongs to the feast after a sacrifice, without further specifying what sacrifice. The old view is probably the more correct.

In his silken robes, clean and bright, With his cap on his head, looking so respectful, From the hall he goes to the foot of the stairs, And (then) from the sheep to the oxen¹. (He inspects) the tripods, large and small, And the curved goblet of rhinoceros horn². The good spirits are mild, (But) there is no noise, no insolence:—An auspice (this) of great longevity.

ODE 8. THE *K'Ö*.

AN ODE IN PRAISE OF KING WÜ, AND RECOGNISING THE DUTY TO FOLLOW HIS COURSE.

This was sung, according to the Preface, at the conclusion of the dance in honour of king Wü;—see on the last piece of the second decade.

Oh! powerful was the king's army, But he nursed it, in obedience to circumstances, while the

colour of the sacrificial victims. So it was for the ancestral temple; but in sacrificing to the spirits of the land and grain, the victim was a 'yellow' bull with black lips.

¹ The subject of these lines must be an ordinary officer, for to such the silk robes and a purple cap were proper, when he was assisting at the sacrifices of the king or of a feudal prince. There were two buildings outside the principal gate leading to the ancestral temple, and two corresponding inside, in which the personators of the departed ancestors were feasted. We must suppose the officer in question descending from the upper hall to the vestibule of the gate, to inspect the dishes, arranged for the feast, and then proceeding to see the animals, and the tripods for boiling the flesh, &c.

² The goblet of rhinoceros horn was to be drained, as a penalty, by any one offending at the feast against the rules of propriety; but here there was no occasion for it.

time was yet dark. When the time was clearly bright, He thereupon donned his grand armour. We have been favoured to receive What the martial king accomplished. To deal aright with what we have inherited, We have to be sincere imitators of thy course, (O king).

ODE 9. THE HWAN.

CELEBRATING THE MERIT AND SUCCESS OF KING WŪ.

According to a statement in the *3o Kwan*, this piece also was sung in connexion with the dance of WŪ. The Preface says it was used in declarations of war, and in sacrificing to God and the Father of War. Perhaps it came to be used on such occasions; but we must refer it in the first place to the reign of king K'ang.

There is peace throughout our myriad regions. There has been a succession of plentiful years:—Heaven does not weary in its favour. The martial king WŪ Maintained (the confidence of) his officers, And employed them all over the kingdom, So securing the establishment of his family. Oh! glorious was he in the sight of Heaven, Which kinged him in the room (of Shang).

ODE 10. THE LÂI.

CELEBRATING THE PRAISE OF KING WÂN.

This is the only account of the piece that can be given from itself. The *3o Kwan*, however, refers it to the dance of king WŪ; and the Preface says it contains the words with which WŪ accompanied his grant of fiefs and appanages in the ancestral temple to his principal followers.

King Wân laboured earnestly:—Right is it we should have received (the kingdom). We will diffuse (his virtue), ever cherishing the thought of

him; Henceforth we will seek only the settlement (of the kingdom). It was he through whom came the appointment of *K'âu*. Oh! let us ever cherish the thought of him.

ODE 11. THE PAN.

CELEBRATING THE GREATNESS OF *K'ÂU*, AND ITS FIRM POSSESSION OF THE KINGDOM, AS SEEN IN THE PROGRESSES OF ITS REIGNING SOVEREIGN.

In the eighth piece of the first decade we have an ode akin to this, relating a tentative progress of king *Wû*, to test the acceptance of his sovereignty. This is of a later date, and should be referred, probably, to the reign of king *K'hăng*, when the dynasty was fully acknowledged. Some critics, however, make it, like the three preceding, a portion of what was sung at the *Wû* dance.

Oh! great now is *K'âu*. We ascend the high hills, Both those that are long and narrow, and the lofty mountains. Yes, and (we travel) along the regulated Ho, All under the sky, Assembling those who now respond to me. Thus it is that the appointment belongs to *K'âu*.

III. THE PRAISE ODES OF *Lû*.

It is not according to the truth of things to class the Sung of *Lû* among the sacrificial odes, and I do not call them such. *K'û Hsi* says:—'King *K'hăng*, because of the great services rendered by the duke of *K'âu*, granted to *Po-k'in*, (the duke's eldest son, and first marquis of *Lû*), the privilege of using the royal ceremonies and music, in consequence of which *Lû* had its Sung, which were sung to the music in its ancestral temple. Afterwards, they made in *Lû* other odes in praise of their rulers,

which they also called Sung.' In this way it is endeavoured to account for there being such pieces in this part of the Shih as the four in this division of it. Confucius, it is thought, found them in Lŭ, bearing the name of Sung, and so he classed them with the true sacrificial odes, bearing that designation. If we were to admit, contrary to the evidence in the case, that the Shih was compiled by Confucius, this explanation of the place of the Sung of Lŭ in this Part would not be complimentary to his discrimination.

Whether such a privilege as *K'ü* states was really granted to the first marquis of Lŭ, is a point very much controverted. Many contend that the royal ceremonies were usurped in the state, in the time of duke Hsi (B.C. 659 to 627). But if this should be conceded, it would not affect the application to the odes in this division of the name of Sung. They are totally unlike the Sung of Shang and of *K'âu*. It has often been asked why there are no Fǎng of Lŭ in the first Part of the Shih. The pieces here are really the Fǎng of Lŭ, and may be compared especially with the Fǎng of Pin.

Lŭ was one of the states in the east, having its capital in *K'ü-fâu*, which is still the name of a district in the department of Yen-k'au, Shan-tung. According to *K'ü*, king *K'häng* invested the duke of *K'âu*'s eldest son with the territory. According to Sze-má *K'hien*, the duke of *K'âu* was himself appointed marquis of Lŭ; but being unable to go there in consequence of his duties at the royal court, he sent his son instead. After the expiration of his regency, the territory was largely augmented, but he still remained in *K'âu*.

I pass over the first two odes, which have no claim to a place among 'sacred texts.' And only in one stanza of the third is there the expression of a religious sentiment. I give it entire, however.

ODE 3. THE PHAN SHUI.

IN PRAISE OF SOME MARQUIS OF LŪ, CELEBRATING HIS INTEREST IN THE STATE COLLEGE, WHICH HE HAD, PROBABLY, REPAIRED, TESTIFYING HIS VIRTUES, AND AUSPICING FOR HIM A COMPLETE TRIUMPH OVER THE TRIBES OF THE HW'AI, WHICH WOULD BE CELEBRATED IN THE COLLEGE.

The marquis here celebrated was, probably, Shǎn, or 'duke Hsi,' mentioned above. The immediate occasion of its composition

must have been some opening or inauguration service in connexion with the repair of the college.

1. Pleasant is the semicircular water¹, And we gather the cress about it. The marquis of Lû is coming to it, And we see his dragon-figured banner. His banner waves in the wind, And the bells of his horses tinkle harmoniously. Small and great, All follow the prince in his progress to it.

2. Pleasant is the semicircular water, And we gather the pondweed in it. The marquis of Lû has come to it, With his horses so stately. His horses are grand; His fame is brilliant. Blandly he looks and smiles; Without any impatience he delivers his instructions.

3. Pleasant is the semicircular water, And we gather the mallows about it. The marquis of Lû has come to it, And in the college he is drinking. He is drinking the good spirits. May there be

¹ It is said in the tenth ode of the first decade of the Major Odes of the Kingdom, that king Wû in his capital of Hào built 'his hall with its circlet of water.' That was the royal college built in the middle of a circle of water; each state had its grand college with a semicircular pool in front of it, such as may now be seen in front of the temples of Confucius in the metropolitan cities of the provinces. It is not easy to describe all the purposes which the building served. In this piece the marquis of Lû appears feasting in it, delivering instructions, taking counsel with his ministers, and receiving the spoils and prisoners of war. The *Lî Kî*, VIII, ii, 7, refers to sacrifices to Hâu-kî in connexion with the college of Lû. There the officers of the state in autumn learned ceremonies; in winter, literary studies; in spring and summer, the use of arms; and in autumn and winter, dancing. There were celebrated trials of archery; there the aged were feasted; there the princes held council with their ministers. The college was in the western suburb of each capital.

given to him such old age as is seldom enjoyed!
May he accord with the grand ways, So subduing
to himself all the people!

4. Very admirable is the marquis of Lû, Reverently displaying his virtue, And reverently watching over his department, The pattern of the people. With great qualities, both civil and martial, Brilliantly he affects his meritorious ancestors¹. In everything entirely filial, He seeks the blessing that is sure to follow.

5. Very intelligent is the marquis of Lû, Making his virtue illustrious. He has made this college with its semicircle of water, And the tribes of the Hwâi will submit to him². His martial-looking tiger-leaders Will here present the left ears (of their foes)³. His examiners, wise as Kâo-yâo⁴, Will here present the prisoners.

6. His numerous officers, Men who have enlarged their virtuous minds, With martial energy conducting their expedition, Will drive far away those tribes of the east and south. Vigorous and

¹ The meaning is that the fine qualities of the marquis 'reached to' and affected his ancestors in their spirit-state, and would draw down their protecting favour. Their blessing, seen in his prosperity, was the natural result of his filial piety.

² The Hwâi rises in the department of Nan-yang, Ho-nan, and flows eastward to the sea. South of it, down to the time of this ode, were many rude and wild tribes that gave frequent occupation to the kings of Kâu.

³ When prisoners refused to submit, their left ears were cut off, and shown as trophies.

⁴ The ancient Shun's Minister of Crime. The 'examiners' were officers who questioned the prisoners, especially the more important of them, to elicit information, and decide as to the amount of their guilt and punishment.

grand, Without noise or display, Without appeal to the judges¹, They will here present (the proofs of) their merit.

7. How they draw their bows adorned with bone! How their arrows whiz forth! Their war chariots are very large! Their footmen and charioteers never weary! They have subdued the tribes of Hwâi, And brought them to an unrebelling submission. Only lay your plans securely, And all the tribes of the Hwâi will be won².

8. They come flying on the wing, those owls, And settle on the trees about the college; They eat the fruit of our mulberry trees, And salute us with fine notes³. So awakened shall be those tribes of the Hwâi. They will come presenting their precious things, Their large tortoises, and their elephants' teeth, And great contributions of the southern metals⁴.

¹ The 'judges' decided all questions of dispute in the army, and on the merits of different men who had distinguished themselves.

² In this stanza the poet describes a battle with the wild tribes, as if it were going on before his eyes.

³ An owl is a bird with a disagreeable scream, instead of a beautiful note; but the mulberries grown about the college would make them sing delightfully. And so would the influence of Lû, going forth from the college, transform the nature of the tribes about the Hwâi.

⁴ That is, according to 'the Tribute of Yü,' in the Shû, from King-kâu and Yang-kâu.

ODE 4. THE PÎ KUNG.

IN PRAISE OF DUKE HSÏ, AND AUSPICING FOR HIM A MAGNIFICENT CAREER OF SUCCESS, WHICH WOULD MAKE LÛ ALL THAT IT HAD EVER BEEN:—WRITTEN, PROBABLY, ON AN OCCASION WHEN HSÏ HAD REPAIRED THE TEMPLES OF THE STATE, OF WHICH PIOUS ACT HIS SUCCESS WOULD BE THE REWARD.

There is no doubt that duke Hsï is the hero of this piece. He is mentioned in the third stanza as 'the son of duke K'wang,' and the Hsï-sze referred to in the last stanza as the architect under whose superintendence the temples had been repaired was his brother, whom we meet with elsewhere as 'duke's son, Yü.' The descriptions of various sacrifices prove that the lords of Lû, whether permitted to use royal ceremonies or not, did really do so. The writer was evidently in a poetic rapture as to what his ruler was, and would do. The piece is a genuine bardic effusion.

The poet traces the lords of Lû to Kiang Yüan and her son Hâu-ki. He then comes to the establishment of the K'au dynasty, and under it of the marquissate of Lû; and finally to duke Hsï, dilating on his sacrificial services, the military power of Lû, and the achievements which he might be expected to accomplish in subjugating all the territory lying to the east, and a long way south, of Lû.

1. How pure and still are the solemn temples,
In their strong solidity and minute completeness!
Highly distinguished was Kiang Yüan¹, Of virtue
undeflected. God regarded her with favour, And
without injury or hurt, Immediately, when her
months were completed, She gave birth to Hâu-ki!
On him were conferred all blessings,—(To know)
how the (ordinary) millet ripened early, and the
sacrificial millet late; How first to sow pulse

¹ About Kiang Yüan and her conception and birth of Hâu-ki, see the first piece in the third decade of the Major Odes of the Kingdom. There also Hâu-ki's teaching of husbandry is more fully described.

and then wheat. Anon he was invested with an inferior state, And taught the people how to sow and to reap, The (ordinary) millet and the sacrificial, Rice and the black millet; Ere long over the whole country :— (Thus) continuing the work of Yü.

2. Among the descendants of Hâu-k'i, There was king Thài¹, Dwelling on the south of (mount) K'hi, Where the clipping of Shang began. In process of time Wăn and Wû Continued the work of king Thài, And (the purpose of) Heaven was carried out in its time, In the plain of Mû². 'Have no doubts, no anxieties,' (it was said), 'God is with you³.' Wû disposed of the troops of Shang; He and his men equally shared in the achievement. (Then) king (K'hang) said, 'My uncle⁴, I will set up your eldest son, And make him marquis of Lû. I will greatly enlarge your territory there, To be a help and support to the House of K'au.'

3. Accordingly he appointed (our first) duke of Lû, And made him marquis in the east, Giving him the hills and rivers, The lands and fields, and the attached states⁵. The (present) descendant of the duke of K'au, The son of duke K'wang, With dragon-emblazoned banner, attends the sacrifices, (Grasping) his six reins soft and pliant. In spring

¹ See on the Sacrificial Odes of K'au, decade i, ode 5.

² See the Shû, V, iii.

³ Shang-fû, one of Wû's principal leaders, encouraged him at the battle of Mû with these words.

⁴ That is, the duke of K'au.

⁵ That is, small territories, held by chiefs of other surnames, but acknowledging the jurisdiction of the lords of Lû, and dependent on them for introduction to the royal court.

and autumn he is not remiss; His offerings are all without error¹. To the great and sovereign God, And to his great ancestor Hâu-k'î, He offers the victims, red and pure². They enjoy, they approve, And bestow blessings in large number. The duke of K'âu, and (your other) great ancestors, Also bless you.

4. In autumn comes the sacrifice of the season³, But the bulls for it have had their horns capped in summer⁴; They are the white bull and the red one⁵. (There are) the bull-figured goblet in its dignity⁶; Roast pig, minced meat, and soups; The dishes of bamboo and wood, and the large stands⁷, And the dancers all complete. The filial descendant

¹ These lines refer to the seasonal sacrifices in the temple of ancestors, two seasons being mentioned for all the four, as in some of the odes of Shang.

² From the seasonal sacrifices the poet passes to the sacrifice to God at the border altar in the spring,—no doubt the same which is referred to in the last ode of the first decade of the Sacrificial Odes of K'âu.

³ The subject of the seasonal sacrifices is resumed.

⁴ A piece of wood was fixed across the horns of the victim-bulls, to prevent their injuring them by pushing or rubbing against any hard substance. An animal injured in any way was not fit to be used in sacrifice.

⁵ In sacrificing to the duke of K'âu, a white bull was used by way of distinction. His great services to the dynasty had obtained for him the privilege of being sacrificed to with royal ceremonies. A white bull, such as had been offered to the kings of Shang, was therefore devoted to him; while for Po-k'îin, and the other marquises (or dukes as spoken of by their own subjects), a victim of the orthodox K'âu colour was employed.

⁶ This goblet, fashioned in the shape of a bull, or with a bull pictured on it, must have been well known in connexion with these services.

⁷ 'The large stand' was of a size to support half the roasted body of a victim.

will be blessed. (Your ancestors) will make you gloriously prosperous, They will make you long-lived and good, To preserve this eastern region, Long possessing the state of Lû, Unwaning, un-fallen, Unshaken, undisturbed! They will make your friendship with your three aged (ministers)¹ Like the hills, like the mountains.

5. Our prince's chariots are a thousand, And (in each) are (the two spears with their) vermilion tassels, and (the two bows with their) green bands. His footmen are thirty thousand, With shells on vermilion strings adorning their helmets². So numerous are his ardent followers, To deal with the tribes of the west and north, And to punish those of *King* and *Shû*³, So that none of them will dare to withstand us. (The spirits of your ancestors) shall make you grandly prosperous; They

¹ Referring, probably, to the three principal ministers of the state.

² These lines describe Hsi's resources for war. A thousand chariots was the regular force which a great state could at the utmost bring into the field. Each chariot contained three mailed men;—the charioteer in the middle, a spearman on the right, and an archer on the left. Two spears rose aloft with vermilion tassels, and there were two bows, bound with green bands to frames in their cases. Attached to every chariot were seventy-two foot-soldiers and twenty-five followers, making with the three men in it, 100 in all; so that the whole force would amount to 100,000 men. But in actual service the force of a great state was restricted to three 'armies' or 375 chariots, attended by 37,500 men, of whom 27,500 were foot-soldiers, put down here in round numbers as 30,000.

³ *King* is the *King-khû* of the last of the Sacrificial Odes of Shang, and the name *Shû* was applied to several half-civilized states to the east of it, which it brought, during the *Khün Khû* period, one after another under its jurisdiction.

shall make you long-lived and wealthy. The hoary hair and wrinkled back, Marking the aged men, shall always be in your service. They shall grant you old age, ever vigorous, For myriads and thousands of years, With the eyebrows of longevity, and ever unharmed.

6. The mountain of Thái is lofty, Looked up to by the state of Lû¹. We grandly possess also Kwei and Măng²; And we shall extend to the limits of the east, Even the states along the sea. The tribes of the Hwâi will seek our alliance; All will proffer their allegiance:—Such shall be the achievements of the marquis of Lû.

7. He shall maintain the possession of Hû and Yi³, And extend his sway to the regions of Hsü⁴, Even to the states along the sea. The tribes of the Hwâi, the Man, and the Mo⁵, And those tribes (still more) to the south, All will proffer their allegiance;—Not one will dare not to answer to his call, Thus showing their obedience to the marquis of Lû.

8. Heaven will give great blessing to our prince, So that with the eyebrows of longevity he shall

¹ Mount Thái is well known, the eastern of the four great mountains of China in the time of Shun. It is in the department of Thái-an, Shan-tung.

² These were two smaller hills in Lû.

³ These were two hills of Lû, in the present district of 3âu.

⁴ Hsü was the name of one of Yü's nine provinces, embracing portions of the present Shan-tung, Kiang-sü, and An-hui.

⁵ Mo was properly the name of certain wild tribes in the north, as Man was that of the tribes of the south. But we cannot suppose any tribes to be meant here but such as lay south of Lû.

maintain Lû. He shall possess *Kang* and *Hsü*¹,
 And recover all the territory of the duke of *K'âu*.
 Then shall the marquis of Lû feast and be glad,
 With his admirable wife and aged mother; With
 his excellent ministers and all his (other) officers².
 Our region and state shall he hold, Thus receiving
 many blessings, To hoary hair, and with teeth ever
 renewed like a child's.

9. The pines of *3û-lâi*³, And the cypresses of
*Hsin-fû*³, Were cut down and measured, With
 the cubit line and the eight cubits' line. The pro-
 jecting beams of pine were made very large; The
 grand inner apartments rose vast. Splendid look
 the new temples, The work of *Hsi-sze*, Very
 wide and large, Answering to the expectations of
 all the people.

¹ *Kang* was a city with some adjacent territory, in the present district of *Thăng*, that had been taken from Lû by *K'hi*. *Hsü*, called in the Spring and Autumn 'the fields of *Hsü*,' was west from Lû, and had been granted to it as a convenient place for its princes to stop at on their way to the royal court; but it had been sold or parted with to *K'ang* in the first year of duke *Hwan* (B.C. 711). The poet desires that *Hsi* should recover these and all other territory which had at any time belonged to Lû.

² He would feast with the ladies in the inner apartment of the palace, suitable for such a purpose; with his ministers in the outer banqueting-room.

³ These were two hills, in the present department of *Thái-an*.

THE MINOR ODES OF THE KINGDOM.

PIECES AND STANZAS ILLUSTRATING THE RELIGIOUS
VIEWS AND PRACTICES OF THE WRITERS AND
THEIR TIMES.

The First Decade, or that of Lû-ming.

ODE 5, STANZA 1. THE FÂ MŨ.

THE FÂ MŨ IS A FESTAL ODE, WHICH WAS SUNG AT THE ENTERTAINMENT OF FRIENDS;—INTENDED TO CELEBRATE THE DUTY AND VALUE OF FRIENDSHIP, EVEN TO THE HIGHEST.

On the trees go the blows *kǎng-kǎng*; And
the birds cry out *ying-ying*. One issues from the
dark valley, And removes to the lofty tree. Ying
goes its cry, Seeking with its voice its companion.
Look at the bird, Bird as it is, seeking with its
voice its companion; And shall a man Not seek
to have his friends? Spiritual beings will then
hearken to him¹; He shall have harmony and
peace.

ODE 6. THE THIEN PÂO.

A FESTAL ODE, RESPONSIVE TO ANY OF THE FIVE THAT PRECEDE IT.
THE KING'S OFFICERS AND GUESTS, HAVING BEEN FEASTED BY HIM,
CELEBRATE HIS PRAISES, AND DESIRE FOR HIM THE BLESSING OF
HEAVEN AND HIS ANCESTORS.

Ascribed, like the former, to the duke of Kâu.

Heaven protects and establishes thee, With the
greatest security; Makes thee entirely virtuous.

¹ This line and the following show the power and value of the cultivation of friendship in affecting spiritual beings. That designation is understood in the widest sense.

That thou mayest enjoy every happiness; Grants thee much increase, So that thou hast all in abundance.

Heaven protects and establishes thee. It grants thee all excellence, So that thine every matter is right, And thou receivest every Heavenly favour. It sends down to thee long-during happiness, Which the days are not sufficient to enjoy.

Heaven protects and establishes thee, So that in everything thou dost prosper. Like the high hills and the mountain masses, Like the topmost ridges and the greatest bulks, Like the stream ever coming on, Such is thine increase.

With happy auspices and purifications thou bringest the offerings, And dost filially present them, In spring, summer, autumn, and winter, To the dukes and former kings¹; And they say, 'We give to thee myriads of years, duration unlimited².'

The spirits come³, And confer on thee many blessings. The people are simple and honest, Daily enjoying their meat and drink. All the black-haired race, in all their surnames, Universally practise thy virtue.

Like the moon advancing to the full, Like the sun ascending the heavens, Like the everlasting southern hills, Never waning, never falling, Like

¹ These dukes and former kings are all the ancestors of the royal House of K'âu, sacrificed to at the four seasons of the year.

² Here we have the response of the dukes and kings communicated to the sacrificing king by the individuals chosen to represent them at the service.

³ The spirits here are, of course, those of the former dukes and kings.

the luxuriance of the fir and the cypress;— May
such be thy succeeding line!

ODE 9, STANZA 4. THE Tĭ TŪ.

THE Tĭ TŪ IS AN ODE OF CONGRATULATION, INTENDED FOR THE MEN
WHO HAVE RETURNED FROM MILITARY DUTY AND SERVICE ON THE
FRONTIERS.

The congratulation is given in a description of the anxiety and
longing of the soldiers' wives for their return. We must suppose
one of the wives to be the speaker throughout. The fourth
stanza shows how she had resorted to divination to allay her
fears about her husband.

They have not packed up, they do not come.
My sorrowing heart is greatly distressed. The
time is past, and he is not here, To the multipli-
cation of my sorrows. Both by the tortoise-shell
and the reeds have I divined, And they unite in
saying he is near. My warrior is at hand.

The Fourth Decade, or that of K'hi fū.

ODE 5, STANZAS 5 TO 9. THE SZE KAN.

THE SZE KAN WAS PROBABLY MADE FOR A FESTIVAL ON THE COM-
PLETION OF A PALACE; CONTAINING A DESCRIPTION OF IT, AND
PROCEEDING TO GOOD WISHES FOR THE BUILDER AND HIS POSTE-
RITY. THE STANZAS HERE GIVEN SHOW HOW DIVINATION WAS RE-
SORTED TO FOR THE INTERPRETATION OF DREAMS.

The piece is referred to the time of king Hsüan (B.C. 827 to 782).

Level and smooth is the courtyard, And lofty
are the pillars around it. Pleasant is the exposure
of the chamber to the light, And deep and wide
are its recesses. Here will our noble lord repose.

On the rush-mat below and that of fine bamboos
above it, May he repose in slumber! May he sleep

and awake, (Saying), 'Divine for me my dreams¹. What dreams are lucky? They have been of bears and grisly bears; They have been of cobras and (other) snakes.'

The chief diviner will divine them. 'The bears and grisly bears Are the auspicious intimations of sons; The cobras and (other) snakes Are the auspicious intimations of daughters².'

Sons shall be born to him :—They will be put to sleep on couches; They will be clothed in robes; They will have sceptres to play with; Their cry will be loud. They will be (hereafter) resplendent with red knee-covers, The (future) king, the princes of the land.

Daughters shall be born to him :—They will be put to sleep on the ground; They will be clothed with wrappers; They will have tiles to play with³. It will be theirs neither to do wrong nor to do good⁴. Only about the spirits and the food will

¹ In the Official Book of K'âu, ch. 24, mention is made of the Diviner of Dreams and his duties :—He had to consider the season of the year when a dream occurred, the day of the cycle, and the then predominant influence of the two powers of nature. By the positions of the sun, moon, and planets in the zodiacal spaces he could determine whether any one of the six classes of dreams was lucky or unlucky. Those six classes were ordinary and regular dreams, terrible dreams, dreams of thought, dreams in waking, dreams of joy, and dreams of fear.

² The boy would have a sceptre, a symbol of dignity, to play with; the girl, a tile, the symbol of woman's work, as, sitting with a tile on her knee, she twists the threads of hemp.

³ That is, the red apron of a king and of the prince of a state.

⁴ The woman has only to be obedient. That is her whole duty. The line does not mean, as it has been said, that 'she is incapable of good or evil;' but it is not her part to take the initiative even in what is good.

they have to think, And to cause no sorrow to their parents.

ODE 6, STANZA 4. THE WŪ YANG.

THE WŪ YANG IS SUPPOSED TO CELEBRATE THE largeness AND EXCELLENT CONDITION OF KING HSŪAN'S FLOCKS AND HERDS. THE CONCLUDING STANZA HAS REFERENCE TO THE DIVINATION OF THE DREAMS OF HIS HERDSMEN.

Your herdsmen shall dream, Of multitudes and then of fishes, Of the tortoise-and-serpent, and then of the falcon, banners¹. The chief diviner will divine the dreams;—How the multitudes, dissolving into fishes, Betoken plentiful years; How the tortoise-and-serpent, dissolving into the falcon, banners, Betoken the increasing population of the kingdom.

ODE 7. THE KIEH NAN SHAN.

A LAMENTATION OVER THE UNSETTLED STATE OF THE KINGDOM; DENOUNCING THE INJUSTICE AND NEGLECT OF THE CHIEF MINISTER, BLAMING ALSO THE CONDUCT OF THE KING, WITH APPEALS TO HEAVEN, AND SEEMINGLY CHARGING IT WITH CRUELTY AND INJUSTICE.

This piece is referred to the time of king Yü (B. C. 781 to 771), the unworthy son of king Hsüan. The 'Grand-Master' Yin must have been one of the 'three Kung,' the highest ministers at the court of K'au, and was, probably, the chief of the three, and administrator of the government under Yü.

Lofty is that southern hill², With its masses of rocks! Awe-inspiring are you, O (Grand-)Master

¹ The tortoise-and-serpent banner marked the presence in a host of its leader on a military expedition. On its field were the figures of tortoises, with snakes coiled round them. The falcon banners belonged to the commanders of the divisions of the host. They bore the figures of falcons on them.

² 'The southern hill' was also called the Kung-nan, and rose right to the south of the western capital of K'au.

Yin, And the people all look to you ! A fire burns in their grieving hearts ; They do not dare to speak of you even in jest. The kingdom is verging to extinction ;—How is it that you do not consider the state of things ?

Lofty is that southern hill, And vigorously grows the vegetation on it ! Awe-inspiring are you, O (Grand-)Master Yin, But how is it that you are so unjust ? Heaven is continually redoubling its inflictions ; Deaths and disorder increase and multiply ; No words of satisfaction come from the people ; And yet you do not correct nor bemoan yourself.

The Grand-Master Yin Is the foundation of our Káu, And the balance of the kingdom is in his hands. He should be keeping its four quarters together ; He should be aiding the Son of Heaven, So as to preserve the people from going astray. O unpitying great Heaven, It is not right he should reduce us all to such misery !

He does nothing himself personally, And the people have no confidence in him. Making no enquiry about them, and no trial of their services, He should not deal deceitfully with superior men. If he dismissed them on the requirement of justice, Mean men would not be endangering (the common-weal) ; And his mean relatives Would not be in offices of importance.

Great Heaven, unjust, Is sending down these exhausting disorders. Great Heaven, unkind, Is sending down these great miseries. Let superior men come (into office), And that would bring rest to the people's hearts. Let superior men execute

their justice, And the animosities and angers would disappear¹.

O unpitying great Heaven, There is no end to the disorder! With every month it continues to grow, So that the people have no repose. I am as if intoxicated with the grief of my heart. Who holds the ordering of the kingdom? He attends not himself to the government, And the result is toil and pain to the people.

I yoke my four steeds, My four steeds, long-necked. I look to the four quarters (of the kingdom); Distress is everywhere; there is no place I can drive to.

Now your evil is rampant², And I can see your spears. Anon you are pacified and friendly as if you were pledging one another.

From great Heaven is the injustice, And our king has no repose. (Yet) he will not correct his heart, And goes on to resent endeavours to rectify him.

I, K'ia-fû, have made this poem, To lay bare the king's disorders. If you would but change your heart, Then would the myriad regions be nourished.

¹ In this stanza, as in the next and the last but one, the writer complains of Heaven, and charges it foolishly. He does so by way of appeal, however, and indicates the true causes of the misery of the kingdom,—the reckless conduct, namely, of the king and his minister.

² The parties spoken of here are the followers of the minister, 'mean men,' however high in place and great in power, now friendly, now hostile to one another.

ODE 8, STANZAS 4, 5, AND 7. THE K'ANG YÜEH.

THE K'ANG YÜEH IS, LIKE THE PRECEDING ODE, A LAMENTATION OVER THE MISERIES OF THE KINGDOM, AND THE RUIN COMING ON IT; WITH A SIMILAR, BUT MORE HOPEFULLY EXPRESSED, APPEAL TO HEAVEN, 'THE GREAT GOD.'

Look into the middle of the forest; There are (only) large faggots and small branches in it¹. The people now amidst their perils Look to Heaven, all dark; But let its determination be fixed, And there is no one whom it will not overcome. There is the great God,—Does he hate any one?

If one say of a hill that it is low, There are its ridges and its large masses. The false calumnies of the people,—How is it that you do not repress them²? You call those experienced ancients, You consult the diviner of dreams. They all say, 'We are very wise, But who can distinguish the male and female crow³?'

Look at the rugged and stony field;—Luxuriantly rises in it the springing grain. (But) Heaven moves and shakes me, As if it could not overcome me⁴.

¹ By introducing the word 'only,' I have followed the view of the older interpreters, who consider the forest, with merely some faggots and twigs left in it, to be emblematic of the ravages of oppressive government in the court and kingdom. K'ü Hsi takes a different view of them:—'In a forest you can easily distinguish the large faggots from the small branches, while Heaven appears unable to distinguish between the good and bad.'

² The calumnies that were abroad were as absurd as the assertion in line 1, and yet the king could not, or would not, see through them and repress them.

³ This reference to the diviners of dreams is in derision of their pretensions.

⁴ That is, the productive energy of nature manifests itself in the most unlikely places; how was it that 'the great God, who hates no one,' was contending so with the writer?

They sought me (at first) to be a pattern (to them),
(Eagerly) as if they could not get me; (Now) they
regard me with great animosity, And will not use
my strength.

ODE 9. THE SHIH YÜEH KIH K'IAO.

THE LAMENTATION OF AN OFFICER OVER THE PRODIGES CELESTIAL
AND TERRESTRIAL, ESPECIALLY AN ECLIPSE OF THE SUN, THAT
WERE BETOKENING THE RUIN OF K'AU. HE SETS FORTH WHAT HE
CONSIDERED TO BE THE TRUE CAUSES OF THE PREVAILING MISERY,
WHICH WAS BY NO MEANS TO BE CHARGED ON HEAVEN.

Attention is called in the Introduction, p. 296, to the date of the
solar eclipse mentioned in this piece.

At the conjunction (of the sun and moon) in the
tenth month, On the first day of the moon, which
was *hsin-mão*, The sun was eclipsed, A thing
of very evil omen. Before, the moon became small,
And now the sun became small. Henceforth the
lower people Will be in a very deplorable case.

The sun and moon announce evil, Not keeping
to their proper paths. Throughout the kingdom
there is no (proper) government, Because the good
are not employed. For the moon to be eclipsed
Is but an ordinary matter. Now that the sun has
been eclipsed,—How bad it is!

Grandly flashes the lightning of the thunder.
There is a want of rest, a want of good. The
streams all bubble up and overflow. The crags on
the hill-tops fall down. High banks become valleys;
Deep valleys become hills. Alas for the men of
this time! How does (the king) not stop these
things?

Hwang-fû is the President; Fan is the Minister

of Instruction; *K'ia-po* is the (chief) Administrator; *Kung-yün* is the chief Cook; *3âu* is the Recorder of the Interior; *Khwei* is Master of the Horse; *Yü* is Captain of the Guards; And the beautiful wife blazes, now in possession of her place ¹.

This *Hwang-fû* Will not acknowledge that he is acting out of season. But why does he call us to move, Without coming and consulting with us? He has removed our walls and roofs; And our fields are all either a marsh or a moor. He says, 'I am not injuring you; The laws require that thus it should be.'

Hwang-fû is very wise; He has built a great city for himself in *Hsiang*. He chose three men as his ministers, All of them possessed of great wealth. He could not bring himself to leave a single minister, Who might guard our king. He (also) selected those who had chariots and horses, To go and reside in *Hsiang* ².

¹ We do not know anything from history of the ministers of *Yü* mentioned in this stanza. *Hwang-fû* appears to have been the leading minister of the government at the time when the ode was written, and, as appears from the next two stanzas, was very crafty, oppressive, and selfishly ambitious. The mention of 'the chief Cook' among the high ministers appears strange; but we shall find that functionary mentioned in another ode; and from history it appears that 'the Cook,' at the royal and feudal courts, sometimes played an important part during the times of *K'au*. 'The beautiful wife,' no doubt, was the well-known *Sze* of *P'ao*, raised by king *Yü* from her position as one of his concubines to be his queen, and whose insane folly and ambition led to her husband's death, and great and disastrous changes in the kingdom.

² *Hsiang* was a district of the royal domain, in the present district of *Măng*, department of *Hwâi-k'ing*, *Ho-nan*. It had been assigned to *Hwang-fû*, and he was establishing himself there, without any loyal regard to the king. As a noble in the royal domain,

I have exerted myself to discharge my service,
And do not dare to make a report of my toils.
Without crime or offence of any kind, Slandrous
mouths are loud against me. (But) the calamities
of the lower people Do not come down from
Heaven. A multitude of (fair) words, and hatred
behind the back;—The earnest, strong pursuit of
this is from men.

Distant far is my village, And my dissatisfaction
is great. In other quarters there is ease, And
I dwell here, alone and sorrowful. Everybody is
going into retirement, And I alone dare not seek
rest. The ordinances of Heaven are inexplicable,
But I will not dare to follow my friends, and leave
my post.

ODE 10, STANZAS 1 AND 3. THE YÜ WÜ K'ANG.

THE WRITER OF THIS PIECE MOURNS OVER THE MISERABLE STATE
OF THE KINGDOM, THE INCORRIGIBLE COURSE OF THE KING, AND
OTHER EVILS, APPEALING ALSO TO HEAVEN, AND SURPRISED THAT
IT ALLOWED SUCH THINGS TO BE.

Great and wide Heaven, How is it you have
contracted your kindness, Sending down death
and famine, Destroying all through the kingdom?
Compassionate Heaven, arrayed in terrors, How
is it you exercise no forethought, no care? Let
alone the criminals:—They have suffered for their
guilt. But those who have no crime Are indis-
criminately involved in ruin.

he was entitled only to two ministers, but he had appointed three
as in one of the feudal states, encouraging, moreover, the resort to
himself of the wealthy and powerful, while the court was left weak
and unprotected.

How is it, O great Heaven, That the king will not hearken to the justest words? He is like a man going (astray), Who knows not where he will proceed to. All ye officers, Let each of you attend to his duties. How do ye not stand in awe of one another? Ye do not stand in awe of Heaven.

The Fifth Decade, or that of Hsião Min.

ODE 1, STANZAS 1, 2, AND 3. THE HSIÃO MIN.

A LAMENTATION OVER THE RECKLESSNESS AND INCAPACITY OF THE KING AND HIS COUNSELLORS. DIVINATION HAS BECOME OF NO AVAIL, AND HEAVEN IS DESPAIRINGLY APPEALED TO.

This is referred, like several of the pieces in the fourth decade, to the time of king Yü.

The angry terrors of compassionate Heaven Extend through this lower world. (The king's) counsels and plans are crooked and bad; When will he stop (in his course)? Counsels that are good he will not follow, And those that are not good he employs. When I look at his counsels and plans, I am greatly pained.

Now they agree, and now they defame one another;—The case is greatly to be deplored. If a counsel be good, They are all found opposing it. If a counsel be bad, They are all found according with it. When I look at such counsels and plans, What will they come to?

Our tortoise-shells are wearied out, And will not tell us anything about the plans. The counsellors are very many, But on that account nothing is accomplished. The speakers fill the court, But

who dares to take any responsibility on himself?
We are as if we consulted (about a journey) without
taking a step in advance, And therefore did not
get on on the road.

ODE 2, STANZAS 1 AND 2. THE HSIÃO YÜAN.

SOME OFFICER IN A TIME OF DISORDER AND MISGOVERNMENT URGES
ON HIS BROTHERS THE DUTY OF MAINTAINING THEIR OWN VIRTUE,
AND OF OBSERVING THE GREATEST CAUTION.

Small is the cooing dove, But it flies aloft to
heaven. My heart is wounded with sorrow, And
I think of our forefathers. When the dawn is
breaking, and I cannot sleep, The thoughts in my
breast are of our parents.

Men who are grave and wise, Though they
drink, are mild and masters of themselves; But
those who are benighted and ignorant Become
devoted to drink, and more so daily. Be careful,
each of you, of your deportment; What Heaven
confers, (when once lost), is not regained¹.

The greenbeaks come and go, Picking up grain
about the stackyard. Alas for the distressed and
the solitary, Deemed fit inmates for the prisons!
With a handful of grain I go out and divine², How
I may be able to become good.

¹ 'What Heaven confers' is, probably, the good human nature, which by vice, and especially by drunkenness, may be irretrievably ruined.

² A religious act is here referred to, on which we have not sufficient information to be able to throw much light. It was the practice to spread some finely ground rice on the ground, in connexion with divination, as an offering to the spirits. The poet represents himself here as using a handful of grain for the purpose,—probably on account of his poverty.

ODE 3, STANZAS 1 AND 3. THE HSIÃO PAN.

THE ELDEST SON AND HEIR-APPARENT OF KING YŪ BEWAILS HIS DEGRADATION, APPEALING TO HEAVEN AS TO HIS INNOCENCE, AND COMPLAINING OF ITS CASTING HIS LOT IN SUCH A TIME.

It is allowed that this piece is clearly the composition of a banished son, and there is no necessity to call in question the tradition preserved in the Preface which prefers it to 王孫, the eldest son of king YŪ. His mother was a princess of the House of Shǎn; but when YŪ became enamoured of Sze of Páo, the queen was degraded, and the son banished to Shǎn.

With flapping wings the crows Come back, flying
all in a flock¹. Other people are happy, And I
only am full of misery. What is my offence against
Heaven? What is my crime? My heart is sad;—
What is to be done?

Even the mulberry trees and the rottleras Must
be regarded with reverence²; But no one is to be
looked up to like a father, No one is to be de-
pendent on as a mother. Have I not a connexion
with the hairs (of my father)? Did I not dwell
in the womb (of my mother)? O Heaven, who
gave me birth! How was it at so inauspicious
a time?

¹ The sight of the crows, all together, suggests to the prince his own condition, solitary and driven from court.

² The mulberry tree and the rottlera were both planted about the farmsteadings, and are therefore mentioned here. They carried the thoughts back to the father or grandfather, or the more remote ancestor, who first planted them, and so a feeling of reverence attached to themselves.

ODE 4, STANZA 1. THE *KHIÃO YEN*.

SOME ONE, SUFFERING FROM THE KING THROUGH SLANDER, APPEALS
TO HEAVEN, AND GOES ON TO DWELL ON THE NATURE AND EVIL
OF SLANDER.

This piece has been referred to the time of king Lî, B.C. 878
to 828.

O vast and distant Heaven, Who art called our
parent, That, without crime or offence, I should
suffer from disorders thus great! The terrors of
great Heaven are excessive, But indeed I have

Heaven are very excessive, But indeed I have
committed no offence.

ODE 6, STANZAS 5 AND 6. THE *HSIANG PO*.

A EUNUCH, HIMSELF THE VICTIM OF SLANDER, COMPLAINS OF HIS FATE,
AND WARNS AND DENOUNCES HIS ENEMIES; APPEALING AGAINST
THEM, AS HIS LAST RESORT, TO HEAVEN.

The proud are delighted, And the troubled are
in sorrow. O azure Heaven! O azure Heaven!
Look on those proud men, Pity those who are
troubled.

Those slanderers! Who devised their schemes
for them? I would take those slanderers, And
throw them to wolves and tigers. If these refused
to devour them, I would cast them into the north¹.
If the north refused to receive them, I would
throw them into the hands of great (Heaven)².

¹ 'The north,' i.e. the region where there are the rigours of winter
and the barrenness of the desert.

² 'Great Heaven,' 'Heaven' has to be supplied here, but there

ODE 9. THE TÀ TUNG.

AN OFFICER OF ONE OF THE STATES OF THE EAST DEPLORES THE EXACTIONS MADE FROM THEM BY THE GOVERNMENT, COMPLAINS OF THE FAVOUR SHOWN TO THE WEST, CONTRASTS THE MISERY OF THE PRESENT WITH THE HAPPINESS OF THE PAST, AND APPEALS TO THE STARS OF HEAVEN IDLY BEHOLDING THEIR CONDITION.

I give the whole of this piece, because it is an interesting instance of Sabian views. The writer, despairing of help from men, appeals to Heaven; but he distributes the Power that could help him among many heavenly bodies, supposing that there are spiritual beings in them, taking account of human affairs.

Well loaded with millet were the dishes, And long and curved were the spoons of thorn-wood. The way to *Kâu* was like a whetstone, And straight as an arrow. (So) the officers trod it, And the common people looked on it. When I look back and think of it, My tears run down in streams.

In the states of the east, large and small, The looms are empty. Then shoes of dolichos fibre Are made to serve to walk on the hoar-frost. Slight and elegant gentlemen¹ Walk along that road to *Kâu*. Their going and coming makes my heart sad.

Ye cold waters, issuing variously from the spring, Do not soak the firewood I have cut. Sorrowful I awake and sigh;—Alas for us toiled people! The firewood has been cut;—Would that it were

is no doubt as to the propriety of doing so; and, moreover, the peculiar phraseology of the line shows that the poet did not rest in the thought of the material heavens.

¹ That is, 'slight-looking,' unfit for toil; and yet they are obliged to make their journey on foot.

conveyed home! Alas for us the toiled people!
Would that we could have rest¹!

The sons of the east Are summoned only (to service), without encouragement; While the sons of the west Shine in splendid dresses. The sons of boatmen Have furs of the bear and grisly bear. The sons of the poorest families Form the officers in public employment.

If we present them with spirits, They regard them as not fit to be called liquor. If we give them long girdle pendants with their stones, They do not think them long enough.

There is the Milky Way in heaven ², Which looks down on us in light; And the three stars together are the Weaving Sisters ³, Passing in a day through seven stages (of the sky).

Although they go through their seven stages, They complete no bright work for us. Brilliant shine the Draught Oxen ⁴, But they do not serve to draw our carts. In the east there is Lucifer ⁵; In the west there is Hesperus ⁵; Long and curved

¹ This stanza describes, directly or by symbol, the exactions from which the people of the east were suffering.

² 'The Milky Way' is here called simply the Han, = in the sky what the Han river is in China.

³ 'The Weaving Sisters, or Ladies,' are three stars in Lyra, that form a triangle. To explain what is said of their passing through seven spaces, it is said: 'The stars seem to go round the circumference of the heavens, divided into twelve spaces, in a day and night. They would accomplish six of them in a day; but as their motion is rather in advance of that of the sun, they have entered into the seventh space by the time it is up with them again.'

⁴ 'The Draught Oxen' is the name of some stars in the neck of Aquila.

⁵ Liù Í (Sung dynasty) says: 'The metal star (Venus) is in the

is the Rabbit Net of the sky¹;—But they only occupy their places.

In the south is the Sieve², But it is of no use to sift. In the north is the Ladle³, But it lades out no liquor. In the south is the Sieve, Idly showing its mouth. In the north is the Ladle, Raising its handle in the west.

The Sixth Decade, or that of Pei Shan.

ODE 3, STANZAS 1, 4, AND 5. THE HSIÃO MING.

AN OFFICER, KEPT LONG ABROAD ON DISTANT SERVICE, APPEALS TO HEAVEN, DEPLORING THE HARDSHIPS OF HIS LOT, AND TENDERS GOOD ADVICE TO HIS MORE FORTUNATE FRIENDS AT COURT.

From the first day of the second month, I have passed through the cold and the heat. My heart is sad; The poison (of my lot) is too bitter. I think of those (at court) in their offices, And my tears flow down like rain. Do I not wish to return? But I fear the net for crime.

Ah! ye gentlemen, Do not reckon on your rest

east in the morning, thus "opening the brightness of the day;" and it is in the west in the evening, thus "prolonging the day." The author of the piece, however, evidently took Lucifer and Hesperus to be two stars.

¹ 'The Rabbit Net' is the Hyades.

² 'The Sieve' is the name of one of the twenty-eight constellations of the zodiac,—part of Sagittarius.

³ 'The Ladle' is the constellation next to 'the Sieve,'—also part of Sagittarius.

being permanent. Quietly fulfil the duties of your offices, Associating with the correct and upright; So shall the spirits hearken to you, And give you good.

Ah! ye gentlemen, Do not reckon on your repose being permanent. Quietly fulfil the duties of your offices, Loving the correct and upright; So shall the spirits hearken to you, And give you large measures of bright happiness.

ODE 5. THE *KHÔ* 3HZE.

SACRIFICIAL AND FESTAL SERVICES IN THE ANCESTRAL TEMPLE; AND
THEIR CONNEXION WITH ATTENTION TO HUSBANDRY.

See the remarks on the Services of the Ancestral Temple, pp. 300, 301.

Thick grew the tribulus (on the ground), But they cleared away its thorny bushes. Why did they this of old? That we might plant our millet and sacrificial millet; That our millet might be abundant, And our sacrificial millet luxuriant. When our barns are full, And our stacks can be counted by tens of myriads, We proceed to make spirits and prepared grain, For offerings and sacrifice. We seat the representatives of the dead, and urge them to eat¹:—Thus seeking to increase our bright happiness.

¹ The poet hurries on to describe the sacrifices in progress. The persons selected to personate the departed were necessarily inferior in rank to the principal sacrificer, yet for the time they were superior to him. This circumstance, it was supposed, would make them feel uncomfortable; and therefore, as soon as they appeared in the temple, the director of the ceremonies instructed the sacrificer to ask them to be seated, and to place them at ease; after which they were urged to take some refreshment.

With correct and reverent deportment, The bulls
and rams all pure, We proceed to the winter and
autumnal sacrifices. Some flay (the victims); some
cook (their flesh); Some arrange (the meat); some
adjust (the pieces of it). The officer of prayer
sacrifices inside the temple gate¹, And all the
sacrificial service is complete and brilliant. Grandly
come our progenitors; Their spirits happily enjoy
the offerings; Their filial descendant receives blessing :—They will reward him with great happiness,
With myriads of years, life without end.

They attend to the furnaces with reverence;
They prepare the trays, which are very large;—
Some for the roast meat, some for the broiled. Wives
presiding are still and reverent², Preparing the
numerous (smaller) dishes. The guests and visitors³
Present the cup all round⁴. Every form is accord-
ing to rule; Every smile and word are as they
should be. The spirits quietly come, And respond

¹ The *K'ü*, who is mentioned here, was evidently an officer, 'one who makes or recites prayers.' The sacrifice he is said to offer was, probably, a libation, the pouring out fragrant spirits, as a part of the general service, and likely to attract the hovering spirits of the departed, on their approach to the temple. Hence his act was performed just inside the gate.

² 'Wives presiding,' i.e. the wife of the sacrificer, the principal in the service, and other ladies of the harem. The dishes under their care, the smaller dishes, would be those containing sauces, cakes, condiments, &c.

³ 'The guests and visitors' would be nobles and officers of different surnames from the sacrificer, chosen by divination to take part in the sacrificial service.

⁴ 'Present the cup all round' describes the ceremonies of drinking, which took place between the guests and visitors, the representatives of the dead, and the sacrificer.

with great blessings,—Myriads of years as the (fitting) reward.

We are very much exhausted, And have performed every ceremony without error. The able officer of prayer announces (the will of the spirits)¹, And goes to the filial descendant to convey it¹:— ‘Fragrant has been your filial sacrifice, And the spirits have enjoyed your spirits and viands. They confer on you a hundred blessings; Each as it is desired, Each as sure as law. You have been exact and expeditious; You have been correct and careful; They will ever confer on you the choicest favours, In myriads and tens of myriads.’

The ceremonies having thus been completed, And the bells and drums having given their warning², The filial descendant goes to his place³, And the able officer of prayer makes his announcement, ‘The spirits have drunk to the full.’ The great representatives of the dead then rise, And the bells and drums escort their withdrawal, (On which) the spirits tranquilly return (to whence they came)⁴. All the servants, and the presiding wives, Remove (the trays and dishes) without delay. The

¹ The officer of prayer had in the first place obtained, or professed to have obtained, this answer of the progenitors from their personators.

² The music now announced that the sacrificial service in the temple was ended.

³ The sacrificer, or principal in the service, now left the place which he had occupied, descended from the hall, and took his position at the foot of the steps on the east,—the place appropriate to him in dismissing his guests.

⁴ Where did they return to? According to K'ang Hsüan, ‘To heaven.’

(sacrificer's) uncles and cousins All repair to the private feast ¹.

The musicians all go in to perform, And give their soothing aid at the second blessing ². Your ³ viands are set forth; There is no dissatisfaction, but all feel happy. They drink to the full, and eat to the full; Great and small, they bow their heads, (saying), 'The spirits enjoyed your spirits and viands, And will cause you to live long. Your sacrifices, all in their seasons, Are completely discharged by you. May your sons and your grandsons Never fail to perpetuate these services!'

ODE 6. THE HSIN NAN SHAN.

HUSBANDRY TRACED TO ITS FIRST AUTHOR; DETAILS ABOUT IT, GOING ON TO THE SUBJECT OF SACRIFICES TO ANCESTORS.

The Preface refers this piece to the reign of king Yü; but there is nothing in it to suggest the idea of its having been made in a time of disorder and misgovernment. 'The distant descendant' in the first stanza is evidently the principal in the sacrifice of the last two stanzas:—according to *K'ü*, a noble or great landholder in the royal domain; according to others, some one of the kings of *K'âu*. I incline myself to this latter view. The three pieces,

¹ These uncles and cousins were all present at the sacrifice, and of the same surname as the principal. The feast to them was to show his peculiar affection for his relatives.

² The feast was given in the apartment of the temple behind the hall where the sacrifice had been performed, so that the musicians are represented as going in to continue at the feast the music they had discoursed at the sacrifice.

³ The transition to the second person here is a difficulty. We can hardly make the speech, made by some one of the guests on behalf of all the others, commence here. We must come to the conclusion that the ode was written, in compliment to the sacrificer, by one of the relatives who shared in the feast; and so here he addresses him directly.

of which this is the middle one, seem all to be royal odes. The mention of 'the southern hill' strongly confirms this view.

Yes, (all about) that southern hill Was made manageable by Yü¹. Its plains and marshes being opened up, It was made into fields by the distant descendant. We define their boundaries, We form their smaller divisions, And make the acres lie, here to the south, there to the east.

The heavens overhead are one arch of clouds, Snowing in multitudinous flakes; There is super-added the drizzling rain. When (the land) has received the moistening, Soaking influence abundantly, It produces all our kinds of grain.

The boundaries and smaller divisions are nicely adjusted, And the millets yield abundant crops, The harvest of the distant descendant. We proceed to make therewith spirits and food, To supply our representatives of the departed, and our guests;—To obtain long life, extending over myriads of years.

In the midst of the fields are the huts², And

¹ There is here a recognition of the work of the great Yü, as the real founder of the kingdom of China, extending the territory of former elective chiefs, and opening up the country. 'The southern hill' bounded the prospect to the south from the capital of K'âu, and hence the writer makes mention of it. He does not mean to confine the work of Yü to that part of the country; but, on the other hand, there is nothing in his language to afford a confirmation to the account given in the third Part of the Shû of that hero's achievements.

² In every K'ing, or space of 900 Chinese acres or m'âu, assigned to eight families, there were in the centre 100 m'âu of 'public fields,' belonging to the government, and cultivated by the husbandmen in common. In this space of 100 m'âu, two m'âu and a half were again assigned to each family, and on them were

along the bounding divisions are gourds. The fruit is sliced and pickled, To be presented to our great ancestors, That their distant descendant may have long life, And receive the blessing of Heaven ¹.

We sacrifice (first) with clear spirits, And then follow with a red bull; Offering them to our ancestors, (Our lord) holds the knife with tinkling bells, To lay open the hair of the victim, And takes the blood and fat ².

Then we present, then we offer; All round the fragrance is diffused. Complete and brilliant is the sacrificial service; Grandly come our ancestors. They will reward (their descendant) with great blessing, Long life, years without end.

ODE 7. THE PHŪ THIEN.

PICTURES OF HUSBANDRY, AND SACRIFICES CONNECTED WITH IT. HAPPY UNDERSTANDING BETWEEN THE PEOPLE AND THEIR SUPERIORS.

It is difficult to say who the 'I' in the piece is, but evidently he and the 'distant descendant' are different persons. I suppose he may have been an officer, who had charge of the farms, as we may call them, in the royal domain.

Bright are those extensive fields, A tenth of whose produce is annually levied ³. I take the old

erected the huts in which they lived, while they were actively engaged in their agricultural labours.

¹ Here, as in so many other places, the sovereign Power, ruling in the lots of men, is referred to as Heaven.

² The fat was taken from the victim, and then burnt along with fragrant herbs, so as to form a cloud of incense. On the taking of the 'blood,' it is only said, that it was done to enable the sacrificer to announce that a proper victim had been slain.

³ This line, literally, is, 'Yearly are taken ten (and a) thousand;' meaning the produce of ten acres in every hundred, and of a thousand in every ten thousand.

stores, And with them feed the husbandmen. From of old we have had good years ; And now I go to the south-lying acres, Where some are weeding, and some gather the earth about the roots. The millets look luxuriant ; And in a spacious resting-place, I collect and encourage the men of greater promise ¹.

With my vessels full of bright millet, And my pure victim-rams, We sacrificed at the altar of the spirits of the land, and at (the altars of those of the four) quarters ². That my fields are in such good condition Is matter of joy to the husbandmen. With lutes, and with drums beating, We will invoke the Father of Husbandry ³, And pray for sweet rain, To increase the produce of our millets, And to bless my men and their wives.

The distant descendant comes, When their wives and children Are bringing food to those (at work) in the south-lying acres. The surveyor of the fields (also) comes and is glad. He takes (of the food) on the left and the right, And tastes whether

¹ The general rule was that the sons of husbandmen should continue husbandmen ; but their superior might select those among them in whom he saw promising abilities, and facilitate their advancement to the higher grade of officers.

² The sacrifices here mentioned were of thanksgiving at the end of the harvest of the preceding year. The one was to 'sovereign Earth,' supposed to be the supreme Power in correlation with Heaven, or, possibly, to the spirits supposed to preside over the productive energies of the land ; the other to the spirits presiding over the four quarters of the sky, and ruling all atmospheric influences.

³ This was the sacrifice that had been, or was about to be, offered in spring to 'the Father of Husbandry,'—probably the ancient mythical Tî, Shăn Năng.

it be good or not. The grain is well cultivated, all the acres over; Good will it be and abundant. The distant descendant has no displacency; The husbandmen are encouraged to diligence.

The crops of the distant descendant Look (thick) as thatch, and (swelling) like a carriage-cover. His stacks will stand like islands and mounds. He will seek for thousands of granaries; He will seek for tens of thousands of carts. The millets, the paddy, and the maize Will awake the joy of the husbandmen; (And they will say), 'May he be rewarded with great happiness, With myriads of years, life without end!'

ODE 8. THE TÂ THIEN.

FURTHER PICTURES OF HUSBANDRY, AND SACRIFICES CONNECTED WITH IT.

Large are the fields, and various is the work to be done. Having selected the seed, and looked after the implements, So that all preparations have been made for our labour, We take our sharp plough-shares, And commence on the south-lying acres. We sow all the kinds of grain; Which grow up straight and large, So that the wish of the distant descendant is satisfied.

It ears and the fruit lies soft in its sheath; It hardens and is of good quality; There is no wolf's-tail grass nor darnel. We remove the insects that eat the heart and the leaf, And those that eat the roots and the joints, So that they shall not hurt the young plants of our fields. May the spirit, the Father of Husbandry¹, Lay hold of them, and put them in the blazing fire!

¹ The ancient Shăn Năng, as in the preceding ode.

The clouds form in dense masses, And the rain comes down slowly. May it first rain on our public fields¹, And then come to our private¹! Yonder shall be young grain unreaped, And here some bundles ungathered; Yonder shall be handfuls left on the ground, And here ears untouched:—For the benefit of the widow².

The distant descendant will come, When their wives and children Are bringing food to those (at work) on the south-lying acres. The surveyor of the fields (also) will come and be glad. They will come and offer pure sacrifices to (the spirits of the four) quarters, With their victims red and black³, With their preparations of millet:—Thus offering, thus sacrificing, Thus increasing our bright happiness.

The Seventh Decade, or that of Sang Hû.

ODE 1, STANZA 1. THE SANG HÛ.

THE KING, ENTERTAINING THE CHIEF AMONG THE FEUDAL PRINCES,
EXPRESSES HIS ADMIRATION OF THEM, AND GOOD WISHES FOR THEM.

They flit about, the greenbeaks⁴, With their

¹ These are two famous lines, continually quoted as showing the loyal attachment of the people to their superiors in those ancient times.

² Compare the legislation of Moses, in connexion with the harvest, for the benefit of the poor, in Deuteronomy xxiv. 19–22.

³ They would not sacrifice to these spirits all at once, or all in one place, but in the several quarters as they went along on their progress through the domain. For each quarter the colour of the victim was different. A red victim was offered to the spirit of the south, and a black to that of the north.

⁴ The greenbeaks appeared in the second ode of the fifth decade. The bird had many names, and a beautiful plumage,

variegated wings. To be rejoiced in are these princes! May they receive the blessing of Heaven!¹

ODE 6, STANZAS 1 AND 2. THE PIN KIH KHÔ YEN.

AGAINST DRUNKENNESS. DRINKING ACCORDING TO RULE AT ARCHERY CONTESTS AND THE SEASONAL SACRIFICES, AND DRINKING TO EXCESS.

There are good grounds for referring the authorship of this piece to duke Wû of Wei (B.C. 812 to 758), who played an important part in the kingdom, during the affairs which terminated in the death of king Yû, and the removal of the capital from Hào to Lo. The piece, we may suppose, is descriptive of things as they were at the court of king Yû.

When the guests first approach the mats², They take their places on the left and the right in an orderly manner. The dishes of bamboo and wood are arranged in rows, With the sauces and kernels displayed in them. The spirits are mild and good, And they drink, all equally reverent. The bells and drums are properly arranged³, And they raise their pledge-cups with order and ease⁴. (Then) the great

made use of here to compliment the princes on the elegance of their manners, and perhaps also the splendour of their equipages. The bird is here called the 'mulberry Hû,' because it appeared when the mulberry tree was coming into leaf.

¹ This line is to be understood, with Kû Hsî, as a prayer of the king to Heaven for his lords.

² The mats were spread on the floor, and also the viands of the feast. Chairs and tables were not used in that early time.

³ The archery took place in the open court, beneath the hall or raised apartment, where the entertainment was given. Near the steps leading up to the hall was the regular place for the bells and drums, but it was necessary now to remove them more on one side, to leave the ground clear for the archers.

⁴ The host first presented a cup to the guest, which the latter drank, and then he returned a cup to the host. After this pre-

target is set up; The bows and arrows are made ready for the shooting. The archers are arranged in classes; 'Show your skill in shooting,' (it is said by one). 'I shall hit that mark' (is the response), 'And pray you to drink the cup¹.'

The dancers move with their flutes to the notes of the organ and drum, While all the instruments perform in harmony. All this is done to please the meritorious ancestors, Along with the observance of all ceremonies. When all the ceremonies have been fully performed, Grandly and fully, (The personators of the dead say), 'We confer on you great blessings, And may your descendants also be happy!' These are happy and delighted, And each of them exerts his ability. A guest² draws the spirits; An attendant enters again with a cup, And fills it,—the cup of rest². Thus are performed your seasonal ceremonies³.

liminary ceremony, the company all drank to one another,—'took up their cups,' as it is here expressed.

¹ Each defeated archer was obliged to drink a large cup of spirits as a penalty.

² This guest was, it is supposed, the eldest of all the scions of the royal House present on the occasion. At this point, he presented a cup to the chief among the personators of the ancestors, and received one in return. He then proceeded to draw more spirits from one of the vases of supply, and an attendant came in and filled other cups,—we may suppose for all the other personators. This was called 'the cup of repose or comfort;' and the sacrifice was thus concluded,—in all sobriety and decency.

³ The three stanzas that follow this, graphically descriptive of the drunken revel, are said to belong to the feast of the royal relatives that followed the conclusion of the sacrificial service, and is called 'the second blessing' in the sixth ode of the preceding decade. This opinion probably is correct; but as the piece does not itself say so, and because of the absence from the text of religious sentiments, I have not given the stanzas here.

The Eighth Decade, or that of Po Hwá.

ODE 5, STANZAS 1 AND 2. THE PO HWÁ.

THE QUEEN OF KING YŪ COMPLAINS OF BEING DEGRADED AND
FORSAKEN.

The fibres from the white-flowered rush Are
bound with the white grass¹. This man's sending
me away makes me dwell solitary.

The light and brilliant clouds Bedew the rush
and the grass². The way of Heaven is hard and
difficult³;—This man does not conform (to good
principle).

¹ The stalks of the rush were tied with the grass in bundles, in order to be steeped;—an operation which ladies in those days might be supposed to be familiar with. The two lines suggest the idea of the close connexion between the two plants, and the necessity of the one to the other;—as it should be between husband and wife.

² The clouds bestowed their dewy influence on the plants, while her husband neglected the speaker.

³ 'The way of Heaven' is equivalent to our 'The course of Providence.' The lady's words are, literally, 'The steps of Heaven.' She makes but a feeble wail; but in Chinese opinion discharges thereby, all the better, the duty of a wife.

THE MAJOR ODES OF THE KINGDOM.

PIECES AND STANZAS ILLUSTRATING THE RELIGIOUS
VIEWS AND PRACTICES OF THE WRITERS AND
THEIR TIMES.

The First Decade, or that of Wăn Wang.

ODE 1. THE WĀN WĀNG.

DYNASTY OF KĀU, SHOWING HOW HIS VIRTUES DREW TO HIM THE
FAVOURING REGARD OF HEAVEN OR GOD, AND MADE HIM A BRIGHT
PATTERN TO HIS DESCENDANTS AND THEIR MINISTERS.

The composition of this and the other pieces of this decade is attributed to the duke of Kâu, king Wăn's son, and was intended by him for the benefit of his nephew, the young king K'ang. Wăn, it must be borne in mind, was never actually king of China. He laid the foundations of the kingly power, which was established by his son king Wû, and consolidated by the duke of Kâu. The title of king was given to him and to others by the duke, according to the view of filial piety, that has been referred to on p. 299.

King Wăn is on high. Oh! bright is he in
heaven. Although Kâu was an old country, The
(favouring) appointment lighted on it recently¹.
Illustrious was the House of Kâu, And the

¹ The family of Kâu, according to its traditions, was very ancient, but it did not occupy the territory of Kâu, from which it subsequently took its name, till B. C. 1326; and it was not till the time of Wăn (B. C. 1231 to 1135) that the divine purpose concerning its supremacy in the kingdom was fully manifested.

appointment of God came at the proper season. King Wăn ascends and descends On the left and the right of God¹.

Full of earnest activity was king Wăn, And his fame is without end. The gifts (of God) to Kâu Extend to the descendants of king Wăn, In the direct line and the collateral branches for a hundred generations². All the officers of Kâu Shall (also) be illustrious from age to age.

They shall be illustrious from age to age, Zealously and reverently pursuing their plans. Admirable are the many officers, Born in this royal kingdom. The royal kingdom is able to produce them, The supporters of (the House of) Kâu. Numerous is the array of officers, And by them king Wăn enjoys his repose.

Profound was king Wăn; Oh! continuous and bright was his feeling of reverence. Great is the appointment of Heaven! There were the descendants of (the sovereigns of) Shang³—The descendants of the sovereigns of Shang Were in number more

¹ According to K'ü Hsî, the first and last two lines of this stanza are to be taken of the spirit of Wăn in heaven. Attempts have been made to explain them otherwise, or rather to explain them away. But language could not more expressly intimate the existence of a supreme personal God, and the continued existence of the human spirit.

² The text, literally, is, 'The root and the branches:' the root (and stem) denoting the eldest sons, by the recognised queen, succeeding to the throne; and the branches, the other sons by the queen and concubines. The former would grow up directly from the root; and the latter, the chief nobles of the kingdom, would constitute the branches of the great Kâu tree.

³ The Shang or Yin dynasty of kings superseded by Kâu.

than hundreds of thousands. But when God gave the command, They became subject to Kâu.

They became subject to Kâu, (For) the appointment of Heaven is not unchangeable. The officers of Yin, admirable and alert, Assist at the libations in our capital¹. They assist at those libations, Always wearing the hatchet-figures on their lower garments and their peculiar cap². O ye loyal ministers of the king, Ever think of your ancestor!

Ever think of your ancestor, Cultivating your virtue, Always seeking to accord with the will (of Heaven):—So shall you be seeking for much happiness, Before Yin lost the multitudes, (Its kings) were the correlates of God³. Look to Yin as a beacon; The great appointment is not easily preserved:

The appointment is not easily (preserved):—Do not cause your own extinction. Display and make bright your righteousness and fame, And look at (the fate of) Yin in the light of Heaven. The doings of high Heaven Have neither sound nor

¹ These officers of Yin would be the descendants of the Yin kings and of their principal nobles, scions likewise of the Yin stock. They would assist, at the court of Kâu, at the services in the ancestral temple, which began with a libation of fragrant spirits to bring down the spirits of the departed.

² These, differing from the dress worn by the representatives of the ruling House, were still worn by the officers of Yin or Shang, by way of honour, and also by way of warning.

³ There was God in heaven hating none, desiring the good of all the people; there were the sovereigns on earth, God's vicegerents, maintained by him so long as they carried out in their government his purpose of good.

smell¹. Take your pattern from king Wăn, And
the myriad regions will repose confidence in you.

ODE 2. THE TÂ MING.

HOW THE APPOINTMENT OF HEAVEN OR GOD CAME FROM HIS FATHER
TO KING WĂN, AND DESCENDED TO HIS SON, KING WŪ, WHO OVER-
THREW THE DYNASTY OF SHANG BY HIS VICTORY AT MŪ; CELE-
BRATING ALSO THE MOTHER AND WIFE OF KING WĂN.

The illustration of illustrious (virtue) is required
below, And the dread majesty is on high². Heaven
is not readily to be relied on; It is not easy to be
king. Yin's rightful heir to the heavenly seat Was
not permitted to possess the kingdom.

Zăn, the second of the princesses of Kih³, From
(the domain of) Yin-shang, Came to be married
to (the prince of) Kâu, And became his wife in his

¹ These two lines are quoted in the last paragraph of the Doctrine of the Mean, as representing the ideal of perfect virtue. They are indicative of Power, operating silently, and not to be perceived by the senses, but resistless in its operations.

² 'The first two lines,' says the commentator Yen Zhan, 'contain a general sentiment, expressing the principle that governs the relation between Heaven and men. According to line 1, the good or evil of a ruler cannot be concealed; according to 2, Heaven, in giving its favour or taking it away, acts with strict decision. When below there is the illustrious illustration (of virtue), that reaches up on high. When above there is the awful majesty, that exercises a survey below. The relation between Heaven and men ought to excite our awe.'

³ The state of Kih must have been somewhere in the royal domain of Yin. Its lords had the surname of Zăn, and the second daughter of the House became the wife of Kî of Kâu. She is called in the eighth line Thâi-zăn, by which name she is still famous in China. 'She commenced,' it is said, 'the instruction of her child when he was still in her womb, looking on no improper sight, listening to no licentious sound, uttering no word of pride.'

capital. Both she and king *Kî* Were entirely virtuous. (Then) *Thâi-zăn* became pregnant, And gave birth to our king *Wăn*.

This king *Wăn*, Watchfully and reverently, With entire intelligence served God, And so secured the great blessing. His virtue was without deflection; And in consequence he received (the allegiance of) the states from all quarters.

Heaven surveyed this lower world; And its appointment lighted (on king *Wăn*). In his early years, It made for him a mate¹;—On the north of the *Hsiâ*, On the banks of the *Wei*. When king *Wăn* would marry, There was the lady in a large state².

In a large state was the lady, Like a fair denizen of heaven. The ceremonies determined the auspiciousness (of the union)³, And in person he met her on the *Wei*. Over it he made a bridge of boats; The glory (of the occasion) was illustrious.

The favouring appointment was from Heaven, Giving the throne to our king *Wăn*, In the capital of *Kâu*. The lady-successor was from *Hsin*, Its eldest daughter, who came to marry him. She was blessed to give birth to king *Wû*, Who was preserved, and helped, and received (also) the appoint-

¹ Heaven is here represented as arranging for the fulfilment of its purposes beforehand.

² The name of the state was *Hsin*, and it must have been near the *Hsiâ* and the *Wei*, somewhere in the south-east of the present *Shen-hsî*.

³ 'The ceremonies' would be various; first of all, divination by means of the tortoise-shell.

ment, And in accordance with it smote the great Shang.

The troops of Yin-shang Were collected like a forest, And marshalled in the wilderness of Mû. We rose (to the crisis); 'God is with you,' (said Shang-fû to the king), 'Have no doubts in your heart¹.'

The wilderness of Mû spread out extensive; Bright shone the chariots of sandal; The teams of bays, black-maned and white-bellied, galloped along; The Grand-Master Shang-fû Was like an eagle on the wing, Assisting king Wû, Who at one onset smote the great Shang. That morning's encounter was followed by a clear, bright (day).

ODE 3. THE MIEN.

SMALL BEGINNINGS AND SUBSEQUENT GROWTH OF THE HOUSE OF KÂU IN KÂU. ITS REMOVAL FROM PIN UNDER THAN-FÛ, WITH ITS FIRST SETTLEMENT IN KÂU, WITH THE PLACE THEN GIVEN TO THE BUILDING OF THE ANCESTRAL TEMPLE, AND THE ALTAR TO THE SPIRITS OF THE LAND. CONSOLIDATION OF ITS FORTUNES BY KING WĂN.

'The ancient duke Than-fû' was the grandfather of king Wăn, and was canonized by the duke of Kâu as 'king Thâi.' As mentioned in a note on p. 316, he was the first of his family to settle in Kâu, removing there from Pin, the site of their earlier settlement, 'the country about the Kzü and the Kûi.'

In long trains ever increasing grow the gourds². When (our) people first sprang, From the country about the Kzü and the Kûi³, The ancient duke

¹ See the account of the battle of Mû in the third Book of the fifth Part of the Shû. Shang-fû was one of Wû's principal leaders and counsellors, his 'Grand-Master Shang-fû' in the next stanza.

² As a gourd grows and extends, with a vast development of its tendrils and leaves, so had the House of Kâu increased.

³ These were two rivers in the territory of Pin, which name still

Than-fû Made for them kiln-like huts and caves,
Ere they had yet any houses ¹.

The ancient duke Than-fû Came in the morning,
galloping his horses, Along the banks of the western
rivers, To the foot of mount *K'hi*²; And there he
and the lady *Kiang*³ Came and together looked
out for a site.

The plain of *K'au* looked beautiful and rich,
With its violets, and sowthistles (sweet) as dump-
lings. There he began by consulting (with his
followers); There he singed the tortoise-shell, (and
divined). The responses were there to stay and
then; And they proceeded there to build ⁴.

He encouraged the people, and settled them;
Here on the left, there on the right. He divided
the ground, and subdivided it; He dug the ditches;
he defined the acres. From the east to the west,
There was nothing which he did not take in hand ⁵.

remains in the small department of Pin *K'au*, in Shen-hsi. The
K'hi flows into the Lo, and the *K'hi* into the Wei.

¹ According to this ode then, up to the time of Than-fû, the
K'au people had only had the dwellings here described; but this
is not easily reconciled with other accounts, or even with other
stanzas of this piece.

² See a graphic account of the circumstances in which this
migration took place, in the fifteenth chapter of the second Part
of the first Book of Mencius, very much to the honour of the
ancient duke.

³ This lady is known as *Thâi-kiang*, the worthy predecessor of
Thâi-sân.

⁴ This stanza has reference to the choice—by council and
divination—of a site for what should be the chief town of the
new settlement.

⁵ This stanza describes the general arrangements for the
occupancy and cultivation of the plain of *K'au*, and the distribution
of the people over it.

He called his Superintendent of Works; He called his Minister of Instruction; And charged them with the rearing of the houses. With the line they made everything straight; They bound the frame-boards tight, so that they should rise regularly: Uprose the ancestral temple in its solemn grandeur¹.

Crowds brought the earth in baskets; They threw it with shouts into the frames; They beat it with responsive blows. They pared the walls repeatedly, till they sounded strong. Five thousand cubits of them arose together, So that the roll of the great drums did not overpower (the noise of the builders)².

They reared the outer gate (of the palace), Which rose in lofty state. They set up the gate of audience, Which rose severe and exact. They reared the great altar to the spirits of the land, From which all great movements should proceed³.

¹ This stanza describes the preparations and processes for erecting the buildings of the new city. The whole took place under the direction of two officers, in whom we have the germ probably of the Six Heads of the Boards or Departments, whose functions are described in the *Shû* and the *Official Book of Kâu*. The materials of the buildings were earth and lime pounded together in frames, as is still to be seen in many parts of the country. The first great building taken in hand was the ancestral temple. Than-fû would make a home for the spirits of his fathers, before he made one for himself. However imperfectly directed, the religious feeling asserted the supremacy which it ought to possess.

² The bustle and order of the building all over the city is here graphically set forth.

³ Than-fû was now at leisure to build the palace for himself, which appears to have been not a very large building, though the Chinese names of its gates are those belonging to the two which

Thus though he could not prevent the rage of his foes¹, He did not let fall his own fame. The oaks and the buckthorns were (gradually) thinned, And roads for travellers were opened. The hordes of the Khwăn disappeared, Startled and panting.

(The chiefs of) Yü and Zui² were brought to an agreement By king Wăn's stimulating their natural virtue. Then, I may say, some came to him, previously not knowing him; Some, drawn the last by the first; Some, drawn by his rapid successes; And some by his defence (of the weak) from insult.

were peculiar to the palaces of the kings of Kâu in the subsequent times of the dynasty. Outside the palace were the altars appropriate to the spirits of the four quarters of the land, the 'great' or royal altar being peculiar to the kings, though the one built by Than-fû is here so named. All great undertakings, and such as required the co-operation of all the people, were preceded by a solemn sacrifice at this altar.

¹ Referring to Than-fû's relations with the wild hordes, described by Mencius, and which obliged him to leave Pin. As the new settlement in Kâu grew, they did not dare to trouble it.

² The poet passes on here to the time of king Wăn. The story of the chiefs of Yü and Zui (two states on the east of the Ho) is this:— They had a quarrel about a strip of territory, to which each of them laid claim. Going to lay their dispute before the lord of Kâu, as soon as they entered his territory, they saw the ploughers readily yielding the furrow, and travellers yielding the path, while men and women avoided one another on the road, and old people had no burdens to carry. At his court, they beheld the officers of each inferior grade giving place to those above them. They became ashamed of their own quarrel, agreed to let the disputed ground be an open territory, and withdrew without presuming to appear before Wăn. When this affair was noised abroad, more than forty states, it is said, tendered their submission to Kâu.

ODE 4, STANZAS 1 AND 2. THE YÎ PHO.

IN PRAISE OF KING WÂN, CELEBRATING HIS INFLUENCE, DIGNITY IN THE
TEMPLE SERVICES, ACTIVITY, AND CAPACITY TO RULE.

Abundant is the growth of the buckthorn and
shrubby trees, Supplying firewood; yea, stores of
it¹. Elegant and dignified was our prince and king;
On the left and the right they hastened to him.

Elegant and dignified was our prince and king;
On his left and his right they bore their half-
mace (libation-cups)²:—They bore them with solemn
gravity, As beseemed such eminent officers.

ODE 5. THE HAN LÔ.

IN PRAISE OF THE VIRTUE OF KING WÂN, BLESSED BY HIS ANCESTORS,
AND RAISED TO THE HIGHEST DIGNITY WITHOUT SEEKING OF HIS
OWN.

Look at the foot of the Han³, How abundantly
grow the hazel and arrow-thorn⁴. Easy and self-
possessed was our prince, In his pursuit of dignity
(still) easy and self-possessed.

Massive is that libation-cup of jade, With the

¹ It is difficult to trace the connexion between these allusive
lines and the rest of the piece.

² Here we have the lord of Kâu in his ancestral temple, assisted
by his ministers or great officers in pouring out the libations to the
spirits of the departed. The libation-cup was fitted with a handle
of jade, that used by the king having a complete kwei, the obelisk-
like symbol of rank, while the cups used by a minister had for a
handle only half a kwei.

³ Where mount Han was cannot now be determined.

⁴ As the foot of the hill was favourable to vegetable growth,
so were king Wân's natural qualities to his distinction and
advancement.

yellow liquid sparkling in it¹. Easy and self-possessed was our prince, The fit recipient of blessing and dignity.

The hawk flies up to heaven, The fishes leap in the deep². Easy and self-possessed was our prince :—Did he not exert an influence on men?

His clear spirits were in the vessels; His red bull was ready³;—To offer, to sacrifice, To increase his bright happiness.

Thick grow the oaks and the buckthorn, Which the people use for fuel⁴. Easy and self-possessed was our prince, Cheered and encouraged by the spirits⁴.

Luxuriant are the dolichos and other creepers, Clinging to the branches and stems. Easy and self-possessed was our prince, Seeking for happiness by no crooked ways.

ODE 6. THE SZÉ KÂI.

THE VIRTUE OF WĂN, WITH HIS FILIAL PIETY AND CONSTANT REVERENCE,
AND THEIR WONDERFUL EFFECTS. THE EXCELLENT CHARACTER OF
HIS MOTHER AND WIFE.

Pure and reverent was Thái Zăn⁵, The mother of king Wăn. Loving was she to Kâu Kiang⁶;—

¹ As a cup of such quality was the proper receptacle for the yellow, herb-flavoured spirits, so was the character of Wăn such that all blessing must accrue to him.

² It is the nature of the hawk to fly and of fishes to swim, and so there went out an influence from Wăn unconsciously to himself.

³ Red, we have seen, was the proper colour for victims in the ancestral temple of Kâu.

⁴ As it was natural for the people to take the wood and use it, so it was natural for the spirits of his ancestors, and spiritual beings generally, to bless king Wăn.

⁵ Thái Zăn is celebrated, above, in the second ode.

⁶ Kâu Kiang is 'the lady Kiang' of ode 3, the wife of Than-fû or

A wife becoming the House of K'âu. Thái Sze¹ inherited her excellent fame, And from her came a hundred sons².

He conformed to the example of his ancestors, And their spirits had no occasion for complaint. Their spirits had no occasion for dissatisfaction; And his example acted on his wife, Extended to his brethren, And was felt by all the clans and states.

Full of harmony was he in his palace; Full of reverence in the ancestral temple. Unseen (by men), he still felt that he was under inspection³: Unweariedly he maintained his virtue.

Though he could not prevent (some) great calamities, His brightness and magnanimity were without stain. Without previous instruction he did what was right; Without admonition he went on (in the path of goodness).

So, grown up men became virtuous (through him), And young men made (constant) attainments. (Our) ancient prince never felt weariness, And from him were the fame and eminence of his officers.

king Thái, who came with him from Pin. She is here called K'âu, as having married the lord of K'âu.

¹ Thái Sze, the wife of Wăn, we are told in ode 2, was from the state of Hsin. The surname Sze shows that its lords must have been descended from the Great Yü.

² We are not to suppose that Thái Sze had herself a hundred sons. She had ten, and her freedom from jealousy so encouraged the fruitfulness of the harem, that all the sons born in it are ascribed to her.

³ Where there was no human eye to observe him, Wăn still felt that he was open to the observation of spiritual beings.

ODE 7. THE HWANG Î.

SHOWING THE RISE OF THE HOUSE OF KÂU TO THE SOVEREIGNTY OF THE KINGDOM THROUGH THE FAVOUR OF GOD. THE ACHIEVEMENTS OF KINGS THÂI AND KÎ, AND ESPECIALLY OF KING WÂN.

Great is God, Beholding this lower world in majesty. He surveyed the four quarters (of the kingdom), Seeking for some one to give establishment to the people. Those two earlier dynasties¹ Had failed to satisfy him with their government; So, throughout the various states, He sought and considered For one on whom he might confer the rule. Hating all the great states, He turned his kind regards on the west, And there gave a settlement (to king Thâi).

(King Thâi) raised up and removed The dead trunks and the fallen trees. He dressed and regulated The bushy clumps and the (tangled) rows. He opened up and cleared The tamarisk trees and the stave trees. He hewed and thinned The mountain mulberry trees. God having brought about the removal thither of this intelligent ruler, The Kwan hordes fled away². Heaven had raised up a helpmeet for him, And the appointment he had received was made sure.

God surveyed the hills, Where the oaks and the buckthorn were thinned, And paths made through the firs and cypresses. God, who had raised the

¹ Those of Hsiâ and Shang.

² The same as 'the hordes of the Khwân' in ode 3. Mr. T. W. Kingsmill says that 'Kwan' here should be 'Chun,' and charges the transliteration Kwan with error (Journal of the Royal Asiatic Society for April, 1878). He had not consulted his dictionary for the proper pronunciation of the Chinese character.

state, raised up a proper ruler¹ for it,—From the time of Thái-po and king Kỉ (this was done)¹. Now this king Kỉ In his heart was full of brotherly duty. Full of duty to his elder brother, He gave himself the more to promote the prosperity (of the country), And secured to him the glory (of his act)². He accepted his dignity and did not lose it, And (ere long his family) possessed the whole kingdom.

This king Kỉ Was gifted by God with the power of judgment, So that the fame of his virtue silently grew. His virtue was highly intelligent,—Highly intelligent, and of rare discrimination; Able to lead, able to rule, To rule over this great country; Rendering a cordial submission, effecting a cordial union³. When (the sway) came to king Wăn, His

¹ King Wăn is 'the proper ruler' intended here, and the next line intimates that this was determined before there was any likelihood of his becoming the ruler even of the territory of Kâu;—another instance of the foreseeing providence ascribed to God. Thái-po was the eldest son of king Thái, and king Kỉ was, perhaps, only the third. The succession ought to have come to Thái-po; but he, seeing the sage virtues of Khang (afterwards king Wăn), the son of Kỉ, and seeing also that king Thái was anxious that this boy should ultimately become ruler of Kâu, voluntarily withdrew from Kâu altogether, and left the state to Kỉ and his son. See the remark of Confucius on Thái-po's conduct, in the Analects, VIII, i.

² The lines from six to ten speak of king Kỉ in his relation to his elder brother. He accepted Thái-po's act without any failure of his own duty to him, and by his own improvement of it, made his brother more glorious through it. His feeling of brotherly duty was simply the natural instinct of his heart. Having accepted the act, it only made him the more anxious to promote the good of the state, and thus he made his brother more glorious by showing what advantages accrued from his resignation and withdrawal from Kâu.

³ This line refers to Kỉ's maintenance of his own loyal duty

virtue left nothing to be dissatisfied with, He received the blessing of God, And it was extended to his descendants.

God said to king Wăn¹, 'Be not like those who reject this and cling to that; Be not like those who are ruled by their likings and desires;' So he grandly ascended before others to the height (of virtue). The people of Mî² were disobedient, Daring to oppose our great country, And invaded Yüan, marching to Kung³. The king rose, majestic in his wrath; He marshalled his troops, To stop the invading foes; To consolidate the prosperity of Kâu; To meet the expectations of all under heaven.

He remained quietly in the capital, But (his troops) went on from the borders of Yüan. They ascended our lofty ridges, And (the enemy) arrayed no forces on our hills, On our hills, small or large, Nor drank at our springs, Our springs or our pools. He then determined the finest of the plains, And settled on the south of K'ü⁴, On the banks of

to the dynasty of Shang, and his making all the states under his presidency loyal also.

¹ The statement that 'God spake to king Wăn,' repeated in stanza 7, vexes the Chinese critics, and they find in it simply an intimation that Wăn's conduct was 'in accordance with the will of Heaven.' I am not prepared to object to that view of the meaning; but it is plain that the writer, in giving such a form to his meaning, must have conceived of God as a personal Being, knowing men's hearts, and able to influence them.

² Mî or Mî-hsü was a state in the present K'ing-ning Kâu, of Phing-liang department, Kan-sü.

³ Yüan was a state adjacent to Mî,—the present K'ing Kâu, and Kung must have been a place or district in it.

⁴ Wăn, it appears, made now a small change in the site of his capital, but did not move to Fäng, where he finally settled.

the Wei, The centre of all the states, The resort of the lower people.

God said to king Wăn, 'I am pleased with your intelligent virtue, Not loudly proclaimed nor portrayed, Without extravagance or changeableness, Without consciousness of effort on your part, In accordance with the pattern of God.' God said to king Wăn, 'Take measures against the country of your foes. Along with your brethren, Get ready your scaling ladders, And your engines of onfall and assault, To attack the walls of *Khung*¹.'

The engines of onfall and assault were (at first) gently plied, Against the walls of *Khung* high and and great; Captives for the question were brought in, one after another; The left ears (of the slain) were taken leisurely². He had sacrificed to God and to the Father of War³, Thus seeking to induce

¹ *Khung* was a state, in the present district of Hû, department Hsî-an, Shen-hsi. His conquest of *Khung* was an important event in the history of king Wăn. He moved his capital to it, advancing so much farther towards the east, nearer to the domain of Shang. According to Sze-mâ *Khien* the marquis of *Khung* had slandered the lord of *Kâu*, who was president of the states of the west, to *Kâu-hsin*, the king of Shang, and our hero was put in prison. His friends succeeded in effecting his deliverance by means of various gifts to the tyrant, and he was reinstated in the west with more than his former power. Three years afterwards he attacked the marquis of *Khung*.

² So far the siege was prosecuted slowly and, so to say, tenderly, Wăn hoping that the enemy would be induced to surrender without great sacrifice of life.

³ The sacrifice to God had been offered in *Kâu*, at the commencement of the expedition; that to the Father of War, on the army's arriving at the borders of *Khung*. We can hardly tell who is intended by the Father of War. *Kû Hsi* and others would require the plural 'Fathers,' saying the sacrifice was to Hwang Tî and *K'ih Yü*, who are found engaged in hostilities far back in the

submission, And throughout the region none had dared to insult him. The engines of onfall and assault were (then) vigorously plied, Against the walls of *Khung* very strong. He attacked it, and let loose all his forces; He extinguished (its sacrifices)¹, and made an end of its existence; And throughout the kingdom none dared to oppose him.

ODE 9. THE HSIÁ WŪ.

IN PRAISE OF KING WŪ, WALKING IN THE WAYS OF HIS FOREFATHERS,
AND BY HIS FILIAL PIETY SECURING THE THRONE TO HIMSELF AND
HIS POSTERITY.

Successors tread in the steps (of their predecessors) in our *Kâu*. For generations there had been wise kings; The three sovereigns were in heaven²; And king (WŪ) was their worthy successor in his capital³.

King (WŪ) was their worthy successor in his capital, Rousing himself to seek for the hereditary virtue, Always striving to be in accordance with the

mythical period of Chinese history. But *K'ih Yü* appears as a rebel, or opposed to the One man in all the country who was then fit to rule. It is difficult to imagine how they could be associated, and sacrificed to together.

¹ The extinction of its sacrifices was the final act in the extinction of a state. Any members of its ruling House who might survive could no longer sacrifice to their ancestors as having been men of princely dignity. The family was reduced to the ranks of the people.

² 'The three sovereigns,' or 'wise kings,' are to be understood of the three celebrated in ode 7,—*Thái*, *K'í*, and *Wán*. We are thus obliged, with all Chinese scholars, to understand this ode of king WŪ. The statement that 'the three kings were in heaven' is very express.

³ The capital here is *Háo*, to which WŪ removed in B.C. 1134, the year after his father's death. It was on the east of the river *Fäng*, and only about eight miles from *Wán*'s capital of *Fäng*.

will (of Heaven); And thus he secured the confidence due to a king.

He secured the confidence due to a king, And became the pattern of all below him. Ever thinking how to be filial, His filial mind was the model (which he supplied).

Men loved him, the One man, And responded (to his example) with a docile virtue. Ever thinking how to be filial, He brilliantly continued the doings (of his fathers).

Brilliantly! and his posterity, Continuing to walk in the steps of their forefathers, For myriads of years, Will receive the blessing of Heaven.

They will receive the blessing of Heaven, And from the four quarters (of the kingdom) will felicitations come to them. For myriads of years Will there not be their helpers?

ODE 10. THE WĂN WANG YÜ SHĀNG.

THE PRAISE OF KINGS WĂN AND WŪ :—HOW THE FORMER DISPLAYED HIS MILITARY PROWESS ONLY TO SECURE THE TRANQUILLITY OF THE PEOPLE; AND HOW THE LATTER, IN ACCORDANCE WITH THE RESULTS OF DIVINATION, ENTERED IN HIS NEW CAPITAL OF HÂO, INTO THE SOVEREIGNTY OF THE KINGDOM WITH THE SINCERE GOOD WILL OF ALL THE PEOPLE.

King Wăn is famous; Yea, he is very famous. What he sought was the repose (of the people); What he saw was the completion (of his work). A sovereign true was king Wăn!

King Wăn received the appointment (from Heaven), And achieved his martial success. Having overthrown *Khung*¹ He fixed his (capital) city in Făng². A sovereign true was king Wăn!

¹ As related in ode 7.

² Făng had, probably, been the capital of *Khung*, and Wăn

He repaired the walls along the (old) moat. His establishing himself in Fǎng was according to (the pattern of his forefathers), It was not that he was in haste to gratify his wishes ;—It was to show the filial duty that had come down to him. A sovereign true was the royal prince !

His royal merit was brightly displayed By those walls of Fǎng. There were collected (the sympathies of the people of) the four quarters, Who regarded the royal prince as their protector. A sovereign true was the royal prince !

The Fǎng-water flowed on to the east (of the city), Through the meritorious labour of Yü. There were collected (the sympathies of the people of) the four quarters, Who would have the great king as their ruler. A sovereign true was the great king¹ !

In the capital of Háo he built his hall with its circlet of water². From the west to the east, From the south to the north, There was not a thought but did him homage. A sovereign true was the great king !

He examined and divined, did the king, About settling in the capital of Háo. The tortoise-shell decided the site³, And king Wû completed the city. A sovereign true was king Wû !

removed to it, simply making the necessary repairs and alterations. This explains how we find nothing about the divinations which should have preceded so important a step as the founding of a new capital.

¹ The writer has passed on to Wû, who did actually become king.

² See on the third of the Praise Odes of Lû in Part IV.

³ Háo was built by Wû, and hence we have the account of his divining about the site and the undertaking.

By the Făng-water grows the white millet¹;—
Did not king Wû show wisdom in his employ-
ment of officers? He would leave his plans to his
descendants, And secure comfort and support to
his son. A sovereign true was king Wû!

The Second Decade, or that of Shăng Min.

ODE 1. THE SHĂNG MIN.

THE LEGEND OF HÂU-K'Í:—HIS CONCEPTION; HIS BIRTH; THE PERILS
OF HIS INFANCY; HIS BOYISH HABITS OF AGRICULTURE; HIS SUBSE-
QUENT METHODS AND TEACHING OF AGRICULTURE; HIS FOUNDING
OF CERTAIN SACRIFICES; AND THE HONOURS OF SACRIFICE PAID TO
HIM BY THE HOUSE OF K'ÂU.

Of Hâu-k'í there is some notice on the tenth ode of the first
decade of the Sacrificial Odes of K'âu. To him the kings of
K'âu traced their lineage. Of K'iang Yüan, his mother, our
knowledge is very scanty. It is said that she was a daughter
of the House of Thái, which traced its lineage up to Shăn-nung
in præhistoric times. From the first stanza of this piece it
appears that she was married, and had been so for some time
without having any child. But who her husband was it is
impossible to say with certainty. As the K'âu surname was K'í,
he must have been one of the descendants of Hwang Tí.

The first birth of (our) people² Was from K'iang
Yüan. How did she give birth to (our) people?
She had presented a pure offering and sacrificed³,

¹ 'The white millet,' a valuable species, grown near the Făng,
suggests to the writer the idea of all the men of ability whom Wû
collected around him.

² Our 'people' is of course the people of K'âu. The whole
piece is about the individual from whom the House of K'âu sprang,
of which were the kings of the dynasty so called.

³ To whom K'iang Yüan sacrificed and prayed we are not told,
but I receive the impression that it was to God,—see the next
stanza,—and that she did so all alone with the special object which
is mentioned.

That her childlessness might be taken away. She then trod on a toe-print made by God, and was moved¹, In the large place where she rested. She became pregnant; she dwelt retired; She gave birth to, and nourished (a son), Who was Hâu-kí.

When she had fulfilled her months, Her first-born son (came forth) like a lamb. There was no bursting, nor rending, No injury, no hurt; Showing how wonderful he would be. Did not God give her the comfort? Had he not accepted her pure offering and sacrifice, So that thus easily she brought forth her son?

He was placed in a narrow lane, But the sheep and oxen protected him with loving care². He was placed in a wide forest, Where he was met with by the wood-cutters. He was placed on the cold ice, And a bird screened and supported him with its wings. When the bird went away, Hâu-kí began to wail. His cry was long and loud, So that his voice filled the whole way².

¹ The 'toe-print made by God' has occasioned much speculation of the critics. We may simply draw the conclusion that the poet meant to have his readers believe with him that the conception of his hero was supernatural. We saw in the third of the Sacrificial Odes of Shang that there was also a legend assigning a præternatural birth to the father of the House of Shang.

² It does not appear from the ode who exposed the infant to these various perils; nor did Chinese tradition ever fashion any story on the subject. Máo makes the exposure to have been made by Kiang Yüan's husband, dissatisfied with what had taken place; Käng, by the mother herself, to show the more the wonderful character of her child. Readers will compare the accounts with the Roman legends about Romulus and Remus, their mother and her father; but the two legends differ according to the different characters of the Chinese and Roman peoples.

When he was able to crawl, He looked majestic and intelligent. When he was able to feed himself, He fell to planting beans. The beans grew luxuriantly; His rows of paddy shot up beautifully; His hemp and wheat grew strong and close; His gourds yielded abundantly.

The husbandry of Hâu-k' Proceeded on the plan of helping (the growth). Having cleared away the thick grass, He sowed the ground with the yellow cereals. He managed the living grain, till it was ready to burst; Then he used it as seed, and it sprang up; It grew and came into ear; It became strong and good; It hung down, every grain complete; And thus he was appointed lord of Thái¹.

He gave (his people) the beautiful grains;—The black millet and the double-kernelled, The tall red and the white. They planted extensively the black and the double-kernelled, Which were reaped and stacked on the ground. They planted extensively the tall red and the white, Which were carried on their shoulders and backs, Home for the sacrifices which he founded².

And how as to our sacrifices (continued from him)?

¹ Hâu-k'’s mother, we have seen, was a princess of Thái, in the present district of Wû-kung, K'ien Kâu, Shen-hsi. This may have led to his appointment to that principality, and the transference of the lordship from Kiangs to K'is. Evidently he was appointed to that dignity for his services in the promotion of agriculture. Still he has not displaced the older Shăn-nung, with whom on his father’s side he had a connexion, as ‘the Father of Husbandry.’

² This is not to be understood of sacrifice in general, as if there had been no such thing before Hâu-k'; but of the sacrifices of the House of Kâu,—those in the ancestral temple and others,—which began with him as its great ancestor.

Some hull (the grain); some take it from the mortar; Some sift it; some tread it. It is rattling in the dishes; It is distilled, and the steam floats about. We consult¹; we observe the rites of purification; We take southernwood and offer it with the fat; We sacrifice a ram to the spirit of the path²; We offer roast flesh and broiled:—And thus introduce the coming year³.

We load the stands with the offerings, The stands both of wood and of earthenware. As soon as the fragrance ascends, God, well pleased, smells the sweet savour. Fragrant it is, and in its due season⁴. Hâu-*kî* founded our sacrifices, And no one, we presume, has given occasion for blame or regret in regard to them, Down to the present day.

ODE 2. THE HSIN WEI.

A FESTAL ODE, CELEBRATING SOME ENTERTAINMENT GIVEN BY THE KING TO HIS RELATIVES, WITH THE TRIAL OF ARCHERY AFTER THE FEAST; CELEBRATING ESPECIALLY THE HONOUR DONE ON SUCH OCCASIONS TO THE AGED.

This ode is given here, because it is commonly taken as a prelude to the next. *K'ü Hsî* interprets it of the feast, given by the

¹ That is, we divine about the day, and choose the officers to take part in the service.

² A sacrifice was offered to the spirit of the road on commencing a journey, and we see here that it was offered also in connexion with the king's going to the ancestral temple or the border altar.

³ It does not appear clearly what sacrifices the poet had in view here. I think they must be all those in which the kings of *K'âu* appeared as the principals or sacrificers. The concluding line is understood to intimate that the kings were not to forget that a prosperous agriculture was the foundation of their prosperity.

⁴ In this stanza we have the peculiar honour paid to Hâu-*kî* by his descendants at one of the great border sacrifices to God,—the same to which the last ode in the first decade of the Sacrificial Odes of *K'âu* belongs.

king, at the close of the sacrifice in the ancestral temple, to the princes of his own surname. There are difficulties in the interpretation of the piece on this view, which, however, is to be preferred to any other.

In thick patches are those rushes, Springing by the way-side:—Let not the cattle and sheep trample them. Anon they will grow up; anon they will be completely formed, With their leaves soft and glossy¹. Closely related are brethren; Let none be absent, let all be near. For some there are mats spread; For some there are given stools².

The mats are spread, and a second one above; The stools are given, and there are plenty of servants. (The guests) are pledged, and they pledge (the host) in return; He rinses the cups (and refills them, but the guests) put them down, Sauces and pickles are brought in, With roasted meat and broiled. Excellent provisions there are of tripe and palates; With singing to lutes, and with drums.

The ornamented bows are strong, And the four arrows are all balanced. They discharge the arrows, and all hit, And the guests are arranged according to their skill. The ornamented bows are drawn to the full, And the arrows are grasped in the hand. They go straight to the mark as if planted

¹ In the rushes growing up densely from a common root we have an emblem of brothers all sprung from the same ancestor; and in the plants developing so finely, when preserved from injury, an emblem of the happy fellowships of consanguinity, when nothing is allowed to interfere with mutual confidence and good feeling.

² In a previous note I have said that chairs and tables had not come into use in those early times. Guests sat and feasts were spread on mats on the floor; for the aged, however, stools were placed on which they could lean forward.

in it, And the guests are arranged according to the humble propriety of their behaviour.

The distant descendant presides over the feast ; His sweet spirits are strong. He fills their cups from a large vase, And prays for the hoary old (among his guests) :— That with hoary age and wrinkled back, They may lead on one another (to virtue), and support one another (in it); That so their old age may be blessed, And their bright happiness ever increased.

ODE 3. THE *Ki sui*.

RESPONSIVE TO THE LAST :—THE UNCLES AND BRETHREN OF THE KING EXPRESS THEIR SENSE OF HIS KINDNESS, AND THEIR WISHES FOR HIS HAPPINESS, MOSTLY IN THE WORDS IN WHICH THE PERSONATORS OF THE DEPARTED ANCESTORS HAD CONVEYED THEIR SATISFACTION WITH THE SACRIFICE OFFERED TO THEM, AND PROMISED TO HIM THEIR BLESSING.

You have made us drink to the full of your spirits; You have satiated us with your kindness. May you enjoy, O our lord, myriads of years! May your bright happiness (ever) be increased!

You have made us drink to the full of your spirits; Your viands were set out before us. May you enjoy, O our lord, myriads of years! May your bright intelligence ever be increased!

May your bright intelligence become perfect, High and brilliant, leading to a good end! That good end has (now) its beginning :—The personators of your ancestors announced it in their blessing.

What was their announcement? ‘(The offerings) in your dishes of bamboo and wood are clean and

fine. Your friends¹, assisting in the service, Have done their part with reverent demeanour.

‘Your reverent demeanour was altogether what the occasion required; And also that of your filial son². For such filial piety, continued without ceasing, There will ever be conferred blessings upon you.’

What will the blessings be? ‘That along the passages of your palace, You shall move for ten thousand years, And there will be granted to you for ever dignity and posterity.’

How as to your posterity? ‘Heaven invests you with your dignity; Yea, for ten thousand years, The bright appointment is attached (to your line).’

How is it attached? ‘There is given you a heroic wife. There is given you a heroic wife, And from her shall come the (line of) descendants.’

ODE 4. THE HŪ Î.

AN ODE APPROPRIATE TO THE FEAST GIVEN TO THE PERSONATORS OF THE DEPARTED, ON THE DAY AFTER THE SACRIFICE IN THE ANCESTRAL TEMPLE.

This supplementary sacrifice on the day after the principal service in the temple appeared in the ninth Book of the fourth Part of the Shû; and of the feast after it to the personators of the dead I have spoken on p. 301.

The wild-ducks and widgeons are on the *King*³;

¹ That is, the guests, visitors, and officers of the court.

² Towards the end of the sacrificial service, the eldest son of the king joined in pledging the representatives of their ancestors.

³ The *King* is an affluent of the Wei, not far from Wû's capital of Hào. The birds, feeling at home in its waters, on its sands, &c., serve to introduce the parties feasted, in a situation where they might relax from the gravity of the preceding day, and be happy.

The personators of your ancestors feast and are happy. Your spirits are clear; Your viands are fragrant. The personators of your ancestors feast and drink;—Their happiness and dignity are made complete.

The wild-ducks and widgeons are on the sand; The personators of the dead enjoy the feast, their appropriate tribute. Your spirits are abundant; Your viands are good. The personators of your ancestors feast and drink;—Happiness and dignity lend them their aids.

The wild-ducks and widgeons are on the islets; The personators of your ancestors feast and enjoy themselves. Your spirits are strained; Your viands are in slices. The personators of your ancestors feast and drink;—Happiness and dignity descend on them.

The wild-ducks and widgeons are where the waters meet; The personators of your ancestors feast and are honoured. The feast is spread in the ancestral temple, The place where happiness and dignity descend. The personators of your ancestors feast and drink;—Their happiness and dignity are at the highest point.

The wild-ducks and widgeons are in the gorge; The personators of your ancestors rest, full of complacency. The fine spirits are delicious; Your meat, roast and broiled, is fragrant. The personators of your ancestors feast and drink;—No troubles will be theirs after this.

ODE 5, STANZA 1. THE *KIÀ* LO.

IN PRAISE OF SOME KING, WHOSE VIRTUE SECURED TO HIM THE
FAVOUR OF HEAVEN.

Perhaps the response of the feasted personators of the ancestors.

Of our admirable, amiable sovereign Most illustrious is the excellent virtue. He orders rightly the people, orders rightly the officers, And receives his dignity from Heaven, Which protects and helps him, and (confirms) his appointment, By repeated acts of renewal from heaven.

ODE 8. THE *KHÜAN* Â.

ADDRESSED, PROBABLY, BY THE DUKE OF SHÂO TO KING *KHÂNG*, DESIRING FOR HIM LONG PROSPERITY, AND CONGRATULATING HIM, IN ORDER TO ADMONISH HIM, ON THE HAPPINESS OF HIS PEOPLE, THE NUMBER OF HIS ADMIRABLE OFFICERS, AND THE AUSPICIOUS OMEN ARISING FROM THE APPEARANCE OF THE PHOENIX.

The duke of Shâo was the famous Shih, who appears in the fifth and other Books of the fifth Part of the Shû, the colleague of the duke of Kâu in the early days of the Kâu dynasty. This piece may have been composed by him, but there is no evidence in it that it was so. The assigning it to him rests entirely on the authority of the preface. The language, however, is that in which an old statesman of that time might express his complacency in his young sovereign.

Into the recesses of the large mound Came the wind, whirling from the south. There was (our) happy, courteous sovereign, Rambling and singing; And I took occasion to give forth my notes.

‘Full of spirits you ramble ; Full of satisfaction you rest. O happy and courteous sovereign, May you fulfil your years, And end them like your ancestors !

‘Your territory is great and glorious, And per-

fectly secure. O happy and courteous sovereign,
May you fulfil your years, As the host of all the
spirits¹!

'You have received the appointment long acknowledged,
With peace around your happiness and dignity. O happy and courteous sovereign, May
you fulfil your years, With pure happiness your
constant possession!

'You have helpers and supporters, Men of filial
piety and of virtue, To lead you on, and act as
wings to you, (So that), O happy and courteous
sovereign, You are a pattern to the four quarters
(of the kingdom).

'Full of dignity and majesty (are they), Like a

¹ 'Host of the hundred—i.e., of all—the spirits' is one of the titles of the sovereign of China. It was and is his prerogative to offer the great 'border sacrifices' to Heaven and Earth, or, as Confucius explains them, to God, and to the spirits of his ancestors in his ancestral temple; and in his progresses (now neglected), among the states, to the spirits of the hills and rivers throughout the kingdom. Every feudal prince could only sacrifice to the hills and streams within his own territory. Under the changed conditions of the government of China, the sacrificial ritual of the emperor still retains the substance of whatever belonged to the sovereigns in this respect from the earliest dynasties. On the text here, Khung Ying-tâ of the Thang dynasty said, 'He who possesses all under the sky, sacrifices to all the spirits, and thus he is the host of them all.' K'ü Hsi said on it, 'And always be the host of (the spirits of) Heaven and Earth, of the hills and rivers, and of the departed.' The term 'host' does not imply any superiority of rank on the part of the entertainer. In the greatest sacrifices the emperor acknowledges himself as 'the servant or subject of Heaven.' See the prayer of the first of the present Manchâu line of emperors, in announcing that he had ascended the throne, at the altar of Heaven and Earth, in 1644, as translated by the Rev. Dr. Edkins in the chapter on Imperial Worship, in the recent edition of his 'Religion in China.'

jade-mace (in its purity), The subject of praise, the contemplation of hope. O happy and courteous sovereign, (Through them) the four quarters (of the kingdom) are guided by you.

‘The male and female phoenix fly about¹, Their wings rustling, While they settle in their proper resting-place. Many are your admirable officers, O king, Ready to be employed by you, Loving you, the Son of Heaven.

‘The male and female phoenix fly about, Their wings rustling, As they soar up to heaven. Many are your admirable officers, O king, Waiting for your commands, And loving the multitudes of the people.

‘The male and female phoenix give out their notes, On that lofty ridge. The dryandras grow, On those eastern slopes. They grow luxuriantly ; And harmoniously the notes resound.

¹ The phoenix (so the creature has been named) is a fabulous bird, ‘the chief of the 360 classes of the winged tribes.’ It is mentioned in the fourth Book of the second Part of the Shû, as appearing in the courtyard of Shun ; and the appearance of a pair of them has always been understood to denote a sage on the throne and prosperity in the country. Even Confucius (Analects, IX, viii) could not express his hopelessness about his own times more strongly than by saying that ‘the phoenix did not make its appearance.’ He was himself also called ‘a phoenix,’ in derision, by one of the recluses of his time (Analects, XVIII, v). The type of the bird was, perhaps, the Argus pheasant, but the descriptions of it are of a monstrous creature, having ‘a fowl’s head, a swallow’s chin, a serpent’s neck, a fish’s tail,’ &c. It only lights on the dryandra cordifolia, of which tree also many marvellous stories are related. The poet is not to be understood as saying that the phoenix actually appeared ; but that the king was sage and his government prosperous, as if it had appeared.

'Your chariots, O sovereign, Are numerous,
many. Your horses, O sovereign, Are well trained
and fleet. I have made my few verses, In pro-
longation of your song.'

ODE 9, STANZA 1. THE MIN LÂO.

IN A TIME OF DISORDER AND SUFFERING, SOME OFFICER OF DISTINC-
TION CALLS ON HIS FELLOWS TO JOIN WITH HIM TO EFFECT A
REFORMATION IN THE CAPITAL, AND PUT AWAY THE PARTIES WHO
WERE THE CAUSE OF THE PREVAILING MISERY.

With the *K'üan Â*, what are called the 'correct' odes of Part III,
or those belonging to a period of good government, and the
composition of which is ascribed mainly to the duke of *Kâu*, come
to an end; and those that follow are the 'changed' Major Odes
of the Kingdom, or those belonging to a degenerate period, com-
mencing with this. Some among them, however, are equal to
any of the former class. The *Min Lâu* has been assigned to
duke *Mû* of *Shâu*, a descendant of duke *Khang*, the *Shih* of the
Shû, the reputed author of the *K'üan Â*, and was directed
against king *Lî*, B.C. 878 to 828.

The people indeed are heavily burdened, But
perhaps a little relief may be got for them. Let
us cherish this centre of the kingdom, To secure
the repose of the four quarters of it. Let us give
no indulgence to the wily and obsequious, In order
to make the unconscientious careful, And to repress
robbers and oppressors, Who have no fear of the
clear will (of Heaven)¹. Then let us show kindness
to those who are distant, And help those who are
near,—Thus establishing (the throne of) our king.

¹ 'The clear will,' according to *K'ü Hsi*, is 'the clear appointment
of Heaven;' according to *K'ü Kung-*ch*ien*, 'correct principle.'
They both mean the law of human duty, as gathered from the
nature of man's moral constitution conferred by Heaven.

ODE 10. THE PAN.

AN OFFICER OF EXPERIENCE MOURNS OVER THE PREVAILING MISERY;
COMPLAINS OF THE WANT OF SYMPATHY WITH HIM SHOWN BY OTHER
OFFICERS; ADMONISHES THEM, AND SETS FORTH THE DUTY RE-
QUIRED OF THEM, ESPECIALLY IN THE ANGRY MOOD IN WHICH IT
MIGHT SEEM THAT HEAVEN WAS.

This piece, like the last, is assigned to the time of king Lî.

God has reversed (his usual course of procedure)¹,
And the lower people are full of distress. The
words which you utter are not right; The plans
which you form are not far-reaching. As there are
not sages, you think you have no guidance;—You
have no real sincerity. (Thus) your plans do not
reach far, And I therefore strongly admonish you.

Heaven is now sending down calamities;—Do not
be so complacent. Heaven is now producing such
movements;—Do not be so indifferent. If your
words were harmonious, The people would become
united. If your words were gentle and kind, The
people would be settled.

Though my duties are different from yours, I am
your fellow-servant. I come to advise with you,
And you hear me with contemptuous indifference.
My words are about the (present urgent) affairs;—
Do not think them matter for laughter. The ancients
had a saying:—‘Consult the gatherers of grass
and firewood².’

¹ The proof of God's having reversed his usual course of procedure was to be found in the universal misery of the people, whose good He was understood to desire, and for the securing of which government by righteous kings was maintained by him.

² If ancient worthies thought that persons in such mean employments were to be consulted, surely the advice of the writer deserved to be taken into account by his comrades.

Heaven is now exercising oppression ;—Do not in such a way make a mock of things. An old man, (I speak) with entire sincerity; But you, my juniors, are full of pride. It is not that my words are those of age, But you make a joke of what is sad. But the troubles will multiply like flames, Till they are beyond help or remedy.

Heaven is now displaying its anger ;—Do not be either boastful or flattering, Utterly departing from all propriety of demeanour, Till good men are reduced to personators of the dead¹. The people now sigh and groan, And we dare not examine (into the causes of their trouble). The ruin and disorder are exhausting all their means of living, And we show no kindness to our multitudes.

Heaven enlightens the people², As the bamboo flute responds to the earthen whistle; As two half-maces form a whole one; As you take a thing, and bring it away in your hand, Bringing it away, without any more ado. The enlightenment of the people is very easy. They have (now) many perversities ;—Do not you set up your perversity before them.

Good men are a fence ; The multitudes of the people are a wall ; Great states are screens ; Great families are buttresses ; The cherishing of virtue

¹ During all the time of the sacrifice, the personators of the dead said not a word, but only ate and drank. To the semblance of them good men were now reduced.

² The meaning is, that Heaven has so attuned the mind to virtue, that, if good example were set before the people, they would certainly and readily follow it. This is illustrated by various instances of things, in which the one succeeded the other freely and as if necessarily ; so that government by virtue was really very easy.

secures repose ; The circle of (the king's) relatives is a fortified wall. We must not let the fortified wall get destroyed ; We must not let (the king) be solitary and consumed with terrors.

Revere the anger of Heaven, And presume not to make sport or be idle. Revere the changing moods of Heaven, And presume not to drive about (at your pleasure). Great Heaven is intelligent, And is with you in all your goings. Great Heaven is clear-seeing, And is with you in your wanderings and indulgences.

The Third Decade, or that of Tang.

ODE 1. THE TANG.

WARNINGS, SUPPOSED TO BE ADDRESSED TO KING LÎ, ON THE ISSUES OF THE COURSE WHICH HE WAS PURSUING, SHOWING THAT THE MISERIES OF THE TIME AND THE IMMINENT DANGER OF RUIN WERE TO BE ATTRIBUTED, NOT TO HEAVEN, BUT TO HIMSELF AND HIS MINISTERS.

This ode, like the ninth of the second decade, is attributed to duke Mû of Shão. The structure of the piece is peculiar, for, after the first stanza, we have king Wăn introduced delivering a series of warnings to Kâu-hsin, the last king of the Shang dynasty. They are put into Wăn's mouth, in the hope that Lî, if, indeed, he was the monarch whom the writer had in view, would transfer the figure of Kâu-hsin to himself, and alter his course so as to avoid a similar ruin.

How vast is God, The ruler of men below ! How arrayed in terrors is God, With many things irregular in his ordinations. Heaven gave birth to the multitudes of the people, But the nature it confers is not to be depended on. All are (good)

at first, But few prove themselves to be so at the last¹.

King Wăn said, 'Alas! Alas! you sovereign of Shang, That you should have such violently oppressive ministers, That you should have such extortionate exactors, That you should have them in offices, That you should have them in the conduct of affairs! "Heaven made them with their insolent dispositions;" But it is you who employ them, and give them strength.'

King Wăn said, 'Alas! Alas! you (sovereign of) Yin-shang, You ought to employ such as are good, But (you employ instead) violent oppressors, who cause many dissatisfactions. They respond to you with baseless stories, And (thus) robbers and thieves are in your court. Hence come oaths and curses, Without limit, without end.'

King Wăn said, 'Alas! Alas! you (sovereign of) Yin-shang, You show a strong fierce will in the centre of the kingdom, And consider the contracting of enmities a proof of virtue. All-unintelligent are you of your (proper) virtue, And so you have no (good) men behind you, nor by your side. Without any intelligence of your (proper) virtue, You have no (good) intimate adviser or minister.'

King Wăn said, 'Alas! Alas! you (sovereign of) Yin-shang, It is not Heaven that flushes your face with spirits, So that you follow what is evil and imitate it. You go wrong in all your conduct; You make no distinction between the light and the

¹ The meaning seems to be that, whatever miseries might prevail, and be ignorantly ascribed to God, they were in reality owing to men's neglect of the law of Heaven inscribed on their hearts.

darkness; But amid clamour and shouting, You turn the day into night¹.'

King Wăn said, 'Alas! Alas! you (sovereign of) Yin-shang, (All round you) is like the noise of cicadas, Or like the bubbling of boiling soup. Affairs, great and small, are approaching to ruin, And still you (and your creatures) go on in this course. Indignation is rife against you here in the Middle Kingdom, And extends to the demon regions².'

King Wăn said, 'Alas! Alas! you (sovereign of) Yin-shang, It is not God that has caused this evil time, But it arises from Yin's not using the old (ways). Although you have not old experienced men, There are still the ancient statutes and laws. But you will not listen to them, And so your great appointment is being overthrown.'

King Wăn said, 'Alas! Alas! you (sovereign of) Shang, People have a saying, "When a tree falls utterly, While its branches and leaves are yet uninjured, It must first have been uprooted." The beacon of Yin is not far distant;—It is in the age of the (last) sovereign of Hsiâ.'

¹ We speak of 'turning night into day.' The tyrant of Shang turned day into night. Excesses, generally committed in darkness, were by him done openly.

² These 'demon regions' are understood to mean the seat of the Turkic tribes to the north of China, known from the earliest times by various names—'The hill Zung,' 'the northern Lî,' 'the Hsien-yun,' &c. Towards the beginning of our era, they were called Hsiung-nô, from which, perhaps, came the name Huns; and some centuries later, Thû-kûeh (Thuh-kûeh), from which came Turk. We are told in the Yî, under the diagram Kî-M, that Kâo Jung (B.C. 1324-1266) conducted an expedition against the demon regions, and in three years subdued them.

ODE 2. THE YÎ.

CONTAINING VARIOUS COUNSELS WHICH DUKE WŪ OF WEI MADE TO ADMONISH HIMSELF, WHEN HE WAS OVER HIS NINETIETH YEAR; ESPECIALLY ON THE DUTY OF A RULER TO BE CAREFUL OF HIS OUTWARD DEMEANOUR, FEELING THAT HE IS EVER UNDER THE INSPECTION OF SPIRITUAL BEINGS, AND TO RECEIVE WITH DOCILITY INSTRUCTIONS DELIVERED TO HIM.

The sixth ode in the seventh decade of the Minor Odes of the Kingdom is attributed to the same duke of Wei as this; and the two bear traces of having proceeded from the same writer. The external authorities for assigning this piece to duke WŪ are the statement of the preface and an article in the 'Narratives of the States,' a work already referred to as belonging to the period of the K'au dynasty. That article relates how WŪ, at the age of ninety-five, insisted on all his ministers and officers being instant, in season and out of season, to admonish him on his conduct, and that 'he made the warnings in the Î to admonish himself.' The Î is understood to be only another name for this Yî. Thus the speaker throughout the piece is WŪ, and 'the young son,' whom he sometimes addresses, is himself also. The conception of the writer in taking such a method to admonish himself, and give forth the lessons of his long life, is very remarkable; and the execution of it is successful.

Outward demeanour, cautious and grave, Is an indication of the (inward) virtue. People have the saying, 'There is no wise man who is not (also) stupid.' The stupidity of the ordinary man Is determined by his (natural) defects. The stupidity of the wise man Is from his doing violence (to his proper character).

What is most powerful is the being the man¹;—

¹ WŪ writes as the marquis of Wei, the ruler of a state; but what he says is susceptible of universal application. In every smaller sphere, and in the largest, 'being the man,' displaying, that is, the proper qualities of humanity, will be appreciated and felt.

In all quarters (of the state) men are influenced by it. To an upright virtuous conduct All in the four quarters of the state render obedient homage. With great counsels and determinate orders, With far-reaching plans and timely announcements, And with reverent care of his outward demeanour, One will become the pattern of the people.

As for the circumstances of the present time, You are bent on error and confusion in your government. Your virtue is subverted; You are besotted by drink¹. Although you thus pursue nothing but pleasure, How is it you do not think of your relation to the past, And do not widely study the former kings, That you might hold fast their wise laws?

Shall not those whom great Heaven does not approve of, Surely as the waters flow from a spring, Sink down together in ruin? Rise early and go to bed late, Sprinkle and sweep your courtyard;— So as to be a pattern to the people². Have in good order your chariots and horses, Your bows and arrows, and (other) weapons of war;—To be prepared for warlike action, To keep at a distance (the hordes of) the south.

Perfect what concerns your officers and people;

¹ Han Ying (who has been mentioned in the Introduction) says that Wû made the sixth ode of the seventh decade of the former Part against drunkenness, when he was repenting of his own giving way to that vice. His mention of the habit here, at the age of ninety-five, must be understood as a warning to other rulers.

² Line 3 describes things important to the cultivation of one's self; and line 4, things important to the regulation of one's family. They may seem unimportant, it is said, as compared with the defence of the state, spoken of in the last four lines of the stanza; but the ruler ought not to neglect them.

Be careful of your duties as a prince (of the kingdom). To be prepared for unforeseen dangers, Be cautious of what you say; Be reverentially careful of your outward behaviour; In all things be mild and correct. A flaw in a mace of white jade May be ground away; But for a flaw in speech Nothing can be done.

Do not speak lightly; your words are your own¹. Do not say, 'This is of little importance; No one can hold my tongue for me.' Words are not to be cast away. Every word finds its answer; Every good deed has its recompense. If you are gracious among your friends, And to the people, as if they were your children, Your descendants will continue in unbroken line, And all the people will surely be obedient to you.

Looked at in friendly intercourse with superior men, You make your countenance harmonious and mild; Anxious not to do anything wrong. Looked at in your chamber, You ought to be equally free from shame before the light which shines in. Do not say, 'This place is not public; No one can see me here.' The approaches of spiritual beings Cannot be calculated beforehand; But the more should they not be slighted².

¹ And therefore every one is himself responsible for his words.

² K'ü Hsi says that from the fourth line this stanza only speaks of the constant care there should be in watching over one's thoughts; but in saying so, he overlooks the consideration by which such watchful care is enforced. Compare what is said of king Wán in the third stanza of the sixth ode of the first decade. King Wán and duke Wú were both influenced by the consideration that their inmost thoughts, even when 'unseen by men,' were open to the inspection of spiritual beings.

O prince, let your practice of virtue Be entirely good and admirable. Watch well over your behaviour, And allow nothing wrong in your demeanour. Committing no excess, doing nothing injurious, There are few who will not in such a case take you for their pattern. When one throws to me a peach, I return to him a plum¹. To look for horns on a young ram Will only weary you, my son².

The tough and elastic wood Can be fitted with the silken string³. The mild and respectful man Possesses the foundation of virtue. There is a wise man;—I tell him good words, And he yields to them the practice of docile virtue. There is a stupid man;—He says on the contrary that my words are not true:—So different are people's minds.

Oh! my son, When you did not know what was good, and what was not good, Not only did I lead you by the hand, But I showed the difference between them by appealing to instances. Not (only) did I charge you face to face, But I held you by the ear⁴. And still perhaps you do not know, Although you have held a son in your arms. If people be not self-sufficient, Who comes to a late maturity after early instruction?

Great Heaven is very intelligent, And I pass

¹ That is, every deed, in fact, meets with its recompense.

² See the conclusion of duke Wü's ode against drunkenness. Horns grow as the young ram grows. Effects must not be expected where there have not been the conditions from which they naturally spring.

³ Such wood is the proper material for a bow:

⁴ That is, to secure your attention.

my life without pleasure. When I see you so dark and stupid, My heart is full of pain. I taught you with assiduous repetition, And you listened to me with contempt. You would not consider me as your teacher, But regarded me as troublesome. Still perhaps you do not know;—But you are very old.

Oh! my son, I have told you the old ways. Hear and follow my counsels:—Then shall you have no cause for great regret. Heaven is now inflicting calamities, And is destroying the state. My illustrations are not taken from things remote:—Great Heaven makes no mistakes. If you go on to deteriorate in your virtue, You will bring the people to great distress.

ODE 3, STANZAS 1, 2, 3, 4, AND 7. THE SANG ZÂU.

THE WRITER MOURNS OVER THE MISERY AND DISORDER OF THE TIMES, WITH A VIEW TO REPREHEND THE MISGOVERNMENT OF KING LÎ, APPEALING ALSO TO HEAVEN TO HAVE COMPASSION.

King Lî is not mentioned by name in the piece, but the second line of stanza 7 can only be explained of him. He was driven from the throne, in consequence of his misgovernment, in B. C. 842, and only saved his life by flying to Kih, a place in the present Ho Kâu, department Phing-yang, Shan-hsi, where he remained till his death in B. C. 828. The government in the meantime was carried on by the dukes of Sháo and Kâu, whose administration, called the period of 'Mutual Harmony,' forms an important chronological era in Chinese history. On the authority of a reference in the 30 Kwan, the piece is ascribed to an earl of Zui.

Luxuriant is that young mulberry tree, And beneath it wide is the shade; But they will pluck its leaves till it is quite destroyed¹. The distress

¹ These three lines are metaphorical of the once flourishing kingdom, which was now brought to the verge of ruin.

inflicted on these (multitudes of the) people, Is an unceasing sorrow to my heart; My commiseration fills (my breast). O thou bright and great Heaven, Shouldst thou not have compassion on us?

The four steeds (gallop about), eager and strong¹; The tortoise-and-serpent and the falcon banners fly about. Disorder grows, and no peace can be secured. Every state is being ruined; There are no black heads among the people². Everything is reduced to ashes by calamity. Oh! alas! The doom of the kingdom hurries on.

There is nothing to arrest the doom of the kingdom; Heaven does not nourish us. There is no place in which to stop securely; There is no place to which to go. Superior men are the bonds (of the social state)³, Allowing no love of strife in their hearts. Who reared the steps of the dissatisfaction⁴, Which has reached the present distress?

The grief of my heart is extreme, And I dwell on (the condition of) our land. I was born at an unhappy time, To meet with the severe anger of Heaven. From the west to the east, There is no quiet place of abiding. Many are the distresses I meet with; Very urgent is the trouble on our borders.

Heaven is sending down death and disorder, And

¹ That is, the war-chariots, each drawn by its team of four horses.

² The young and able-bodied of the people were slain or absent on distant expeditions, and only old and gray-headed men were to be seen.

³ Intimating that no such men were now to be found in office.

⁴ Meaning the king by his misgovernment and employment of bad men.

has put an end to our king. It is (now) sending down those devourers of the grain, So that the husbandry is all in evil case. Alas for our middle states¹! All is in peril and going to ruin. I have no strength (to do anything), And think of (the Power in) the azure vault.

ODE 4. THE YUN HAN.

KING HSÜAN, ON OCCASION OF A GREAT DROUGHT, EXPOSTULATES WITH GOD AND ALL THE SPIRITS, WHO MIGHT BE EXPECTED TO HELP HIM AND HIS PEOPLE; ASKS THEM WHEREFORE THEY WERE CONTENDING WITH HIM; AND DETAILS THE MEASURES HE HAD TAKEN, AND WAS STILL TAKING, FOR THE REMOVAL OF THE CALAMITY.

King Hsüan does not occur by name in the ode, though the remarkable prayer which it relates is ascribed to a king in stanza 1. All critics have admitted the statement of the Preface that the piece was made, in admiration of king Hsüan, by Zǎng Shù, a great officer, we may presume, of the court. The standard chronology places the commencement of the drought in B.C. 822, the sixth year of Hsüan's reign. How long it continued we cannot tell.

Bright was the milky way, Shining and revolving in the sky. The king said, 'Oh! What crime is chargeable on us now, That Heaven (thus) sends down death and disorder? Famine comes again and again. There is no spirit I have not sacrificed to²; There is no victim I have grudged; Our

¹ We must translate here in the plural, 'the middle states' meaning all the states subject to the sovereign of K'âu.

² In the Official Book of K'âu, among the duties of the Minister of Instruction, or, as Biot translates the title, 'the Director of the Multitudes,' it is stated that one of the things he has to do, on occurrences of famine, is 'to seek out the spirits,' that is, as explained by the commentators, to see that sacrifices are offered to all the spirits, even such as may have been discontinued. This rule had, no doubt, been acted on during the drought which this ode describes.

jade symbols, oblong and round, are exhausted¹;—
How is it that I am not heard?

‘The drought is excessive; Its fervours become more and more tormenting. I have not ceased offering pure sacrifices; From the border altars I have gone to the ancestral temple². To the (Powers) above and below I have presented my offerings and then buried them³;—There is no spirit whom I have not honoured. Hâu-*hi* is not equal to the occasion; God does not come to us. This wasting and ruin of our country,—Would that it fell (only) on me!

‘The drought is excessive, And I may not try to excuse myself. I am full of terror, and feel the peril, Like the clap of thunder or the roll. Of the remnant of *Kâu*, among the black-haired people, There will not be half a man left; Nor will God from his great heaven exempt (even) me. Shall

¹ We have, in the sixth Book of the fifth Part of the *Shû*, an instance of the use of the symbols here mentioned in sacrificing to the spirits of departed kings. The Official Book, among the duties of the Minister of Religion, mentions the use of these and other symbols—in all six, of different shapes and colours—at the different sacrifices.

² By ‘the border altars’ we are to understand the altars in the suburbs of the capital, where Heaven and Earth were sacrificed to;—the great services at the solstices, and any other seasons. The mention of Hâu-*hi* in the seventh line makes us think especially of the service in the spring, to pray for a good year, when Hâu-*hi* was associated with God.

³ ‘The (Powers) above and below’ are Heaven and Earth. The offerings, during the progress of the service, were placed on the ground, or on the altars, and buried in the earth at the close of it. This explains what the king says in the first stanza about the offerings of jade being exhausted.

we not mingle our fears together? (The sacrifices to) my ancestors will be extinguished¹.

'The drought is excessive, And it cannot be stopped. More fierce and fiery, It is leaving me no place. My end is near;—I have none to look up, none to look round, to. The many dukes and their ministers of the past² Give me no help. O ye parents and (nearer) ancestors³, How can ye bear to see me thus?

'The drought is excessive;—Parched are the hills, and the streams are dried. The demon of drought exercises his oppression, As if scattering flames and fire⁴ My heart is terrified with the heat;—My sorrowing heart is as if on fire. The

¹ Equivalent to the extinction of the dynasty.

² The king had sacrificed to all the early lords of Kâu. 'The many dukes' may comprehend kings Thái and Kỉ. He had also sacrificed to their ministers. Compare what Pan-kǎng says in the Shû, p. 109, about his predecessors and their ministers. Some take 'the many dukes, and the ministers,' of all princes of states who had signalled themselves by services to the people and kingdom.

³ The king could hardly hope that his father, the oppressive Lî, would in his spirit-state give him any aid; but we need only find in his words the expression of natural feeling. Probably it was the consideration of the character of Lî which has made some critics understand by 'parents' and 'ancestors' the same individuals, namely, kings Wăn and Wû, 'the ancestors' of Hsüan, and who had truly been 'the parents' of the people.

⁴ Khung Ying-tâ, from 'the Book of Spirits and Marvels,' gives the following account of 'the demon of drought':—'In the southern regions there is a man, two or three cubits in height, with the upper part of his body bare, and his eyes in the top of his head. He runs with the speed of the wind, and is named Po. In whatever state he appears, there ensues a great drought.' The Book of Spirits and Marvels, however, as it now exists, cannot be older than our fourth or fifth century.

many dukes and their ministers of the past Do not hear me. O God, from thy great heaven, Grant me the liberty to withdraw (into retirement¹).

‘The drought is excessive ;—I struggle and fear to go away. How is it that I am afflicted with this drought ? I cannot ascertain the cause of it. In praying for a good year I was abundantly early². I was not late (in sacrificing) to (the spirits of) the four quarters and of the land³. God in great heaven Does not consider me. Reverent to the intelligent spirits, I ought not to be thus the object of their anger.

‘The drought is excessive ;—All is dispersion, and the bonds of government are relaxed. Reduced to extremities are the heads of departments ; Full of distress are my chief ministers, The Master of the Horse, the Commander of the Guards, The chief Cook⁴, and my attendants. There is no one who has not (tried to) help (the people) ; They have not refrained on the ground of being unable. I look up to the great heaven ;—Why am I plunged in this sorrow ?

‘I look up to the great heaven, But its stars sparkle bright. My great officers and excellent men, Ye have reverently drawn near (to Heaven) with all

¹ That is, to withdraw and give place to a more worthy sovereign.

² This was the border sacrifice to God, when Hâu-kî was associated with him. Some critics add a sacrifice in the first month of winter, for a blessing on the ensuing year, offered to ‘the honoured ones of heaven,’—the sun, moon, and zodiacal constellations.

³ See note 2 on p. 371.

⁴ See note 1 on p. 356.

your powers. Death is approaching, But do not cast away what you have done. You are seeking not for me only, But to give rest to all our departments. I look up to the great heaven;—When shall I be favoured with repose ?'

ODE 5, STANZAS 1, 2, AND 4. THE SUNG KÂO.

CELEBRATING THE APPOINTMENT BY KING HSÜAN OF A RELATIVE TO BE THE MARQUIS OF SHĀN, AND DEFENDER OF THE SOUTHERN BORDER OF THE KINGDOM, WITH THE ARRANGEMENTS MADE FOR HIS ENTERING ON HIS CHARGE.

That the king who appears in this piece was king Hsüan is sufficiently established. He appears in it commissioning 'his great uncle,' an elder brother, that is, of his mother, to go and rule, as marquis of Shān, and chief or president of the states in the south of the kingdom, to defend the borders against the encroaching hordes of the south, headed by the princes of K'û, whose lords had been rebellious against the middle states even in the time of the Shang dynasty;—see the last of the Sacrificial Odes of Shang.

Grandly lofty are the mountains, With their large masses reaching to the heavens. From those mountains was sent down a spirit, Who produced the birth of (the princes of) Fû and Shān¹. Fû and

¹ Shān was a small marquisate, a part of what is the present department of Nan-yang, Ho-nan. Fû, which was also called Lü, was another small territory, not far from Shān. The princes of both were Kiangs, descended from the chief minister of Yao, called in the first Book of the Shû, 'the Four Mountains.' Other states were ruled by his descendants, particularly the great state of K'û. When it is said here that a spirit was sent down from the great mountains, and produced the birth of (the princes of) Fû and Shān, we have, probably, a legendary tradition concerning the birth of Yao's minister, which was current among all his descendants; and with which we may compare the legends that have come under our notice about the supernatural births of the ancestors of the founders of the Houses of Shang and K'au. The character for

Shăn Are the support of K'âu, Screens to all the states, Diffusing (their influence) over the four quarters of the kingdom.

Full of activity is the chief of Shăn, And the king would employ him to continue the services (of his fathers), With his capital in Hsieh¹, Where he should be a pattern to the states of the south. The king gave charge to the earl of Sháo, To arrange all about the residence of the chief of Shăn, Where he should do what was necessary for the regions of the south, And where his posterity might maintain his merit.

Of the services of the chief of Shăn The foundation was laid by the earl of Sháo, Who first built the walls (of his city), And then completed his ancestral temple². When the temple was completed, wide and grand, The king conferred on the chief of Sháo Four noble steeds, With the hooks for the trappings of the breast-bands, glittering bright³.

'mountains' in lines 1 and 3 is the same that occurs in the title of Yáo's minister. On the statement about the mountains sending down a spirit, Hwang Hsün, a critic of the Sung dynasty, says that 'it is merely a personification of the poet, to show how high Heaven had a mind to revive the fortunes of K'âu, and that we need not trouble ourselves about whether there was such a spirit or not.'

¹ Hsieh was in the present Făng K'âu of the department of Nan-yang.

² Compare with this the account given, in ode 3 of the first decade, of the settling of 'the ancient duke Than-fü' in the plain of K'âu. Here, as there, the great religious edifice, the ancestral temple, takes precedence of all other buildings in the new city.

³ The steeds with their equipments were tokens of the royal favour, usually granted on occasions of investiture. The conferring of them was followed immediately by the departure of the newly-invested prince to his charge.

ODE 6, STANZAS 1 AND 7. THE *K'ANG* MIN.

CELEBRATING THE VIRTUES OF *K'UNG SHAN-FŪ*, WHO APPEARS TO HAVE BEEN ONE OF THE PRINCIPAL MINISTERS OF KING *HSŪAN*, AND HIS DESPATCH TO THE EAST, TO FORTIFY THE CAPITAL OF THE STATE OF *KHŪ*.

Heaven, in giving birth to the multitudes of the people, To every faculty and relationship annexed its law. The people possess this normal nature, And they (consequently) love its normal virtue¹. Heaven beheld the ruler of *K'au*, Brilliantly affecting it by his conduct below, And to maintain him, its Son, Gave birth to *Kung Shan-fŭ*².

Kung Shan-fŭ went forth, having sacrificed to the spirit of the road³. His four steeds were strong;

¹ We get an idea of the meaning which has been attached to these four lines from a very early time by Mencius' quotation of them (VI, i, ch. 6) in support of his doctrine of the goodness of human nature, and the remark on the piece which he attributes to Confucius, that 'the maker of it knew indeed the constitution (of our nature).' Every faculty, bodily or mental, has its function to fulfil, and every relationship its duty to be discharged. The function and the duty are the things which the human being has to observe :—the seeing clearly, for instance, with the eyes, and hearing distinctly with the ears; the maintenance of righteousness between ruler and minister, and of affection between parent and child. This is the 'normal nature,' and the 'normal virtue' is the nature fulfilling the various laws of its constitution.

² The connexion between these four lines and those that precede is this :—that while Heaven produces all men with the good nature there described, on occasions it produces others with virtue and powers in a super-eminent degree. Such an occasion was presented by the case of king *Hsŭan*, and therefore, to mark its appreciation of him, and for his help, it now produced *Kung Shan-fŭ*.

³ This was a special sacrifice at the commencement of a journey, or of an expedition. See note 2 on p. 399.

His men were alert, He was always anxious lest he should not be equal to his commission; His steeds went on without stopping, To the tinkling of their eight bells. The king had given charge to *Kung Shan-fû*, To fortify the city there in the east.

ODE 7, STANZAS 1 AND PART OF 3. THE HAN YI.

CELEBRATING THE MARQUIS OF HAN:—HIS INVESTITURE, AND THE KING'S CHARGE TO HIM; THE GIFTS HE RECEIVED, AND THE PARTING FEAST AT THE COURT; HIS MARRIAGE; THE EXCELLENCE OF HIS TERRITORY; AND HIS SWAY OVER THE REGIONS OF THE NORTH.

Only one line—the first of stanza 3—in this interesting piece serves to illustrate the religious practices of the time, and needs no further note than what has been given on the first line of stanza 7 in the preceding ode. The name of the marquissate of Han remains in the district of Han-*h*hâng, department of Hsî-an, Shen-hsî, in which also is mount Liang.

Very grand is the mountain of Liang, Which was made cultivable by Yü. Bright is the way from it, (Along which came) the marquis of Han to receive investiture. The king in person gave the charge:—
‘Continue the services of your ancestors; Let not my charge to you come to nought. Be diligent early and late, And reverently discharge your duties:—
So shall my appointment of you not change. Be a support against those princes who do not come to court, Thus assisting your sovereign.’

When the marquis of Han left the court, he sacrificed to the spirit of the road. He went forth, and lodged for the night in Tû.

ODE 8, STANZAS 4 AND 5. THE KIANG HAN.

CELEBRATING AN EXPEDITION AGAINST THE SOUTHERN TRIBES OF THE HWÂI, AND THE WORK DONE FOR THE KING IN THEIR COUNTRY, BY HÛ, THE EARL OF SHÂO, WITH THE MANNER IN WHICH THE KING REWARDED HIM, AND HE RESPONDED TO THE ROYAL FAVOUR.

Hû was probably the same earl of Shâo, who is mentioned in ode 5, as building his capital of Hsieh for the new marquis of Shăn. The lords of Shâo had been distinguished in the service of Kâu ever since the rise of the dynasty.

The king gave charge to Hû of Shâo:—‘You have everywhere made known (and carried out my orders). When (the kings) Wăn and Wû received their appointment, The duke of Shâo was their strong support. You not (only) have a regard to me the little child, But you try to resemble that duke of Shâo. You have commenced and earnestly displayed your merit; And I will make you happy.

‘I give you a large libation-cup of jade¹, And a jar of herb-flavoured spirits from the black millet². I have made announcement to the Accomplished one³, And confer on you hills, lands, and fields. In (*Khi*-)kâu shall you receive investiture, According as your ancestor received his.’ Hû bowed with

¹ See note 2 on p. 386.

² The cup and the spirits would be used by the earl when sacrificing in his ancestral temple. Compare the similar gift from king K'ang to the duke of Kâu, in the Shû, p. 194. More substantial gifts are immediately specified.

³ ‘The Accomplished one’ is understood to be king Wăn (= ‘the Accomplished king’). He was the founder of the Kâu dynasty. To him the kingdom had first come by the appointment and gift of Heaven. It was the duty therefore of his successors, in making grants of territory to meritorious officers, to announce them to him in *Khi*-kâu, the old territory of the family, and obtain, as it were, his leave for what they were doing.

his head to the ground (and said), 'May the Son of Heaven live for ever!'

ODE 10, STANZAS 1, 5, 6, AND 7. THE *KAN ZANG*.

THE WRITER DEPLORES, WITH AN APPEALING WAIL TO HEAVEN, THE MISERY AND OPPRESSION THAT PREVAILED, AND INTIMATES THAT THEY WERE CAUSED BY THE INTERFERENCE OF WOMEN AND EUNUCHS IN THE GOVERNMENT.

The king addressed in this piece was most probably Yü. It suits his character and reign.

I look up to great Heaven, But it shows us no kindness. Very long have we been disquieted, And these great calamities are sent down (upon us). There is nothing settled in the country; Officers and people are in distress. Through the insects from without and from within, There is no peace or limit (to our misery). The net of crime is not taken up¹, And there is no peace nor cure (for our state).

Why is it that Heaven is (thus) reproving (you)? Why is it that Heaven is not blessing (you)? You neglect your great barbarian (foes), And regard me with hatred. You are regardless of the evil omens (that abound²), And your demeanour is all unseemly. (Good) men are going away, And the country is sure to go to ruin.

Heaven is letting down its net, And many (are the calamities in it). (Good) men are going away, And my heart is sorrowful. Heaven is letting down

¹ By 'the net of crime' we are to understand the multitude of penal laws, to whose doom people were exposed. In stanza 6, Heaven is represented as letting it down.

² Compare ode 9 of the fourth decade in the former Part.

its net, And soon (all will be caught in it). (Good) men are going away, And my heart is sad.

Right from the spring comes the water bubbling, Revealing its depth. The sorrow of my heart,—Is it (only) of to-day? Why were these things not before me? Or why were they not after me? But mysteriously great Heaven Is able to strengthen anything. Do not disgrace your great ancestors :— This will save your posterity ¹.

ODE 11, STANZAS 1 AND 2. THE SHÃO MIN.

THE WRITER APPEALS TO HEAVEN, BEMOANING THE MISERY AND RUIN WHICH WERE GOING ON, AND SHOWING HOW THEY WERE DUE TO THE KING'S EMPLOYMENT OF MEAN AND WORTHLESS CREATURES.

Compassionate Heaven is arrayed in angry terrors. Heaven is indeed sending down ruin, Afflicting us with famine, So that the people are all wandering fugitives. In the settled regions, and on the borders, all is desolation.

Heaven sends down its net of crime ;— Devouring insects, who weary and confuse men's minds, Ignorant, oppressive, negligent, Breeders of confusion, utterly perverse :— These are the men employed.

¹ The writer in these concluding lines ventures to summon the king to repentance, and to hold out a hope that there might come a change in their state. He does this, believing that all things are possible with Heaven.

LESSONS FROM THE STATES.

ODES AND STANZAS ILLUSTRATING THE RELIGIOUS VIEWS AND PRACTICES OF THE WRITERS AND THEIR TIMES.

It has been stated in the Introduction, p. 276, that the first Part of the Shih, called the Kwo Fǎng, or 'Lessons from the States,' consists of 160 pieces, descriptive of manners and events in several of the feudal states into which the kingdom of K'áu was divided. Nearly all of them are short; and the passages illustrating the religious views and practices of their times are comparatively few. What passages there are, however, of this nature will all be found below. The pieces are not arranged in decades, as in the Odes of the Kingdom, but in Books, under the names of the states in which they were produced.

Although the Kwo Fǎng form, as usually published, the first Part of the Shih, nearly all of them are more recent in their origin than the pieces of the other Parts. They bring us face to face with the states of the kingdom, and the ways of their officers and people for several centuries of the dynasty of K'áu.

BOOK II. THE ODES OF SHĀO AND THE SOUTH.

THE Shū and previous portions of the Shih have made us familiar with Shāo, the name of the appanage of Shih, one of the principal ministers at the court of K'áu in the first two reigns of the dynasty. The site of the city of Shāo was in the present department of Fǎng-*khiang*, Shen-hsī. The first possessor of it, along with the still more famous duke of K'áu, remained at court, to watch over the fortunes of the new dynasty. They were known as 'the highest dukes' and 'the two great chiefs,' the duke of K'áu having charge of the eastern portions of the kingdom, and the other of the western. The pieces in this Book are supposed to have been produced in Shāo, and the principalities south of it within his jurisdiction, by the duke.

ODE 2. THE *ZHAI FAN*.

CELEBRATING THE INDUSTRY AND REVERENCE OF A PRINCE'S WIFE,
ASSISTING HIM IN SACRIFICING.

We must suppose the ladies of a harem, in one of the states of the south, admiring and praising in these simple stanzas the way in which their mistress discharged her duties. A view of the ode maintained by many is that the lady gathered the southernwood, not to use it in sacrificing, but in the nurture of the silkworms under her care; but the evidence of the characters in the text is, on the whole, in favour of the more common view. Constant reference is made to the piece by Chinese moralists, to show that the most trivial things are accepted in sacrifice, when there are reverence and sincerity in the presenting of them.

One critic asked *K'ü Hsü* whether it was conceivable that the wife of a prince did herself what is here related, and he replied that the poet said so. Another has observed that if the lady ordered and employed others, it was still her own doing. But that the lady did it herself is not incredible, when we consider the simplicity of those early times, in the twelfth century B. C.

She gathers the white southernwood, By the
ponds, on the islets. She employs it, In the
business of our prince.

She gathers the white southernwood, Along
the streams in the valleys. She employs it, In
the temple¹ of our prince.

¹ If the character here translated 'temple' had no other signification but that, there would be an end of the dispute about the meaning of the piece. But while we find it often used of the ancestral temple, it may also mean any building, especially one of a large and public character, such as a palace or mansion; and hence some contend that it should be interpreted here of 'the silk-worm house.' We are to conceive of the lady, after having gathered the materials for sacrificial use, then preparing them according to rule, and while it is yet dark on the morning of the sacrificial day, going with them into the temple, and setting them forth in their proper vessels and places.

With head-dress reverently rising aloft, Early,
while yet it is night, she is in the prince's (temple).
In her head-dress, slowly retiring, She returns (to
her own apartments).

ODE 4. THE *ZHAI* PIN.

CELEBRATING THE DILIGENCE AND REVERENCE OF THE YOUNG WIFE OF
AN OFFICER, DOING HER PART IN SACRIFICIAL OFFERINGS.

She gathers the large duckweed, By the banks
of the stream in the southern valley. She gathers
the pondweed, In those pools left by the floods.

She deposits what she gathers, In her square
baskets and round ones. She boils it, In her tripods
and pans.

She sets forth her preparations, Under the window
in the ancestral chamber¹. Who superintends the
business? It is (this) reverent young lady.

¹ 'The ancestral chamber' was a room behind the temple of the family, dedicated specially to the ancestor of the officer whose wife is the subject of the piece. The princes of states were succeeded, as a rule, by the eldest son of the wife proper. Their sons by other wives were called 'other sons.' The eldest son by the wife proper of one of them became the 'great ancestor' of the clan descended from him, and 'the ancestral chamber' was an apartment dedicated to him. Miao and other interpreters, going on certain statements as to the training of daughters in the business of sacrificing in this apartment for three months previous to their marriage, contend that the lady spoken of here was not yet married, but was only undergoing this preparatory education. It is not necessary, however, to adopt this interpretation. The lady appears doing the same duties as the wife in the former piece.

BOOK III. THE ODES OF PHEI.

WHEN king Wü overthrew the dynasty of Shang, the domain of its kings was divided into three portions, the northern portion being called Phei, the southern Yung, and the eastern Wei, the rulers of which last in course of time absorbed the other two. It is impossible to say why the old names were retained in the arrangement of the odes in this Part of the Shih, for it is acknowledged on all hands that the pieces in Books iii and iv, as well as those of Book v, are all odes of Wei.

ODE 4. THE ZĀH YÜEH.

SUPPOSED TO BE THE COMPLAINT AND APPEAL OF K'WANG KIANG, A MARCHIONESS OF WEI, AGAINST THE BAD TREATMENT SHE RECEIVED FROM HER HUSBAND.

All the Chinese critics give this interpretation of the piece. *K'wang Kiang* was a daughter of the house of *K'hi*, about the middle of the eighth century B.C., and was married to the marquis Yang, known in history as 'duke *K'wang*,' of Wei. She was a lady of admirable character, and beautiful; but her husband proved faithless and unkind. In this ode she makes her subdued moan, appealing to the sun and moon, as if they could take cognizance of the way in which she was treated. Possibly, however, the addressing those bodies may simply be an instance of *proso-popoeia*.

O sun, O moon, Which enlighten this lower earth! Here is this man, Who treats me not according to the ancient rule. How can he get his mind settled? Would he then not regard me?

O sun, O moon, Which overshadow this lower earth! Here is this man, Who will not be friendly with me. How can he get his mind settled? Would he then not respond to me?

O sun, O moon, Which come forth from the east! Here is this man, With virtuous words, but really not good. How can he get his mind settled? Would he then allow me to be forgotten?

O sun, O moon, From the east that come forth!
 O father, O mother, There is no sequel to your
 nourishing of me. How can he get his mind settled?
 Would he then respond to me contrary to all reason?

ODE 15, STANZA 1. THE PEI MǎN.

AN OFFICER OF WEI SETS FORTH HIS HARD LOT, THROUGH DISTRESSES
 AND THE BURDENS LAID UPON HIM, AND HIS SILENCE UNDER IT IN
 SUBMISSION TO HEAVEN.

I go out at the north gate, With my heart full
 of sorrow. Straited am I and poor, And no one
 takes knowledge of my distress. So it is! Heaven
 has done it¹;—What then shall I say?

BOOK IV. THE ODES OF YUNG.

See the preliminary note on p. 433.

ODE 1. THE PAI K'ĀU.

PROTEST OF A WIDOW AGAINST BEING URGED TO MARRY AGAIN, AND
 HER APPEAL TO HER MOTHER AND TO HEAVEN.

THIS piece, it is said, was made by Kung K'iang, the widow of
 Kung-po, son of the marquis Hsi of Wei (B.C. 855-814). Kung-
 po having died an early death, her parents (who must have been
 the marquis of K'ĕ and his wife or one of the ladies of his harem)
 wanted to force her to a second marriage, against which she
 protests. The ode was preserved, no doubt, as an example of

¹ The 'Complete Digest of Comments on the Shih' warns its
 readers not to take 'Heaven' here as synonymous with Ming,
 'what is decreed or commanded.' The writer does not go on
 to define the precise idea which he understood the character to
 convey. This appears to be what we often mean by 'Providence,'
 when we speak of anything permitted, rather than appointed, by
 the supreme ruling Power.

what the Chinese have always considered a great virtue,—the refusal of a widow to marry again.

It floats about, that boat of cypress wood, There
in the middle of the Ho¹. With his two tufts of
hair falling over his forehead², He was my mate;
And I swear that till death I will have no other.
O mother, O Heaven³, Why will you not under-
stand me?

It floats about, that boat of cypress wood, There
by the side of the Ho. With his two tufts of hair
falling over his forehead, He was my only one;
And I swear that till death I will not do the evil
thing. O mother, O Heaven, Why will you not
understand me?

ODE 3, STANZA 2. THE KÜN-SZE KIEH LÂO.

CONTRAST BETWEEN THE BEAUTY AND SPLENDOUR OF HSÜAN KIANG
AND HER VICIOUSNESS.

Hstian Kiang was a princess of K'hi, who, towards the close of the seventh century B.C., became wife to the marquis of Wei, known as duke Hstian. She was beautiful and unfortunate, but various things are related of her indicative of the grossest immoralities prevailing in the court of Wei.

How rich and splendid Is her pheasant-figured

¹ These allusive lines, probably, indicate the speaker's widowhood, which left her like 'a boat floating about on the water.'

² Such was the mode in which the hair was kept, while a boy or young man's parents were alive, parted into two tufts from the pia mater, and brought down as low as the eyebrows on either side of the forehead.

³ Máo thought that the lady intended her father by 'Heaven'; while K'ü held that her father may have been dead, and that the mother is called Heaven, with reference to the kindness and protection that she ought to show. There seems rather to be in the term a wild, and not very intelligent, appeal to the supreme Power in heaven.

robe¹! Her black hair in masses like clouds, No false locks does she descend to. There are her ear-plugs of jade, Her comb-pin of ivory, And her high forehead, so white. She appears like a visitant from heaven! She appears like a goddess².

ODE 6, STANZAS 1 AND 2. THE TING KIH FANG KUNG.

CELEBRATING THE PRAISE OF DUKE WÂN;—HIS DILIGENCE, FORESIGHT, USE OF DIVINATION, AND OTHER QUALITIES.

The state of Wei was reduced to extremity by an irruption of some northern hordes in B.C. 660, and had nearly disappeared from among the states of Kâu. Under the marquis Wei, known in history as duke Wân, its fortunes revived, and he became a sort of second founder of the state.

When Ting culminated (at night-fall)³, He began to build the palace at K'û⁴, Determining

¹ The lady is introduced arrayed in the gorgeous robes worn by the princess of a state in the ancestral temple.

² P. Lacharme translated these two concluding lines by 'Tu primo aspectu coelos (pulchritudine), et imperatorem (majestate) adaequas,' without any sanction of the Chinese critics; and moreover there was no Tî (帝) in the sense of emperor then in China. The sovereigns of Kâu were wang or kings. K'û Hsi expands the lines thus:—'Such is the beauty of her robes and appearance, that beholders are struck with awe, as if she were a spiritual being.' Hsü K'ien (Yüan dynasty) deals with them thus:—'With such splendour of beauty and dress, how is it that she is here? She has come down from heaven! She is a spiritual being!'

³ Ting is the name of a small space in the heavens, embracing α Markab and another star of Pegasus. Its culminating at night-fall was the signal that the labours of husbandry were over for the year, and that building operations should be taken in hand. Great as was the urgency for the building of his new capital, duke Wân would not take it in hand till the proper time for such a labour was arrived.

⁴ K'û, or K'û-k'û, was the new capital of Wei, in the present district of K'äng-wû, department 3 Hào-k'au, Shan-tung.

its aspects by means of the sun. He built the palace at *Khû*. He planted about it hazel and chesnut trees, The *Î*, the *T hung*, the *3ze*, and the varnish tree. Which, when cut down, might afford materials for lutes.

He ascended those old walls, And thence surveyed (the site of) *Khû*. He surveyed *Khû* and *Thang*¹, With the lofty hills and high elevations about. He descended and examined the mulberry trees. He then divined by the tortoise-shell, and got a favourable response²; And thus the issue has been truly good.

BOOK V. THE ODES OF WEI.

It has been said on the title of Book iii, that Wei at first was the eastern portion of the old domain of the kings of Shang. With this a brother of king *Wû*, called *Khang-shû*, was invested. The principality was afterwards increased by the absorption of *Phei* and *Yung*. It came to embrace portions of the present provinces of *Kih-lî*, *Shan-tung*, and *Ho-nan*. It outlasted the dynasty of *Kâu* itself, the last prince of Wei being reduced to the ranks of the people only during the dynasty of *K'in*.

ODE 4, STANZAS 1 AND 2. THE MĂNG.

AN UNFORTUNATE WOMAN, WHO HAD BEEN SEDUCED INTO AN IMPROPER CONNEXION, NOW CAST OFF, RELATES AND BEMOANS HER SAD CASE.

An extract is given from the pathetic history here related, because it shows how divination was used among the common people, and entered generally into the ordinary affairs of life.

A simple-looking lad you were, Carrying cloth

¹ *Thang* was the name of a town, evidently not far from *Khû*.

² We have seen before how divination was resorted to on occasion of new undertakings, especially in proceeding to rear a city.

to exchange it for silk. (But) you came not so to purchase silk;—You came to make proposals to me. I convoyed you through the *Khî*¹, As far as Tun-*khiû*², 'It is not I,' (I said), 'who would protract the time; But you have had no good go-between. I pray you be not angry, And let autumn be the time.'

I ascended that ruinous wall, To look towards Fû-kwan³; And when I saw (you) not (coming from) it, My tears flowed in streams. When I did see (you coming from) Fû-kwan, I laughed and I spoke. You had consulted, (you said), the tortoise-shell and the divining stalks, And there was nothing unfavourable in their response⁴. 'Then come,' (I said), 'with your carriage, And I will remove with my goods.'

BOOK VI. THE ODES OF THE ROYAL DOMAIN.

KING Wăn, it has been seen, had for his capital the city of Făng, from which his son, king Wû, moved the seat of government to Hào. In the time of king Kăng, a city was built by the duke

¹ The *Khî* was a famous river of Wei.

² Tun-*khiû* was a well-known place—'the mound or height of Tun'—south of the Wei.

³ Fû-kwan must have been the place where the man lived, according to *Kû*. Rather, it must have been a pass (Fû-kwan may mean 'the gate or pass of Fû'), through which he would come, and was visible from near the residence of the woman.

⁴ Ying-tâ observes that the man had never divined about the matter, and said that he had done so only to complete the process of seduction. The critics dwell on the inconsistency of divination being resorted to in such a case:—'Divination is proper only if used in reference to what is right and moral.'

of Kâu, near the present Lo-yang, and called 'the eastern capital.' Meetings of the princes of the states assembled there; but the court continued to be held at Hào till the accession of king Phing in B. C. 770. From that time, the kings of Kâu sank nearly to the level of the princes of the states, and the poems collected in their domain were classed among the 'Lessons of Manners from the States,' though still distinguished by the epithet 'royal' prefixed to them.

ODE 1, STANZA 1. THE SHŪ LĪ.

AN OFFICER DESCRIBES HIS MELANCHOLY AND REFLECTIONS ON SEEING THE DESOLATION OF THE OLD CAPITAL OF KÂU, MAKING HIS MOAN TO HEAVEN BECAUSE OF IT.

There is no specific mention of the old capital of Kâu in the piece, but the schools of Máo and K'ü are agreed in this interpretation, which is much more likely than any of the others that have been proposed.

There was the millet with its drooping heads;
There was the sacrificial millet coming into blade¹.
Slowly I moved about, In my heart all-agitated.
Those who knew me Said I was sad at heart.
Those who did not know me, Said I was seeking
for something. O thou distant and azure Heaven²!
By what man was this (brought about)³?

¹ That is, there where the ancestral temple and other grand buildings of Hào had once stood.

² 'He cried out to Heaven,' says Yen 3an, 'and told (his distress), but he calls it distant in its azure brightness, lamenting that his complaint was not heard.' This is, probably, the correct explanation of the language. The speaker would by it express his grief that the dynasty of Kâu and its people were abandoned and uncared for by Heaven.

³ Referring to king Yü, whose reckless course had led to the destruction of Hào by the Zung, and in a minor degree to his son, king Phing, who had subsequently removed to the eastern capital.

ODE 9, STANZAS 1 AND 3. THE TÂ KÜ.

A LADY EXCUSES HERSELF FOR NOT FLYING TO HER LOVER BY HER FEAR OF A SEVERE AND VIRTUOUS MAGISTRATE, AND SWEARS TO HIM THAT SHE IS SINCERE IN HER ATTACHMENT TO HIM.

His great carriage rolls along, And his robes of rank glitter like the young sedge. Do I not think of you? But I am afraid of this officer, and dare not (fly to you).

While living we may have to occupy different apartments; But, when dead, we shall share the same grave. If you say that I am not sincere, By the bright sun I swear that I am¹.

BOOK X. THE ODES OF THANG.

THE odes of Thang were really the odes of Jin, the greatest of the fiefs of Kâu until the rise of K'in. King K'ang, in B.C. 1107, invested his younger brother, called Shû-yü, with the territory where Yáo was supposed to have ruled anciently as the marquis of Thang, in the present department of Thâi-yüan, Shan-hsi, the fief retaining that ancient name. Subsequently the name of the state was changed to Jin, from the river Jin in the southern part of it.

ODE 8, STANZA 1. THE PÂO YÜ.

Sû-sû go the feathers of the wild geese, As

¹ In the 'Complete Digest' this oath is expanded in the following way:—'These words are from my heart. If you think that they are not sincere, there is (a Power) above, like the bright sun, observing me;—how should my words not be sincere?'

they settle on the bushy oaks¹. The king's affairs must not be slackly discharged, And (so) we cannot plant our millets;—What will our parents have to rely on? O thou distant and azure Heaven²! When shall we be in our places again?

ODE 11. THE KO SHĀNG.

A WIFE MOURNS THE DEATH OF HER HUSBAND, REFUSING TO BE COMFORTED, AND DECLARES THAT SHE WILL CHERISH HIS MEMORY TILL HER OWN DEATH.

It is supposed that the husband whose death is bewailed in this piece had died in one of the military expeditions of which duke Hsien (B.C. 676–651) was fond. It may have been so, but there is nothing in the piece to make us think of duke Hsien. I give it a place in the volume, not because of the religious sentiment in it, but because of the absence of that sentiment, where we might expect it. The lady shows the grand virtue of a Chinese widow, in that she will never marry again. And her grief would not be assuaged. The days would all seem long summer days, and the nights all long winter nights; so that a hundred long years would seem to drag their slow course. But there is not any hope expressed of a re-union with her husband in another state. The 'abode' and the 'chamber' of which she speaks are to be understood of his grave; and her thoughts do not appear to go beyond it.

The dolichos grows, covering the thorn trees;
The convolvulus spreads all over the waste³. The

¹ Trees are not the proper place for geese to rest on; and the attempt to do so is productive of much noise and trouble to the birds. The lines would seem to allude to the hardships of the soldiers' lot, called from their homes to go on a distant expedition.

² See note 2 on ode 1 of Book vi, where Heaven is appealed to in the same language.

³ These two lines are taken as allusive, the speaker being led by the sight of the weak plants supported by the trees, shrubs, and tombs, to think of her own desolate, unsupported condition. But they may also be taken as narrative, and descriptive of the battle-ground, where her husband had met his death.

man of my admiration is no more here;—With whom can I dwell? I abide alone.

The *dolichos* grows, covering the jujube trees; The *convolvulus* spreads all over the tombs. The man of my admiration is no more here;—With whom can I dwell? I rest alone.

How beautiful was the pillow of horn! How splendid was the embroidered coverlet!¹ The man of my admiration is no more here;—With whom can I dwell? Alone (I wait for) the morning.

Through the (long) days of summer, Through the (long) nights of winter (shall I be alone), Till the lapse of a hundred years, When I shall go home to his abode.

Through the (long) nights of winter, Through the (long) days of summer (shall I be alone), Till the lapse of a hundred years, When I shall go home to his chamber.

BOOK XI. THE ODES OF *KHIN*.

THE state of *Khin* took its name from its earliest principal city, in the present district of *Khing-shui*, in *Khin Kâu*, *Kan-sû*. Its chiefs claimed to be descended from *Yî*, who appears in the *Shû* as the forester of *Shun*, and the assistant of the great *Yü* in his labours on the flood of *Yáo*. The history of his descendants is very imperfectly related till we come to a *Fei-ze*, who had charge of the herds of horses belonging to king *Hsiáo* (B.C. 909–895), and in consequence of his good services was invested with

¹ These things had been ornaments of the bridal chamber; and as the widow thinks of them, her grief becomes more intense.

the small territory of *K'in*, as an attached state. A descendant of his, known as duke Hsiang, in consequence of his loyal services, when the capital was moved to the east in B.C. 770, was raised to the dignity of an earl, and took his place among the great feudal princes of the kingdom, receiving also a large portion of territory, which included the ancient capital of the House of *K'au*. In course of time *K'in*, as is well known, superseded the dynasty of *K'au*, having gradually moved its capital more and more to the east. The people of *K'in* were, no doubt, mainly composed of the wild tribes of the west.

ODE 6, STANZA 1. THE HWANG NIÃO.

LAMENT FOR THREE WORTHIES OF *K'HIN*, WHO WERE BURIED IN THE SAME GRAVE WITH DUKE MŪ.

There is no difficulty or difference in the interpretation of this piece; and it brings us down to B.C. 621. Then died duke Mŭ, after playing an important part in the north-west of China for thirty-nine years. The *So Kwan*, under the sixth year of duke Wăn, makes mention of Mŭ's requiring that the three brothers here celebrated should be buried with him, and of the composition of this piece in consequence. *Sze-mâ K'ien* says that this barbarous practice began with Mŭ's predecessor, with whom sixty-six persons were buried alive, and that one hundred and seventy-seven in all were buried with Mŭ. The death of the last distinguished man of the House of *K'in*, the emperor I, was subsequently celebrated by the entombment with him of all the inmates of his harem.

They flit about, the yellow birds, And rest upon the jujube trees¹. Who followed duke Mŭ in the grave? *3ze-kü Yen-hsi*. And this *Yen-hsi* Was a man above a hundred. When he came to the

¹ It is difficult to see the relation between these two allusive lines and the rest of the stanza. Some say that it is this,—that the people loved the three victims as they liked the birds; others that the birds among the trees were in their proper place,—very different from the brothers in the grave of duke Mŭ.

grave, He looked terrified and trembled. Thou azure Heaven there! Could he have been redeemed, We would have given a hundred (ordinary) men for him ¹.

BOOK XV. THE ODES OF PIN.

DUKE LIÜ, an ancestor of the *Kâu* family, made a settlement, according to its traditions, in B.C. 1797, in Pin, the site of which is pointed out, 90 *li* to the west of the present district city of San-shui, in Pin *Kâu*, Shen-hsi, where the tribe remained till the movement eastwards of Than-fü, celebrated in the first decade of the Major Odes of the Kingdom, ode 3. The duke of *Kâu*, during the minority of king *Khăng*, made, it is supposed, the first of the pieces in this Book, describing for the instruction of the young monarch, the ancient ways of their fathers in Pin; and subsequently some one compiled other odes made by the duke, and others also about him, and brought them together under the common name of 'the Odes of Pin.'

ODE 1, STANZA 8. THE *KHÎ YÜEH*.

DESCRIBING LIFE IN PIN IN THE OLDEN TIME; THE PROVIDENT ARRANGEMENTS THERE TO SECURE THE CONSTANT SUPPLY OF FOOD AND RAIMENT,—WHATEVER WAS NECESSARY FOR THE SUPPORT AND COMFORT OF THE PEOPLE.

If the piece was made, as the Chinese critics all suppose, by the duke of *Kâu*, we must still suppose that he writes in the person of an old farmer or yeoman of Pin. The picture which it gives of the manners of the Chinese people, their thrifty, provident ways, their agriculture and weaving, nearly 3,700 years ago, is

¹ This appeal to Heaven is like what we met with in the first of the Odes of the Royal Domain, and the eighth of those of Thang.

full of interest ; but it is not till we come to the concluding stanza that we find anything bearing on their religious practices.

In the days of (our) second month, they hew out the ice with harmonious blows¹; And in those of (our) third month, they convey it to the ice-houses, (Which they open) in those of (our) fourth, early in the morning A lamb having been offered in sacrifice with scallions². In the ninth month, it is cold, with frost. In the tenth month, they sweep clean their stack-sites. (Taking) the two bottles of spirits to be offered to their ruler, And having killed their lambs and sheep, They go to his hall, And raising

¹ They went for the ice to the deep recesses of the hills, and wherever it was to be found in the best condition.

² It is said in the last chapter of 'the Great Learning,' that 'the family which keeps its stores of ice does not rear cattle or sheep,' meaning that the possessor of an ice-house must be supposed to be very wealthy, and above the necessity of increasing his means in the way described. Probably, the having ice-houses by high ministers and heads of clans was an innovation on the earlier custom, according to which such a distinction was proper only to the king, or the princes of states, on whom it devolved as 'the fathers of the people,' to impart from their stores in the hot season as might be necessary. The third and fourth lines of this stanza are to be understood of what was done by the orders of the ruler of the tribe of Kâu in Pin. In the Official Book of Kâu, Part I, ch. 5, we have a description of the duties of 'the Providers of Ice,' and the same subject is treated in the sixth Book of 'the Record of Rites,' sections 2 and 6. The ice having been collected and stored in winter, the ice-houses were solemnly opened in the spring. A sacrifice was offered to 'the Ruler of Cold, the Spirit of the Ice,' and of the first ice brought forth an offering was set out in the apartment behind the principal hall of the ancestral temple. A sacrifice to the same Ruler of Cold, it is said, had also been offered when the ice began to be collected. The ceremony may be taken as an illustration of the manner in which religious services entered into the life of the ancient Chinese.

the cup of rhinoceros horn, Wish him long life,—
that he may live for ever¹.

¹ The custom described in the five concluding lines is mentioned to show the good and loyal feeling of the people of Pin towards their chief. Having finished all the agricultural labours of the year, and being now prepared to enjoy the results of their industry, the first thing they do is to hasten to the hall of their ruler, and ask him to share in their joy, and express their loyal wishes for his happiness.

THE HSIÄO KING
OR
CLASSIC OF FILIAL PIETY.

THE HSIÃO KING

OR

CLASSIC OF FILIAL PIETY.

INTRODUCTION.

CHAPTER I.

THE NAME OF THE CLASSIC; ITS EXISTENCE BEFORE THE HAN DYNASTY; ITS CONTENTS, AND BY WHOM IT WAS WRITTEN.

1. The Chinese character pronounced Hsiáo, which we translate by 'Filial Piety,' and which may also perform the part of an adjective, 'filial,' of a verb, 'to be filial,' or of an adverb, 'filially,' is one of the composite characters whose meaning is suggested by the meanings of their constituent parts combined together. It is made up of two others,—one signifying 'an old man' or 'old age,' and beneath it the character signifying 'a son.' It thus, according to the Shwo Wăn, the oldest Chinese dictionary (A. D. 100), presents to the eye 'a son bearing up an old man,' that is, a child supporting his parent. Hsiáo also enters as their phonetical element into at least twenty other characters, so that it must be put down as of very early formation. The character King has been explained in the Introduction to the Shû King, p. 2; and the title, Hsiáo King, means 'the Classic of Filial Piety.'

2. Many Chinese critics contend that this brief treatise was thus designated by Confucius himself, and that it received the distinction of being styled a King before

any of the older and more important classics. For the preservation of the text as we now have it, we are indebted to Hsüan Jung (A. D. 713-755), one of the emperors of the Tang dynasty.

Was the treatise called the Hsião King by Confucius? In the preface to his commentary on it there occurs this sentence :—‘ The Master said, “ My aim is seen in the *Khun Khiû* ; my (rule of) conduct is in the Hsião King.” ’ The imperial author quotes the saying, as if it were universally acknowledged to have come from the sage. It is found at a much earlier date in the preface of Ho Hsiû (A. D. 129-182) to his commentary on the *Khun Khiû* as transmitted and annotated by Kung-yang. The industry of scholars has traced it still farther back, and in a more extended form, to a work called Hsião King *Kü-ming Kùeh*,—a production, probably, of the first century of our era, or of the century before it. It was one of a class of writings on the classical books, full of mysterious and useless speculations, that never took rank among the acknowledged expositions. Most of them soon disappeared, but this subsisted down to the Sui dynasty (A. D. 581-618), for there was a copy of it then in the Imperial Library. It is now lost, but a few passages of it have been collected from quotations in the Han writers. Among them is this :—‘ Confucius said, “ If you wish to see my aim in dispensing praise or blame to the feudal lords, it is to be found in the *Khun Khiû* ; the courses by which I would exalt the social relations are in the Hsião King.” ’ The words thus ascribed to Confucius were condensed, it is supposed, into the form in which we have them,—first from Ho Hsiû, and afterwards from the emperor Hsüan Jung. Whether they were really used by the sage or not, they were attributed to him as early as the beginning of our Christian era, and it was then believed that he had given to our classic the honourable name of a King.

3. But the existence of the Hsião King can be traced several hundred years farther back ;—to within less than a century after the death of Confucius. Sze-mâ The Hsião King existed before the Han dynasty. *Khien*, in his history of the House of Wei, one of the three marquisates into which the

great state of *K'in* was broken up in the fifth century B. C., tells us that the marquis Wăn received, in B. C. 407, the classical books from Pû 3ze-hsiâ, and mentions the names of two other disciples of Confucius, with whom he was on intimate terms of friendship. There remains the title of a commentary on the *Hsiào King* by this marquis Wăn; and the book was existing in the time of 3hâi Yung (A. D. 133-192), who gives a short extract from it in one of his treatises.

4. The recovery of our classic after the fires of *K'in* will be related in the next chapter. Assuming here that it was recovered, we look into it, and find a conversation, or memoranda, perhaps, of several conversations, between Confucius and his disciple 3ăng-ze. The latter, however, is little more than a listener, to whom the sage delivers his views on Filial Piety in its various relations. There are two recensions of the text;—one in eighteen chapters, and the other in twenty-two. As edited in eighteen chapters, each of them has a very brief descriptive heading. I have given this in the subjoined translation, but the headings cannot be traced back beyond the commentary of the emperor Hsüan.

The saying attributed by Ho Hsiû and others to Confucius would seem to indicate that he had himself composed the work, but the reader of it sees at once that it could not have proceeded from him. Nor do the style and method of the treatise suggest a view which has had many advocates,—that it was written by 3ăng-ze, under the direction of the master. There is no reason, however, why we should not accept the still more common account,—that the *Hsiào* came from the school of 3ăng-ze. To use the words of Hû Yin, an author of the first half of our twelfth century:—‘The Classic of Filial Piety was not made by 3ăng-ze himself. When he retired from his conversation (or conversations) with *Kung-ni* on the subject of Filial Piety, he repeated to the disciples of his own school what (the master) had said, and they classified the sayings, and formed the treatise.’

CHAPTER II.

THE RECOVERY OF THE HSIÃO KING UNDER THE HAN DYNASTY, AND ITS PRESERVATION DOWN TO THE PUBLICATION OF THE COMMENTARY OF THE THANG EMPEROR HSÜAN 3UNG.

1. The Hsião King suffered, like all the other Confucian books except the *Yi*, from the fires of *K'in*. Its subsequent recovery was very like that of the *Shû*, described on pp. 7, 8. We have in each case a shorter and a longer copy, a modern text and an ancient text.

In the Catalogue of the Imperial Library, prepared by Liû Hin immediately before the commencement of our Recovery of the Christian era, there are two copies of the Hsião King. Hsião:—‘the old text of the Khung family,’ which was in twenty-two chapters, according to a note by Pan Kû (died A. D. 92), the compiler of the documents in the records of the western Han; and another copy, which was, according to the same authority, in eighteen chapters, and was subsequently styled ‘the modern text.’ Immediately following the entry of these two copies, we find ‘Expositions of the Hsião by four scholars,’—whose surnames were *Kang-sun*, *Kiang*, *Yi*, and *Hâu*. ‘They all,’ says Pan Kû, ‘had laboured on the shorter text.’

The copy in eighteen chapters therefore, we must pre-
 The shorter or modern text. sume, had been the first recovered; but of how this came about we have no account till we come to the records of the Sui dynasty. There it is said that, when the *K'in* edict for the destruction of the books was issued, his copy of the Hsião was hidden by a scholar called Yen Kih, a member, doubtless, of the Yen family to which Confucius’ favourite disciple Yen Hui had belonged. When the edict was abrogated in a few years, Kăn, a son of Kih, brought the copy from its hiding-place. This must have been in the second century B. C., and the copy, transcribed, probably by Kăn, in the form of the characters then used, would pass into the charge of the board of ‘great scholars’ appointed to preserve the

ancient books, in the reigns of the emperors Wăn and King, B. C. 179-141.

The copy in the ancient text was derived from the tablets found in the wall of the Confucian house in the time of the emperor Wû (B. C. 140-87), and ^{The old or longer text.} is commonly said to have been deciphered, as in the case of the tablets of the Shû, by Khung An-kwo. An-kwo wrote a commentary himself on the Hsião, which does not appear in Hin's Catalogue, just as no mention is made there of his commentary on the Shû. We find it entered, however, among the books in the Sui Library with the following note:—'The work of An-kwo disappeared during the troubles of the Liang dynasty (A. D. 502-556), and continued unknown till the time of Sui, when a copy was found in the capital, and came into the possession of a scholar called Liû Hsüan.' Hsüan made his treasure public, and ere long it was acknowledged by the court, while many scholars contended that it was a forgery of his own, and ascribed by him to An-kwo. Whatever opinion we may form on this matter, the discovery of the old text, and the production of a commentary on it by Khung An-kwo, can hardly be called in question.

It might be argued, indeed, that another copy in the old text was found in the first century B. C. In a memorial addressed about the Shwo Wăn dictionary to the emperor An, in A. D. 121, by Hsü Kung, a son of the author, he says ^{Was another copy in the old text discovered?} that the Hsião King which his father used was a copy of that presented, by 'a very old man of Lû,' to the emperor Kào (B. C. 86-74)¹. Many Chinese critics, and especially Wang Ying-lin

¹ The language of the memorial is:—'The Hsião King' (used by my father in the composition of his dictionary) 'was what San lão of Lû presented in the time of the emperor Kào.' The San lão most readily suggests to the reader the idea of 'three old men;' but the characters may also mean, in harmony with Chinese idiom, 'the three classes of old men,' or 'an individual from those three classes.' The classical passage to explain the phrase is par. 18 in the first section of the sixth Book in the Lî Kî, where it is said that king Wăn feasted the San lão and Wû kang, 'the three classes of old men and five classes of men of experience,' in his royal college. The three classes of old men were such as were over 80, 90, and 100 years respectively. It was from a man of one of these classes that the emperor received the Hsião in the old

(better known as Wang Po-hâu, A. D. 1223-1296), say that this is a different account of the recovery of the old text from that with which the name of Khung An-kwo is connected. It is difficult to reconcile the two statements, as will be seen on a reference to the note below¹; and yet it

text. According to the account given in the next note this man was Khung 3ze-hui; and in the Books of Sui that is given as the name of the individual of the Khung family, who had hidden the tablets on the appearance of the K'in edict for the destruction of all the old books.

¹ The Catalogue Raisonné of the Imperial Libraries commences its account of the copies of the Hsião with a description of 'the Old Text of the Hsião with the Commentary of Khung An-kwo,' obtained from Japan; but the editors give good reasons for doubting its genuineness. There is a copy of this work in the Chinese portion of the British Museum, an edition printed in Japan in 1732, which I have carefully examined, with the help of Professor R. K. Douglas and Mr. A. Wylie. It contains not only the commentary of Khung An-kwo, but what purports to be the original preface of that scholar. There it is said that the bamboo tablets of the copy in 'tadpole characters,' found in the wall of Confucius' old 'lecture hall, in a stone case,' were presented to the emperor by Khung 3ze-hui, 'a very old man of Lû.' The emperor, it is added, caused two copies to be made in the current characters of the time by 'the great scholars,' one of which was given to 3ze-hui, and the other to General Ho Kwang, a minister of war and favourite, who greatly valued it, and placed it among the archives of the empire, where it was jealously guarded.

This account makes the meaning of the phrase 'the San liao of Lû' quite clear; but there are difficulties in the way of our believing that it proceeded from Khung An-kwo. No mention is made of him in it, whereas, according to the current narrations, the tablets with the tadpole characters were first deciphered by him; nor is the name of the emperor to whom Khung 3ze-hui presented the tablets given. No doubt, however, this emperor was K'ao, with whom Ho Kwang was a favourite. If the preface were genuine, of course An-kwo was alive after 3ze-hui went to court with the tablets. Now, the tablets were discovered in the period Thien-han, B. C. 100-97, and K'ao reigned from B. C. 86 to 74. An-kwo died at the age of sixty, but in what year we are not told. He had studied the Shih under Shân Kung, whose death can hardly be placed later than in B. C. 135. If An-kwo were born in B. C. 150, he would have been more than sixty years old—the age assigned to him at his death—at the accession of K'ao. I cannot believe, therefore, that the preface in the Japanese Hsião was written by him; and if we reject the preface, we must also reject the commentary before which it stands.

The text of the Hsião in the work is nearly identical with that of Sze-mâ Kwang, mentioned below on p. 458; but to the chapters there are prefixed the headings (which Kwang did not adopt), that cannot be traced farther back than the Thang dynasty. This might be got over, but the commentary throws no new light on the text. 'It is shallow and poor,' say the editors of the Catalogue Raisonné, 'and not in the style of the Han scholars.' I must think with them that Khung An-kwo's commentary, purporting to have been preserved in Japan is a forgery.

is possible that the difficulty would disappear, if the details of the discovery and the subsequent dealing with the tablets had come down to us complete.

Certainly, in the first century B. C. there were two copies of the Hsião King in the Imperial Library of Han. If those copies, catalogued by Liû Hin, were the actual text, presented by Yen Kăn, and a faithful transcript in the current Han characters of the ancient text discovered in the wall of Confucius' old lecture hall, we should be able to say that

Can we rely
fully on the
copies cata-
logued by Liû
Hin?

the evidence for the recovery of the Hsião, as it had existed during the Kâu dynasty, was as satisfactory as we could desire; but there are some considerations that are in the way

of our doing so.

According to the records of Sui, after the old text came into the possession of the court, and the differences between it and the text earlier recovered were observed, Liû Hsiang (B.C. 80-9), the father of Hin, was charged by the emperor (K'ang, B.C. 32-7) to compare the two. The result of his examination of them was that 'he removed from the modern text what was excessive and erroneous, and fixed the number of the chapters at eighteen.' It does not appear that previously there was any division of Kăn's copy into chapters. What Hsiang did in the case of the old text we are not told. A note by Yen Sze-kû of the Thang dynasty, appended to Hin's Catalogue, quotes from him that 'one chapter of the modern text was divided into two in the old, another into three, and that the old had one chapter which did not appear in the other.' This missing chapter, it is understood, was the one beginning, 'Inside the smaller doors leading to the inner apartments,' which I have appended, from the current old text, to my translation of the classic as published by Hsüan Jung; and yet the Sui account says that that chapter was in the Hsião of K'ang-sun, one of the four early commentators on the modern text.

The copies catalogued by Hin were made after the examination and revision of the two texts by his father. There are suspicious resemblances between the style and method of the present classic and those of the original works of

Hsiang that have come down to us. It is impossible to say, from the want of information, what liberties he took with the documents put into his charge. The differences between the two texts as we now have them are trivial. I believe that the changes made in them by Hsiang were not important; but having them as they came from his revision, we have them at second hand, and this has afforded ground for the dealing with them by K'ü Hsi and others in the manner which will be described in the next chapter.

2. I have said above (p. 450) that for the text of the classic,—the modern text, that is,—as we now have it, we are indebted to the labours of the emperor Hsüan Tsung of the Tang dynasty. K'ü Í-tsun, of the K'ien-lung period (1736-1795), in his work on the classics and the writings on them, has adduced the titles of eighty-six different works on our classic, that appeared between Khung An-kwo and Hsüan Tsung. Not a single one of all these now survives; but the enumeration of them shows that the most distinguished scholars during the intervening centuries exercised their powers on the treatise, and would keep a watch on one another in the preservation of the text. Moreover, several of the works continued through the Tang dynasty, and on into that of Sung. The Catalogue of the Sui Library contains the titles of nineteen in its list.

The emperor Hsüan says, in his preface, that in the making of his commentary he had freely used the commentaries of six earlier writers, whom he names. They were, Wei K'áo, Wang Sû, Yü Fan, and Liú Sháo, all of our second and third centuries; Liú Hsüan, of our sixth century, who laboured on the commentary of Khung An-kwo, which, as I have already stated, is said to have been discovered in his time and presented to him; and Lû K'hang, rather earlier than Liú, who dealt critically with the commentary attributed to K'ang Khang-k'hang. 'But,' says the imperial author, 'if a comment be right in reason, why need we enquire from whom it came? We have therefore taken those six writers, considered wherein

From Khung
An-kwo to
the emperor
Hsüan Tsung.

Hsüan Tsung's
work.

they agreed and differed, and decided between their interpretations by reference to the general scope of the five (great) King. In compendious style, but with extensive examination of the subject, we have made the meaning of the classic clear.'

The emperor says nothing himself about the differences between the ancient and modern texts, though we know that that subject was vehemently agitated among the scholars of his court. The text as commented on by him is in eighteen chapters, which do not include the chapter to which I have referred on p. 455 as having been in the copy of *Kang-sun* in the first century B.C. It is said, and on sufficient authority, that this chapter was excluded through the influence of the scholar and minister *Sze-má Kăn*. To each of his chapters the emperor prefixed a brief heading or argument, which I have retained in the translation. These headings, probably, were selected by him from a variety proposed by the scholars about the court.

The text employed in this imperial commentary might now be considered as sufficiently secured. It was engraved, in less than a century after, on the stone tablets of *Thang*, which were completed in the year 837, and set up in *Hsi-an*, the *Thang* capital, where they remain, very little damaged, to this day¹. And not only so. The emperor was so pleased with the commentary which he had made, that he caused the whole of it to be engraved on four large tablets or pillars of stone in 745. They are still to be seen at *Hsi-an*, in front of the Confucian College.

¹ These tablets are commonly said to contain the thirteen classics (*Shih-san King*). They contained, however, only twelve different works,—the *Yi*, the *Shû*, the *Shih*, the *Kâu Lî*, the *Í Lî*, the *Lî Kî*, and the amplifications of the *K'un K'ü*,—by *3o K'hiu-ming*, by *Kung-yang*, and by *Kü-liang*. These form 'the nine King.' In addition to these there were the *Lun Yü*, the *Hsiáo King*, and the *R Yâ*. According to *Kü Yen-wû* (1613-1682), the characters on the tablets were in all 650,252. Mr. T. W. Rhys Davids (*Buddhism*, p. 19) estimates that our English Bible contains between 900,000 and 950,000 words. The first Psalm, in what is called the Delegates' version, very good and concise, contains 100 Chinese characters, and in our English version 130 words. The classics of the *Thang* tablets, if the translator were a master of both languages, might be rendered in English so as to form a volume not quite so large as our Bible.

It is hardly necessary to say more on the preservation of the Hsião King. In A. D. 996 the second emperor of the Sung dynasty gave orders for an annotated edition of it to be prepared. This was finally completed in 1001, under the superintendence of Hsing Ping (932-1010), with a large critical apparatus, and a lengthened exposition, both of the text and of Hsüan Tsung's explanation. This work has ever since been current in China.

CHAPTER III.

CRITICISM OF THE HSIÃO SINCE THE THANG DYNASTY.

I. Notwithstanding the difficulty about one chapter which has been pointed out on p. 455, Hsüan Tsung's text was generally accepted as the representative of that in modern characters, recovered in the second century B. C. There were still those, however, who continued to advocate the claims of 'the old text.' Sze-mâ Kwang, a distinguished minister and scholar of the Sung dynasty (1009-1086), presented to the court in 1054 his 'Explanations of the Hsião King according to the Old Text,' arguing, in his preface and in various memorials, for the correctness of that text, as recovered by Liü Hsüan in the sixth century. Fan Tsü-yü (1041-1098), a scholar of the same century, and in other things a collaborateur of Kwang, produced, towards the end of his life, an 'Exposition of the Hsião King according to the Old Text.' He says in his preface:— 'Though the agreement between the ancient and modern texts is great, and the difference small, yet the ancient deserves to be preferred, and my labour upon it may not be without some little value¹.'

¹ In the Hsião King, as now frequently published in China, either separately by itself, or bound up with K'ü Hsi's Hsião Hsiao, 'the Teaching for the Young,' we find the old text, without distinction of chapters. The commentaries of Hsüan Tsung and Sze-mâ Kwang, and the exposition of Fan Tsü-yü, however, follow one another at the end of the several clauses and paragraphs.

2. But our classic had still to pass the ordeal of the sceptical criticism that set in during the Sung dynasty. The most notable result of this sceptical criticism. Views of K'ü Hsi. was 'the Hsiáo King Expurgated,' published by K'ü Hsi in 1186. He tells us that when he first saw a statement by Hû Hung (a minister in the reign of K'ao Jung, 1127-1162), that the quotations from the Book of Poetry in the Hsiáo were probably of later introduction into the text, he was terror-struck. Prolonged examination, however, satisfied him that there were good grounds for Hû's statement, and that other portions of the text were also open to suspicion. He found, moreover, that another earlier writer, Wang Ying-kh'ân, in the reign of Hsiáo Jung (1163-1189), had come to the conclusion that much of the Hsiáo had been fabricated or interpolated in the Han dynasty. The way was open for him to give expression to his convictions, without incurring the charge of being the first to impugn the accepted text.

The fact was, as pointed out by the editors of the Catalogue Raisonné of the Imperial Library of the present dynasty, that K'ü had long entertained the views which he indicated in his expurgated edition of the Hsiáo, and his references to Hû and Wang were simply to shield his own boldness. He divided the treatise into one chapter of classical text, and fourteen chapters of illustration and commentary. But both parts were freely expurgated. His classical text embraces the first six chapters in my translation, and is supposed by him to form one continuous discourse by Confucius. The rest of the treatise should not be attributed to the sage at all. The bulk of it may have come from 3äng-ze, or from members of his school, but large interpolations were made by the Han scholars. Adopting the old text, K'ü discarded from it altogether 223 characters.

Attention will be called, under the several chapters, to

Some portions also are in a different order from the arrangement of Hsüan Jung and Hsing Ping, which I have followed in my translation. As has been already said, the difference between its text and that of the Tang emperor is slight,—hardly greater than the variations in the different recensions of our Gospels and the other books of the New Testament.

some of the passages which he suppressed, and to the reasons, generally satisfactory, which he advanced for his procedure. Evidently he was influenced considerably by the way in which *K'häng Î* (1033-1107), whom he called 'his master,' had dealt with the old text of 'the Great Learning;' but he made his innovations with a bolder pencil and on a more extensive plan, not merely altering the arrangement of paragraphs, and supplementing what was plainly defective, but challenging the genuineness of large portions of the treatise, and removing them without scruple.

Under the Yüan dynasty, *Wû K'häng* (1249-1333), the greatest of its scholars, followed in the wake of *K'häng*. *Wû K'häng*. of *K'ü Hsi*, yet with the independence characteristic of himself. As *K'ü* had preferred the old text, *Wû* decided—and, I believe, more correctly—in favour of the modern, arguing that the copy of *Khung An-kwo's* text and commentary, said to have been recovered and published in the sixth century by *Liü Hsüan*, was a fabrication. He adopted, therefore, *Hsüan Jung's* text as the basis of his revision, which appeared with the title of 'the Hsião King, in paragraphs and sentences¹.' He adopted *K'ü's* division of the treatise into classical text and commentary. The chapter of classical text is the same as *K'ü's*; the chapters of commentary are only twelve. He discarded, of course, the chapter peculiar to the old text, which has been referred to more than once, united *Hsüan Jung's* eleventh chapter with another, and arranged the other chapters differently from *K'ü*. His revision altogether had 246 characters fewer than the old text.

3. *K'ü Î-tsun* gives the titles of nearly 120 works on our classic that appeared after the volume of *Wû K'häng*, bringing its literary history down to the end of the Ming dynasty. The scholars of the present dynasty have not been less abundant in their labours on it than their predecessors. Among the col-

¹ The title of this work in the Catalogue of the Imperial Libraries is 'Settlement of the Text of the Hsião King.'

lected works of Máo K'hi-ling (1623-1713) is one called 'Questions about the Hsiáo King,' in which, with his usual ability, and, it must be added, his usual acrimony, he defends the received text. He asserts—and in this he is correct—that there is no difference of any importance between the ancient and modern texts; when he asserts further that there never was any such difference, what he affirms is incapable of proof. He pours scorn on K'ü Hsi and Wü K'häng; but he is not so successful in defending the integrity of the Hsiáo as I have allowed him to be in vindicating the portions of the Shû that we owe to Khung An-kwo.

The Hsiáo King has always been a favourite with the emperors of China. Before Hsüan Sung took it in hand, the first and eighth emperors of the eastern K'in dynasty (317-419), the first and third of the Liang (502-556), and the ninth of the northern Wei (386-534) had published their labours upon it. The Manchâu rulers of the present dynasty have signalled themselves in this department. In 1656 the first emperor produced in one chapter his 'Imperial Commentary on the Hsiáo King,' and in 1728 the third published a 'Collection of Comments' on it. Between them was the long reign known to us as the Khang-hsi period (1662-1722), during which there appeared under the direction of the second emperor, the most distinguished of his line, his 'Extensive Explanation of the Hsiáo King,' in 100 chapters. The only portion of the text which it gives in full is K'ü Hsi's chapter of Confucian text; but most of the topics touched on in K'ü's supplementary chapters, added, as he supposed, by some later hand, are dealt with in the course of the work, the whole of which will amply repay a careful study.

4. It will have been seen that the two great scholars, K'ü Hsi and Wü K'häng, who have taken the greatest liberties with the text of our classic, allow that there is a Confucian element in it, and that more than a fifth part of the whole, containing, even as expurgated by K'ü, about 400 characters, may be correctly ascribed to the sage. I agree with them

Conclusion
regarding the
genuineness
and integrity
of the Hsiáo.

in this. All the rest of the treatise, to whomsoever it may be ascribed, from Ǵǵng-ǵze, the immediate disciple of Confucius, down to Liû Hsiang (B. C. 80-9), took its present form in the first century before our Christian era. The reader will fail to see in it a close connexion between the different chapters, and think that the author or authors try to make more of Filial Piety than can be made of it. The whole, however, is a valuable monument of antiquity, and an exhibition of the virtue which Chinese moralists and rulers, from the most ancient times, have delighted to celebrate as the fundamental principle of human virtue, the great source of social happiness, and the bond of national strength and stability.

NOTE ON THE TRANSLATION.

In preparing the translation of the Hsião King for the present work, I have made frequent reference to four earlier translations.

Two of them were made by myself;—the one about thirty years ago, simply as an exercise for my own improvement in Chinese; the other four years ago, when I was anxious to understand fully the Confucian teaching on the subject of Filial Piety, but without reference to my earlier version.

The third is a translation in the fourth volume of the Chinese Repository, pp. 345-353 (1835), for the accuracy of which much cannot be said. Very few notes are appended to it. The fourth is in the '*Mémoires concernant les Chinois*' (Paris, 1779), being part of a long treatise on the '*Ancient and Modern Doctrine of the Chinese about Filial Piety*,' by P. Cibot. In a preliminary notice to his version of our classic, he says:—'P. Noël formerly translated the Hsião King into Latin. Our translation will necessarily be different from his. He laboured on the old text, and we on the new, which the scholars of the Imperial College have adopted. Besides this, he has

launched out into paraphrase, and we have made it our business to present the text in French such as it is in Chinese.' I have not been able to refer to P. Noël's translation in preparing that now given to the public ; but I had his work before me when writing out my earliest version. The difference between the old and modern texts is too slight to affect the character of translations of them, but P. Noël's version is decidedly periphrastic. The title of his work is : — 'SINENSIS IMPERII LIBRI CLASSICI SEX, nimirum Adulorum Schola, Immutabile Medium, Liber sententiarum, Mencius, Filialis Observantia, Parvulorum Schola, e Sinico idiomate in Latinum traducti à P. Fr. Noël, S. J. (Prague, 1711).' The present version, I believe, gives the text in English, such as it is in Chinese, more accurately and closely than P. Cibot's does in French.

THE HSIÃO KING.

CHAPTER I.

THE SCOPE AND MEANING OF THE TREATISE.

(ONCE), when *Kung-nî*¹ was unoccupied, and his disciple *Šǎng*² was sitting by in attendance on him, the Master said, 'Šǎn, the ancient kings had a perfect virtue and all-embracing rule of conduct, through which they were in accord with all under heaven. By the practice of it the people were brought to live in peace and harmony, and there was no ill-will between superiors and inferiors. Do you know what it was³?' *Šǎng* rose from his mat, and said, 'How

¹ *Kung-nî* was the designation or marriage-name of Confucius. We find it twice in the Doctrine of the Mean (chh. 2 and 30), applied to the sage by *Šze-sze*, his grandson, the reputed author of that treatise. By his designation, it is said, a grandson might speak of his grandfather, and therefore some scholars contend that the Classic of Filial Piety should also be ascribed to *Šze-sze*; but such a canon cannot be considered as sufficiently established. On the authorship of the Classic, see the Introduction, p. 451.

² *Šǎng-ze*, named *Šǎn*, and styled *Šze-yü*, was one of the most distinguished of the disciples of Confucius. He was a favourite with the sage, and himself a voluminous writer. Many incidents and sayings are related, illustrative of his filial piety, so that it was natural for the master to enter with him on the discussion of that virtue. He shares in the honour and worship still paid to Confucius, and is one of his 'Four Assessors' in his temples.

³ Both the translator in the Chinese Repository and P. Cibot have rendered this opening address of Confucius very imperfectly.

should I, Shǎn, who am so devoid of intelligence, be able to know this?' The Master said, '(It was filial piety). Now filial piety is the root of (all) virtue¹, and (the stem) out of which grows (all moral) teaching. Sit down again, and I will explain the subject to you. Our bodies—to every hair and bit of skin—are received by us from our parents; and we must not presume to injure or wound them:—this is the beginning of filial piety. When we have established our character by the practice of the (filial) course, so as to make our name famous in future ages, and thereby glorify our parents:—this is the end of filial piety. It commences with the service

The former has:—'Do you understand how the ancient kings, who possessed the greatest virtue and the best moral principles, rendered the whole empire so obedient that the people lived in peace and harmony, and no ill-will existed between superiors and inferiors?' The other:—'Do you know what was the pre-eminent virtue and the essential doctrine which our ancient monarchs taught to all the empire, to maintain concord among their subjects, and banish all dissatisfaction between superiors and inferiors?' P. Cibot comes the nearer to the meaning of the text, but he has neglected the characters corresponding to 'through which they were in accord with all under heaven,' that are expounded clearly enough by Hsüan Jung. The sentiment of the sage is, as he has tersely expressed it in the Doctrine of the Mean (ch. 13), that the ancient kings 'governed men, according to their nature, with what is proper to them.'

1 'All virtue' means the five virtuous principles, the constituents of humanity, 'benevolence, righteousness, propriety, knowledge, and fidelity.' Of these, benevolence is the chief and fundamental, so that Mencius says (VII, ii, ch. 16), 'Benevolence is man.' In man's nature, therefore, benevolence is the root of filial piety; while in practice filial piety is the root of benevolence. Such is the way in which K'ü Hsü and other critical scholars reconcile the statements of the text here and elsewhere with their theory as to the constituents of humanity.

of parents; it proceeds to the service of the ruler; it is completed by the establishment of the character.

‘It is said in the Major Odes of the Kingdom,
“Ever think of your ancestor,
Cultivating your virtue¹.”’

CHAPTER II.

FILIAL PIETY IN THE SON OF HEAVEN.

He who loves his parents will not dare (to incur the risk of) being hated by any man, and he who reveres his parents will not dare (to incur the risk of) being contemned by any man². When the love and reverence (of the Son of Heaven) are thus carried to the utmost in the service of his parents, the lessons of his virtue affect all the people, and he becomes

¹ See the Shih King, III, i, ode 2, stanza 4. *K'ü Hsü* commences his expurgation of our classic with casting out this concluding paragraph; and rightly so. Such quotations of the odes and other passages in the ancient classics are not after the manner of Confucius. The application made of them, moreover, is often far-fetched, and away from their proper meaning.

² The thing thus generally stated must be understood specially of the sovereign, and only he who stands related to all other men can give its full manifestation. Previous translators have missed the peculiarity of the construction in each of the clauses. Thus P. Cibot gives:—‘He who loves his parents will not dare to hate any one,’ &c. But in the second member we have a well-known form in Chinese to give the force of the passive voice. Attention is called to this in the Extensive Explanation of the Hsiáo (see p. 461):—‘*Wü yü zǎn* does not mean merely to hate men; it indicates an anxious apprehension lest the hatred of men should light on me, and my parents thereby be involved in it.’

a pattern to (all within) the four seas¹:—this is the filial piety of the Son of Heaven².

It is said in (the Marquis of) Fû on Punishments³,
 'The One man will have felicity, and the millions
 of the people will depend on (what ensures his hap-
 piness).'

CHAPTER III.

FILIAL PIETY IN THE PRINCES OF STATES.

Above others, and yet free from pride, they dwell on high, without peril; adhering to economy, and carefully observant of the rules and laws, they are full, without overflowing. To dwell on high without peril is the way long to preserve nobility; to be full without overflowing is the way long to preserve riches. When their riches and nobility do not leave their persons, then they are able to preserve the altars of their land and grain, and to secure the harmony of their people and men in office⁴:—this is the filial piety of the princes of states.

¹ Chinese scholars make 'the people' to be the subjects of the king, and 'all within the four seas' to be the barbarous tribes outside the four borders of the kingdom, between them and the seas or oceans within which the habitable earth was contained—according to the earliest geographical conceptions. All we have to find in the language is the unbounded, the universal, influence of 'the Son of Heaven.'

² The appellation 'Son of Heaven' for the sovereign was unknown in the earliest times of the Chinese nation. It cannot be traced beyond the Shang dynasty.

³ See the Shû, V, xxvii, 4, and the note on the name of that Book, p. 254.

⁴ In the Chinese Repository we have for this:—'They will be able to protect their ancestral possessions with the produce of their lands;' 'They will make sure the supreme rank to their

It is said in the Book of Poetry¹,
 'Be apprehensive, be cautious,
 As if on the brink of a deep abyss,
 As if treading on thin ice.'

CHAPTER IV. FILIAL PIETY IN HIGH MINISTERS AND GREAT OFFICERS.

They do not presume to wear robes other than those appointed by the laws of the ancient kings²; nor to speak words other than those sanctioned by their speech; nor to exhibit conduct other than that exemplified by their virtuous ways. Thus none of their words being contrary to those sanctions, and none of their actions contrary to the (right) way,

families.' But it is better to retain the style of the original. The king had a great altar to the spirit (or spirits) presiding over the land. The colour of the earth in the centre of it was yellow; that on each of its four sides differed according to the colours assigned to the four quarters of the sky. A portion of this earth was cut away, and formed the nucleus of a corresponding altar in each feudal state, according to their position relative to the capital. The prince of the state had the prerogative of sacrificing there. A similar rule prevailed for the altars to the spirits presiding over the grain. So long as a family ruled in a state, so long its chief offered those sacrifices; and the extinction of the sacrifices was an emphatic way of describing the ruin and extinction of the ruling House.

¹ See the Shih, II, v, ode 1, stanza 6.

² The articles of dress, to be worn by individuals according to their rank, from the sovereign downwards, in their ordinary attire, and on special occasions, were the subject of attention and enactment in China from the earliest times. We find references to them in the earliest books of the Shû (Part II, Books iii, iv). The words to be spoken, and conduct to be exhibited, on every varying occasion, could not be so particularly described; but the example of the ancient kings would suffice for these, as their enactments for the dress.

from their mouths there comes no exceptionable speech, and in their conduct there are found no exceptionable actions. Their words may fill all under heaven, and no error of speech will be found in them. Their actions may fill all under heaven, and no dissatisfaction or dislike will be awakened by them. When these three things—(their robes, their words, and their conduct)—are all complete as they should be, they can then preserve their ancestral temples¹:—this is the filial piety of high ministers and great officers.

It is said in the Book of Poetry²,

‘He is never idle, day or night,
In the service of the One man.’

CHAPTER V. FILIAL PIETY IN INFERIOR OFFICERS.

As they serve their fathers, so they serve their mothers, and they love them equally. As they serve their fathers, so they serve their rulers, and they reverence them equally. Hence love is what is chiefly rendered to the mother, and reverence is what is chiefly rendered to the ruler, while both of these things are given to the father. Therefore when they serve their ruler with filial piety they are loyal; when they serve their superiors with reverence they are obedient. Not failing in this loyalty

¹ Their ancestral temples were to the ministers and grand officers what the altars of their land and grain were to the feudal lords. Every great officer had three temples or shrines, in which he sacrificed to the first chief of his family or clan; to his grandfather, and to his father. While these remained, the family remained, and its honours were perpetuated.

² See the Shih, III, iii, ode 6, stanza 4.

and obedience in serving those above them, they are then able to preserve their emoluments and positions, and to maintain their sacrifices¹:—this is the filial piety of inferior officers².

It is said in the Book of Poetry³,

‘Rising early and going to sleep late,
Do not disgrace those who gave you birth.’

CHAPTER VI.

FILIAL PIETY IN THE COMMON PEOPLE.

They follow the course of heaven (in the revolving seasons); they distinguish the advantages

¹ These officers had their ‘positions’ or places, and their pay. They had also their sacrifices, but such as were private or personal to themselves, so that we have not much information about them.

² The Chinese Repository has here, ‘Such is the influence of filial duty when performed by scholars;’ and P. Cibot, ‘Voilà sommairement ce qui caractérise la Piété Filiale du Lettré.’ But to use the term ‘scholar’ here is to translate from the standpoint of modern China, and not from that of the time of Confucius. The Shih of feudal China were the younger sons of the higher classes, and men that by their ability were rising out of the lower, and who were all in inferior situations, and looking forward to offices of trust in the service of the royal court, or of their several states. Below the ‘great officers’ of ch. 4, three classes of Shih—the highest, middle, lowest—were recognised, all intended in this chapter. When the feudal system had passed away, the class of ‘scholars’ gradually took their place. Shih (士) is one of the oldest characters in Chinese, but the idea expressed in its formation is not known. Confucius is quoted in the Shwo Wăn as making it to be from the characters for one (一) and ten (十). A very old definition of it is—‘The denomination of one entrusted with affairs.’

³ See the Shih, II, iii, ode 2, stanza 6.

afforded by (different) soils¹; they are careful of their conduct and economical in their expenditure;—in order to nourish their parents:—this is the filial piety of the common people.

Therefore from the Son of Heaven down to the common people, there never has been one whose filial piety was without its beginning and end on whom calamity did not come.

CHAPTER VII.

FILIAL PIETY IN RELATION TO THE THREE POWERS².

The disciple ǰǎng said, 'Immense indeed is the greatness of filial piety!' The Master replied³,

¹ These two sentences describe the attention of the people to the various processes of agriculture, as conditioned by the seasons and the qualities of different soils.

With this chapter there ends what *K'ü Hsi* regarded as the only portion of the *Hsiáo* in which we can rest as having come from Confucius. So far, it is with him a continuous discourse that proceeded from the sage. And there is, in this portion, especially when we admit *K'ü*'s expurgations, a certain sequence and progress, without logical connexion, in the exhibition of the subject which we fail to find in the chapters that follow.

² 'The Three Powers' is a phrase which is first found in two of the Appendixes to the *Yi King*, denoting Heaven, Earth, and Man, as the three great agents or agencies in nature, or the circle of being.

³ The whole of the reply of Confucius here, down to 'the advantages afforded by earth,' is found in a narrative in the *So Kwan*, under the twenty-fifth year of duke *K'áo* (B.C. 517), with the important difference that the discourse is there about 'ceremonies,' and not about filial piety. Plainly, it is an interpolation in the *Hsiáo*, and is rightly thrown out by *K'ü* and *Wü K'ǎng*. To my own mind it was a relief to find that the passage was not genuine, and had not come from Confucius. The discourse in the *So Kwan*, which is quite lengthy, these sentences being only the com-

‘Yes, filial piety is the constant (method) of Heaven, the righteousness of Earth, and the practical duty of Man¹. Heaven and earth invariably pursue the course (that may be thus described), and the people take it as their pattern. (The ancient kings) imitated the brilliant luminaries of heaven, and acted in accordance with the (varying) advantages afforded by earth, so that they were in accord with all under heaven; and in consequence their teachings, without being severe, were successful, and their government, without being rigorous, secured perfect order.

mencement of it, is more than sufficiently fanciful; but it is conceivable that what is here predicated of filial piety might be spoken of ceremonies, while I never could see what it could have to do with filial piety, or filial piety with it. After the long discourse in the *30 Kwan* one of the interlocutors in it exclaims, ‘Immense, indeed, is the greatness of ceremonies!’—the same terms with which *3äng-ze* is made to commence this chapter, saving that we have ‘ceremonies’ instead of ‘filial piety.’ There can be no doubt that the passage is interpolated; and yet the first part of it is quoted by Pan Kû (in our first century), in a note to Liû Hin’s Catalogue, and also in the Amplification of the First Precept of the Khang-hsî Sacred Edict (in our eighteenth century). Pan Kû may not have been sufficiently acquainted with the *30 Kwan* to detect the forgery; that Chinese scholars should still quote the description as applicable to filial piety shows how liable they are to be carried away by fine-sounding terms and mysterious utterances.

P. Cibot gives a correct translation of the first part in a note, but adds that it carries the sense of the text much too high, and would bring it into collision with the prejudices of the west, and he has preferred to hold to the more common explanation:—‘Ce qu’est la régularité des monuments des astres pour le firmament, la fertilité des campagnes pour la terre, la Piété Filiale l’est constamment pour les peuples!’

¹ An amusing translation of this sentence is found in Samuel Johnson’s ‘Oriental Religions, China,’ p. 208, beginning, ‘Filial Piety is the Book of Heaven!’ Mr. Johnson does not say where he got this version.

'The ancient kings, seeing how their teachings¹ could transform the people, set before them therefore an example of the most extended love, and none of the people neglected their parents; they set forth to them (the nature of) virtue and righteousness, and the people roused themselves to the practice of them; they went before them with reverence and yielding courtesy, and the people had no contentions; they led them on by the rules of propriety and by music, and the people were harmonious and benignant; they showed them what they loved and what they disliked, and the people understood their prohibitions.

'It is said in the Book of Poetry²,
"Awe-inspiring are you, O Grand-Master Yin,
And the people all look up to you."'

CHAPTER VIII. FILIAL PIETY IN GOVERNMENT.

The Master said, 'Anciently, when the intelligent kings by means of filial piety ruled all under heaven, they did not dare to receive with disrespect the ministers of small states;—how much less would they do so to the dukes, marquises, counts, and barons!' Thus it was that they got (the princes of) the myriad states with joyful hearts (to assist them) in the (sacrificial) services to their royal predecessors³.

¹ Sze-mâ Kwang changes the character for 'teachings' here into that for 'filial piety.' There is no external evidence for such a reading; and the texture of the whole treatise is so loose that we cannot insist on internal evidence.

² See the Shih, II, iv, ode 7, stanza 1.

³ Under the K'áu dynasty there were five orders of nobility, and the states belonging to their rulers varied proportionally in size.

‘The rulers of states did not dare to slight wifeless men and widows;—how much less would they slight their officers and the people! Thus it was that they got all their people with joyful hearts (to assist them) in serving the rulers, their predecessors¹.

‘The heads of clans did not dare to slight their servants and concubines;—how much less would they slight their wives and sons! Thus it was that they got their men with joyful hearts (to assist them) in the service of their parents.

‘In such a state of things, while alive, parents reposed in (the glory of) their sons; and, when sacrificed to, their disembodied spirits enjoyed their offerings². Therefore all under heaven peace and harmony prevailed; disasters and calamities did not occur; misfortunes and rebellions did not arise.

‘It is said in the Book of Poetry³,

“To an upright, virtuous conduct

All in the four quarters of the state render obedient homage.”’

There were besides many smaller states attached to these. The feudal lords at stated times appeared at the royal court, and one important duty which then devolved on them was to take part in the sacrificial services of the sovereign in the ancestral temple.

¹ These services were also the sacrifices in the ancestral temples of the rulers of the states and of the chiefs of clans,—the feudal princes and the ministers and great officers of chapters 3 and 4.

² In the Chinese Repository we read here:—‘Parents enjoyed tranquillity while they lived, and after their decease sacrifices were offered to their disembodied spirits.’ To the same effect P. Cibot:—‘Les pères et mères étoient heureux pendant la vie, et après leur mort leurs âmes étoient consolées par des Tsî (sacrifices).’ I believe that I have caught the meaning more exactly.

³ See the Shih, III, iii, ode 2, stanza 2.

CHAPTER IX. THE GOVERNMENT OF THE SAGES¹.

The disciple Jǎng said, 'I venture to ask whether in the virtue of the sages there was not something greater than filial piety.' The Master replied, 'Of all (creatures with their different) natures produced by Heaven and Earth, man is the noblest. Of all the actions of man there is none greater than filial piety. In filial piety there is nothing greater than the reverential awe of one's father. In the reverential awe shown to one's father there is nothing greater than the making him the correlate of Heaven². The duke of K'âu was the man who (first) did this³.

¹ 'The sages' here must mean the sage sovereigns of antiquity, who had at once the highest wisdom and the highest place.

² See a note on p. 99 on the meaning of the phrase 'the fellow of God,' which is the same as that in this chapter, translated 'the correlate of God.' P. Cibot goes at length into a discussion of the idea conveyed by the Chinese character P'ei, but without coming to any definite conclusion; and indeed Tâi Thung, author of the dictionary Liû Shû Kû, says that 'its original significance has baffled investigation, while its classical usage is in the sense of "mate," "fellow."' The meaning here is the second assigned to it on p. 99. In the Chinese Repository we find:—'As a mark of reverence there is nothing more important than to place the father on an equality with heaven;' which is by no means the idea, while the author further distorts the meaning by the following note:—'T'ien, "Heaven," and Shang T'î, the "Supreme Ruler," seem to be perfectly synonymous; and whatever ideas the Chinese attach to them, it is evident that the noble lord of K'âu regarded his ancestors, immediate and remote, as their equals, and paid to the one the same homage as the other. In thus elevating mortals to an equality with the Supreme Ruler, he is upheld and approved by Confucius, and has been imitated by myriads of every generation of his countrymen down to the present day.'

³ It is difficult to say in what the innovation of the duke of K'âu

‘Formerly the duke of *Kâu* at the border altar sacrificed to *Hâu-kî* as the correlate of Heaven, and in the Brilliant Hall he honoured king *Wăn*, and sacrificed to him as the correlate of God¹. The

consisted. The editors of the *Extensive Explanation* of the *Hsiáo* say:—‘According to commentators on our classic, Shun thinking only of the virtue of his ancestor did not sacrifice to him at the border altar. The sovereigns of *Hsiâ* and *Yin* were the first to sacrifice there to their ancestors; but they had not the ceremony of sacrificing to their fathers as the correlates of Heaven. This began with the duke of *Kâu*.’ To this explanation of the text the editors demur, and consider that the noun ‘father’ in the previous sentence should be taken, in the case of the duke of *Kâu*, both of *Hâu-kî* and king *Wăn*.

¹ The reader of the translations from the *Shih* must be familiar with *Hâu-kî*, as the ancestor to whom the kings of *Kâu* traced their lineage, and with king *Wăn*, as the acknowledged founder of their dynasty in connexion with his son, king *Wû*. Was any greater honour done to *Hâu-kî* in making him the correlate of Heaven than to king *Wăn* in making him the correlate of God? We must say, No. As is said in the *Extensive Explanation*, ‘The words Heaven and God are different, but their meaning is one and the same.’ The question is susceptible of easy determination. Let me refer the reader to the translations from the *Shih* on pp. 317 and 329. The tenth piece on the latter was sung, at the border sacrifice to Heaven, in honour of *Hâu-kî*; and the first four lines of it are to the effect—

‘O thou, accomplished, great *Hâu-kî*!
To thee alone ’twas given
To be, by what we trace to thee,
The correlate of Heaven;’

while the fifth and sixth lines are—

‘God had the wheat and barley meant
To nourish all mankind.
None would have fathomed His intent,
But for thy guiding mind.’

The seventh piece on the former page was used at the sacrifice, in the Brilliant Hall, to king *Wăn*, as ‘the correlate of God.’ The first three lines have been versified by—

consequence was that from (all the states) within the four seas, every (prince) came in the discharge of his duty to (assist in those) sacrifices. In the virtue of the sages what besides was there greater than filial piety?

'Now the feeling of affection grows up at the parents' knees, and as (the duty of) nourishing those parents is exercised, the affection daily merges in awe. The sages proceeded from the (feeling of) awe to teach (the duties of) reverence, and from (that of) affection to teach (those of) love. The teachings of the sages, without being severe, were successful, and their government, without being rigo-

'My offerings here are given,
A ram, a bull.
Accept them, mighty Heaven,
All-bountiful;'

and the sixth and seventh lines by—

'From Wăn comes blessing rich;
Now on the right
He owns those gifts to which
Him I invite.'

Since 'Heaven' and 'God' have the same reference, why are they used here as if there were some opposition between them? The nearest approach to an answer to this is found also in the *Extensive Explanation*, derived mainly from *K'ân Hsiang-tão*, of the Sung dynasty, and to the following effect:—'Heaven (Tien) just is God (Tî). Heaven is a term specially expressive of honour, and Hâu-kî was made the correlate of Heaven, because he was remote, far distant from the worshipper. God is a term expressive of affection, and king Wăn was made the correlate of God, because he was nearer to, the father of, the duke of K'âu.' Hsiang-tão concludes by saying that the sacrifice at the border altar was an old institution, while that in the Brilliant Hall was first appointed by the duke of K'âu. According to this view, Heaven would approximate to the name for Deity in the absolute,—Jehovah, as explained in Exodus xv. 14; while Tî is God, 'our Father in heaven.'

rous, was effective. What they proceeded from was the root (of filial piety implanted by Heaven).

'The relation and duties between father and son, (thus belonging to) the Heaven-conferred nature, (contain in them the principle of) righteousness between ruler and subject¹. The son derives his life from his parents, and no greater gift could possibly be transmitted; his ruler and parent (in one), his father deals with him accordingly, and no generosity could be greater than this. Hence, he who does not love his parents, but loves other men, is called a rebel against virtue; and he who does not revere his parents, but reveres other men, is called a rebel against propriety. When (the ruler) himself thus acts contrary to (the principles) which should place him in accord (with all men), he presents nothing for the people to imitate. He has nothing to do with what is good, but entirely and only with what is injurious to virtue. Though he may get (his will, and be above others), the superior man does not give him his approval.

¹ We find for this in the Chinese Repository:—'The feelings which ought to characterise the intercourse between father and son are of a heavenly nature, resembling the bonds which exist between a prince and his ministers.' P. Cibot gives:—'*Les rapports immuable de père et de fils découlent de l'essence même du Tien, et offrent la première idée de prince et de sujet;*' adding on the former clause this note:—'*Les commentateurs ne disent que des mots sur ces paroles; mais comment pourroient ils les bien expliquer, puisqu'ils ne sauroient en entrevoir le sens supreme et ineffable? Quelques-uns ont pris le parti de citer le texte de Táo-teh King (ch. 42), "Le Táo est vie et unité; le premier a engendré le second; les deux ont produit le troisième; le trois ont fait toutes choses;" c'est-à-dire, qu'ils ont tâché d'expliquer un texte qui les passe, par un autre où ils ne comprennent rien.'* But there is neither difficulty in the construction of the text here, nor mystery in its meaning.

‘It is not so with the superior man. He speaks, having thought whether the words should be spoken; he acts, having thought whether his actions are sure to give pleasure. His virtue and righteousness are such as will be honoured; what he initiates and does is fit to be imitated; his deportment is worthy of contemplation; his movements in advancing or retiring are all according to the proper rule. In this way does he present himself to the people, who both revere and love him, imitate and become like him. Thus he is able to make his teaching of virtue successful, and his government and orders to be carried into effect ¹.

‘It is said in the Book of Poetry ²,

“The virtuous man, the princely one,
Has nothing wrong in his deportment.”

CHAPTER X. AN ORDERLY DESCRIPTION OF THE ACTS OF FILIAL PIETY.

The Master said, ‘The service which a filial son does to his parents is as follows:—In his general conduct to them, he manifests the utmost reverence; in his nourishing of them, his endeavour is to give them the utmost pleasure; when they are ill, he feels the greatest anxiety; in mourning for them (dead), he exhibits every demonstration of grief; in sacrificing to them, he displays the utmost solemnity. When a son is complete in these five things (he may be pronounced) able to serve his parents.

¹ This paragraph may be called a mosaic, formed by piecing together passages from the *30 Kwan*.

² See the *Shih*, I, xiv, ode 3, stanza 3.

'He who (thus) serves his parents, in a high situation, will be free from pride; in a low situation, will be free from insubordination; and among his equals, will not be quarrelsome. In a high situation pride leads to ruin; in a low situation insubordination leads to punishment; among equals quarrelsomeness leads to the wielding of weapons.

'If those three things be not put away, though a son every day contribute beef, mutton, and pork¹ to nourish his parents, he is not filial.'

CHAPTER XI. FILIAL PIETY IN RELATION TO THE FIVE PUNISHMENTS.

The Master said, 'There are three thousand offences against which the five punishments are directed², and there is not one of them greater than being unfilial.

'When constraint is put upon a ruler, that is the disowning of his superiority; when the authority of the sages is disallowed, that is the disowning of (all) law; when filial piety is put aside, that is the disowning of the principle of affection. These (three things) pave the way to anarchy.'

CHAPTER XII. AMPLIFICATION OF 'THE ALL-EMBRACING RULE OF CONDUCT' IN CHAPTER I.

The Master said, 'For teaching the people to be affectionate and loving there is nothing better than Filial Piety; for teaching them (the observance of) propriety and submissiveness there is nothing better than Fraternal Duty; for changing their manners

¹ Compare with this the Confucian Analects, II, vii.

² See the Shû, p. 43, and especially pp. 255, 256.

and altering their customs there is nothing better than Music ; for securing the repose of superiors and the good order of the people there is nothing better than the Rules of Propriety.

‘ The Rules of Propriety are simply (the development of) the principle of Reverence. Therefore the reverence paid to a father makes (all) sons pleased ; the reverence paid to an elder brother makes (all) younger brothers pleased ; the reverence paid to a ruler makes (all) subjects pleased¹. The reverence paid to one man makes thousands and myriads of men pleased. The reverence is paid to a few, and the pleasure extends to many ;—this is what is meant by an “ All-embracing Rule of Conduct.” ’

CHAPTER XIII. AMPLIFICATION OF ‘ THE PERFECT VIRTUE ’ IN CHAPTER I.

The Master said, ‘ The teaching of filial piety by the superior man² does not require that he should go to family after family, and daily see the members of each. His teaching of filial piety is a tribute of reverence to all the fathers under heaven ; his teaching of fraternal submission is a tribute of reverence to all the elder brothers under heaven ; his teaching of the duty of a subject is a tribute of reverence to all the rulers under heaven.

¹ We must understand that the ‘ reverence ’ here is to be understood as paid by the sovereign. In reverencing his father (or an uncle may also in Chinese usage be so styled), he reverences the idea of fatherhood, and being ‘ in accord with the minds of all under heaven,’ his example is universally powerful. And we may reason similarly of the other two cases of reverence specified.

² The *Kün-ze*, or ‘ superior man,’ here must be taken of the sovereign. P. Cibot translates it by ‘ un prince.’

' It is said in the Book of Poetry¹,
 " The happy and courteous sovereign
 Is the parent of the people."

' If it were not a perfect virtue, how could it be recognised as in accordance with their nature by the people so extensively as this ?'

CHAPTER XIV. AMPLIFICATION OF 'MAKING OUR NAME FAMOUS' IN CHAPTER I.

The Master said, ' The filial piety with which the superior man serves his parents may be transferred as loyalty to the ruler ; the fraternal duty with which he serves his elder brother may be transferred as submissive deference to elders ; his regulation of his family may be transferred as good government in any official position. Therefore, when his conduct is thus successful in his inner (private) circle, his name will be established (and transmitted) to future generations.'

CHAPTER XV. FILIAL PIETY IN RELATION TO REPROOF AND REMONSTRANCE.

The disciple Ǻng said, ' I have heard your instructions on the affection of love, on respect and reverence, on giving repose to (the minds of) our parents, and on making our name famous ;—I would venture to ask if (simple) obedience to the orders of one's father can be pronounced filial piety.' The Master replied, ' What words are these ! what words are these ! Anciently, if the Son of Heaven had seven ministers who would remonstrate with him,

¹ See the Shih, III, ii, ode 7, stanza 1. The two lines of the Shih here are, possibly, not an interpolation.

although he had not right methods of government, he would not lose his possession of the kingdom; if the prince of a state had five such ministers, though his measures might be equally wrong, he would not lose his state; if a great officer had three, he would not, in a similar case, lose (the headship of) his clan; if an inferior officer had a friend who would remonstrate with him, a good name would not cease to be connected with his character; and the father who had a son that would remonstrate with him would not sink into the gulf of unrighteous deeds¹. Therefore when a case of unrighteous conduct is concerned, a son must by no means keep from remonstrating with his father, nor a minister from remonstrating with his ruler. Hence, since remonstrance is required in the case of unrighteous conduct, how can (simple) obedience to the orders of a father be accounted filial piety²?

CHAPTER XVI. THE INFLUENCE OF FILIAL PIETY AND THE RESPONSE TO IT.

The Master said, 'Anciently, the intelligent kings served their fathers with filial piety, and therefore they served Heaven with intelligence; they served their mothers with filial piety, and therefore they served Earth with discrimination³. They pursued

¹ The numbers 7, 5, 3, 1 cannot be illustrated by examples, nor should they be insisted on. The higher the dignity, the greater would be the risk, and the stronger must be the support that was needed.

² Compare the Analects, IV, xviii, and the Lî Kî, X, i, 15.

³ This chapter is as difficult to grasp as the seventh, which treated of Filial Piety in Relation to 'the Three Powers.' It is indeed a sequel to that. Heaven and Earth appear as two Powers, or as

the right course with reference to their (own) seniors and juniors, and therefore they secured the regulation of the relations between superiors and inferiors (throughout the kingdom).

'When Heaven and Earth were served with intelligence and discrimination, the spiritual intelligences displayed (their retributive power¹).

'Therefore even the Son of Heaven must have some whom he honours ; that is, he has his uncles of his surname. He must have some to whom he concedes the precedence ; that is, he has his cousins, who bear the same surname, and are older than himself. In the ancestral temple he manifests the utmost reverence, showing that he does not forget his parents ; he cultivates his person and is careful of his conduct, fearing lest he should disgrace his predecessors.

'When in the ancestral temple he exhibits the

a dual Power, taking the place of Heaven or God. We can in a degree follow the treatise in transferring the reverence paid by a son to his father to loyalty shown by him to his ruler ; but it is more difficult to understand the development of filial piety into religion that is here assumed and described. Was it not the pressing of this virtue too far, the making more of it than can be made, that tended to deprave religion during the *K'au* dynasty, and to mingle with the earlier monotheism a form of nature-worship ?

Hsing Ping, in his 'Correct Meaning,' makes the 'discrimination' here to be 'an ability to distinguish the advantages of the earth ;'—showing how he had the sixth and seventh chapters in his mind.

¹ 'The Spiritual Intelligences' here are Heaven and Earth conceived of as Spiritual Beings. They responded to the sincere service of the intelligent kings, as Hsing Ping says, with 'the harmony of the active and passive principles of nature, seasonable winds and rain, the absence of epidemic sickness and plague, and the repose of all under heaven.' Compare with this what is said in 'the Great Plan' of the *Shû*, pp. 147, 148.

utmost reverence, the spirits of the departed manifest themselves¹. Perfect filial piety and fraternal duty reach to (and move) the spiritual intelligences, and diffuse their light on all within the four seas;—they penetrate everywhere.

‘It is said in the Book of Poetry²,
 “From the west to the east,
 From the south to the north,
 There was not a thought but did him homage.”’

CHAPTER XVII. THE SERVICE OF THE RULER.

The Master said, ‘The superior man³ serves his ruler in such a way, that when at court in his presence his thought is how to discharge his loyal duty to the utmost; and when he retires from it, his thought is how to amend his errors. He carries out with deference the measures springing from his excellent qualities, and rectifies him (only) to save him from what are evil. Hence, as the superior and inferior, they are able to have an affection for each other.

‘It is said in the Book of Poetry⁴,
 “In my heart I love him;
 And why should I not say so?
 In the core of my heart I keep him,
 And never will forget him.”’

¹ The reader will have noticed many instances of this, or what were intended to be instances of it, in the translations from the Shih, pp. 365-368, &c.

² See the Shih, III, i, ode 10, stanza 6.

³ ‘The superior man’ here can only be the good and intelligent officer in the royal domain or at a feudal court.

⁴ See the Shih, II, viii, ode 4, stanza 4.

CHAPTER XVIII.

FILIAL PIETY IN MOURNING FOR PARENTS.

The Master said, 'When a filial son is mourning for a parent, he wails, but not with a prolonged sobbing; in the movements of ceremony he pays no attention to his appearance; his words are without elegance of phrase; he cannot bear to wear fine clothes; when he hears music, he feels no delight; when he eats a delicacy, he is not conscious of its flavour:—such is the nature of grief and sorrow.

'After three days he may partake of food; for thus the people are taught that the living should not be injured on account of the dead, and that emaciation must not be carried to the extinction of life:—such is the rule of the sages. The period of mourning does not go beyond three years, to show the people that it must have an end.

'An inner and outer coffin are made; the grave-clothes also are put on, and the shroud; and (the body) is lifted (into the coffin). The sacrificial vessels, round and square, are (regularly) set forth, and (the sight of them) fills (the mourners) with (fresh) distress¹. The women beat their breasts, and the men stamp with their feet, wailing and weeping, while they sorrowfully escort the coffin to the grave. They consult the tortoise-shell to determine the grave and the ground about it, and

¹ These vessels were arranged every day by the coffin, while it continued in the house, after the corpse was put into it. The practice was a serving of the dead as the living had been served. It is not thought necessary to give any details as to the other different rites of mourning which are mentioned. They will be found, with others, in the translations from the *Lî Kî*.

there they lay the body in peace. They prepare the ancestral temple (to receive the tablet of the departed), and there present offerings to the disembodied spirit. In spring and autumn they offer sacrifices, thinking of the deceased as the seasons come round.

‘The services of love and reverence to parents when alive, and those of grief and sorrow to them when dead :—these completely discharge the fundamental duty of living men. The righteous claims of life and death are all satisfied, and the filial son’s service of his parents is completed.’

The above is the Classic of Filial Piety, as published by the emperor Hsüan in A.D. 722, with the headings then prefixed to the eighteen chapters. Subsequently, in the eleventh century, Sze-mâ Kwang (A.D. 1009–1086), a famous statesman and historian, published what he thought was the more ancient text of the Classic in twenty-two chapters, with ‘Explanations’ by himself, without indicating, however, the different chapters, and of course without headings to them. This work is commonly published along with an ‘Exposition’ of his views, by Fan 3ü-yü, one of his contemporaries and friends. The differences between his text and that of the Thang emperor are insignificant. He gives, however, one additional chapter, which would be the nineteenth of his arrangement. It is as follows :—‘Inside the smaller doors leading to the inner apartments are to be found all the rules (of government). There is awe for the father, and also for the elder brother. Wife and children, servants and concubines are like the common people, serfs, and underlings.’

Acoustics. By W. F. Donkin, M.A., F.R.S., Savilian Professor of Astronomy, Oxford. Crown 8vo. cloth, 7s. 6d.

A Treatise on Electricity and Magnetism. By J. Clerk Maxwell, M.A., F.R.S., Professor of Experimental Physics in the University of Cambridge. 2 vols. 8vo. cloth, 1l. 11s. 6d.

An Elementary Treatise on the same subject. By the same Author. *Preparing.*

A Treatise on Statics. By G. M. Minchin, M.A., Professor of Applied Mathematics in the Indian Engineering College, Cooper's Hill. *Second Edition, Revised and Enlarged. In the Press.*

Geodesy. By Alexander Ross Clarke, R.E. *In the Press.*

VII. PHYSICAL SCIENCE.

A Handbook of Descriptive Astronomy. By G. F. Chambers, F.R.A.S. *Third Edition.* Demy 8vo. cloth, 28s.

Chemistry for Students. By A. W. Williamson, Phil. Dqc., F.R.S., Professor of Chemistry, University College, London. *A new Edition, with Solutions.* Extra fcap. 8vo. cloth, 8s. 6d.

A Treatise on Heat, with numerous Woodcuts and Diagrams. By Balfour Stewart, LL.D., F.R.S., Professor of Natural Philosophy in Owens College, Manchester. *Third Edition.* Extra fcap. 8vo. cloth, 7s. 6d.

Lessons on Thermodynamics. By R. E. Baynes, M.A., Senior Student of Christ Church, Oxford, and Lee's Reader in Physics. Crown 8vo. cloth, 7s. 6d.

Forms of Animal Life. By G. Rolleston, M.D., F.R.S., Linacre Professor of Physiology, Oxford. Illustrated by Descriptions and Drawings of Dissections. Demy 8vo. cloth, 16s.

Exercises in Practical Chemistry (Laboratory Practice). By A. G. Vernon Harcourt, M.A., F.R.S., Senior Student of Christ Church, and Lee's Reader in Chemistry; and H. G. Madan, M.A., Fellow of Queen's College, Oxford. *Second Edition.* Crown 8vo. cloth, 7s. 6d.

Geology of Oxford and the Valley of the Thames. By John Phillips, M.A., F.R.S., Professor of Geology, Oxford. 8vo. cloth, 21s.

Crystallography. By M. H. N. Story-Maskelyne, M.A., Professor of Mineralogy, Oxford; and Deputy Keeper in the Department of Minerals, British Museum. *In the Press.*

VIII. HISTORY.

The Constitutional History of England, in its Origin and Development. By William Stubbs, M.A., Regius Professor of Modern History. *In Three Volumes.* Crown 8vo. cloth, each 12s.

Select Charters and other Illustrations of English Constitutional History, from the Earliest Times to the Reign of Edward I. Arranged and Edited by W. Stubbs, M.A. *Third Edition.* Crown 8vo. cloth, 8s. 6d.

A History of England, principally in the Seventeenth Century. By Leopold Von Ranke. Translated by Resident Members of the University of Oxford, under the superintendence of G. W. Kitchin, M.A., and C. W. Boase, M.A. 6 vols. 8vo. cloth, 3l. 3s.

Genealogical Tables illustrative of Modern History. By H. B. George, M.A. *Second Edition.* Small 4to. cloth, 12s.

A History of France. With numerous Maps, Plans, and Tables. By G. W. Kitchin, M.A. *In Three Volumes.* Crown 8vo. cloth, each 10s. 6d.

Vol. 1. Down to the Year 1453. Vol. 2. From 1453-1624.
Vol. 3. From 1624-1793.

A Manual of Ancient History. By George Rawlinson, M.A., Camden Professor of Ancient History, formerly Fellow of Exeter College, Oxford. Demy 8vo. cloth, 14s.

A History of Germany and of the Empire, down to the close of the Middle Ages. By J. Bryce, D.C.L., Regius Professor of Civil Law in the University of Oxford.

Italy and her Invaders. By T. Hodgkin. *In the Press.*

A History of British India. By S. J. Owen, M.A., Reader in Indian History in the University of Oxford.

A History of Greece. By E. A. Freeman, M.A., formerly Fellow of Trinity College, Oxford.

A History of Greece from its Conquest by the Romans to the present time, B.C. 146 to A.D. 1864. By George Finlay, LL.D. A new Edition, revised throughout, and in part re-written, with considerable additions, by the Author, and Edited by H. F. Tozer, M.A., Tutor and late Fellow of Exeter College, Oxford. In Seven Volumes. 8vo. cloth, 3l. 10s.

A Selection from the Despatches, Treaties, and other Papers of the Marquess Wellesley, K.G., during his Government of India; with Appendix, Map of India, and Plans. Edited by S. J. Owen, M.A., Reader in Indian History in the University of Oxford, formerly Professor of History in the Elphinstone College, Bombay. 8vo. cloth, 1l. 4s.

IX. LAW.

Elements of Law considered with reference to Principles of General Jurisprudence. By William Markby, M.A., Judge of the High Court of Judicature, Calcutta. *Second Edition, with Supplement.* Crown 8vo. cloth, 7s. 6d.

An Introduction to the History of the Law of Real Property, with original Authorities. By Kenelm E. Digby, M.A., of Lincoln's Inn, Barrister-at-Law, and formerly Fellow of Corpus Christi College, Oxford. *Second Edition.* Crown 8vo. cloth, 7s. 6d.

The Elements of Jurisprudence. By Thomas Erskine Holland, D.C.L., Chichele Professor of International Law and Diplomacy, and formerly Fellow of Exeter College, Oxford. *In the Press.*

The Institutes of Justinian, edited as a recension of the Institutes of Gaius. By the same Editor. Extra fcap. 8vo. cloth, 5s.

Alberici Gentilis, I.C.D., I.C. Professoris Regii, De Iure Belli Libri Tres. Edidit Thomas Erskine Holland I.C.D., Iuris Gentium Professor Chicheleianus, Coll. Omn. Anim. Socius, necnon in Univ. Perusin. Iuris Professor Honorarius. Small 4to. half morocco, 21s.

Gaii Institutionum Juris Civilis Commentarii Quatuor; or, Elements of Roman Law by Gaius. With a Translation and Commentary by Edward Poste, M.A., Barrister-at-Law, and Fellow of Oriel College, Oxford. *Second Edition.* 8vo. cloth, 18s.

Select Titles from the Digest of Justinian. By T. E. Holland, D.C.L., Chichele Professor of International Law and Diplomacy, and formerly Fellow of Exeter College, Oxford, and C. L. Shadwell, B.C.L., Fellow of Oriel College, Oxford. *In Parts.*

Part I. Introductory Titles. 8vo. sewed, 2s. 6d.

Part II. Family Law. 8vo. sewed, 1s.

Part III. Property Law. 8vo. sewed, 2s. 6d.

Part IV. (No. 1). Law of Obligations. 8vo. sewed, 3s. 6d.

Principles of the English Law of Contract. By Sir William R. Anson, Bart., B.C.L., Vinerian Reader of English Law, and Fellow of All Souls College, Oxford. Crown 8vo. cloth, 9s.

A Treatise on International Law. By W. E. Hall, M.A. *Preparing.*

X. MENTAL AND MORAL PHILOSOPHY.

Bacon. Novum Organum. Edited, with Introduction, Notes, &c., by T. Fowler, M.A., Professor of Logic in the University of Oxford. 8vo. cloth, 14s.

Selections from Berkeley, with an Introduction and Notes. For the use of Students in the Universities. By Alexander Campbell Fraser, LL.D. *Second Edition.* Crown 8vo. cloth, 7s. 6d. *See also* p. 17.

The Elements of Deductive Logic, designed mainly for the use of Junior Students in the Universities. By T. Fowler, M.A., Professor of Logic in the University of Oxford. *Sixth Edition*, with a Collection of Examples. Extra fcap. 8vo. cloth, 3s. 6d.

The Elements of Inductive Logic, designed mainly for the use of Students in the Universities. By the same Author. *Third Edition.* Extra fcap. 8vo. cloth, 6s.

A Manual of Political Economy, for the use of Schools. By J. E. Thorold Rogers, M.A., formerly Professor of Political Economy, Oxford. *Third Edition.* Extra fcap. 8vo. cloth, 4s. 6d.

An Introduction to the Principles of Morals and Legislation. By Jeremy Bentham. Crown 8vo. cloth, 6s. 6d.

XI. ART, &c.

A Handbook of Pictorial Art. By R. St. J. Tyrwhitt, M.A., formerly Student and Tutor of Christ Church, Oxford. With coloured Illustrations, Photographs, and a chapter on Perspective by A. Macdonald. *Second Edition.* 8vo. half morocco, 18s.

A Music Primer for Schools. By J. Troutbeck, M.A., Music Master in Westminster School, and R. F. Dale, M.A., B. Mus., Assistant Master in Westminster School. Crown 8vo. cloth, 1s. 6d.

A Treatise on Harmony. By Sir F. A. Gore Ouseley, Bart., Professor of Music in the University of Oxford. *Second Edition.* 4to. cloth, 10s.

A Treatise on Counterpoint, Canon, and Fugue, based upon that of Cherubini. By the same Author. 4to. cloth, 16s.

A Treatise on Musical Form and General Composition. By the same Author. 4to. cloth, 10s.

The Cultivation of the Speaking Voice. By John Hullah. *Second Edition.* Extra fcap. 8vo. cloth, 2s. 6d.

XII. MISCELLANEOUS.

- Specimens of Lowland Scotch and Northern English.** By Dr. J. A. H. Murray. *Preparing.*
- Dante.** Selections from the *Inferno*. With Introduction and Notes. By H. B. Cotterill, B.A. Extra fcap. 8vo. *cloth*, 4s. 6d.
- Tasso.** *La Gerusalemme Liberata.* Cantos i, ii. With Introduction and Notes. By the same Editor. Extra fcap. 8vo. *cloth*, 2s. 6d.
- A Treatise on the use of the Tenses in Hebrew.** By S. R. Driver, M.A., Fellow of New College. Extra fcap. 8vo. *cloth*, 6s. 6d.
- The Book of Tobit.** A Chaldee Text, from a unique MS. in the Bodleian Library; with other Rabbinical Texts, English Translations, and the Itala. Edited by Ad. Neubauer, M.A. Crown 8vo. *cloth*, 6s.
- Outlines of Textual Criticism applied to the New Testament.** By C. E. Hammond, M.A., Fellow and Tutor of Exeter College, Oxford. *Second Edition.* Extra fcap. 8vo. *cloth*, 3s. 6d.
- The Modern Greek Language in its relation to Ancient Greek.** By E. M. Geldart, B.A. Extra fcap. 8vo. *cloth*, 4s. 6d.
- A Handbook of Phonetics**, including a Popular Exposition of the Principles of Spelling Reform. By Henry Sweet, President of the Philological Society, Author of a 'History of English Sounds,' &c. Extra fcap. 8vo. *cloth*, 4s. 6d.
- A System of Physical Education: Theoretical and Practical.** By Archibald MacLaren. Extra fcap. 8vo. *cloth*, 7s. 6d.

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFACE	PAGE xiii
-------------------	--------------

INTRODUCTION.

CHAP.

I. THE YI KING FROM THE TWELFTH CENTURY B.C. TO THE COMMENCEMENT OF THE CHRISTIAN ERA . . .	I
--	---

There was a Yi in the time of Confucius. The Yi is now made up of the Text which Confucius saw, and the Appendixes ascribed to him. The Yi escaped the fires of Shih. The Yi before Confucius, and when it was made:—mentioned in the Official Book of K'au; in the So K'wan; testimony of the Appendixes. Not the most ancient of the Chinese books. The Text much older than the Appendixes. Labours of native scholars on the Yi imperfectly described. Erroneous account of the labours of sinologists.

II. THE SUBJECT-MATTER OF THE TEXT. THE LINEAL FIGURES AND THE EXPLANATION OF THEM . . .	9
---	---

The Yi consists of essays based on lineal figures. Origin of the lineal figures. Who first multiplied them to sixty-four? Why they were not continued after sixty-four. The form of the River Map. State of the country in the time of king Wăn. Character of the last king of Shang. The lords of K'au; and especially king Wăn. Wăn in prison occupied with the lineal figures. The seventh hexagram.

III. THE APPENDIXES	26
-------------------------------	----

Subjects of the chapter. Number and nature of the Appendixes. Their authorship. No superscription of Confucius on any of them. The third and fourth evidently not from him. Bearing of this conclusion on the others. The first Appendix. Fû-hsi's trigrams. King Wăn's. The name Kwei-shăn. The second Appendix. The Great Symbolism. The third Appendix. Harmony between the lines of the figures ever changing, and the changes in external phenomena. Divination; ancient, and its object. Formation of

21458

the lineal figures by the divining stalks. The names Yin and Yang. The name Kwei-shăn. Shăn alone. The fourth Appendix. The fifth. First paragraph. Mythology of the Yi. Operation of God in nature throughout the year. Concluding paragraphs. The sixth Appendix. The seventh.

Plates I, II, III, exhibiting the hexagrams and trigrams.

---	-----

PREFACE.

I wrote out a translation of the Yî King, embracing both the Text and the Appendixes, in 1854 and 1855; and have to acknowledge that when the manuscript was completed, I knew very little about the scope and method of the book. I laid the volumes containing the result of my labour aside, and hoped, believed indeed, that the light would by and by dawn, and that I should one day get hold of a clue that would guide me to a knowledge of the mysterious classic.

Before that day came, the translation was soaked, in 1870, for more than a month in water of the Red Sea. By dint of careful manipulation it was recovered so as to be still legible; but it was not till 1874 that I began to be able to give to the book the prolonged attention necessary to make it reveal its secrets. Then for the first time I got hold, as I believe, of the clue, and found that my toil of twenty years before was of no service at all.

What had tended more than anything else to hide the nature of the book from my earlier studies was the way in which, with the Text, ordinarily and, as I think, correctly ascribed to king Wăn and his son Tan, there are interspersed, under each hexagram, the portions of the Appendixes I, II, and IV relating to it. The student at first thinks this an advantage. He believes that all the Appendixes were written by Confucius, and combine with the text to form one harmonious work; and he is glad to have the sentiments of 'the three sages' brought together. But I now perceived that the composition of the Text and of the Appendixes, allowing the Confucian authorship of the latter, was separated by about 700 years, and that their subject-matter was often incongruous. My first step towards a right understanding of the Yî was to study the Text by itself and as complete in itself. It was easy to

do this because the imperial edition of 1715, with all its critical apparatus, keeps the Text and the Appendixes separate.

The wisdom of the course thus adopted became more apparent by the formation of eight different concordances, one for the Text, and one for each of the Appendixes. They showed that many characters in the Appendixes, and those especially which most readily occur to sinologists as characteristic of the *Yi*, are not to be found in the Text at all. A fuller acquaintance, moreover, with the tone and style of the Appendixes satisfied me that while we had sufficient evidence that the greater part of them was not from Confucius, we had no evidence that any part was his, unless it might be the paragraphs introduced by the compiler or compilers as sayings of 'the Master.'

Studying the Text in the manner thus described, I soon arrived at the view of the meaning and object of the *Yi*, which I have described in the second chapter of the Introduction; and I was delighted to find that there was a substantial agreement between my interpretations of the hexagrams and their several lines and those given by the most noted commentators from the Han dynasty down to the present. They have not formulated the scheme so concisely as I have done, and they were fettered by their belief in the Confucian authorship of the Appendixes; but they held the same general opinion, and were similarly controlled by it in construing the Text. Any sinologist who will examine the *Yü Kih Zăh Kiang Yi King Kieh I*, prepared by one of the departments of the Han Lin college, and published in 1682, and which I have called the 'Daily Lessons,' or 'Lectures,' will see the agreement between my views and those underlying its paraphrase.

After the clue to the meaning of the *Yi* was discovered, there remained the difficulty of translating. The peculiarity of its style makes it the most difficult of all the Confucian classics to present in an intelligible version. I suppose that there are sinologists who will continue, for a time at least, to maintain that it was intended by its

author or authors, whoever they were, merely as a book of divination; and of course the oracles of divination were designedly wrapped up in mysterious phraseology. But notwithstanding the account of the origin of the book and its composition by king Wăn and his son, which I have seen reason to adopt, they, its authors, had to write after the manner of diviners. There is hardly another work in the ancient literature of China that presents the same difficulties to the translator.

When I made my first translation of it in 1854, I endeavoured to be as concise in my English as the original Chinese was. Much of what I wrote was made up, in consequence, of so many English words, with little or no mark of syntactical connexion. I followed in this the example of P. Regis and his coadjutors (Introduction, page 9) in their Latin version. But their version is all but unintelligible, and mine was not less so. How to surmount this difficulty occurred to me after I had found the clue to the interpretation;—in a fact which I had unconsciously acted on in all my translations of other classics, namely, that the written characters of the Chinese are not representations of words, but symbols of ideas, and that the combination of them in composition is not a representation of what the writer would say, but of what he thinks. It is vain therefore for a translator to attempt a literal version. When the symbolic characters have brought his mind en rapport with that of his author, he is free to render the ideas in his own or any other speech in the best manner that he can attain to. This is the rule which Mencius followed in interpreting the old poems of his country:—‘We must try with our thoughts to meet the scope of a sentence, and then we shall apprehend it.’ In the study of a Chinese classical book there is not so much an interpretation of the characters employed by the writer as a participation of his thoughts;—there is the seeing of mind to mind. The canon hence derived for a translator is not one of license. It will be his object to express the meaning of the original as exactly and concisely as possible. But it will be necessary for him to introduce a word or two

now and then to indicate what the mind of the writer supplied for itself. What I have done in this way will generally be seen enclosed in parentheses, though I queried whether I might not dispense with them, as there is nothing in the English version which was not, I believe, present in the writer's thought. I hope, however, that I have been able in this way to make the translation intelligible to readers. If, after all, they shall conclude that in what is said on the hexagrams there is often 'much ado about nothing,' it is not the translator who should be deemed accountable for that, but his original.

I had intended to append to the volume translations of certain chapters from *K'ü Hsî* and other writers of the Sung dynasty; but this purpose could not be carried into effect for want of space. It was found necessary to accompany the version with a running commentary, illustrating the way in which the teachings of king Wăn and his son are supposed to be drawn from the figures and their several lines; and my difficulty was to keep the single *Yî* within the limits of one volume. Those intended translations therefore are reserved for another opportunity; and indeed, the Sung philosophy did not grow out of the *Yî* proper, but from the Appendixes to it, and especially from the third of them. It is more Tâoistic than Confucian.

When I first took the *Yî* in hand, there existed no translation of it in any western language but that of P. Regis and his coadjutors, which I have mentioned above and in various places of the Introduction. The authors were all sinologists of great attainments; and their view of the Text as relating to the transactions between the founders of the *K'âu* dynasty and the last sovereign of the Shang or Yin, and capable of being illustrated historically, though too narrow, was an approximation to the truth. The late M. Mohl, who had edited the work in 1834, said to me once, 'I like it; for I come to it out of a sea of mist, and find solid ground.' No sufficient distinction was made in it, however, between the Text and the Appendixes; and in discussing the third and following Appendixes the translators

were haunted by the name and shade of Confucius. To the excessive literalness of the version I have referred above.

In 1876 the Rev. Canon McClatchie, M.A., published a version at Shanghai with the title, 'A Translation of the Confucian Yî King, or the "Classic of Changes," with Notes and Appendix.' This embraces both the Text and the Appendixes, the first, second, and fourth of the latter being interspersed along with the Text, as in the ordinary school editions of the classic. So far as I can judge from his language, he does not appear to be aware that the first and second Appendixes were not the work of king Wăn and the duke of Kâu, but of a subsequent writer—he would say of Confucius—explaining their explanations of the entire hexagrams and their several lines. His own special object was 'to open the mysteries of the Yî by applying to it the key of Comparative Mythology.' Such a key was not necessary; and the author, by the application of it, has found sundry things to which I have occasionally referred in my notes. They are not pleasant to look at or dwell upon; and happily it has never entered into the minds of Chinese scholars to conceive of them. I have followed Canon McClatchie's translation from paragraph to paragraph and from sentence to sentence, but found nothing which I could employ with advantage in my own.

Long after my translation had been completed, and that of the Text indeed was printed, I received from Shanghai the third volume of P. Angelo Zottoli's '*Cursus Litteraturae Sinicae*,' which had appeared in 1880. About 100 pages of it are occupied with the Yî. The Latin version is a great improvement on that in the work of Regis; but P. Zottoli translates only the Text of the first two hexagrams, with the portions of the first, second, and fourth Appendixes relating to them; and other six hexagrams with the explanations of king Wăn's Thwan and of the Great Symbolism. Of the remaining fifty-six hexagrams only the briefest summary is given; and then follow the Appendixes III, V, VI, and VII at length. The author has done his work well.

His general view of the *Yî* is stated in the following sentences:—‘*Ex Fû-hsi figuris, Wăn regis definitionibus, Kâu ducis symbolis, et Confucii commentariis, Liber conficitur, qui a mutationibus, quas duo elementa in hexagrammatum compositione inducunt, Yî (Mutator) vel Yî King (Mutationum Liber) appellatur. Quid igitur tandem famosus iste Yî King? Paucis accipe: ex linearum qualitate continua vel intercisa; earumque situ, imo, medio, vel supremo; mutuaque ipsarum relatione, occursu, dissidio, convenientia; ex ipso scilicet trigrammatum corpore seu forma, tum ex trigrammatum symbolo seu imagine, tum ex trigrammatum proprietate seu virtute, tum etiam aliquando ex unius ad alterum hexagramma varietate, eruitur aliqua imago, deducitur aliqua sententia, quoddam veluti oraculum continens, quod sorte etiam consulere possis ad documentum obtinendum, moderandae vitae solvendove dubio consentaneum. Ita liber juxta Confucii explicationem in scholis tradi solitam. Nil igitur sublime aut mysteriosum, nil foedum aut vile hic quaeras; argutulum potius lusum ibi video ad instructiones morales politicasque eliciendas, ut ad satietatem usque in Sinicis passim classicis, obvias, planas, naturales; tantum, cum liber iste, ut integrum legenti textum facile patebit, ad sortilegii usum deductus fuerit, per ipsum jam summum homo obtinebit vitae beneficium, arcanam cum spiritibus communicationem secretamque futurorum eventuum cognitionem; theurgus igitur visus est iste liber, totus lux, totus spiritus, hominisque vitae accommodatissimus; indeque laudes a Confucio ei tributas, prorsus exaggeratas, in hujus libri praesertim appendice videre erit, si vere tamen, ut communis fert opinio, ipse sit hujus appendicis auctor.*’

There has been a report for two or three years of a new translation of the *Yî*, or at least of a part of it, as being in preparation by M. Terrien de Lacouperie, and Professor R. K. Douglas of the British Museum and King’s College, London. I have alluded on pages 8, 9 of the Introduction to some inaccurate statements about native commentaries on the *Yî* and translations of it by foreigners, made in connexion with this contemplated version. But I did not know

what the projected undertaking really was, till I read a letter from M. Terrien in the 'Athenæum' of the 21st January of this year. He there says that the joint translation 'deals only with the oldest part of the book, the short lists of characters which follow each of the sixty-four headings, and leaves entirely aside the explanations and commentaries attributed to Wen Wang, K'âu Kung, Confucius, and others, from 1200 B. C. downwards, which are commonly embodied as an integral part of the classic;' adding, 'The proportion of the primitive text to these additions is about one-sixth of the whole.' But if we take away these explanations and commentaries attributed to king Wăn, the duke of K'âu, and Confucius, we take away the whole Yî. There remain only the linear figures attributed to Fû-hsî, without any lists of characters, long or short, without a single written character of any kind whatever. The projectors have been misled somehow about the contents of the Yî; and unless they can overthrow all the traditions and beliefs about them, whether Chinese or foreign, their undertaking is more hopeless than the task laid on the children of Israel by Pharaoh, that they should make bricks without straw.

I do not express myself thus in any spirit of hostility. If, by discoveries in Accadian or any other long-buried and forgotten language, M. Terrien de Lacouperie can throw new light on the written characters of China or on its speech, no one will rejoice more than myself; but his ignorance of how the contents of the classic are made up does not give much prospect of success in his promised translation.

In the preface to the third volume of these 'Sacred Books of the East,' containing the Shû King, Shih King, and Hsiao King, I have spoken of the Chinese terms Tî and Shang Tî, and shown how I felt it necessary to continue to render them by our word God, as I had done in all my translations of the Chinese classics since 1861. My doing so gave offence to some of the missionaries in China and others; and in June, 1880, twenty-three gentlemen addressed a letter to Professor F. Max Müller, complaining

that, in such a work edited by him, he should allow me to give my own private interpretation of the name or names in question instead of translating them or transferring them. Professor Müller published the letter which he had received, with his reply to it, in the 'Times' newspaper of Dec. 30, 1880. Since then the matter has rested, and I introduce it again here in this preface, because, though we do not meet with the name in the Yî so frequently as in the Shû and Shih, I have, as before, wherever it does occur, translated it by God. Those who object to that term say that Shang Tî might be rendered by 'Supreme Ruler' or 'Supreme Emperor,' or by 'Ruler (or Emperor) on high;' but when I examined the question, more than thirty years ago, with all possible interest and all the resources at my command, I came to the conclusions that Tî, on its first employment by the Chinese fathers, was intended to express the same concept which our fathers expressed by God, and that such has been its highest and proper application ever since. There would be little if any difference in the meaning conveyed to readers by 'Supreme Ruler' and 'God;' but when I render Tî by God and Shang Tî by the Supreme God, or, for the sake of brevity, simply by God, I am translating, and not giving a private interpretation of my own. I do it not in the interests of controversy, but as the simple expression of what to me is truth; and I am glad to know that a great majority of the Protestant missionaries in China use Tî and Shang Tî as the nearest analogue for God.

It would be tedious to mention the many critical editions and commentaries that I have used in preparing the translation. I have not had the help of able native scholars, which saved time and was otherwise valuable when I was working in the East on other classics. The want of this, however, has been more than compensated in some respects by my copy of the 'Daily Lectures on the Yî,' the full title of which is given on page xiv. The friend who purchased it for me five years ago in Canton was obliged to content himself with a second-hand copy; but I found that the

previous owner had been a ripe scholar who freely used his pencil in pursuing his studies. It was possible, from his punctuation, interlineations, and many marginal notes, to follow the exercises of his mind, patiently pursuing his search for the meaning of the most difficult passages. I am under great obligations to him; and also to the *K'au Yî Keh Kung*, the great imperial edition of the present dynasty, first published in 1715. I have generally spoken of its authors as the Khang-hsî editors. Their numerous discussions of the meaning, and ingenious decisions, go far to raise the interpretation of the *Yî* to a science.

THE YĪ KING

OR

BOOK OF CHANGES.

INTRODUCTION.

CHAPTER I.

THE YĪ KING FROM THE TWELFTH CENTURY B.C. TO
THE COMMENCEMENT OF THE CHRISTIAN ERA.

1. Confucius is reported to have said on one occasion, 'If some years were added to my life, I would give fifty to the study of the YĪ, and might then escape falling into great errors¹.' The utterance is referred by the best critics to the closing period of Confucius' life, when he had returned from his long and painful wanderings among the States, and was settled again in his native Lû. By this time he was nearly seventy, and it seems strange, if he spoke seriously, that he should have thought it possible for his life to be prolonged other fifty years. So far as that specification is concerned, a corruption of the text is generally admitted. My reason for adducing the passage has simply been to prove from it the existence of a YĪ King in the time of Confucius. In the history of him by Sze-mâ K'ien it is stated that, in the closing years of his life, he became fond of the YĪ, and wrote various appendixes to it, that he read his copy of it so much that the leathern thongs (by which the tablets containing it were bound together) were thrice worn out, and that he said, 'Give me several years (more), and I should be master of the YĪ².' The ancient books on which Confucius had delighted

¹ Confucian Analects, VII, xvi.

² The Historical Records; Life of Confucius, p. 12.

to discourse with his disciples were those of History, Poetry, and Rites and Ceremonies¹; but ere he passed away from among them, his attention was much occupied also by the YĪ as a monument of antiquity, which in the prime of his days he had too much neglected.

2. *K'zien* says that Confucius wrote various appendixes to the YĪ, specifying all but two of the treatises, which go

The YĪ is now made up of the Text which Confucius saw and the Appendixes ascribed to him.

by the name of 'the Ten Appendixes,' and are, with hardly a dissentient voice, attributed to the sage. They are published along with the older Text, which is based on still older lineal figures, and are received by most Chinese readers, as well as by foreign Chinese scholars,

as an integral portion of the YĪ King. The two portions should, however, be carefully distinguished. I will speak of them as the Text and the Appendixes.

3. The YĪ happily escaped the fires of *Shin*, which proved so disastrous to most of the ancient literature of China in

The YĪ escaped the fires of *Shin*.

B.C. 213. In the memorial which the premier *Lî Sze* addressed to his sovereign, advising that the old books should be consigned to

the flames, an exception was made of those which treated of 'medicine, divination, and husbandry².' The YĪ was held to be a book of divination, and so was preserved.

In the catalogue of works in the imperial library, prepared by *Liû Hin* about the beginning of our era, there is an enumeration of those on the YĪ and its Appendixes,—the books of thirteen different authors or schools, comprehended in 294 portions of larger or smaller dimensions³. I need not follow the history and study of the YĪ into the line of the centuries since the time of *Liû Hin*. The imperial *Khang-hsi* edition of it, which appeared in 1715, contains quotations from the commentaries of 218 scholars, covering, more or less closely, the time from the second century B.C. to our seventeenth century. I may venture to say that

¹ *Analects*, VII, xvii.

² *Legge's Chinese Classics*, I, prolegomena, pp. 6-9.

³ *Books of the Earlier Han; History of Literature*, pp. 1, 2.

those 218 are hardly a tenth of the men who have tried to interpret the remarkable book, and solve the many problems to which it gives rise.

4. It may be assumed then that the Yî King, properly so called, existed before Confucius, and has come down to us as correctly as any other of the ancient books of China; and it might also be said, as correctly as any of the old

The Yî before
Confucius,
and when it
was made.

monuments of Hebrew, Sanskrit, Greek, or Latin literature. The question arises of how far before Confucius we can trace its existence. Of course an inquiry into this point will not include the portions or appendixes attributed to the sage himself. Attention will be called to them by and by, when I shall consider how far we are entitled, or whether we are at all entitled, to ascribe them to him. I do not doubt, however, that they belong to what may be called the Confucian period, and were produced some time after his death, probably between B.C. 450 and 350. By whomsoever they were written, they may be legitimately employed in illustration of what were the prevailing views in that age on various points connected with the Yî. Indeed, but for the guidance and hints derived from them as to the meaning of the text, and the relation between its statements and the linear figures, there would be great difficulty in making out any consistent interpretation of it.

- (i) The earliest mention of the classic is found in the Official Book of the K'âu dynasty, where it is said that, among the duties of 'the Grand Diviner,' 'he had charge of the rules for the three Yî (systems of Changes), called the Lien-shan, the Kwei-jhang, and the Yî of K'âu; that in each of them the regular (or primary) lineal figures were 8, which were multiplied, in each, till they amounted to 64.' The date of the Official Book has not been exactly ascertained. The above passage can hardly be reconciled with the opinion of the majority of Chinese critics that it was the work of the duke of K'âu, the consolidator and legislator of the dynasty so called; but I think there must have been the groundwork of it at a very early date. When that was composed or compiled, there

The Yî men-
tioned in the
Official Book
of K'âu.

was existing, among the archives of the kingdom, under the charge of a high officer, 'the YĪ of K'âu,'—what constitutes the Text of the present YĪ; the Text, that is, as distinguished from the Appendixes. There were two other YĪ, known as the Lien-shan and the Kwei-ḡhang. It would be a waste of time to try to discover the meaning of these designations. They are found in this and another passage of the Official Book; and nowhere else. Not a single trace of what they denoted remains, while we possess 'the YĪ of K'âu' complete¹.

(ii) In the Supplement of 30 K'üü-ming to 'the Spring and Autumn,' there is abundant evidence that divination by the YĪ was frequent, throughout the states of China, before the time of Con-

The YĪ men-
tioned in the
30 K'hwān.

fucius. There are at least eight narratives of such a practice, between the years B.C. 672 and 564, before he was born; and five times during his life-time the divining stalks and the book were had recourse to on occasions with which he had nothing to do. In all these cases the text of the YĪ, as we have it now, is freely quoted. The 'Spring and Autumn' commences in B.C. 722. If it extended back to the rise of the K'âu dynasty, we should, no doubt, find

¹ See the K'âu Kwan (or Lî), Book XXIV, parr. 3, 4, and 27. Biot (Le Tcheou Lî, vol. ii, pp. 70, 71) translates the former two paragraphs thus:— 'Il (Le Grand Augure) est préposé aux trois méthodes pour les changements (des lignes divinatoires). La première est appelée Liaison des montagnes (Lien-shan); la seconde, Retour et Conservation (Kwei-ḡhang); la troisième, Changements des K'âu. Pour toutes il y a huit lignes symboliques sacrées, et soixante-quatre combinaisons de ces lignes.'

Some tell us that by Lien-shan was intended Fû-hsi, and by Kwei-ḡhang Hwang Tî; others, that the former was the YĪ of the Hsiâ dynasty, and the latter that of Shang or Yin. A third set will have it that Lien-shan was a designation of Shān Nāng, between Fû-hsi and Hwang Tî. I should say myself, as many Chinese critics do say, that Lien-shan was an arrangement of the lineal symbols in which the first figure was the present 52nd hexagram, K'ân , consisting of the trigram representing mountains doubled; and that Kwei-ḡhang was an arrangement where the first figure was the present 2nd hexagram, K'hwān , consisting of the trigram representing the earth doubled,—with reference to the disappearance and safe keeping of plants in the bosom of the earth in winter. All this, however, is only conjecture.

accounts of divination by the *Yi* interspersed over the long intervening period. For centuries before Confucius appeared on the stage of his country, the *Yi* was well known among the various feudal states, which then constituted the Middle Kingdom¹.

(iii) We may now look into one of the Appendixes for its testimony to the age and authorship of the Text. The third Appendix is the longest, and the most important². In the 49th paragraph of the second Section of it it is said:—

‘Was it not in the middle period of antiquity that the *Yi* began to flourish? Was not he who made it (or were not they who made it) familiar with anxiety and calamity?’

The highest antiquity commences, according to Chinese writers, with *Fû-hsi*, B.C. 3322; and the lowest with Confucius in the middle of the sixth century B.C. Between these is the period of middle antiquity, extending a comparatively short time, from the rise of the *Kâu* dynasty, towards the close of the twelfth century B.C., to the Confucian era. According to this paragraph it was in this period that our *Yi* was made.

The 69th paragraph is still more definite in its testimony:—

‘Was it not in the last age of the Yin (dynasty), when the virtue of *Kâu* had reached its highest point, and during the troubles between king *Wăn* and (the tyrant) *Kâu*, that (the study of) the *Yi* began to flourish? On this account the explanations (in the book) express (a feeling of) anxious apprehension, (and teach) how peril may be turned into security, and easy carelessness is sure to meet with overthrow.’

The dynasty of Yin was superseded by that of *Kâu* in B.C. 1122. The founder of *Kâu* was he whom we call king *Wăn*, though he himself never occupied the throne. The

² That is, the third as it appears farther on in this volume in two Sections. With the Chinese critics it forms the fifth and sixth Appendixes, or ‘Wings,’ as they are termed.

troubles between him and the last sovereign of Yin reached their height in B. C. 1143, when the tyrant threw him into prison in a place called Yû-li, identified as having been in the present district of Thang-yin, department of K'ang-teh, province of Ho-nan. Wăn was not kept long in confinement. His friends succeeded in appeasing the jealousy of his enemy, and securing his liberation in the following year. It follows that the Yî, so far as we owe it to king Wăn, was made in the year B.C. 1143 or 1142, or perhaps that it was begun in the former year and finished in the latter¹.

But the part which is thus ascribed to king Wăn is only a small portion of the Yî. A larger share is attributed to his son Tan, known as the duke of K'âu, and in it we have allusions to king Wû, who succeeded his father Wăn, and was really the first sovereign of the dynasty of K'âu². There are passages, moreover, which must be understood of events in the early years of the next reign. But the duke of K'âu died in the year B. C. 1105, the 11th of king K'iang. A few years then before that time, in the last decade of the twelfth century B.C., the Yî King, as it has come down to us, was complete³.

5. We have thus traced the text of the Yî to its authors, the famous king Wăn in the year 1143 B. C., and his equally famous son, the duke of K'âu, in between thirty and forty years later. It can thus boast of a great antiquity; but a general opinion has prevailed that it belonged to a period still more distant. Only two translations of it have been made by European scholars. The first was executed by Regis and other Roman Catholic missionaries in the beginning of last century, though it was given to the public only

The Yî is not
the most
ancient of
the Chinese
books.

¹ Sze-mâ K'ien (History of the K'âu Dynasty, p. 3) relates that, 'when he was confined in Yû-li, Wăn increased the 8 trigrams to 64 hexagrams.'

² E.g., hexagrams XVII, 1. 6; XLVI, 1. 4. Tan's authorship of the symbolism is recognised in the 30 K'awan, B. C. 540.

³ P. Regis (vol. ii, p. 379) says: 'Vel nihil vel parum errabit qui dicet opus Yî King fuisse perfectum anno quinto K'iang Wang, seu anno 1109 aut non ultra annum 1108, ante aerae Christianae initium; quod satis in rebus non omnino certis.' But the fifth year of king K'iang was B. C. 1111.

in 1834 by the late Jules Mohl, with a title commencing 'Y-King, antiquissimus Sinarum liber¹.' The language of the other European translator of it, the Rev. Canon McClatchie of Shanghâi, whose work appeared in 1876, is still more decided. The first sentence of his Introduction contains two very serious misstatements, but I have at present to do only with the former of them;—that 'the Yî King is regarded by the Chinese with peculiar veneration, . . . as being the most ancient of their classical writings.' The Shû is the oldest of the Chinese classics, and contains documents more than a thousand years earlier than king Wăn. Several pieces of the Shih King are also older than anything in the Yî; to which there can thus be assigned only the third place in point of age among the monuments of Chinese literature. Existing, however, about 3000 years ago, it cannot be called modern. Unless it be the books of the Pentateuch, Joshua, and Judges, an equal antiquity cannot be claimed for any portion of our Sacred Scriptures.

It will be well to observe here also how much older the
 The Text Text is than the Appendixes. Supposing
 much older them to be the work of Confucius, though
 than the it will appear by and by that this assumption
 Appendixes.

¹ It has been suggested that 'Antiquissimus Sinarum liber' may mean only 'A very ancient book of the Chinese,' but the first sentence of the Preface to the work commences:—'Inter omnes constat librorum Sinicorum, quos classicos vocant, primum et antiquissimum esse Y-King.'

At the end of M. De Guignes' edition of P. Gaubil's translation of the Shû, there is a notice of the Yî King sent in 1738 to the Cardinals of the Congregation de Propaganda Fide by M. Claude Visdelou, Bishop of Claudiopolis. M. De Guignes says himself, 'L' Y-King est le premier des Livres Canoniques des Chinois.' But P. Visdelou writes more guardedly and correctly:—'Pour son ancienneté, s'il en faut croire les Annales des Chinois, il a été commencé quarante-six siècles avant celui-ci. Si cela est vrai, comme toute la nation l'avoue unanimement, on peut à juste titre l'appeler le plus ancien des livres.' But he adds, 'Ce n'étoit pas proprement un livre, ni quelque chose d'approchant; c'étoit une énigme très obscure, et plus difficile cent fois à expliquer que celle du sphinx.'

P. Couplet expresses himself much to the same effect in the prolegomena (p. xviii) to the work called 'Confucius Sinarum Philosophus,' published at Paris in 1687 by himself and three other fathers of the Society of Jesus (Intorcetta, Herdritch, and Rougemont). Both they and P. Visdelou give an example of a portion of the text and its interpretation, having singularly selected the same hexagram,—the 15th, on Humility.

can be received as only partially correct, if indeed it be received at all, the sage could not have entered on their composition earlier than B.C. 483, 660 years later than the portion of the text that came from king Wăn, and nearly 630 later than what we owe to the duke of K'âu. But during that long period of between six and seven centuries changes may have arisen in the views taken by thinking men of the method and manner of the Yî; and I cannot accept the Text and the Appendixes as forming one work in any proper sense of the term. Nothing has prevented the full understanding of both, so far as parts of the latter can be understood, so much as the blending of them together, which originated with Pi Kih of the first Han dynasty. The common editions of the book have five of the Appendixes (as they are ordinarily reckoned) broken up and printed side by side with the Text; and the confusion thence arising has made it difficult, through the intermixture of incongruous ideas, for foreign students to lay hold of the meaning.

6. Native scholars have of course been well aware of the difference in time between the appearance of the Text and the Appendixes; and in the Khang-hsi edition of them the two are printed separately. Labours of native scholars on the Yî. Only now and then, however, has any critic ventured to doubt that the two parts formed one homogeneous whole, or that all the appendixes were from the style or pencil of Confucius. Hundreds of them have brought a wonderful and consistent meaning out of the Text; but to find in it or in the Appendixes what is unreasonable, or any inconsistency between them, would be to impeach the infallibility of Confucius, and stamp on themselves the brand of heterodoxy.

At the same time it is an unfair description of what they have accomplished to say, as has An imperfect description of their labours. been done lately, that since the fires of Shih, 'the foremost scholars of each generation have edited the Text (meaning both the Text and the Appendixes), and heaped commentary after commentary upon it; and one and all have arrived at the somewhat

lame conclusion that its full significance is past finding out¹. A multitude of the native commentaries are of the highest value, and have left little to be done for the elucidation of the Text; and if they say that a passage in an Appendix is 'unfathomable' or 'incalculable,' it is because their authors shrink from allowing, even to themselves, that the ancient sages intermeddled, and intermeddled unwisely, with things too high for them.

When the same writer who thus speaks of native scholars goes on to say that 'in the same way a host of European Chinese scholars have made translations of the Yî, and have, if possible, made confusion worse confounded,' he only shows how imperfectly he had made himself acquainted with the subject. 'The host of European Chinese scholars who have made translations of the Yî' amount to two,—the same two mentioned by me above on pp. 6, 7. The translation of Regis and his coadjutors² is indeed capable of improvement; but their work as a whole, and especially the prolegomena, dissertations, and notes, supply a mass of correct and valuable information. They had nearly succeeded in unravelling the confusion, and solving the enigma of the Yî.

CHAPTER II.

THE SUBJECT-MATTER OF THE TEXT. THE LINEAL FIGURES AND THE EXPLANATION OF THEM.

1. Having described the Yî King as consisting of a text in explanation of certain lineal figures, and of appendixes to it, and having traced the composition of the former to

¹ See a communication on certain new views about the Yî in the 'Times' of April 20, 1880; reprinted in Trübner's American, European, and Oriental Literary Record, New Series, vol. i, pp. 125-127.

² Regis' coadjutors in the work were the Fathers Joseph de Mailla, who turned the Chinese into Latin word for word, and compared the result with the Mantâu version of the Yî; and Peter du Tartre, whose principal business was to supply the historical illustrations. Regis himself revised all their work and enlarged it, adding his own dissertations and notes. See Prospectus Operis, immediately after M. Mohl's Preface.

its authors in the twelfth century B.C., and that of the latter to between six and seven centuries later at least, I proceed to give an account of what we find in the Text, and how it is deduced from the figures.

The subject-matter of the Text may be briefly represented as consisting of sixty-four short essays, enigmatically and symbolically expressed, on important themes, mostly of a moral, social, and political character, and based on the same number of lineal figures, each made up of six lines, some of which are whole and the others divided.

The first two and the last two may serve for the present as a specimen of those figures:  ; and  .

 ¹. The Text says nothing about their origin and formation. There they are. King Wăn takes them up, one after another, in the order that suits himself, determined, evidently, by the contrast in the lines of each successive pair of hexagrams, and gives their significance, as a whole, with some indication, perhaps, of the action to be taken in the circumstances which he supposes them to symbolise, and whether that action will be lucky or unlucky. Then the duke of K'âu, beginning with the first or bottom line, expresses, by means of a symbolical or emblematical illustration, the significance of each line, with a similar indication of the good or bad fortune of action taken in connexion with it. The king's interpretation of the whole hexagram will be found to be in harmony with the combined significance of the six lines as interpreted by his son.

Both of them, no doubt, were familiar with the practice of divination which had prevailed in China for more than a thousand years, and would copy closely its methods and style. They were not divining themselves, but their words became oracles to subsequent ages, when men divined by the hexagrams, and sought by means of what was said under them to ascertain how it would be with them in the

¹ See Plate I at the end of the Introduction.

future, and learn whether they should persevere in or withdraw from the courses they were intending to pursue.

2. I will give an instance of the lessons which the lineal figures are made to teach, but before I do so, it will be

The origin of
the lineal
figures.

necessary to relate what is said of their origin, and of the rules observed in studying and interpreting them. For information on these points we must have recourse to the Appendixes; and in reply to the question by whom and in what way the figures were formed, the third, of which we made use in the last chapter, supplies us with three different answers.

(i) The 11th paragraph of Section ii says:—

‘Anciently, when the rule of all under heaven was in the hands of Páo-hsi, looking up, he contemplated the brilliant forms exhibited in the sky; and looking down, he surveyed the patterns shown on the earth. He marked the ornamental appearances on birds and beasts, and the (different) suitabilities of the soil. Near at hand, in his own person, he found things for consideration, and the same at a distance, in things in general. On this he devised the eight lineal figures of three lines each, to exhibit fully the spirit-like and intelligent operations (in nature), and to classify the qualities of the myriads of things.’

Páo-hsi is another name for Fû-hsi, the most ancient personage who is mentioned with any definiteness in Chinese history, while much that is fabulous is current about him. His place in chronology begins in B.C. 3322, 5203 years ago. He appears in this paragraph as the deviser of the eight kwâ or trigrams. The processes by which he was led to form them, and the purposes which he intended them to serve, are described, but in vague and general terms that do not satisfy our curiosity. The eight figures, however, were ; called *khiên*, *túi*, *lí*, *kǎn*, *sùn*, *khán*, *kǎn*, and *khwán*; and representing heaven or the sky; water, especially a collection of water as in a marsh or lake; fire, the sun, lightning; thunder; wind and wood; water, especially as in rain, the clouds, springs, streams in defiles, and the moon; a hill or mountain; and the earth. To each of these figures is assigned a certain attribute or quality which should be suggested by the

natural object it symbolises; but on those attributes we need not enter at present.

(ii) The 70th and 71st paragraphs of Section i give another account of the origin of the trigrams:—

‘In (the system of) the YĪ there is the Great Extreme, which produced the two $\hat{I}$ (Elementary Forms). These two Forms produced the four Hsiang (Emblematic Symbols); which again produced the eight Kwâ (or Trigrams). The eight Kwâ served to determine the good and evil (issues of events), and from this determination there ensued the (prosecution of the) great business of life.’

The two elementary Forms, the four emblematic Symbols, and the eight Trigrams can all be exhibited with what may be deemed certainty. A whole line (—) and a divided (— —) were the two $\hat{I}$. These two lines placed over themselves, and each of them over the other, formed the four Hsiang: $\equiv$; $\equiv$; $\equiv$; $\equiv$. The same two lines placed successively over these Hsiang, formed the eight Kwâ, exhibited above.

Who will undertake to say what is meant by ‘the Great Extreme’ which produced the two elementary Forms? Nowhere else does the name occur in the old Confucian literature. I have no doubt myself that it found its way into this Appendix in the fifth (? or fourth) century B.C. from a Tâoist source. Kû Hsi, in his ‘Lessons on the YĪ for the Young,’ gives for it the figure of a circle,—thus, $\bigcirc$; observing that he does so from the philosopher Kâu (A.D. 1017–1073)¹, and cautioning his readers against thinking that such a representation came from Fû-hsi himself. To me the circular symbol appears very unsuccessful. ‘The Great Extreme,’ it is said, ‘divided and produced two lines,—a whole line and a divided line.’ But I do not understand how this could be. Suppose it possible for the circle to unroll itself;

¹ Kâu-ze, called Kâu Tun-f and Kâu Mâu-shuh, and, still more commonly, from the rivulet near which was his favourite residence, Kâu Lien-khî. Mayers (Chinese Reader's Manual, p. 23) says:—‘He held various offices of state, and was for many years at the head of a galaxy of scholars who sought for instruction in matters of philosophy and research:—second only to Kû Hsi in literary repute.’

—we shall have one long line, ————. If this divide itself, we have two whole lines; and another division of one of them is necessary to give us the whole and the divided lines of the lineal figures. The attempt to fashion the Great Extreme as a circle must be pronounced a failure.

But when we start from the two lines as bases, the formation of all the diagrams by a repetition of the process indicated above is easy. The addition to each of the trigrams of each of the two fundamental lines produces 16 figures of four lines; dealt with in the same way, these produce 32 figures of five lines; and a similar operation with these produces the 64 hexagrams, each of which forms the subject of an essay in the text of the Yî. The lines increase in an arithmetical progression whose common difference is 1, and the figures in a geometrical progression whose common ratio is 2. This is all the mystery in the formation of the lineal figures; this, I believe, was the process by which they were first formed; and it is hardly necessary to imagine them to have come from a sage like Fû-hsî. The endowments of an ordinary man were sufficient for such a work. It was possible even to shorten the operation by proceeding at once from the trigrams to the hexagrams, according to what we find in Section i, paragraph 2:—

‘A strong and a weak line were manipulated together (till there were the 8 trigrams), and those 8 trigrams were added each to itself and to all the others (till the 64 hexagrams were formed).’

It is a moot question who first multiplied the figures from the trigrams universally ascribed to Fû-hsî to the 64 hexagrams of the Yî. The more common view is that it was king Wăn; but K'ü Hsî, when he was questioned on the subject, rather inclined to hold that Fû-hsî had multiplied them himself, but declined to say whether he thought that their names were as old as the figures themselves, or only dated from the twelfth century B.C.¹ I will not venture to controvert

¹ K'ü-jze K'wan shû, or Digest of Works of K'ü-jze, chap. 26 (the first chapter on the Yî), art. 16.

his opinion about the multiplication of the figures, but I must think that the names, as we have them now, were from king Wăn.

✓ No Chinese writer has tried to explain why the framers stopped with the 64 hexagrams, instead of going on to
 Why the 128 figures of 7 lines, 256 of 8, 512 of 9, and
 figures were not continued so on indefinitely. No reason can be given
 after 64. for it, but the cumbrousness of the result, and
 the impossibility of dealing, after the manner of king Wăn, with such a mass of figures.

(iii) The 73rd paragraph of Section i, with but one paragraph between it and the two others which we have been considering, gives what may be considered a third account of the origin of the lineal figures :—

‘Heaven produced the spirit-like things (the tortoise and the divining plant), and the sages took advantage of them. (The operations of) heaven and earth are marked by so many changes and transformations, and the sages imitated them (by means of the YĪ). Heaven hangs out its (brilliant) figures, from which are seen good fortune and bad, and the sages made their emblematic interpretations accordingly. The Ho gave forth the scheme or map, and the Lo gave forth the writing, of (both of) which the sages took advantage.’

The words with which we have at present to do are—
 ‘The Ho (that is, the Yellow River) gave forth the Map.’ This map, according to tradition and popular belief, contained a scheme which served as a model to Fû-hsî in making his 8 trigrams. Apart from this passage in the YĪ King, we know that Confucius believed in such a map, or spoke at least as if he did¹. In the ‘Record of Rites’ it is said that ‘the map was borne by a horse²;’ and the thing, whatever it was, is mentioned in the Shû as still preserved at court, among other curiosities, in B.C. 1079³. The story of it, as now current, is this, that ‘a dragon-horse’ issued from the Yellow River, bearing on its back an arrangement of marks, from which Fû-hsî got the idea of the trigrams.

¹ Analects IX, viii.

² Lĭ K’î VIII, iv, 16.

³ Shû V, xxii, 19.

All this is so evidently fabulous that it seems a waste of time to enter into any details about it. My reason for doing so is a wish to take advantage of the map in giving such a statement of the rules observed in interpreting the figures as is necessary in this Introduction.

The map that was preserved, it has been seen, in the eleventh century B.C., afterwards perished, and though there

The form of was much speculation about its form from the the River Map. time that the restoration of the ancient classics was undertaken in the Han dynasty, the first delineation of it given to the public was in the reign of Hui Jung of the Sung dynasty (A.D. 1101-1125)¹. The most approved scheme of it is the following:—

It will be observed that the markings in this scheme are small circles, pretty nearly equally divided into dark and light. All of them whose numbers are odd are light circles,—1, 3, 5, 7, 9; and all of them whose numbers are even are dark,—2, 4, 6, 8, 10. This is given as the origin of what is said in paragraphs 49 and 50 of Section i about the numbers of heaven and earth. The difference in the colour of the circles occasioned the distinction of them and of what they

¹ See Mayers' Chinese Reader's Manual, pp. 56, 57.

signify into Yin and Yang, the dark and the bright, the moon-like and the sun-like; for the sun is called the Great Brightness (Thái Yang), and the moon the Great Obscurity (Thái Yin). I shall have more to say in the next chapter on the application of these names. Fû-hsî in making the trigrams, and king Wăn, if it was he who first multiplied them to the 64 hexagrams, found it convenient to use lines instead of the circles:—the whole line (——) for the bright circle (○), and the divided line (— —) for the dark (●). The first, the third, and the fifth lines in a hexagram, if they are 'correct' as it is called, should all be whole, and the second, fourth, and sixth lines should all be divided. Yang lines are strong (or hard), and Yin lines are weak (or soft). The former indicate vigour and authority; the latter, feebleness and submission. It is the part of the former to command; of the latter to obey.

The lines, moreover, in the two trigrams that make up the hexagrams, and characterise the subjects which they represent, are related to one another by their position, and have their significance modified accordingly. The first line and the fourth, the second and the fifth, the third and the sixth are all correlates; and to make the correlation perfect the two members of it should be lines of different qualities, one whole and the other divided. And, finally, the middle lines of the trigrams, the second and fifth, that is, of the hexagrams, have a peculiar value and force. If we have a whole line (——) in the fifth place, and a divided line (— —) in the second, or vice versâ, the correlation is complete. Let the subject of the fifth be the sovereign or a commander-in-chief, according to the name and meaning of the hexagram, then the subject of the second will be an able minister or a skilful officer, and the result of their mutual action will be most beneficial and successful. It is specially important to have a clear idea of the name of the hexagram, and of the subject or state which it is intended to denote. The significance of all the lines comes thus to be of various application, and will differ in different hexagrams.

I have thus endeavoured to indicate how the lineal figures were formed, and the principal rules laid down for the interpretation of them. The details are wearying, but my position is like that of one who is called on to explain an important monument of architecture, very bizarre in its conception and execution. A plainer, simpler structure might have answered the purpose better, but the architect had his reasons for the plan and style which he adopted. If the result of his labours be worth expounding, we must not grudge the study necessary to detect his processes of thought, nor the effort and time required to bring the minds of others into sympathy with his.

My own opinion, as I have intimated, is, that the second account of the origin of the trigrams and hexagrams is the true one. However the idea of the whole and divided lines arose in the mind of the first framer, we must start from them; and then, manipulating them in the manner described, we arrive, very easily, at all the lineal figures, and might proceed to multiply them to billions. We cannot tell who devised the third account of their formation from the map or scheme on the dragon-horse of the Yellow River¹. Its object, no doubt, was to impart a supernatural character to the trigrams and produce a religious veneration for them. It may be doubted whether the scheme as it is now fashioned be the correct one,—such as it was in the *Kâu* dynasty. The paragraph where it is mentioned, goes on to say—‘The Lo produced the writing.’ This writing was a scheme of the same character as the Ho map, but on the back of a tortoise, which emerged from the river Lo, and showed it to the Great Yü, when he was engaged in his celebrated work of draining off the waters of the flood, as related in the *Shû*. To the hero sage it suggested ‘the Great Plan,’ an interesting but mystical document of the same classic, ‘a Treatise,’ according to Gaubil, ‘of Physics, Astrology, Divination, Morals, Politics, and Religion,’ the great model for the government of the

¹ Certainly it was not Confucius. See on the authorship of the Appendixes, and especially of Appendix III, in the next chapter.

kingdom. The accepted representation of this writing is the following :—

But substituting numbers for the number of marks, we have

4	9	2
3	5	7
8	1	6

This is nothing but the arithmetical puzzle, in which the numbers from 1 to 9 are arranged so as to make 15 in whatever way we add them¹. If we had the original form of 'the River Map,' we should probably find it a numerical trifle, not more difficult, not more supernatural, than this magic square.

3. Let us return to the YĪ of *K'âu*, which, as I have said above on p. 10, contains, under each of the 64 hexagrams, a brief essay of a moral, social, or political character, symbolically expressed.

¹ For this dissection, which may also be called *reductio ad absurdum*, of the Lo writing, I was indebted first to P. Regis. See his *Y-King I*, p. 60. But *K'û Hsi* also has got it in the Appendix to his 'Lessons on the YĪ for the Young.'

To understand it, it will be necessary to keep in mind the circumstances in which king Wăn addressed himself to the study of the lineal figures. The kingdom, under the sovereigns of the Yin or Shang dynasty, was utterly disorganised and demoralised. A brother of the reigning king thus described its condition :—

State of the
country in
time of king
Wăn.

‘The house of Yin can no longer exercise rule over the land. The great deeds of our founder were displayed in a former age, but through mad addiction to drink we have destroyed the effects of his virtue. The people, small and great, are given to highway robberies, villainies, and treachery. The nobles and officers imitate one another in violating the laws. There is no certainty that criminals will be apprehended. The lesser people rise up and commit violent outrages on one another. The dynasty of Yin is sinking in ruin; its condition is like that of one crossing a large stream, who can find neither ford nor bank ¹.’

This miserable state of the nation was due very much to the character and tyranny of the monarch. When the son of Wăn took the field against him, he thus denounced him in ‘a Solemn Declaration’ addressed to all the states :—

The character
of the
monarch.

‘Shâu, the king of Shang, treats all virtue with contemptuous slight, and abandons himself to wild idleness and irreverence. He has cut himself off from Heaven, and brought enmity between himself and the people. He cut through the leg-bones of those who were wading in a (winter-)morning; he cut out the heart of the good man ². His power has been shown in killing and murdering. His honours and confidence are given to the villainous and bad. He has driven from him his instructors and guardians. He has thrown to the winds the statutes and penal laws. He neglects the sacrifices to Heaven and Earth. He has discontinued the offerings

¹ The Shû IV, xi, 1, 2.

² These were well-known instances of Shâu's wanton cruelty. Observing some people one winter's day wading through a stream, he ordered their legs to be cut through at the shank-bone, that he might see the marrow which could so endure the cold. ‘The good man’ was a relative of his own, called Pi-kan. Having enraged Shâu by the sternness of his rebukes, the tyrant ordered his heart to be cut out, that he might see the structure of a sage's heart.

in the ancestral temple. He makes (cruel) contrivances of wonderful device and extraordinary ingenuity to please his wife¹.—God will no longer bear with him, but with a curse is sending down his ruin².

Such was the condition of the nation, such the character of the sovereign. Meanwhile in the west of the kingdom, The lords of Kâu; and especially king Wăn. in a part of what is now the province of Shensi, lay the principality of Kâu, the lords of which had long been distinguished for their ability and virtue. Its present chief, now known to us as king Wăn, was K'hang, who had succeeded to his father in B.C. 1185. He was not only lord of Kâu, but had come to be a sort of viceroy over a great part of the kingdom. Equally distinguished in peace and war, a model of all that was good and attractive, he conducted himself with remarkable wisdom and self-restraint. Princes and people would have rejoiced to follow him to attack the tyrant, but he shrank from exposing himself to the charge of being disloyal. At last the jealous suspicion of Shâu was aroused. Wăn, as has been already stated, was thrown into prison in B.C. 1143, and the order for his death might arrive at any moment. Then it was that he occupied himself with the lineal figures.

The use of those figures—of the trigrams at least—had long been practised for the purposes of divination. The employment of the divining stalks is indicated in 'the Counsels of the Great Yü,' one of the earliest Books of the Shû³, and a whole section in 'the Great Plan,' also a Book of the Shû, and referred to the times of the Hsiâ dynasty, describes how 'doubts were to be examined' by means of the tortoise-shell and the stalks⁴. Wăn could not but be familiar with divination as an institution of his

¹ We do not know what these contrivances were. But to please his wife, the infamous Tâ-kî, Shâu had made 'the Heater' and 'the Roaster,' two instruments of torture. The latter was a copper pillar laid above a pit of burning charcoal, and made slippery; culprits were forced to walk along it.

² The Shû V, i, Sect. iii, 2, 3.

³ Shû II, ii, 18.

⁴ Shû V, iv, 20-31.

country¹. Possibly it occurred to him that nothing was more likely to lull the suspicions of his dangerous enemy than the study of the figures; and if his keepers took notice of what he was doing, they would smile at his lines, and the sentences which he appended to them.

King Wăn in prison, occupied with the lineal figures.

I like to think of the lord of K'âu, when incarcerated in Yü-li, with the 64 figures arranged before him. Each hexagram assumed a mystic meaning, and glowed with a deep significance. He made it tell him of the qualities of various objects of nature, or of the principles of human society, or of the condition, actual and possible, of the kingdom. He named the figures, each by a term descriptive of the idea with which he had connected it in his mind, and then he proceeded to set that idea forth, now with a note of exhortation, now with a note of warning. It was an attempt to restrict the follies of divination within the bounds of reason. The last but one of the Appendixes bears the name of 'Sequence of the Diagrams.' I shall have to speak of it more at length in the next chapter. I only remark at present that it deals, feebly indeed, with the names of the hexagrams in harmony with what I have said about them, and tries to account for the order in which they follow one another. It does all this, not critically as if it needed to be established, but in the way of expository statement, relating that about which there was no doubt in the mind of the author.

But all the work of prince K'ang or king Wăn in the Yi thus amounts to no more than 64 short paragraphs.

Work of the duke of K'âu on the separate lines.

We do not know what led his son Tan to enter into his work and complete it as he did. Tan was a patriot, a hero, a legislator, and a philosopher. Perhaps he took the lineal figures in hand as a tribute of filial duty. What had been done for the whole hexagram he would do for each line, and make it clear that all the six lines 'bent one way their precious influence,' and blended their rays in the globe of light which his father had made each figure give forth.

¹ In the Book of Poetry we have Wăn's grandfather (Than-fü, III, i, ode 3. 3) divining, and his son (king Wü, III, i, ode 10. 7) doing the same.

But his method strikes us as singular. Each line seemed to become living, and suggested some phenomenon in nature or some case of human experience, from which the wisdom or folly, the luckiness or unluckiness, indicated by it could be inferred. It cannot be said that the duke carried out his plan in a way likely to interest any one but a hsien shǎng who is a votary of divination, and admires the style of its oracles. According to our notions, a framer of emblems should be a good deal of a poet, but those of the Yĭ only make us think of a dryasdust. Out of more than 350, the greater number are only grotesque. We do not recover from the feeling of disappointment till we remember that both father and son had to write 'according to the trick,' after the manner of diviners, as if this lineal augury had been their profession.

4. At length I come to illustrate what I have said on the subject-matter of the Yĭ by an example. It shall be the

The seventh
hexagram.

treatment of the seventh hexagram (䷎),

which king Wǎn named Sze, meaning Hosts.

The character is also explained as meaning 'multitudes;' and in fact, in a feudal kingdom, the multitudes of the people were all liable to become its army, when occasion required, and the 'host' and the 'population' might be interchangeable terms. As Froude expresses it in the introductory chapter to his History of England, 'Every man was regimented somewhere.'

The hexagram Sze is composed of the two trigrams Khan (䷁) and Khwǎn (䷊), exhibiting waters collected on the earth; and in other symbolisms besides that of the Yĭ, waters indicate assembled multitudes of men. The waters on which the mystical Babylon sits in the Apocalypse are explained as 'peoples and multitudes and nations and tongues.' I do not positively affirm that it was by this interpretation of the trigrams that king Wǎn saw in ䷎ the feudal hosts of his country collected, for neither from him nor his son do we learn, by their direct affirmation, that they had any acquaintance with the trigrams of Fû-hsî. The name which he gave

the figure shows, however, that he saw in it the feudal hosts in the field. How shall their expedition be conducted that it may come to a successful issue?

Looking again at the figure, we see that it is made up of five divided lines, and of one undivided. The undivided line occupies the central place in the lower trigram,—the most important place, next to the fifth, in the whole hexagram. It will represent, in the language of the commentators, 'the lord of the whole figure;' and the parties represented by the other lines may be expected to be of one mind with him or obedient to him. He must be the leader of the hosts. If he were on high, in the fifth place, he would be the sovereign of the kingdom. This is what king Wăn says:—

'Sze indicates how (in the case which it supposes), with firmness and correctness, and (a leader of) age and experience, there will be good fortune and no error.'

This is a good auspice. Let us see how the duke of Kâu expands it.

He says:—

'The first line, divided, shows the host going forth according to the rules (for such a movement). If those (rules) be not good, there will be evil.'

We are not told what the rules for a military expedition were. Some commentators understand them of the reasons justifying the movement,—that it should be to repress and punish disorder and rebellion. Others, with more likelihood, take them to be the discipline or rules laid down to be observed by the troops. The line is divided, a weak line in a strong place, 'not correct:' this justifies the caution given in the duke's second sentence.

The Text goes on:—

'The second line, undivided, shows (the leader) in the midst of the hosts. There will be good fortune and no error. The king has thrice conveyed to him his charge.'

This does not need any amplification. The duke saw in the strong line the symbol of the leader, who enjoyed

the full confidence of his sovereign, and whose authority admitted of no opposition.

On the third line it is said :—

‘The third line, divided, shows how the hosts may possibly have many commanders :—(in such a case) there will be evil.’

The third place is odd, and should be occupied by a strong line, instead of which we have a weak line in it. But it is at the top of the lower trigram, and its subject should be in office or activity. There is suggested the idea that its subject has vaulted over the second line, and wishes to share in the command and honour of him who has been appointed sole commander-in-chief. The lesson in the previous line is made of none effect. We have a divided authority in the expedition. The result can only be evil.

On the fourth line the duke wrote :—

‘The fourth line, divided, shows the hosts in retreat : there is no error.’

The line is also weak, and victory cannot be expected ; but in the fourth place a weak line is in its correct position, and its subject will do what is right in his circumstances. He will retreat, and a retreat is for him the part of wisdom. When safely affected, where advance would be disastrous, a retreat is as glorious as victory.

Under the fifth line we read :—

‘The fifth line, divided, shows birds in the fields which it is advantageous to seize (and destroy). There will be no error. If the oldest son lead the host, and younger men be (also) in command, however firm and correct he may be, there will be evil.’

We have an intimation in this passage that only defensive war, or war waged by the rightful authority to put down rebellion and lawlessness, is right. The ‘birds in the fields’ are emblematic of plunderers and invaders, whom it will be well to destroy. The fifth line symbolises the chief authority, but here he is weak or humble, and has given all power and authority to execute judgment into the hands of the commander-in-chief, who is the oldest son ; and in the subject of line 3 we have an example of the younger men who would cause evil if allowed to share his power.

Finally, on the sixth line the duke wrote :—

‘The topmost line, divided, shows the great ruler delivering his charges (to the men who have distinguished themselves), appointing some to be rulers of states, and others to be chiefs of clans. But small men should not be employed (in such positions).’

The action of the hexagram has been gone through. The expedition has been conducted to a successful end. The enemy has been subdued. His territories are at the disposal of the conqueror. The commander-in-chief has done his part well. His sovereign, ‘the great ruler,’ comes upon the scene, and rewards the officers who have been conspicuous by their bravery and skill, conferring on them rank and lands. But he is warned to have respect in doing so to their moral character. Small men, of ordinary or less than ordinary character, may be rewarded with riches and certain honours; but land and the welfare of its population should not be given into the hands of any who are not equal to the responsibility of such a trust.

The above is a specimen of what I have called the essays that make up the *Yi of Kâu*. So would king Wăn and his son have had all military expeditions conducted in their country 3000 years ago. It seems to me that the principles which they lay down might find a suitable application in the modern warfare of our civilised and Christian Europe. The inculcation of such lessons cannot have been without good effect in China during the long course of its history.

Sze is a fair specimen of its class. From the other 63 hexagrams lessons are deduced, for the most part equally good and striking. But why, it may be asked, why should they be conveyed to us by such an array of lineal figures, and in such a farrago of emblematic representations? It is not for the foreigner to insist on such a question. The Chinese have not valued them the less because of the antiquated dress in which their lessons are arrayed. Hundreds of their commentators have evolved and developed their meaning with a minuteness of detail and felicity of illustration that leave nothing to be desired. It is for foreign students of Chinese to gird up their loins for the

mastery of the book instead of talking about it as mysterious and all but inexplicable.

Granting, however, that the subject-matter of the YĪ is what has been described, very valuable for its practical wisdom, but not drawn up from an abysmal deep of philosophical speculation, it may still be urged, 'But in all this we find nothing to justify the name of the book as YĪ King, the "Classic of Changes." Is there not something more, higher or deeper, in the Appendixes that have been ascribed to Confucius, whose authority is certainly not inferior to that of king Wăn, or the duke of K'âu?' To reply fully to this question will require another chapter.

CHAPTER III.

THE APPENDIXES.

I. Two things have to be considered in this chapter:—the authorship of the Appendixes, and their contents. The Text is ascribed, without dissentient voice, to king Wăn, the founder of the K'âu dynasty, and his son Tan, better known as the duke of K'âu; and I have, in the preceding chapters, given reasons for accepting that view. As regards the portion ascribed to king Wăn, the evidence of the third of the Appendixes and the statement of Sze-mâ K'ien are as positive as could be desired; and as regards that ascribed to his son, there is no ground for calling in question the received tradition. The Appendixes have all been ascribed to Confucius, though not with entirely the same unanimity. Perhaps I have rather intimated my own opinion that this view cannot be sustained. I have pointed out that, even if it be true, between six and seven centuries elapsed after the Text of the classic appeared before the Appendixes were written; and I have said that, considering this fact, I cannot regard its two parts as a homogeneous whole, or as constituting one book in the ordinary acceptation of that name. Before entering on the question of the authorship, a very brief statement of the nature and number of the Appendixes will be advantageous.

Subjects of
the chapter.

✓ 2. They are reckoned to be ten, and called the Shih Yî or 'Ten Wings.' They are in reality not so many; but the

Number and
nature of the
Appendixes.

Text is divided into two sections, called the Upper and Lower, or, as we should say, the first and second, and then the commentary on each section is made to form a separate Appendix. I have found it more convenient in the translation which follows to adopt a somewhat different arrangement.

My first Appendix, in two sections, embraces the first and second 'wings,' consisting of remarks on the paragraphs by king Wăn in the two parts of the Text.

My second Appendix, in two sections, embraces the third and fourth 'wings,' consisting of remarks on the symbolism of the duke of Kâu in his explanation of the individual lines of the hexagrams.

My third Appendix, in two sections, embraces the fifth and sixth 'wings,' which bear the name in Chinese of 'Appended Sentences,' and constitute what is called by many 'the Great Treatise.' Each wing has been divided into twelve chapters of very different length, and I have followed this arrangement in my sections. This is the most important Appendix. It has less of the nature of commentary than the previous four wings. While explaining much of what is found in the Text, it diverges to the origin of the trigrams, the methods pursued in the practice of divination, the rise of many arts in the progress of civilisation, and other subjects.

My fourth Appendix, also in two sections, forms the seventh 'wing.' It is confined to an amplification of the expositions of the first and second hexagrams by king Wăn and his son, purporting to show how they may be interpreted of man's nature and doings.

My fifth Appendix is the eighth 'wing,' called 'Discourses on the Trigrams.' It treats of the different arrangement of these in respect of the seasons of the year and the cardinal points by Fû-hsi and king Wăn. It contains also one paragraph, which might seem to justify the view that there is a mythology in the Yî.

My sixth Appendix, in two sections, is the ninth 'wing,'—

'a Treatise on the Sequence of the Hexagrams,' intended to trace the connexion of meaning between them in the order in which they follow one another in the Text of king Wăn.

My seventh Appendix is the tenth 'wing,' an exhibition of the meaning of the 64 hexagrams, not taken in succession, but promiscuously and at random, as they approximate to or are opposed to one another in meaning.

3. Such are the Appendixes of the YĪ King. We have
The author-ship of the Appendixes. to enquire next who wrote them, and especially whether it be possible to accept the dictum that they were all written by Con-

fucius. If they have come down to us, bearing unmistakably the stamp of the mind and pencil of the great sage, we cannot but receive them with deference, not to say with reverence. If, on the contrary, it shall appear that with great part of them he had nothing to do, and that it is not certain that any part of them is from him, we shall feel entirely at liberty to exercise our own judgment on their contents, and weigh them in the balances of our reason.

None of the Appendixes, it is to be observed, bear the superscription of Confucius. There is not a
 / There is no superscription of Confucius on any of the Appendixes. single sentence in any one of them ascribing it to him. I gave in the first chapter, on p. 2, the earliest testimony that these treatises were produced by him. It is that of Sze-mâ *K'ien*, whose 'Historical Records' must have appeared about the year 100 before our era. He ascribes all the Appendixes, except the last two of them, which he does not mention at all, expressly to Confucius; and this, no doubt, was the common belief in the fourth century after the sage's death.

But when we look for ourselves into the third and fourth Appendixes—the fifth, sixth, and seventh 'wings'—both of which are specified by *K'ien*, we find it impossible to receive his statement about them. What is remarkable in both parts of the third is, the frequent occurrence of the formula, 'The Master said,' familiar to all readers of the Confucian Analects. Of course, the

The third and fourth Appendixes evidently not from Confucius.

sentence following that formula, or the paragraph covered by it, was, in the judgment of the writer, in the language of Confucius; but what shall we say of the portions preceding and following? If he were the author of them, he would not thus be distinguishing himself from himself. The formula occurs in the third Appendix at least twenty-three times. Where we first meet with it, *K'ü Hsi* has a note to the effect that 'the Appendixes having been all made by Confucius, he ought not to be himself introducing the formula, "The Master said;" and that it may be presumed, wherever it occurs, that it is a subsequent addition to the Master's text.' One instance will show the futility of this attempt to solve the difficulty. The tenth chapter of Section i commences with the 59th paragraph:—

'In the *Yi* there are four things characteristic of the way of the sages. We should set the highest value on its explanations, to guide us in speaking; on its changes, for the initiation of our movements; on its emblematic figures, for definite action, as in the construction of implements; and on its prognostications, for our practice of divination.'

This is followed by seven paragraphs expanding its statements, and we come to the last one of the chapter which says,—'The Master said, "Such is the import of the statement that there are four things in the *Yi*, characteristic of the way of the sages."' I cannot understand how it could be more fully conveyed to us that the compiler or compilers of this Appendix were distinct from the Master whose words they quoted, as it suited them, to confirm or illustrate their views.

In the fourth Appendix, again, we find a similar occurrence of the formula of quotation. It is much shorter than the third, and the phrase, 'The Master said,' does not come before us so frequently; but in the thirty-six paragraphs that compose the first section we meet with it six times.

Moreover, the first three paragraphs of this Appendix are older than its compilation, which could not have taken place till after the death of Confucius, seeing it professes to quote his words. They are taken in fact from a narrative of the 30 *Kwan*, as having been spoken by a marchioness-

dowager of Lû fourteen years before Confucius was born. To account for this is a difficult task for the orthodox critics among the Chinese literati. Kû Hsi attempts to perform it in this way:—that anciently there was the explanation given in these paragraphs of the four adjectives employed by king Wăn to give the significance of the first hexagram; that it was employed by Mû Kiang of Lû; and that Confucius also availed himself of it, while the chronicler used, as he does below, the phraseology of 'The Master said,' to distinguish the real words of the sage from such ancient sayings. But who was 'the chronicler?' No one can tell. The legitimate conclusion from Kû's criticism is, that so much of the Appendix as is preceded by 'The Master said' is from Confucius,—so much and no more. I am thus obliged to come to the conclusion that Confucius had nothing to do with the composition of these two Appendixes, and that they were not put together till after his death. I have no pleasure in differing from the all but unanimous opinion of Chinese critics and commentators. What is called 'the destructive criticism' has no attractions for me; but when an opinion depends on the argument adduced to support it, and that argument turns out to be of no weight, you can no longer set your seal to this, that the opinion is true. This is the position in which an examination of the internal evidence as to the authorship of the third and fourth Appendixes has placed me. Confucius could not be their author. This conclusion weakens the

Bearing of
the conclusion
as to the third
and fourth on
the other
Appendixes.

confidence which we have been accustomed to place in the view that 'the ten wings' were to be ascribed to him unhesitatingly. The view has broken down in the case of three of them;—possibly there is no sound reason

for holding the Confucian origin of the other seven.

I cannot henceforth maintain that origin save with bated breath. This, however, can be said for the first two Appendixes in my arrangement, that there is no evidence against their being Confucian like the fatal formula, 'The Master said.' So it is with a good part of my fifth Appendix; but the concluding paragraphs of it, as well as the seventh

Appendix, and the sixth also in a less degree, seem too trivial to be the production of the great man. As a translator of every sentence both in the Text and the Appendixes, I confess my sympathy with P. Regis, when he condenses the fifth Appendix into small space, holding that the 8th and following paragraphs are not worthy to be translated. 'They contain,' he says, 'nothing but the mere enumeration of things, some of which may be called Yang, and others Yin, without any other cause for so thinking being given. Such a method of procedure would be unbecoming any philosopher, and it cannot be denied to be unworthy of Confucius, the chief of philosophers¹.'

I could not characterise Confucius as 'the chief of philosophers,' though he was a great moral philosopher, and has been since he went out and in among his disciples, the best teacher of the Chinese nation. But from the first time my attention was directed to the Yi, I regretted that he had stooped to write the parts of the Appendixes now under remark. It is a relief not to be obliged to receive them as his. Even the better treatises have no other claim to that character besides the voice of tradition, first heard nearly 400 years after his death.

4. I return to the Appendixes, and will endeavour to give a brief, but sufficient, account of their contents.

The first bears in Chinese the name of Thwan *K'wan*, 'Treatise on the Thwan,' thwan being the name given

The first Appendix. to the paragraphs in which Wǎn expresses his sense of the significance of the hexagrams.

He does not tell us why he attaches to each hexagram such and such a meaning, nor why he predicates good fortune or bad fortune in connexion with it, for he speaks oracularly, after the manner of a diviner. It is the object of the writer of this Appendix to show the processes of king Wǎn's thoughts in these operations, how he looked at the component trigrams with their symbolic intimations, their attributes and qualities, and their linear composition, till he could not think otherwise of the figures than he did. All these considerations are sometimes taken into account,

¹ Regis' Y-King. vol. ii, p. 576.

and sometimes even one of them is deemed sufficient. In this way some technical characters appear which are not found in the Text. The lines, for instance, and even whole trigrams are distinguished as *kang* and *zâu*, 'hard or strong' and 'weak or soft.' The phrase *Kwei-shăn*, 'spirits,' or 'spiritual beings,' occurs, but has not its physical signification of 'the contracting and expanding energies or operations of nature.' The names *Yin* and *Yang*, mentioned above on pp. 15, 16, do not present themselves.

I delineated, on p. 11, the eight trigrams of *Fû-hsi*, and gave their names, with the natural objects they are said to represent, but did not mention the attributes, the virtues, ascribed to them. Let me submit here a table of them, with those qualities, and the points of the compass to which they are referred. I must do this because king *Wăn* made a change in the geographical arrangement of them, to which reference is made perhaps in his text and certainly in this treatise. He also is said to have formed an entirely different theory as to the things represented by the trigrams, which it will be well to give now, though it belongs properly to the fifth Appendix.

FÛ-HSI'S TRIGRAMS.

1	2	3	4	5	6	7	8
							
<i>k'ien</i>	<i>tui</i>	<i>li</i>	<i>k'ăn</i>	<i>sun</i>	<i>kh'ân</i>	<i>k'ăn</i>	<i>khw'ăn</i>
Heaven, the sky.	Water, collected as in a marsh or lake.	Fire, as in lightning; the sun.	Thunder.	The wind; wood.	Water, as in rain, clouds, springs, streams, and defiles. The moon.	Hills, or mountains.	The earth.
S.	S. E.	E.	N. E.	S. W.	W.	N. W.	N.
Untiring strength; power.	Pleasure; complacent satisfaction.	Brightness; elegance.	Moving, exciting power.	Flexibility; penetration.	Peril; difficulty.	Resting; the act of arresting.	Capaciousness; submission.

The natural objects and phenomena thus represented are found up and down in the Appendixes. It is impossible to believe that the several objects were assigned to the several figures on any principles of science, for there is no indication of science in the matter: it is difficult even, to suppose that they were assigned on any comprehensive scheme of thought. Why are tui and khân used to represent water in different conditions, while khân, moreover, represents the moon? How is sun set apart to represent things so different as wind and wood? At a very early time the Chinese spoke of 'the five elements,' meaning water, fire, wood, metal, and earth; but the trigrams were not made to indicate them, and it is the general opinion that there is no reference to them in the Yî¹.

Again, the attributes assigned to the trigrams are learned mainly from this Appendix and the fifth. We do not readily get familiar with them, nor easily accept them all. It is impossible for us to tell whether they were a part of the jargon of divination before king Wăn, or had grown up between his time and that of the author of the Appendixes.

King Wăn altered the arrangement of the trigrams so that not one of them should stand at the same point of the compass as in the ancient plan. He made them also representative of certain relations among themselves, as if they composed a family of parents and children. It will be sufficient at present to give a table of his scheme.

KING WĂN'S TRIGRAMS.

¹ See K'ao Yi's Hsi Yü Shung Khâo, Book I, art. 3 (1790).

There is thus before us the apparatus with which the writer of the Appendix accomplishes his task. Let me select one of the shortest instances of his work. The fourteenth hexagram is , called Tâ Yû, and meaning 'Possessing in great abundance.' King Wăn saw in it the symbol of a government prosperous and realising all its proper objects; but all that he wrote on it was 'Tâ Yû (indicates) great progress and success.' Unfolding that view of its significance, the Appendix says:—

'In Tâ Yû the weak (line) has the place of honour, is grandly central, and (the strong lines) above and below respond to it. Hence comes its name of "Possession of what is great." The attributes (of its constituent trigrams, *kên* and *li*) are strength and vigour, elegance and brightness. (The ruling line in it) responds to (the ruling line in the symbol of) heaven, and its actings are (consequently all) at the proper times. Thus it is that it is said to indicate great progress and success.'

In a similar way the paragraphs on all the other 63 hexagrams are gone through; and, for the most part, with success. The conviction grows upon the student that the writer has on the whole apprehended the mind of king Wăn.

I stated, on p. 32, that the name *kwei-shăn* occurs in this Appendix. It has not yet, however, received the semi-physical, semi-metaphysical signification which the comparatively modern scholars of the Sung dynasty give to it. There are two passages where it is found;—the second paragraph on *Kên*, the fifteenth hexagram, and the third on *Făng*, the fifty-fifth. By consulting them the reader will be able to form an opinion for himself. The term *kwei* denotes specially the human spirit disembodied, and *shăn* is used for spirits whose seat is in heaven. I do not see my way to translate them, when used binomially together, otherwise than by spiritual beings or spiritual agents.

Kû Hsî once had the following question suggested by the second of these passages put to him:—'Kwei-shăn is a name for the traces of making and transformation; but when it is said that (the interaction of) heaven and earth

is now vigorous and abundant, and now dull and void, growing and diminishing according to the seasons, that constitutes the traces of making and transformation; why should the writer further speak of the Kwei-shǎn?' He replied, 'When he uses the style of "heaven and earth," he is speaking of the result generally; but in ascribing it to the Kwei-shǎn, he is representing the traces of their effective interaction, as if there were men (that is, some personal agency) bringing it about¹.' This solution merely explains the language away. When we come to the fifth Appendix, we shall understand better the views of the period when these treatises were produced.

The single character shǎn is used in explaining the thwān on Kwân, the twentieth hexagram, where we read:—

'In Kwân we see the spirit-like way of heaven, through which the four seasons proceed without error. The sages, in accordance with (this) spirit-like way, laid down their instructions, and all under heaven yield submission to them.'

The author of the Appendix delights to dwell on the changing phenomena taking place between heaven and earth, and which he attributes to their interaction; and he was penetrated evidently with a sense of the harmony between the natural and spiritual worlds. It is this sense, indeed, which vivifies both the thwān and the explanation of them.

5. We proceed to the second Appendix, which professes to do for the duke of Kâu's symbolical exposition of the several lines what the Thwān Kwan does for the entire figures. The work here, however, is accomplished with less trouble and more briefly. The whole bears the name of Hsiang Kwan, 'Treatise on the Symbols' or 'Treatise on the Symbolism (of the Yî).'

¹ See the 'Collected Comments' on hexagram 55 in the Khang-hsi edition of the Yî (App. I). 'The traces of making and transformation' mean the ever-changing phenomena of growth and decay. Our phrase 'Vestiges of Creation' might be used to translate the Chinese characters. See the remarks of the late Dr. Medhurst on the hexagrams 15 and 55 in his 'Dissertation on the Theology of the Chinese,' pp. 107-112. In hexagram 15, Canon McClatchie for kwei-shǎn gives 'gods and demons;' in hexagram 55, 'the Demon-gods.'

If there were reason to think that it came in any way from Confucius, I should fancy that I saw him sitting with a select class of his disciples around him. They read the duke's Text column after column, and the master drops now a word or two, and now a sentence or two, that illuminate the meaning. The disciples take notes on their tablets, or store his remarks in their memories, and by and by they write them out with the whole of the Text or only so much of it as is necessary. Whoever was the original lecturer, the Appendix, I think, must have grown up in this way.

It would not be necessary to speak of it at greater length, if it were not that the six paragraphs on the symbols of the duke of Kâu are always preceded by one which is called 'the Great Symbolism,' and treats of the trigrams composing the hexagram, how they go together to form the six-lined figure, and how their blended meaning appears in the institutions and proceedings of the great men and kings of former days, and of the superior men of all time. The paragraph is for the most part, but by no means always, in harmony with the explanation of the hexagram by king Wăn, and a place in the Thwan Kwan would be more appropriate to it. I suppose that, because it always begins with the mention of the two symbolical trigrams, it is made, for the sake of the symmetry, to form a part of the treatise on the Symbolism of the Yî.

I will give a few examples of the paragraphs of the Great Symbolism. The first hexagram  is formed

The Great Symbolism. by a repetition of the trigram *K'ien* , representing heaven, and it is said on it:— 'Heaven in its motion (gives) the idea of strength. The superior man, in accordance with this, nerves himself to ceaseless activity.'

The second hexagram  is formed by a repetition of the trigram *Khwăn* , representing the earth, and it is said on it:— 'The capacious receptivity of the earth is what is denoted by Khwăn. The superior man, in accordance with this, with his large virtue, supports men and things.'

The forty-fourth hexagram, called Kâu , is formed by the trigrams Sun , representing wind, and K'ien , representing heaven or the sky, and it is said on it:—‘(The symbol of) wind, beneath that of the sky, forms Kâu. In accordance with this, the sovereign distributes his charges, and promulgates his announcements throughout the four quarters (of the kingdom).’

The fifty-ninth hexagram, called Hwân , is formed by the trigrams Khân , representing water, and Sun , representing wind, and it is said on it:—‘(The symbol of) water and (that of wind) above it form Hwân. The ancient kings, in accordance with this, presented offerings to God, and established the ancestral temple.’ The union of the two trigrams suggested to king Wăn the idea of dissipation in the alienation of men from the Supreme Power, and of the minds of parents from their children; a condition which the wisdom of the ancient kings saw could best be met by the influences of religion.

One more example. The twenty-sixth hexagram, called Tâ K'û , is formed of the trigrams K'ien, representing heaven or the sky, and K'ân , representing a mountain, and it is said on it:—‘(The symbol of) heaven in the midst of a mountain forms Tâ K'û. The superior man, in accordance with this, stores largely in his memory the words of former men and their conduct, to subserve the accumulation of his virtue.’ We are ready to exclaim and ask, ‘Heaven, the sky, in the midst of a mountain! Can there be such a thing?’ and K'û Hsi will tell us in reply, ‘No, there cannot be such a thing in reality; but you can conceive it for the purpose of the symbolism.’

From this and the other examples adduced from the Great Symbolism, it is clear that, so far as its testimony bears on the subject, the trigrams of Fû-hsi did not receive their form and meaning with a deep intention that they should serve as the basis of a philosophical scheme concerning the constitution of heaven and earth and all that

is in them. In this Appendix they are used popularly, just as one

‘Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything.’

The writer moralises from them in an edifying manner. There is ingenuity, and sometimes instruction also, in what he says, but there is no mystery. Chinese scholars and gentlemen, however, who have got some little acquaintance with western science, are fond of saying that all the truths of electricity, heat, light, and other branches of European physics, are in the eight trigrams. When asked how then they and their countrymen have been and are ignorant of those truths, they say that they have to learn them first from western books, and then, looking into the YĪ, they see that they were all known to Confucius more than 2000 years ago. The vain assumption thus manifested is childish; and until the Chinese drop their hallucination about the YĪ as containing all things that have ever been dreamt of in all philosophies, it will prove a stumbling-block to them, and keep them from entering on the true path of science.

6. We go on to the third Appendix in two sections, being the fifth and sixth ‘wings,’ and forming what is called ‘The Great Treatise.’ It will appear singular to the reader, as it has always done to myself, that neither in the Text, nor in the first two Appendixes, does the character called YĪ, which gives its name to the classic, once appear. It is the symbol of ‘change,’ and is formed from the character for ‘the sun’ placed over that for ‘the moon’¹. As the sun gives place to the moon, and the moon to the sun, so is change always proceeding in the phenomena of nature and the experiences of society. We meet with the character nearly fifty times in this Appendix; —applied most commonly to the Text of our classic, so that YĪ King or YĪ Shū is ‘the Classic or Book of Changes.’ It is also applied often to the changes in the lines of the

¹ 易 = 日, the sun, placed over 勿, a form of the old 月 (= 月), the moon.

figures, made by the manipulations of divination, apart from any sentence or oracle concerning them delivered by king Wăn or his son.¹ There is therefore the system of the Yî as well as the book of the Yî. The definition of the name which is given in one paragraph will suit them both:—‘Production and reproduction is what is called (the process of) change¹.’ In nature there is no vacuum. When anything is displaced, what displaces it takes the empty room. And in the lineal figures, the strong and the weak lines push each other out.

Now the remarkable thing asserted is, that the changes in the lines of the figures and the changes of external phenomena show a wonderful harmony and concurrence. We read:—

Harmony between the lines ever changing and the changes in external phenomena.

‘The Yî was made on a principle of accordance with heaven and earth, and shows us therefore, without rent or confusion, the course (of things) in heaven and earth².’

‘There is a similarity between the sage and heaven and earth; and hence there is no contrariety in him to them. His knowledge embraces all things, and his course is intended to be helpful to all under the sky; and therefore he falls into no error. He acts according to the exigency of circumstances, without being carried away by their current; he rejoices in Heaven, and knows its ordinations; and hence he has no anxieties. He rests in his own (present) position, and cherishes the spirit of generous benevolence; and hence he can love (without reserve)³.’

‘(Through the Yî) he embraces, as in a mould or enclosure, the transformations of heaven and earth without any error; by an ever-varying adaptation he completes (the nature of) all things without exception; he penetrates to a knowledge of the course of day and night (and all other correlated phenomena). It is thus that his operation is spirit-like, unconditioned by place, while the changes (which he produces) are not restricted to any form.’

One more quotation:—

‘The sage was able to survey all the complex phenomena under the sky. He then considered in his mind how they could be

¹ III, i, 29 (chap. 5. 6).

² III, i, 20 (chap. 4. 1).

³ III, i, 22.

figured, and (by means of the diagrams) represented their material forms and their character¹.'

All that is thus predicated of the sage, or ancient sages, though the writer probably had Fû-hsî in his mind, is more than sufficiently extravagant, and reminds us of the language in 'the Doctrine of the Mean,' that 'the sage, able to assist the transforming and nourishing powers of heaven and earth, may with heaven and earth form a ternion².'

I quoted largely, in the second chapter, from this Appendix the accounts which it gives of the formation of the lineal figures. There is no occasion to return to that subject. Let us suppose the figures formed. They seem to have

the significance, when looked at from certain points of view, which have been determined for us by king Wăn and the duke of K'áu. But this does not amount to divination. How can the lines be made to serve this purpose? The Appendix professes to tell us.

Before touching on the method which it describes, let me observe that divination was practised in China from a very early time. I will not say 5,200 years ago, in the days of Fû-hsî, for I cannot repress doubts of his historical personality; but as soon as we tread the borders of something like credible history, we find it existing. In the Shû King, in a document that purports to be of the twenty-third century B.C.³, divination by means of the tortoise-shell is mentioned; and somewhat later we find that method continuing, and also divination by the lineal figures, manipulated by means of the stalks of a plant⁴, the *Ptarmica Sibirica*⁵, which is still cultivated on and about the grave of Confucius, where I have myself seen it growing.

The object of the divination, it should be acknowledged, was not to discover future events absolutely, as if they could be known beforehand⁶, but

¹ III, i, 38 (chap. 8. 1).

² Doctrine of the Mean, chap. xxii.

³ The Shû II, ii, 18.

⁴ The Shû V, iv, 20, 31.

⁵ See Williams' Syllabic Dictionary on the character 蓍.

⁶ Canon McClatchie (first paragraph of his Introduction) says:—'The YĪ is regarded by the Chinese with peculiar veneration . . . as containing a mine of

to ascertain whether certain schemes, and conditions of events contemplated by the consulter, would turn out luckily or unluckily. But for the actual practice the stalks of the plant were necessary; and I am almost afraid to write that this Appendix teaches that they were produced by Heaven of such a nature as to be fit for the purpose. 'Heaven,' it says, in the 73rd paragraph of Section i, quoted above on p. 14, 'Heaven produced the spirit-like things.' The things were the tortoise and the plant, and in paragraph 68, the same quality of being *shăn*, or 'spirit-like,' is ascribed to them. Occasionally, in the field of Chinese literature, we meet with doubts as to the efficacy of divination, and the folly of expecting any revelation of the character of the future from an old tortoise-shell and a handful of withered twigs¹; but when this Appendix was made, the writer had not attained to so much common sense. The stalks were to him 'spirit-like,' possessed of

knowledge, which, if it were possible to fathom it thoroughly, would, in their estimation, enable the fortunate possessor to foretell all future events.' This misstatement does not surprise me so much as that Morrison, generally accurate on such points, should say (Dictionary, Part II, i, p. 1020, on the character 易):—

'Of the odd and even numbers, the *kwâ* or lines of *Fû-hsi* are the visible signs; and it being assumed that these signs answer to the things signified, and from a knowledge of all the various combinations of numbers, a knowledge of all possible occurrences in nature may be previously known.' The whole article from which I take this sentence is inaccurately written. The language of the Appendix on the knowledge of the future given by the use of the *Yi* is often incautious, and a cursory reader may be misled; to a careful student, however, the meaning is plain. The second passage of the *Shû*, referred to above, treats of 'the Examination of Doubts,' and concludes thus:—'When the tortoise-shell and the stalks are both opposed to the views of men, there will be good fortune in stillness, and active operations will be unlucky.'

¹ A remarkable instance is given by *Liú K'í* (of the Ming dynasty, in the fifteenth century) in a story about *Shão Phing*, who had been marquis of *Tung-ling* in the time of *Shin*, but was degraded under *Han*. Having gone once to *Sze-mâ Ki-kû*, one of the most skilful diviners of the country, and wishing to know whether there would be a brighter future for him, *Sze-mâ* said, 'Ah! is it the way of Heaven to love any (partially)? Heaven loves only the virtuous. What intelligence is possessed by spirits? They are intelligent (only) by their connexion with men. The divining stalks are so much withered grass; the tortoise-shell is a withered bone. They are but things, and man is more intelligent than things. Why not listen to yourself instead of seeking (to learn) from things?' The whole piece is in many of the collections of *Kû Wăn*, or *Elegant Writing*.

a subtle and invisible virtue that fitted them for use in divining.

Given the stalks with such virtue, the process of manipulating them so as to form the lineal figures is described (Section i, chap. 9, parr. 49-58), but it will take the student much time and thought to master the various operations.

Formation
of the lineal
figures by the
divining
stalks.

Forty-nine stalks were employed, which were thrice manipulated for each line, so that it took eighteen manipulations to form a hexagram. The lines were determined by means of the numbers derived from the River Map or scheme. Odd numbers gave strong or undivided lines, and even numbers gave the weak or divided. An important part was played in combining the lines, and forming the hexagrams by the four emblematic symbols, to which the numbers 9, 8, 7, 6 were appropriated¹. The figures having been formed, recourse was had for their interpretation to the thwan of king Wăn, and the emblematic sentences of the duke of Kâu. This was all the part which numbers played in the divination by the YĪ, helping the operator to make up his lineal figure. An analogy has often been asserted between the numbers of the YĪ and the numbers of Pythagoras; and certainly we might make ten, and more than ten, antinomies from these Appendixes in startling agreement with the ten principia of the Pythagoreans. But if Aristotle was correct in holding that Pythagoras regarded numbers as entities, and maintained that Number was the Beginning (Principle, ἀρχή) of things, the cause of their material existence, and of their

¹ These numbers are commonly derived from the River Scheme, in the outer sides of which are the corresponding marks:— ●●●●●●, opposite to ●●; ○○○○○○, opposite to ○; ●●●●●●, opposite to ●●●; and ○○○○○○○○, opposite to ○○○. Hence the number 6 is assigned to ≡≡≡, 7 to ≡≡≡≡, 8 to ≡≡≡≡≡, and 9 to ≡≡≡≡≡≡. Hence also, in connexion with the formation of the figures by manipulation of the stalks, 9 becomes the number symbolical of the undivided line, as representing K'ien ≡≡≡≡≡≡, and 6 of the divided line, as representing Khwân ≡≡≡≡. But the late delineation of the map, as given on p. 15, renders all this uncertain, so far as the scheme is concerned. The numbers of the hsiang, however, may have been fixed, must have been fixed indeed, at an early period.

modifications and different states, then the doctrine of the philosopher of Samos was different from that of the Yî¹, in which numbers come in only as aids in divining to form the hexagrams. Of course all divination is vain, nor is the method of the Yî less absurd than any other. The Chinese themselves have given it up in all circles above those of the professional quacks, and yet their scholars continue to maintain the unfathomable science and wisdom of these appended treatises!

It is in this Appendix that we first meet with the names yin and yang², of which I have spoken briefly on pp. 15, 16. Up to this point, instead of them, the names for the two elementary forms of the lines have been kang and zâu, which I have translated by 'strong and weak,' and which also occur here ten times. The following attempt to explain these different names appears in the fifth Appendix, paragraph 4:—

'Anciently when the sages made the Yî, it was with the design that its figures should be in conformity with the principles underlying the natures (of men and things), and the ordinances appointed (for them by Heaven). With this view they exhibited in them the way of heaven, calling (the lines) yin and yang; the way of earth, calling them the strong (or hard) and the weak (or soft); and the way of man, under the names of benevolence and righteousness. Each (trigram) embraced those three Powers, and being repeated, its full form consisted of six lines.'

However difficult it may be to make what is said here intelligible, it confirms what I have affirmed of the significance of the names yin and yang, as meaning bright and dark, derived from the properties of the sun and moon. We may use for these adjectives a variety of others, such as active and inactive, masculine and feminine, hot and cold, more or less analogous to them; but there arise the important questions,—Do we find yang and yin not merely used to indicate the quality of what they are applied

¹ See the account of Pythagoras and his philosophy in Lewes' History of Philosophy, pp. 18–38 (1871).

² See Section i, 24, 32, 35; Section ii, 28, 29, 30, 35.

to, but at the same time with substantival force, denoting what has the quality which the name denotes? Had the doctrine of a primary matter of an ethereal nature, now expanding and showing itself full of activity and power as yang, now contracting and becoming weak and inactive as yin:—had this doctrine become matter of speculation when this Appendix was written? The Chinese critics and commentators for the most part assume that it had. P. Regis, Dr. Medhurst, and other foreign Chinese scholars repeat their statements without question. I have sought in vain for proof of what is asserted. It took more than a thousand years after the closing of the YĪ to fashion in the Confucian school the doctrine of a primary matter. We do not find it fully developed till the era of the Sung dynasty, and in our eleventh and twelfth centuries¹. To find it in the YĪ is the logical, or rather illogical, error of putting 'the last first.' Neither creation nor cosmogony was before the mind of the author whose work I am analysing. His theme is the YĪ,—the ever-changing phenomena of nature and experience. There is nothing but this in the 'Great Treatise' to task our powers;—nothing deeper or more abstruse.

¹ As a specimen of what the ablest Sung scholars teach, I may give the remarks (from the 'Collected Comments') of Kū Kān (of the same century as Kū Hsi, rather earlier) on the 4th paragraph of Appendix V:—'In the YĪ there is the Great Extreme. When we speak of the yin and yang, we mean the air (or ether) collected in the Great Void. When we speak of the Hard and Soft, we mean that ether collected, and formed into substance. Benevolence and righteousness have their origin in the great void, are seen in the ether substantiated, and move under the influence of conscious intelligence. Looking at the one origin of all things we speak of their nature; looking at the endowments given to them, we speak of the ordinations appointed (for them). Looking at them as (divided into) heaven, earth, and men, we speak of their principle. The three are one and the same. The sages wishing that (their figures) should be in conformity with the principles underlying the natures (of men and things) and the ordinances appointed (for them), called them (now) yin and yang, (now) the hard and the soft, (now) benevolence and righteousness, in order thereby to exhibit the ways of heaven, earth, and men; it is a view of them as related together. The trigrams of the YĪ contain the three Powers; and when they are doubled into hexagrams, there the three Powers unite and are one. But there are the changes and movements of their (several) ways, and therefore there are separate places for the yin and yang, and reciprocal uses of the hard and the soft.'

As in the first Appendix, so in this, the name *kwei-shǎn* occurs twice; in paragraphs 21 and 50 of Section i. In the former instance, each part of the name has its significance. *Kwei* denotes the animal soul or nature, and *Shǎn*, the intellectual soul, the union of which constitutes the living rational man. I have translated them, it will be seen, by 'the *anima* and the *animus*.' Canon McClatchie gives for them 'demons and gods;' and Dr. Medhurst said on the passage, 'The *kwei-shǎns* are evidently the expanding and contracting principles of human life. . . . The *kwei-shǎns* are brought about by the dissolution of the human frame, and consist of the expanding and ascending *shǎn*, which rambles about in space, and of the contracted and shrivelled *kwei*, which reverts to earth and nonentity¹.'

This is pretty much the same view as my own, though I would not here use the phraseology of 'expanding and contracting.' Canon McClatchie is consistent with himself, and renders the characters by 'demons and gods.'

In the latter passage it is more difficult to determine the exact meaning. The writer says, that 'by the odd numbers assigned to heaven and the even numbers assigned to earth, the changes and transformations are effected, and the spirit-like agencies kept in movement;' meaning that by means of the numbers the spirit-like lines might be formed on a scale sufficient to give a picture of all the changing phenomena, taking place, as if by a spiritual agency, in nature. Medhurst contents himself on it with giving the explanation of *K'û Hsî*, that 'the *kwei-shǎns* refer to the contractions and expandings, the recedings and approachings of the productive and completing powers of the even and odd numbers².' Canon McClatchie does not follow his translation of the former passage and give here 'demons and gods,' but we have 'the Demon-god (i.e. *Shang Ti*)³.' I shall refer to this version when considering the fifth Appendix.

¹ Dissertation on the Theology of the Chinese, pp. 111, 112.

² Theology of the Chinese, p. 122.

³ Translation of the *Yi King*, p. 312.

The single character shăn occurs more than twenty times;—used now as a substantive, now as an adjective, and again as a verb. I must refer the reader to the translation and notes for its various significance, subjoining in a note a list of the places where it occurs¹.

Shan alone.

Much more might be said on the third Appendix, for the writer touches on many other topics, antiquarian and speculative, but a review of them would help us little in the study of the leading subject of the YĪ. In passing on to the next treatise, I would only further say that the style of this and the author's manner of presenting his thoughts often remind the reader of 'the Doctrine of the Mean.' I am surprised that 'the Great Treatise' has never been ascribed to the author of that Doctrine, 3ze-sze, the grandson of Confucius, whose death must have taken place between B.C. 400 and 450.

7. The fourth Appendix, the seventh 'wing' of the YĪ, need not detain us long. As I stated on p. 27, it is confined to an exposition of the Text on the first and second hexagrams, being an attempt to show that what is there affirmed of heaven and earth may also be applied to man, and that there is an essential agreement between the qualities ascribed to them, and the benevolence, righteousness, propriety, and wisdom, which are the four constituents of his moral and intellectual nature.

The fourth
Appendix.

It is said by some of the critics that Confucius would have treated all the other hexagrams in a similar way, if his life had been prolonged, but we found special grounds for denying that Confucius had anything to do with the composition of this Appendix; and, moreover, I cannot think of any other figure that would have afforded to the author the same opportunity of discoursing about man. The style and method are after the manner of 'the Doctrine of the Mean' quite as much as those of 'the Great Treatise.' Several paragraphs, moreover, suggest to us the magniloquence of Mencius. It is said, for instance, by 3ze-sze, of

¹ Section i, 23, 32, 57, 58, 62, 64, 67, 68, 69, 73, 76, 81; Section ii, 11, 15, 33, 34, 41, 45.

the sage, that 'he is the equal or correlate of Heaven ¹,' and in this Appendix we have the sentiment expanded into the following:—

'The great man is he who is in harmony in his attributes with heaven and earth; in his brightness with the sun and moon; in his orderly procedure with the four seasons; and in his relation to what is fortunate and what is calamitous with the spiritual agents. He may precede Heaven, and Heaven will not act in opposition to him; he may follow Heaven, but will act only as Heaven at the time would do. If Heaven will not act in opposition to him, how much less will man! how much less will the spiritual agents ²!'

One other passage may receive our consideration:—

'The family that accumulates goodness is sure to have superabundant happiness, and the family that accumulates evil is sure to have superabundant misery ³.'

The language makes us think of the retribution of good and evil as taking place in the family, and not in the individual; the judgment is long deferred, but it is inflicted at last, lighting, however, not on the head or heads that most deserved it. Confucianism never falters in its affirmation of the difference between good and evil, and that each shall have its appropriate recompense; but it has little to say of the where and when and how that recompense will be given. The old classics are silent on the subject of any other retribution besides what takes place in time. About the era of Confucius the view took definite shape that, if the issues of good and evil, virtue and vice, did not take effect in the experience of the individual, they would certainly do so in that of his posterity. This is the prevailing doctrine among the Chinese at the present day; and one of the earliest expressions, perhaps the earliest expression, of it was in the sentence under our notice that has been copied from this Appendix into almost every moral treatise that circulates in China. A wholesome and an important truth it is, that 'the sins of parents are visited

¹ *Kung-yung* xxxi, 4.

² Section i, 34. This is the only paragraph where *kwei-shān* occurs.

³ Section ii, 5.

on their children;' but do the parents themselves escape the curse? It is to be regretted that this short treatise, the only 'wing' of the YĪ professing to set forth its teachings concerning man as man, does not attempt any definite reply to this question. I leave it, merely observing that it has always struck me as the result of an after-thought, and a wish to give to man, as the last of 'the Three Powers,' a suitable place in connexion with the YĪ. The doctrine of 'the Three Powers' is as much out of place in Confucianism as that of 'the Great Extreme.' The treatise contains several paragraphs interesting in themselves, but it adds nothing to our understanding of the Text, or even of the object of the appended treatises, when we try to look at them as a whole.

8. It is very different with the fifth of the Appendixes,
The fifth Appendix. which is made up of 'Remarks on the Trigrams.' It is shorter than the fourth, consisting of only 22 paragraphs, in some of which the author rises to a height of thought reached nowhere else in these treatises, while several of the others are so silly and trivial, that it is difficult, not to say impossible, to believe that they are the production of the same man. We find in it the earlier and later arrangement of the trigrams,—the former, that of Fû-hsi, and the latter, that of king Wăn; their names and attributes; the work of God in nature, described as a progress through the trigrams; and finally a distinctive, but by no means exhaustive, list of the natural objects, symbolised by them.

It commences with the enigmatic declaration that 'Anciently, when the sages made the YĪ,' (that is, the lineal
First paragraph. figures, and the system of divination by them), 'in order to give mysterious assistance to the spiritual Intelligences, they produced (the rules for the use of) the divining plant.' Perhaps this means no more than that the lineal figures were made to 'hold the mirror up to nature,' so that men by the study of them would understand more of the unseen and spiritual operations, to which the phenomena around them were owing, than they could otherwise do.

The author goes on to speak of the Fû-hsi trigrams, and passes from them to those of king Wăn in paragraph 8. That and the following two are very remarkable; but before saying anything of them, I will go on to the 14th, which is the only passage that affords any ground for saying that there is a mythology in the Yî. It says:—

‘*Khien* is (the symbol of) heaven, and hence is styled father. *Khwan* is (the symbol of) earth, and hence is styled mother. *Kăn* (shows) the first application (of *khwan* to *khien*), resulting in getting (the first of) its male (or undivided lines), and hence we call it the oldest son. *Sun* (shows) a first application (of *khien* to *khwan*), resulting in getting (the first of) its female (or divided lines), and hence we call it the oldest daughter. *Khân* (shows) a second application (of *khwan* to *khien*), and *Lî* a second (of *khien* to *khwan*), resulting in the second son and second daughter. In *Kăn* and *Tui* we have a third application (of *khwan* to *khien* and of *khien* to *khwan*), resulting in the youngest son and youngest daughter.’

From this language has come the fable of a marriage between *Khien* and *Khwan*, from which resulted the six other trigrams, considered as their three sons and three daughters; and it is not to be wondered at, if some men of active and ill-regulated imaginations should see Noah and his wife in those two primary trigrams, and in the others their three sons and the three sons’ wives. Have we not in both cases an ogdoad? But I have looked in the paragraph in vain for the notion of a marriage-union between heaven and earth.

It does not treat of the genesis of the other six trigrams by the union of the two, but is a rude attempt to explain their forms when they were once existing¹. According to the idea of changes, *Khien* and *Khwan* are continually varying their forms by their interaction. As here represented, the

¹ This view seems to be in accordance with that of Wû K’ang (of the Yüan dynasty), as given in the ‘Collected Comments’ of the Khang-hsi edition. The editors express their approval of it in preference to the interpretation of K’ü Hsi, who understood the whole to refer to the formation of the lineal figures, the ‘application’ being ‘the manipulation of the stalks to find the proper line.’

other trigrams are not 'produced'¹ by a marriage-union, but from the application, literally the seeking, of one of them—of *Khwăn* as much as of *K'ien*—addressed to the other².

This way of speaking of the trigrams, moreover, as father and mother, sons and daughters, is not so old as *Fû-hsi*; nor have we any real proof that it originated with king *Wăn*. It is not of 'the highest antiquity.' It arose some time in 'middle antiquity,' and was known in the era of the Appendixes; but it had not prevailed then, nor has it prevailed since, to discredit and supersede the older nomenclature. We are startled when we come on it in the place which it occupies. And there it stands alone. It is not entitled to more attention than the two paragraphs that precede it, or the eight that follow it, none of which were thought by P. Regis worthy to be translated. I have just said that it stands 'alone.' Its existence, however, seems to me to be supposed in the fourth chapter, paragraphs 28–30, of the third Appendix, Section ii; but there only the trigrams of 'the six children' are mentioned, and nothing is said of 'the parents.' *K'ăn*, *khân*, and *k'ăn* are referred to as being yang, and sun, *lî*, and *tui aś* being yin. What is said about them is trifling and fanciful.

Leaving the question of the mythology of the *YĪ*, of which I am myself unable to discover a trace, I now call attention to paragraphs 8–10, where the author speaks of the work of God in nature in all the year as a progress through the trigrams, and as being effected by His Spirit. The description assumes the peculiar arrangement of the trigrams, ascribed to king *Wăn*, and which I have exhibited above, on page 33³. Father Regis adopts the general view

Operation of
God in nature
throughout
the year.

¹ But the Chinese term *Shăng* 生, often rendered 'produced,' must not be pressed, so as to determine the method of production, or the way in which one thing comes from another.

² The significance of the mythological paragraph is altogether lost in Canon McClatchie's version:—'*K'ien* is Heaven, and hence he is called Father; *Khwăn* is Earth, and hence she is called Mother; *K'ăn* is the first male, and hence he is called the eldest son,' &c. &c.

³ The reader will understand the difference in the two arrangements better by a reference to the circular representations of them on Plate III.

of Chinese critics that Wăn purposely altered the earlier and established arrangement, as a symbol of the disorganisation and disorder into which the kingdom had fallen¹. But it is hard to say why a man did something more than 3000 years ago, when he has not himself said anything about it. So far as we can judge from this Appendix, the author thought that king Wăn altered the existing order and position of the trigrams with regard to the cardinal points, simply for the occasion,—that he might set forth vividly his ideas about the springing, growth, and maturity in the vegetable kingdom from the labours of spring to the cessation from toil in winter. The marvel is that in doing this he brings God upon the scene, and makes Him in the various processes of nature the ‘all and in all.’

The 8th paragraph says :—

‘God comes forth in Kăn (to his producing work) ; He brings (His processes) into full and equal action in Sun ; they are manifested to one another in Lî ; the greatest service is done for Him in Khwăn ; He rejoices in Tui ; He struggles in K’hen ; He is comforted and enters into rest in Khân ; and he completes (the work of) the year in Kăn.’

God is here named Tî, for which P. Regis gives the Latin ‘Supremus Imperator,’ and Canon McClatchie, after him, ‘the Supreme Emperor.’ I contend that ‘God’ is really the correct translation in English of Tî ; but to render it here by ‘Emperor’ would not affect the meaning of the paragraph. Kû Hsi says that ‘by Tî is intended the Lord and Governor of heaven ;’ and Khung Ying-tâ, about five centuries earlier than Kû, quotes Wang Pî, who died A.D.

¹ E. g. I, 23, 24 :—‘Observant etiam philosophi (lib. 15 Sinicæ philosophiæ Sing-lî) principem Wăn-wang antiquum octo symbolorum, unde aliae figurae omnes perdent, ordinem invertisse ; quo ipsa imperii suis temporibus subversio graphice exprimi poterat, mutatis e naturali loco, quem genesis dederat, iis quatuor figuris, quae rerum naturalium pugnis ac dissociationibus, quas posterior labentis anni pars afferre solet, velut in antecessum, repraesentandis idoneae videbantur ; v. g. si symbolum  Lî, ignis, supponatur loco symboli  Khân, aquae, utriusque elementi inordinatio principi visa est non minus apta ad significandas ruinas et clades reipublicae male ordinatae, quam naturales ab hieme aut imminente aut saeviente rerum generatorum corruptiones.’ See also pp. 67, 68.

249, to the effect that 'Tî is the lord who produces (all) things, the author of prosperity and increase.'

I must refer the reader to the translation in the body of the volume for the 9th paragraph, which is too long to be introduced here. As the 8th speaks directly of God, the 9th, we are told, 'speaks of all things following Him, from spring to winter, from the east to the north, in His progress throughout the year.' In words strikingly like those of the apostle Paul, when writing his Epistle to the Romans, Wan *K'ung-jung* (of the Khang-hsi period) and his son, in their admirable work called, 'A New Digest of Collected Explanations of the Yî King,' say :—'God (Himself) cannot be seen ; we see Him in the things (which He produces).' The first time I read these paragraphs with some understanding, I thought of Thomson's Hymn on the Seasons, and I have thought of it in connexion with them a hundred times since. Our English poet wrote :—

'These, as they change, Almighty Father, these
Are but the varied God. The rolling year
Is full of Thee. Forth in the pleasing spring
Thy beauty walks, Thy tenderness and love.
Then comes Thy glory in the summer months,
With light and heat refulgent. Then Thy sun
Shoots full perfection through the swelling year.
Thy bounty shines in autumn unconfined,
And spreads a common feast for all that lives.
In winter awful Thou!'

Prudish readers have found fault with some of Thomson's expressions, as if they savoured of pantheism. The language of the Chinese writer is not open to the same captious objection. Without poetic ornament, or swelling phrase of any kind, he gives emphatic testimony to God as renewing the face of the earth in spring, and not resting till He has crowned the year with His goodness.

And there is in the passage another thing equally wonderful. The 10th paragraph commences :—'When we speak of Spirit, we mean the subtle presence (and operation of God) with all things ;' and the writer goes on to illustrate this sentiment from the action and influences symbolised

by the six 'children,' or minor trigrams,—water and fire, thunder and wind, mountains and collections of water. *K'ü Hsi* says, that there is that in the paragraph which he does not understand. Some Chinese scholars, however, have not been far from descrying the light that is in it. Let *Liang Yin*, of our fourteenth century, be adduced as an example of them. He says:—'The spirit here simply means God. God is the personality (literally, the body or substantiality) of the Spirit; the Spirit is God in operation. He who is lord over and rules all things is God; the subtle presence and operation of God with all things is by His Spirit.' The language is in fine accord with the definition of *shān* or spirit, given in the 3rd Appendix, Section i, 32.

I wish that the Treatise on the Trigrams had ended with the 10th paragraph. The writer had gradually risen to a noble elevation of thought from which he plunges
 Concluding paragraphs. into a slough of nonsensical remarks which it would be difficult elsewhere to parallel. I have referred on p. 31 to the judgment of P. Regis about them. He could not receive them as from Confucius, and did not take the trouble to translate them, and transfer them to his own pages. My plan required me to translate everything published in China as a part of the *Yi King*; but I have given my reasons for doubting whether any portion of these Appendixes be really from Confucius. There is nothing that could better justify the supercilious disregard with which the classical literature of China is frequently treated than to insist on the concluding portion of this treatise as being from the pencil of its greatest sage. I have dwelt at some length on the 14th paragraph, because of its mythological semblance; but among the eight paragraphs that follow it, it would be difficult to award the palm for silliness. They are descriptive of the eight trigrams, and each one enumerates a dozen or more objects of which its subject is symbolical. The writer must have been fond of and familiar with horses. *K'ien*, the symbol properly of heaven, suggests to him the idea of a good horse; an old horse; a lean horse; and a piebald. *K'ăn*, the symbol of thunder, suggests the

idea of a good neigher; of the horse with white hind-legs; of the prancing horse; and of one with a white star in his forehead. Khân, the symbol of water, suggests the idea of the horse with an elegant spine; of one with a high spirit; of one with a drooping head; and of one with a shambling step. The reader will think he has had enough of these symbolisings of the trigrams. I cannot believe that the earlier portions and this concluding portion of the treatise were by the same author. If there were any evidence that paragraphs 8 to 10 were by Confucius, I should say that they were worthy, even more than worthy, of him; what follows is mere drivel. Horace's picture faintly portrays the inconsistency between the parts:—

'Desinit in piscem mulier formosa superne.'

In reviewing the second of these Appendixes, I was led to speak of the original significance of the trigrams, in opposition to the views of some Chinese who pretend that they can find in them the physical truths discovered by the researches of western science. May I not say now, after viewing the phase of them presented in these paragraphs, that they were devised simply as aids to divination, and partook of the unreasonableness and uncertainty belonging to that?

9. The sixth Appendix is the Treatise on the Sequence of the Hexagrams, to which allusion has been made more

The sixth Appendix. than once. It is not necessary to dwell on it at length. King Wăn, it has been seen, gave a name to each hexagram, expressive of the idea—some moral, social, or political truth—which he wished to set forth by means of it; and this name enters very closely into its interpretation. The author of this treatise endeavours to explain the meaning of the name, and also the sequence of the figures, or how it is that the idea of the one leads on to that of the next. Yet the reader must not expect to find in the 64 a chain 'of linked sweetness long drawn out.' The connexion between any two is generally sufficiently close; but on the whole the essays, which I have said they form, resemble 'a heap of orient pearls at random strung.' The changeableness of human

affairs is a topic never long absent from the writer's mind. He is firmly persuaded that 'the fashion of the world passeth away.' Union is sure to give place to separation, and by and by that separation will issue in re-union.

There is nothing in the treatise to suggest anything about its authorship; and as the reader will see from the notes, we are perplexed occasionally by meanings given to the names that differ from the meanings in the Text.

10. The last and least Appendix is the seventh, called

The seventh Appendix. 34 Kwá Kwan, or 'Treatise on the Lineal Figures taken promiscuously,'—not with regard to any sequence, but as they approximate, or are opposed, to one another in meaning. It is in rhyme, moreover, and this, as much as the meaning, determined, no doubt, the grouping of the hexagrams. The student will learn nothing of value from it; it is more a 'jeu d'esprit' than anything else.

THE YÎ KING.

TEXT. SECTION I.

I. THE *KHIEN* HEXAGRAM.

Explanation of the entire figure by king Wăn.

Khien (represents) what is great and originating, penetrating, advantageous, correct and firm.

Explanation of the separate lines by the duke of *Kâu*.

1. In the first (or lowest) line, undivided, (we see its subject as) the dragon lying hid (in the deep). It is not the time for active doing.

2. In the second line, undivided, (we see its subject as) the dragon appearing in the field. It will be advantageous to meet with the great man.

3. In the third line, undivided, (we see its subject as) the superior man active and vigilant all the day, and in the evening still careful and apprehensive. (The position is) dangerous, but there will be no mistake.

4. In the fourth line, undivided, (we see its subject as the dragon looking) as if he were leaping up, but still in the deep. There will be no mistake.

5. In the fifth line, undivided, (we see its subject as) the dragon on the wing in the sky. It will be advantageous to meet with the great man.

6. In the sixth (or topmost) line, undivided, (we see its subject as) the dragon exceeding the proper limits. There will be occasion for repentance.

7. (The lines of this hexagram are all strong and undivided, as appears from) the use of the number nine. If the host of dragons (thus) appearing were to divest themselves of their heads, there would be good fortune.

The Text under each hexagram consists of one paragraph by king Wăn, explaining the figure as a whole, and of six (in the case of hexagrams 1 and 2, of seven) paragraphs by the duke of Kâu, explaining the individual lines. The explanatory notices introduced above to this effect will not be repeated. A double space will be used to mark off the portion of king Wăn from that of his son.

Each hexagram consists of two of the trigrams of Fû-hsi, the lower being called 'the inner,' and the one above 'the outer.' The lines, however, are numbered from one to six, commencing with the lowest. To denote the number of it and of the sixth line, the terms for 'commencing' and 'topmost' are used. The intermediate lines are simply 'second,' 'third,' &c. As the lines must be either whole or divided, technically called strong and weak, yang and yin, this distinction is indicated by the application to them of the numbers nine and six. All whole lines are nine, all divided lines, six.

Two explanations have been proposed of this application of these numbers. The K'ien trigram, it is said, contains 3 strokes (☰), and the Khwăn 6 (☷). But the yang contains the yin in itself, and its representative number will be 3+6=9, while the yin, not containing the yang, will only have its own number or 6. This explanation, entirely arbitrary, is now deservedly abandoned. The other is based on the use of the 'four Hsiang,' or emblematic figures (☰ the great or old yang, ☱ the young yang, ☷ the old yin, and ☴ the young yin). To these are assigned (by what process is unimportant for our present purpose) the numbers 9, 8, 7, 6. They were 'the old yang,' represented by 9, and 'the old yin,' represented by 6, that, in the manipulation of the stalks to form new diagrams, determined the changes of figure; and so 9 and 6 came to be used as the

II. THE KHWĀN HEXAGRAM.

Khwān (represents) what is great and originating, penetrating, advantageous, correct and having the firmness of a mare. When the superior man (here

names of a yang line and a yin line respectively. This explanation is now universally acquiesced in. The nomenclature of first nine, nine two, &c., or first six, six two, &c., however, is merely a jargon; and I have preferred to use, instead of it, in the translation, in order to describe the lines, the names 'undivided' and 'divided.'

I. Does king Wān ascribe four attributes here to *K'ien*, or only two? According to Appendix IV, always by Chinese writers assigned to Confucius, he assigns four, corresponding to the principles of benevolence, righteousness, propriety, and knowledge in man's nature. *K'ü Hsi* held that he assigned only two, and that we should translate, 'greatly penetrating,' and 'requires to be correct and firm,' two responses in divination. Up and down throughout the Text of the 64 hexagrams, we often find the characters thus coupled together. Both interpretations are possible. I have followed what is accepted as the view of Confucius. It would take pages to give a tithe of what has been written in justification of it, and to reconcile it with the other.

'The dragon' is the symbol employed by the duke of *K'au* to represent 'the superior man' and especially 'the great man,' exhibiting the virtues or attributes characteristic of heaven. The creature's proper home is in the water, but it can disport itself on the land, and also fly and soar aloft. It has been from the earliest time the emblem with the Chinese of the highest dignity and wisdom, of sovereignty and sagehood, the combination of which constitutes 'the great man.' One emblem runs through the lines of many of the hexagrams as here.

But the dragon appears in the sixth line as going beyond the proper limits. The ruling-sage has gone through all the sphere in which he is called on to display his attributes; it is time for him to relax. The line should not be always pulled tight; the bow should not be always kept drawn. The unchanging use

intended) has to make any movement, if he take the initiative, he will go astray; if he follow, he will find his (proper) lord. The advantageousness will be seen in his getting friends in the south-west, and losing friends in the north-east. If he rest in correctness and firmness, there will be good fortune.

1. In the first line, divided, (we see its subject) treading on hoarfrost. The strong ice will come (by and by).

2. The second line, divided, (shows the attribute of) being straight, square, and great. (Its operation), without repeated efforts, will be in every respect advantageous.

3. The third line, divided, (shows its subject) keeping his excellence under restraint, but firmly maintaining it. If he should have occasion to engage in the king's service, though he will not claim the success (for himself), he will bring affairs to a good issue.

4. The fourth line, divided, (shows the symbol of) a sack tied up. There will be no ground for blame or for praise.

5. The fifth line, divided, (shows) the yellow lower garment. There will be great good fortune.

of force will give occasion for repentance. The moral meaning found in the line is that 'the high shall be abased.'

The meaning given to the supernumerary paragraph is the opposite of that of paragraph 6. The 'host of dragons without their heads' would give us the next hexagram, or *Kh wăn*, made up of six divided lines. Force would have given place to submission, and haughtiness to humility; and the result would be good fortune. Such at least is the interpretation of the paragraph given in a narrative of the *30-Kwan* under B. C. 513. For further explanation of the duke of *Kâu's* meaning, see Appendixes II and IV.

6. The sixth line, divided, (shows) dragons fighting in the wild. Their blood is purple and yellow.

7. (The lines of this hexagram are all weak and divided, as appears from) the use of the number six. If those (who are thus represented) be perpetually correct and firm, advantage will arise.

II. The same attributes are here ascribed to Khwān, as in the former hexagram to K'ien ;—but with a difference. The figure, made up of six divided lines, expresses the ideal of subordination and docility. The superior man, represented by it, must not take the initiative ; and by following he will find his lord,—the subject, that is of K'ien. Again, the correctness and firmness is defined to be that of 'a mare,' 'docile and strong,' but a creature for the service of man. That it is not the sex of the animal which the writer has chiefly in mind is plain from the immediate mention of the superior man, and his lord.

That superior man will seek to bring his friends along with himself to serve his ruler. But according to the arrangement of the trigrams by king Wān, the place of Khwān is in the south-west, while the opposite quarter is occupied by the yang trigram Kān, as in Figure 2, Plate III. All that this portion of the Thwan says is an instruction to the subject of the hexagram to seek for others of the same principles and tendencies with himself to serve their common lord. But in quietness and firmness will be his strength.

The symbolism of the lines is various. Paragraph 2 presents to us the earth itself, according to the Chinese conception of it, as a great cube. To keep his excellence under restraint, as in paragraph 3, is the part of a minister or officer, seeking not his own glory, but that of his ruler. Paragraph 4 shows its subject exercising a still greater restraint on himself than in paragraph 3. There is an interpretation of the symbolism of paragraph 5 in a narrative of the 30 Kwan, under the 12th year of duke K'áo, B.C. 530. 'Yellow' is one of the five 'correct' colours, and the colour of the earth. 'The lower garment' is a symbol of humility.
 The fifth line is the seat of honour. If its occupant possess the qualities indicated, he will be greatly fortunate.

See the note on the sixth line of hexagram 1. What is there said to be 'beyond the proper limits' takes place here 'in the wild.' The humble subject of the divided line is transformed into a

III. THE KUN HEXAGRAM.

Kun (indicates that in the case which it presupposes) there will be great progress and success, and the advantage will come from being correct and firm. (But) any movement in advance should not be (lightly) undertaken. There will be advantage in appointing feudal princes.

1. The first line, undivided, shows the difficulty (its subject has) in advancing. It will be advantageous for him to abide correct and firm; advantageous (also) to be made a feudal ruler.

2. The second line, divided, shows (its subject) distressed and obliged to return; (even) the horses of her chariot (also) seem to be retreating. (But) not by a spoiler (is she assailed), but by one who seeks her to be his wife. The young lady maintains her firm correctness, and declines a union. After ten years she will be united, and have children.

3. The third line, divided, shows one following the deer without (the guidance of) the forester, and only finding himself in the midst of the forest. The superior man, acquainted with the secret risks, thinks it better to give up the chase. If he went forward, he would regret it.

dragon, and fights with the true dragon, the subject of the undivided line. They fight and bleed, and their blood is of the colour proper to heaven or the sky, and the colour proper to the earth. Paragraph 7 supposes that the hexagram *Khwân* should become changed into *Khien*;—the result of which would be good.

4. The fourth line, divided, shows (its subject as a lady), the horses of whose chariot appear in retreat. She seeks, however, (the help of) him who seeks her to be his wife. Advance will be fortunate; all will turn out advantageously.

5. The fifth line, undivided, shows the difficulties in the way of (its subject's) dispensing the rich favours that might be expected from him. With firmness and correctness there will be good fortune in small things; (even) with them in great things there will be evil.

6. The topmost line, divided, shows (its subject) with the horses of his chariot obliged to retreat, and weeping tears of blood in streams.

III. The character called *Kun* is pictorial, and was intended to show us how a plant struggles with difficulty out of the earth, rising gradually above the surface. This difficulty, marking the first stages in the growth of a plant, is used to symbolise the struggles that mark the rise of a state out of a condition of disorder, consequent on a great revolution. The same thing is denoted by the combination of the trigrams that form the figure;—as will be seen in the notes on it under Appendix II.

I have introduced within parentheses, in the translation, the words 'in the case which the hexagram presupposes.' It is necessary to introduce them. King Wăn and his son wrote, as they did in every hexagram, with reference to a particular state of affairs which they had in mind. This was the unspoken text which controlled and directed all their writing; and the student must try to get hold of this, if he would make his way with comfort and success through the *Yî*. Wăn saw the social and political world around him in great disorder, hard to be remedied. But he had faith in himself and the destinies of his House. Let there be prudence and caution, with unswerving adherence to the right; let the government of the different states be entrusted to good and able men:—then all would be well.

The first line is undivided, showing the strength of its subject. He will be capable of action, and his place in the trigram of mobility will the more dispose him to it. But above him is the

IV. THE MĂNG HEXAGRAM.

Măng (indicates that in the case which it presupposes) there will be progress and success. I do not (go and) seek the youthful and inexperienced,

trigram of peril; and the lowest line of that, to which especially he must look for response and co-operation, is divided and weak. Hence arise the ideas of difficulty in advancing, the necessity of caution, and the advantage of his being clothed with authority.

To the subject of the second line, divided, advance is still more difficult. He is weak in himself; he is pressed by the subject of the strong line below him. But happily that subject, though strong, is correct; and above in the fifth line, in the place of authority, is the strong one, union with whom and the service of whom should be the objects pursued. All these circumstances suggested to the duke of *Kâu* the idea of a young lady, sought in marriage by a strong wooer, when marriage was unsuitable, rejecting him, and finally, after ten years, marrying a more suitable, the only suitable, match for her.

The third line is divided, not central, and the number of its place is appropriate to the occupancy of a strong line. All these things should affect the symbolism of the line. But the outcome of the whole hexagram being good, the superior man sees the immediate danger and avoids it.

The subject of the fourth line, the first of the upper trigram, has recourse to the strong suitor of line 1, the first of the lower trigram; and with his help is able to cope with the difficulties of the position, and go forward.

The subject of the fifth line is in the place of authority, and should show himself a ruler, dispensing benefits on a great scale. But he is in the very centre of the trigram denoting perilousness, and line 2, which responds to 5, is weak. Hence arises the symbolism, and great things should not be attempted.

The sixth line is weak; the third responding to it is also weak; it is at the extremity of peril; the game is up. What can remain for its subject in such a case but terror and abject weeping?

but he comes and seeks me. When he shows (the sincerity that marks) the first recourse to divination, I instruct him. If he apply a second and third time, that is troublesome; and I do not instruct the troublesome. There will be advantage in being firm and correct.

1. The first line, divided, (has respect to) the dispelling of ignorance. It will be advantageous to use punishment (for that purpose), and to remove the shackles (from the mind). But going on in that way (of punishment) will give occasion for regret.

2. The second line, undivided, (shows its subject) exercising forbearance with the ignorant, in which there will be good fortune; and admitting (even the goodness of women, which will also be fortunate. (He may be described also as) a son able to (sustain the burden of) his family.

3. The third line, divided, (seems to say) that one should not marry a woman whose emblem it might be, for that, when she sees a man of wealth, she will not keep her person from him, and in no wise will advantage come from her.

4. The fourth line, divided, (shows its subject as if) bound in chains of ignorance. There will be occasion for regret.

5. The fifth line, divided, shows its subject as a simple lad without experience. There will be good fortune.

6. In the topmost line, undivided, we see one smiting the ignorant (youth). But no advantage

will come from doing him an injury. Advantage would come from warding off injury from him.

IV. As *K'un* shows us plants struggling from beneath the surface, *Mãng* suggests to us the small and undeveloped appearance which they then present; and hence it came to be the symbol of youthful inexperience and ignorance. The object of the hexagram is to show how such a condition should be dealt with by the parent and ruler, whose authority and duty are represented by the second and sixth, the two undivided lines. All between the first and last sentences of the *Thwan* must be taken as an oracular response received by the party divining on the subject of enlightening the youthful ignorant. This accounts for its being more than usually enigmatical, and for its being partly rhythmical. See Appendix I, in loc.

The subject of the first line, weak, and at the bottom of the figure, is in the grossest ignorance. Let him be punished. If punishment avail to loosen the shackles and manacles from the mind, well; if not, and punishment be persevered with, the effect will be bad.

On the subject of the second line, strong, and in the central place, devolves the task of enlightening the ignorant; and we have him discharging it with forbearance and humility. In proof of his generosity, it is said that 'he receives,' or learns from, even weak and ignorant women. He appears also as 'a son' taking the place of his father.

The third line is weak, and occupies an odd place belonging properly to an undivided line; nor is its place in the centre. All these things give the subject of it so bad a character.

The fourth line is far from both the second and sixth, and can get no help from its correlate,—the first line, weak as itself. What good can be done with or by the subject of it?

The fifth line is in the place of honour, and has for its correlate the strong line in the second place. Being weak in itself, it is taken as the symbol of a simple lad, willing to be taught.

The topmost line is strong, and in the highest place. It is natural, but unwise, in him to use violence in carrying on his educational measures. A better course is suggested to him.

V. THE HSÜ HEXAGRAM.

Hsü intimates that, with the sincerity which is declared in it, there will be brilliant success. With firmness there will be good fortune; and it will be advantageous to cross the great stream.

1. The first line, undivided, shows its subject waiting in the distant border. It will be well for him constantly to maintain (the purpose thus shown), in which case there will be no error.

2. The second line, undivided, shows its subject waiting on the sand (of the mountain stream). He will (suffer) the small (injury of) being spoken (against), but in the end there will be good fortune.

3. The third line, undivided, shows its subject in the mud (close by the stream). He thereby invites the approach of injury.

4. The fourth line, divided, shows its subject waiting in (the place of) blood. But he will get out of the cavern.

5. The fifth line, undivided, shows its subject waiting amidst the appliances of a feast. Through his firmness and correctness there will be good fortune.

6. The topmost line, divided, shows its subject entered into the cavern. (But) there are three guests coming, without being urged, (to his help).

If he receive them respectfully, there will be good fortune in the end.

V. Hsü means waiting. Strength confronted by peril might be expected to advance boldly and at once to struggle with it; but it takes the wiser plan of waiting till success is sure. This is the lesson of the hexagram. That 'sincerity is declared in it' is proved from the fifth line in the position of honour and authority, central, itself undivided and in an odd place. In such a case, nothing but firm correctness is necessary to great success.

'Going through a great stream,' an expression frequent in the Yî, may mean undertaking hazardous enterprises, or encountering great difficulties, without any special reference; but more natural is it to understand by 'the great stream' the Yellow river, which the lords of Kâu must cross in a revolutionary movement against the dynasty of Yin and its tyrant. The passage of it by king Wû, the son of Wăn in B.C. 1122, was certainly one of the greatest deeds in the history of China. It was preceded also by long 'waiting,' till the time of assured success came.

'The border' under line 1 means the frontier territory of the state. There seems no necessity for such a symbolism. 'The sand' and 'the mud' are appropriate with reference to the watery defile; but it is different with 'the border.' The subject of the line appears at work in his distant fields, not thinking of anything but his daily work; and he is advised to abide in that state and mind.

'The sand' of paragraph 2 suggests a nearer approach to the defile, but its subject is still self-restrained and waiting. I do not see what suggests the idea of his suffering from 'the strife of tongues.'

In paragraph 3 the subject is on the brink of the stream. His advance to that position has provoked resistance, which may result in his injury.

Line 4 has passed from the inner to the upper trigram, and entered on the scene of danger and strife;—'into the place of blood.' Its subject is 'weak and in the correct place for him;' he therefore retreats and escapes from the cavern, where he was engaged with his enemy.

Line 5 is strong and central, and in its correct place, being that of honour. All good qualities therefore belong to the subject of it, who has triumphed, and with firmness will triumph still more.

Line 6 is weak, and has entered deeply into the defile and its caverns. What will become of its subject? His correlate is the

Rubison

VI. THE SUNG HEXAGRAM.

Sung intimates how, though there is sincerity in one's contention, he will yet meet with opposition and obstruction; but if he cherish an apprehensive caution, there will be good fortune, while, if he must prosecute the contention to the (bitter) end, there will be evil. It will be advantageous to see the great man; it will not be advantageous to cross the great stream.

1. The first line, divided, shows its subject not perpetuating the matter about which (the contention is). He will suffer the small (injury) of being spoken against, but the end will be fortunate.

2. The second line, undivided, shows its subject unequal to the contention. If he retire and keep concealed (where) the inhabitants of his city are (only) three hundred families, he will fall into no mistake.

3. The third line, divided, shows its subject keeping in the old place assigned for his support, and firmly correct. Perilous as the position is, there will be good fortune in the end. Should he per-

strong line 3 below, which comes with its two companions to his help. If they are respectfully received, that help will prove effectual. P. Regis tries to find out a reference in these 'three guests' to three princes who distinguished themselves by taking part with K'âu in its struggle with Yin or Shang; see vol. i, pp. 279-282. I dare not be so confident of any historical reference.

chance engage in the king's business, he will not (claim the merit of) achievement.

4. The fourth line, undivided, shows its subject unequal to the contention. He returns to (the study of Heaven's) ordinances, changes (his wish to contend), and rests in being firm and correct. There will be good fortune.

5. The fifth line, undivided, shows its subject contending;—and with great good fortune.

6. The topmost line, undivided, shows how its subject may have the leathern belt conferred on him (by the sovereign), and thrice it shall be taken from him in a morning.

VI. We have strength in the upper trigram, as if to regulate and control the lower, and peril in that lower as if looking out for an opportunity to assail the upper; or, as it may be represented, we have one's self in a state of peril matched against strength from without. All this is supposed to give the idea of contention or strife. But the undivided line in the centre of *Khân* is emblematic of sincerity, and gives a character to the whole figure. An individual, so represented, will be very wary, and have good fortune; but strife is bad, and if persevered in even by such a one, the effect will be evil. The fifth line, undivided, in an odd place, and central, serves as a representative of 'the great man,' whose agency is sure to be good; but the topmost line being also strong, and with its two companions, riding as it were, on the trigram of peril, its action is likely to be too rash for a great enterprise. See the treatise on the *Thwan*, in loc.

The subject of line 1 is weak and at the bottom of the figure. He may suffer a little in the nascent strife, but will let it drop; and the effect will be good.

Line 2 represents one who is strong, and has the rule of the lower trigram;—he has the mind for strife, and might be expected to engage in it. But his strength is weakened by being in an even place, and he is no match for his correlate in line 5, and therefore retreats. A town or city with only three hundred families is said

VII. THE SZE HEXAGRAM.

Sze indicates how, in the case which it supposes, with firmness and correctness, and (a leader of) age

to be very small. That the subject of the line should retire to so insignificant a place is further proof of his humility.

Line 3 is weak and in an odd place. Its subject therefore is not equal to strive, but withdraws from the arena. Even if forced into it, he will keep himself in the background;—and be safe. 'He keeps in the old place assigned for his support' is, literally, 'He eats his old virtue;' meaning that he lives in and on the appanage assigned to him for his services.

Line 4 is strong, and not in the centre; so that we are to conceive of its subject as having a mind to strive. But immediately above it is line 5, the symbol of the ruler, and with him it is hopeless to strive; immediately below is 3, weak, and out of its proper place, incapable of maintaining a contention. Its proper correlate is the lowest line, weak, and out of its proper place, from whom little help can come. Hence its subject takes the course indicated, which leads to good fortune.

Line 5 has every circumstance in favour of its subject.

Line 6 is strong and able to contend successfully; but is there to be no end of striving? Persistence in it is sure to end in defeat and disgrace. The contender here might receive a reward from the king for his success; but if he received it thrice in a morning, thrice it would be taken from him again. As to the nature of the reward here given, see on the Li K'i, X, ii, 32.

P. Regis explains several of the expressions in the Text, both in the Thwan and the Hsiang, from the history of king Wăn and his son king Wû. Possibly his own circumstances may have suggested to Wăn some of the Thwan; and his course in avoiding a direct collision with the tyrant Shâu, and Wû's subsequent exploits may have been in the mind of the duke of K'âu. Some of the sentiments, however, cannot be historically explained. They are general protests against all contention and strife.

and experience, there will be good fortune and no error.

1. The first line, divided, shows the host going forth according to the rules (for such a movement). If these be not good, there will be evil.

2. The second line, undivided, shows (the leader) in the midst of the host. There will be good fortune and no error. The king has thrice conveyed to him the orders (of his favour).

3. The third line, divided, shows how the host may, possibly, have many inefficient leaders. There will be evil.

4. The fourth line, divided, shows the host in retreat. There is no error.

5. The fifth line, divided, shows birds in the fields, which it will be advantageous to seize (and destroy). In that case there will be no error. If the oldest son leads the host, and younger men (idly occupy offices assigned to them), however firm and correct he may be, there will be evil.

6. The topmost line, divided, shows the great ruler delivering his charges, (appointing some) to be rulers of states, and others to undertake the headship of clans; but small men should not be employed (in such positions).

VII. The conduct of military expeditions in a feudal kingdom, and we may say, generally, is denoted by the hexagram Sze. Referring to Appendixes I and II for an explanation of the way in which the combination of lines in it is made out to suggest the idea of an army, and that idea being assumed, it is easy to see how the undivided line in the second place should be interpreted of the general, who is responded to by the divided line in the fifth and royal place. Thus entire trust is reposed in him. He is strong

VIII. THE PĬ HEXAGRAM.

PĬ indicates that (under the conditions which it supposes) there is good fortune. But let (the principal party intended in it) re-examine himself, (as if)

and correct, and his enterprises will be successful. He is denominated *kang zǎn*, 'an old, experienced man.'

'The rules,' it is said, 'are twofold;—first, that the war be for a ✓ righteous end; and second, that the manner of conducting it, ✓ especially at the outset, be right.' But how this and the warning in the conclusion should both follow from the divided line being in the first place, has not been sufficiently explained.

How line 2 comes to be the symbol of the general in command of the army has been shown above on the Thwan. The orders of the king thrice conveyed to him are to be understood of his appointment to the command, and not of any rewards conferred on him as a tribute to his merit. Nor is stress to be laid on the 'thrice.' 'It does not mean that the appointment came to him three times; but that it was to him exclusively, and with the entire confidence of the king.'

The symbolism of line 3 is very perplexing. P. Regis translates it:—'*Milites videntur deponere sarcinas in curribus. Male.*' Canon McClatchie has:—'*Third-six represents soldiers as it were lying dead in their baggage carts, and is unlucky.*' To the same effect was my own translation of the paragraph, nearly thirty years ago. But the third line, divided, cannot be forced to have such an indication. The meaning I have now given is more legitimate, taken character by character, and more in harmony with the scope of the hexagram. The subject of line 2 is the one proper leader of the host. But line 3 is divided and weak, and occupies the place of a strong line, as if its subject had perversely jumped over two, and perched himself above it to take the command. This interpretation also suits better in the 5th paragraph.

Line 4 is weak and not central; and therefore 'to retreat' is

by divination, whether his virtue be great, unintermitting, and firm. If it be so, there will be no error. Those who have not rest will then come to him; and with those who are (too) late in coming it will be ill.

1. The first line, divided, shows its subject seeking by his sincerity to win the attachment of his object. There will be no error. Let (the breast) be full of sincerity as an earthenware vessel is of its contents, and it will in the end bring other advantages.

2. In the second line, divided, we see the movement towards union and attachment proceeding from the inward (mind). With firm correctness there will be good fortune.

3. In the third line, divided, we see its subject seeking for union with such as ought not to be associated with.

4. In the fourth line, divided, we see its subject

natural for its subject. But its place is even, and proper for a divided line; and the retreat will be right in the circumstances.

In line 5 we seem to have an intimation of the important truth that only defensive war, or war waged by the rightful authority to put down rebellion and lawlessness, is right. 'The birds in the fields' symbolise parties attacking for plunder. The fifth line symbolises the chief authority,—the king, who is weak, or humble, and in the centre, and cedes the use of all his power to the general symbolised by line 2. The subject of 2 is 'the oldest son.' Those of three and four are supposed to be 'the younger brother and son,' that is, the younger men, who would cause evil if admitted to share the command.

The lesson on the topmost line is true and important, but the critics seem unable to deduce it from the nature of the line, as divided and in the sixth place.

seeking for union with the one beyond himself. With firm correctness there will be good fortune.

5. The fifth line, undivided, affords the most illustrious instance of seeking union and attachment. (We seem to see in it) the king urging his pursuit of the game (only) in three directions, and allowing the escape of all the animals before him, while the people of his towns do not warn one another (to prevent it). There will be good fortune.

6. In the topmost line, divided, we see one seeking union and attachment without having taken the first step (to such an end). There will be evil.

VIII. The idea of union between the different members and classes of a state, and how it can be secured, is the subject of the hexagram Pī. The whole line occupying the fifth place, or that of authority, in the hexagram, represents the ruler to whom the subjects of all the other lines offer a ready submission. According to the general rules for the symbolism of the lines, the second line is the correlate of the fifth; but all the other lines are here made subject to that fifth;—which is also a law of the Yi, according to the ‘Daily Lecture.’ To me it has the suspicious look of being made for the occasion. The harmony of union, therefore, is to be secured by the sovereign authority of one; but he is warned to see to it that his virtue be what will beseem his place, and subjects are warned not to delay to submit to him.

Where does the ‘sincerity’ predicated of the subject of line 1 come from? The ‘earthenware vessel’ is supposed to indicate its plain, unadorned character; but there is nothing in the position and nature of the line, beyond the general idea in the figure, to suggest the attribute.

Line 2 is the proper correlate of 5. Its position in the centre of the inner or lower trigram agrees with the movement of its subject as proceeding from the inward mind.

Line 3 is weak, not in the centre, nor in its correct place. The lines above and below it are both weak. All these things are supposed to account for what is said on it.

‘The one beyond himself’ in line 4 is the ruler or king, who is

IX. THE HSIÃO KHŪ HEXAGRAM.

Hsiao Khū indicates that (under its conditions) there will be progress and success. (We see) dense clouds, but no rain coming from our borders in the west.

1. The first line, undivided, shows its subject returning and pursuing his own course. What mistake should he fall into? There will be good fortune.

2. The second line, undivided, shows its subject, by the attraction (of the former line), returning (to the proper course). There will be good fortune.

the subject of 5, and with whom union ought to be sought. The divided line, moreover, is in a place proper to it. If its subject be firm and correct, there will be good fortune.

The subject of line 5 is the king, who must be the centre of union. The ancient kings had their great hunting expeditions in the different seasons; and that of each season had its peculiar rules. But what is stated here was common to all. When the beating was completed, and the shooting was ready to commence, one side of the enclosure into which the game had been driven was left open and unguarded;—a proof of the royal benevolence, which did not want to make an end of all the game. So well known and understood is this benevolence of the model king of the hexagram, that all his people try to give it effect. Thus the union contemplated is shown to be characterised by mutual confidence and appreciation in virtue and benevolence.

A weak line being in the 6th place, which is appropriate to it, its subject is supposed to be trying to promote union among and with the subjects of the lines below. It is too late. The time is past. Hence it is symbolised as 'without a head,' that is, as not having taken the first step, from which its action should begin, and go on to the end.

3. The third line, undivided, suggests the idea of a carriage, the strap beneath which has been removed, or of a husband and wife looking on each other with averted eyes.

4. The fourth line, divided, shows its subject possessed of sincerity. The danger of bloodshed is thereby averted, and his (ground for) apprehension dismissed. There will be no mistake.

5. The fifth line, undivided, shows its subject possessed of sincerity, and drawing others to unite with him. Rich in resources, he employs his neighbours (in the same cause with himself).

6. The topmost line, undivided, shows how the rain has fallen, and the (onward progress) is stayed; —(so) must we value the full accumulation of the virtue (represented by the upper trigram). But a wife (exercising restraint), however firm and correct she may be, is in a position of peril, (and like) the moon approaching to the full. If the superior man prosecute his measures (in such circumstances), there will be evil.

IX. The name Hsião K'ü is interpreted as meaning 'small restraint.' The idea of 'restraint' having once been determined on as that to be conveyed by the figure, it is easily made out that the restraint must be small, for its representative is the divided line in the fourth place; and the check given by that to all the undivided lines cannot be great. Even if we suppose, as many critics do, that all the virtue of that upper trigram Sun is concentrated in its first line, the attribute ascribed to Sun is that of docile flexibility, which cannot long be successful against the strength emblemized by the lower trigram K'ien. The restraint therefore is small, and in the end there will be 'progress and success.'

The second sentence of the Thwan contains indications of the place, time, and personality of the writer which it seems possible to ascertain. The fief of K'au was the western portion of the

X. THE LI HEXAGRAM.

(Li suggests the idea of) one treading on the tail of a tiger, which does not bite him. There will be progress and success.

kingdom of Yin or Shang, the China of the twelfth century B. C., the era of king Wăn. Rain coming and moistening the ground is the cause of the beauty and luxuriance of the vegetable world, and the emblem of the blessings flowing from good training and good government. Here therefore in the west, the hereditary territory of the house of K'âu, are blessings which might enrich the whole kingdom; but they are somehow restrained. The dense clouds do not empty their stores.

P. Regis says:—‘To declare openly that no rain fell from the heavens long covered with dense clouds over the great tract of country, which stretched from the western border to the court and on to the eastern sea, was nothing else but leaving it to all thoughtful minds to draw the conclusion that the family of Wăn was as worthy of the supreme seat as that of Shâu, the tyrant, however ancient, was unworthy of it (vol. i, p. 356).’ The intimation is not put in the Text, however, so clearly as by P. Regis.

Line 1 is undivided, the first line of K'ien, occupying its proper place. Its subject, therefore, notwithstanding the check of line 4, resumes his movement, and will act according to his strong nature, and go forward.

Line 2 is also strong, and though an even place is not appropriate to it, that place being central, its subject will make common cause with the subject of line 1; and there will be good fortune.

Line 3, though strong, and in a proper place, yet not being in the centre, is supposed to be less able to resist the restraint of line 4; and hence it has the ill omens that are given.

The subject of line 4, one weak line against all the strong lines of the hexagram, might well expect wounds, and feel apprehension in trying to restrain the others; but it is in its proper place; it is the first line also of Sun, whose attribute is docile flexibility.

1. The first line, undivided, shows its subject treading his accustomed path. If he go forward, there will be no error.

2. The second line, undivided, shows its subject treading the path that is level and easy;—a quiet and solitary man, to whom, if he be firm and correct, there will be good fortune.

3. The third line, divided, shows a one-eyed man (who thinks he) can see; a lame man (who thinks he) can walk well; one who treads on the tail of a tiger and is bitten. (All this indicates) ill fortune. We have a (mere) bravo acting the part of a great ruler.

4. The fourth line, undivided, shows its subject treading on the tail of a tiger. He becomes full of apprehensive caution, and in the end there will be good fortune.

5. The fifth line, undivided, shows the resolute tread of its subject. Though he be firm and correct, there will be peril.

6. The sixth line, undivided, tells us to look at (the whole course) that is trodden, and examine the

The strong lines are moved to sympathy and help, and 'there is no mistake.'

Line 5 occupies the central place of Sun, and converts, by the sincerity of its subject, 4 and 6 into its neighbours, who suffer themselves to be used by it, and effect their common object.

In line 6, the idea of the hexagram has run its course. The harmony of nature is restored. The rain falls, and the onward march of the strong lines should now stop. But weakness that has achieved such a result, if it plume itself on it, will be in a position of peril; and like the full moon, which must henceforth wane. Let the superior man, when he has attained his end, remain in quiet.

presage which that gives. If it be complete and without failure, there will be great good fortune.

X. The character giving its name to the hexagram plays an important part also in the symbolism; and this may be the reason why it does not, as the name, occupy the first place in the Thwan. Looking at the figure, we see it is made up of the trigrams Tui, representing a marsh, and K'ien, representing the sky. Tui is a yin trigram, and its top line is divided. Below K'ien, the great symbol of strength, it may readily suggest the idea of treading on a tiger's tail, which was an old way of expressing what was hazardous (Shû V, xxv, 2). But what suggests the statement that 'the tiger does not bite the treader?' The attribute of Tui is pleased satisfaction. Of course such an attribute could not be predicated of one who was in the fangs of a tiger. The coming scatheless out of such danger further suggests the idea of 'progress and success' in the course which king Wăn had in his mind. And according to Appendix VI, that course was 'propriety,' the observance of all the rules of courtesy. On these, as so many stepping-stones, one may tread safely amid scenes of disorder and peril.

Line 1 is an undivided line in an odd place; giving us the ideas of activity, firmness, and correctness. One so characterised will act rightly.

Line 2 occupies the middle place of the trigram, which is supposed to symbolise a path cut straight and level along the hill-side, or over difficult ground. Line 5 is not a proper correlate, and hence the idea of the subject of 2 being 'a quiet and solitary man.'

Line 3 is neither central nor in an even place, which would be proper to it. But with the strength of will which the occupant of an odd place should possess, he goes forward with the evil results so variously emblemed. The editors of the imperial edition, in illustration of the closing sentence, refer to Analects VII, x.

Line 4 is in contiguity with 5, whose subject is in the place of authority; but he occupies the place proper to a weak or divided line, and hence he bethinks himself, and goes softly.

Beneath the symbolism under line 5, lies the principle that the most excellent thing in 'propriety' is humility. And the subject of the line, which is strong and central, will not be lacking in this, but bear in mind that the higher he is exalted, the greater may be his fall.

XI. THE THÂI HEXAGRAM.

In Thái (we see) the little gone and the great come. (It indicates that) there will be good fortune, with progress and success.

1. The first line, undivided, suggests the idea of grass pulled up, and bringing with it other stalks with whose roots it is connected. Advance (on the part of its subject) will be fortunate.

2. The second line, undivided, shows one who can bear with the uncultivated, will cross the Ho without a boat, does not forget the distant, and has no (selfish) friendships. Thus does he prove himself acting in accordance with the course of the due Mean.

3. The third line, undivided, shows that, while there is no state of peace that is not liable to be disturbed, and no departure (of evil men) so that they shall not return, yet when one is firm and correct, as he realises the distresses that may arise, he will commit no error. There is no occasion for sadness at the certainty (of such recurring changes); and in this mood the happiness (of the present) may be (long) enjoyed.

4. The fourth line, divided, shows its subject fluttering (down);—not relying on his own rich

What is said on line 6 is good, but is only a truism. The whole course has been shown; if every step has been right and appropriate, the issue will be very good.

resources, but calling in his neighbours. (They all come) not as having received warning, but in the sincerity (of their hearts).

5. The fifth line, divided, reminds us of (king) Tî-yî's (rule about the) marriage of his younger sister. By such a course there is happiness and there will be great good fortune.

6. The sixth line, divided, shows us the city wall returned into the moat. It is not the time to use the army. (The subject of the line) may, indeed, announce his orders to the people of his own city; but however correct and firm he may be, he will have cause for regret.

XI. The language of the Thwan has reference to the form of Thâi, with the three strong lines of K'ien below, and the three weak lines of Khwân above. The former are 'the great,' active and vigorous; the latter are 'the small,' inactive and submissive. But where have the former 'come' from, and whither are the latter 'gone?' In many editions of the Yî beneath the hexagram of Thâi here, there appears that of Kwei Mei, the 54th in order () which becomes Thâi, if the third and fourth lines exchange places. But in the notes on the Thwan, in the first Appendix, on hexagram 6, I have spoken of the doctrine of 'changing figures,' and intimated my disbelief of it. The different hexagrams arose necessarily by the continued manipulation of the undivided and divided lines, and placing them each over itself and over the other. When king Wân wrote these Thwan, he was taking the 64 hexagrams, as they were ready to his hand, and not forming one from another by any process of divination. The 'gone' and 'come' are merely equivalent to 'below' and 'above,' in the lower trigram or in the upper.

A course in which the motive forces are represented by the three strong, and the opposing by the three weak lines, must be progressive and successful. Thâi is called the hexagram of the first month of the year, the first month of the natural spring, when for six months, through the fostering sun and genial skies, the processes of growth will be going on.

XII. THE PHÏ HEXAGRAM.

In Phï there is the want of good understanding between the (different classes of) men, and its indication is unfavourable to the firm and correct

The symbolism of paragraph 1 is suggested by the three strong lines of *K'ien* all together, and all possessed by the same instinct to advance. The movement of the first will be supported by that of the others, and be fortunate.

The second line is strong, but in an even place. This is supposed to temper the strength of its subject; which is expressed by the first of his characteristics. But the even place is the central; and it is responded to by a proper correlate in the fifth line above. Hence come all the symbolism of the paragraph and the auspice of good fortune implied in it.

Beneath the symbolism in paragraph 3 there lies the persuasion of the constant change that is taking place in nature and in human affairs. As night succeeds to day, and winter to summer, so calamity may be expected to follow prosperity, and decay the flourishing of a state. The third is the last of the lines of *K'ien*, by whose strength and activity the happy state of *Thâi* has been produced. Another aspect of things may be looked for; but by firmness and correctness the good estate of the present may be long continued.

According to the treatise on the *Thwan*, the subjects of the fourth and other upper lines are not 'the small returning' as opponents of the strong lines below, as is generally supposed; but as the correlates of those lines, of one heart and mind with them to maintain the state of *Thâi*, and giving them, humbly but readily, all the help in their power.

Ti-yî, the last sovereign but one of the Yin dynasty, reigned from B.C. 1191 to 1155; but what was the history of him and his sister here referred to we do not know. P. Regis assumes that he gave his sister in marriage to the lord of *K'âu*, known in subse-

course of the superior man. We see in it the great gone and the little come.

1. The first line, divided, suggests the idea of grass pulled up, and bringing with it other stalks with whose roots it is connected. With firm correctness (on the part of its subject), there will be good fortune and progress.

2. The second line, divided, shows its subject patient and obedient. To the small man (comporting himself so) there will be good fortune. If the great man (comport himself) as the distress and obstruction require, he will have success.

3. The third line, divided, shows its subject ashamed of the purpose folded (in his breast).

4. The fourth line, undivided, shows its subject acting in accordance with the ordination (of Heaven), and committing no error. His companions will come and share in his happiness.

5. In the fifth line, undivided, we see him who

quent time as king Wăn, and that she was the famous Thai-sze ;—contrary to all the evidence I have been able to find on the subject. According to *Khăng-ze*, Tî-yî was the first to enact a law that daughters of the royal house, in marrying princes of the states, should be in subjection to them, as if they were not superior to them in rank. Here line 5, while occupying the place of dignity and authority in the hexagram, is yet a weak line in the place of a strong one ; and its subject, accordingly, humbly condescends to his strong and proper correlate in line 2.

The course denoted by Thâi has been run ; and will be followed by one of a different and unhappy character. The earth dug from the moat had been built up to form a protecting wall ; but it is now again fallen into the ditch. War will only aggravate the evil ; and however the ruler may address good proclamations to himself and the people of his capital, the coming evil cannot be altogether averted.

brings the distress and obstruction to a close,—the great man and fortunate. (But let him say), 'We may perish! We may perish!' (so shall the state of things become firm, as if) bound to a clump of bushy mulberry trees.

6. The sixth line, undivided, shows the overthrow (and removal of) the condition of distress and obstruction. Before this there was that condition. Hereafter there will be joy.

XII. The form of Phï, it will be seen, is exactly the opposite of that of Thâi. Much of what has been said on the interpretation of that will apply to this, or at least assist the student in making out the meaning of its symbolism. Phï is the hexagram of the seventh month. Genial influences have done their work, the processes of growth are at an end. Henceforth increasing decay must be looked for.

Naturally we should expect the advance of the subject of the first of the three weak lines to lead to evil; but if he set himself to be firm and correct, he will bring about a different issue.

Patience and obedience are proper for the small man in all circumstances. If the great man in difficulty yet cherish these attributes, he will soon have a happy issue out of the distress.

The third line is weak. Its place is odd, and therefore for it incorrect. Its subject would vent his evil purpose, but has not strength to do so. He is left therefore to the shame which he ought to feel without a word of warning. Does the ming of the fourth line mean 'the ordination of Heaven,' as Kû Hsî thinks; or the orders of the ruler, as K'äng-ze says? Whichever interpretation be taken (and some critics unite the two), the action of the subject of the line, whose strength is tempered by the even position, will be good and correct, and issue in success and happiness.

The strong line in the fifth, (its correct), place, brings the distress and obstruction to a close. Yet its subject—the ruler in the hexagram—is warned to continue to be cautious in two lines of rhyme:—

'And let him say, "I die! I die!"

So to a bushy clump his fortune he shall tie."

There is an end of the condition of distress. It was necessary that condition should give place to its opposite; and the strong line in the topmost place fitly represents the consequent joy.

XIII. THE THUNG Zǎn HEXAGRAM.

Thung Zǎn (or 'Union of men') appears here (as we find it) in the (remote districts of the) country, indicating progress and success. It will be advantageous to cross the great stream. It will be advantageous to maintain the firm correctness of the superior man.

1. The first line, undivided, (shows the representative of) the union of men just issuing from his gate. There will be no error.

2. The second line, divided, (shows the representative of) the union of men in relation with his kindred. There will be occasion for regret.

3. The third line, undivided, (shows its subject) with his arms hidden in the thick grass, and at the top of a high mound. (But) for three years he makes no demonstration.

4. The fourth line, undivided, (shows its subject) mounted on the city wall; but he does not proceed to make the attack (he contemplates). There will be good fortune.

5. In the fifth line, undivided, (the representative of) the union of men first wails and cries out, and then laughs. His great host conquers, and he (and the subject of the second line) meet together.

6. The topmost line, undivided, (shows the repre-

sentative of) the union of men in the suburbs. There will be no occasion for repentance.

XIII. Thung Zăn describes a condition of nature and of the state opposite to that of Phî. There was distress and obstruction; here is union. But the union must be based entirely on public considerations, without taint of selfishness.

The strong line in the fifth, its correct, place, occupies the most important position, and has for its correlate the weak second line, also in its correct place. The one divided line is naturally sought after by all the strong lines. The upper trigram is that of heaven, which is above; the lower is that of fire, whose tendency is to mount upwards. All these things are in harmony with the idea of union. But the union must be free from all selfish motives, and this is indicated by its being in the remote districts of the country, where people are unsophisticated, and free from the depraving effects incident to large societies. A union from such motives will cope with the greatest difficulties; and yet a word of caution is added.

Line 1 emblems the first attempts at union. It is strong, but in the lowest place; and it has no proper correlate above. There is, however, no intermixture of selfishness in it.

Lines 2 and 5 are proper correlates, which fact suggests in this hexagram the idea of their union being limited and partial, and such as may afford ground for blame.

Line 3 is strong, and in an odd place; but it has not a proper correlate in 6. This makes its subject more anxious to unite with 2; but 2 is devoted to its proper correlate in 5, of whose strength 3 is afraid, and takes the measures described. His abstaining so long, however, from any active attempt, will save him from misfortune.

Line 4 is strong, but in an even place, which weakens its subject. He also would fain make an attempt on 2; but he is afraid, and does not carry his purpose into effect.

Line 5 is strong, in an odd, and the central place; and would fain unite with 2, which indeed is the proper correlate of its subject. But 3 and 4 are powerful foes that oppose the union. Their opposition makes him weep; but he collects his forces, defeats them, and effects his purpose.

The union reaches to all within the suburbs, and is not yet universal; but still there is no cause for repentance.

XIV. THE TÂ YÛ HEXAGRAM.

Tâ Yû indicates that, (under the circumstances which it implies), there will be great progress and success.

1. In the first line, undivided, there is no approach to what is injurious, and there is no error. Let there be a realisation of the difficulty (and danger of the position), and there will be no error (to the end).

2. In the second line, undivided, we have a large waggon with its load. In whatever direction advance is made, there will be no error.

3. The third line, undivided, shows us a feudal prince presenting his offerings to the Son of Heaven. A small man would be unequal (to such a duty).

4. The fourth line, undivided, shows its subject keeping his great resources under restraint. There will be no error.

5. The fifth line, divided, shows the sincerity of its subject reciprocated by that of all the others (represented in the hexagram). Let him display a proper majesty, and there will be good fortune.

6. The topmost line, undivided, shows its subject with help accorded to him from Heaven. There will be good fortune, advantage in every respect.

XIV. Tâ Yû means 'Great Havings;' denoting in a kingdom a state of prosperity and abundance, and in a family or individual, a

XV. THE *KHIEN* HEXAGRAM.

K'ien indicates progress and success. The superior man, (being humble as it implies), will have a (good) issue (to his undertakings).

1. The first line, divided, shows us the superior man who adds humility to humility. (Even) the great

state of opulence. The danger threatening such a condition arises from the pride which it is likely to engender. But everything here is against that issue. Apart from the symbolism of the trigrams, we have the place of honour occupied by a weak line, so that its subject will be humble; and all the other lines, strong as they are, will act in obedient sympathy. There will be great progress and success.

Line 1, though strong, is at the lowest part of the figure, and has no correlate above. No external influences have as yet acted injuriously on its subject. Let him do as directed, and no hurtful influence will ever affect him.

The strong line 2 has its proper correlate in line 5, the ruler of the figure, and will use its strength in subordination to his humility. Hence the symbolism.

Line 3 is strong, and in the right (an odd) place. The topmost line of the lower trigram is the proper place for a feudal lord. The subject of this will humbly serve the condescending ruler in line 5. A small man, having the place without the virtue, would give himself airs.

Line 4 is strong, but the strength is tempered by the position, which is that of a weak line. Hence he will do no injury to the mild ruler, to whom he is so near.

Line 5 symbolises the ruler. Mild sincerity is good in him, and affects his ministers and others. But a ruler must not be without an awe-inspiring majesty.

Even the topmost line takes its character from 5. The strength of its subject is still tempered, and Heaven gives its approval.

stream may be crossed with this, and there will be good fortune.

2. The second line, divided, shows us humility that has made itself recognised. With firm correctness there will be good fortune.

3. The third line, undivided, shows the superior man of (acknowledged) merit. He will maintain his success to the end, and have good fortune.

4. The fourth line, divided, shows one, whose action would be in every way advantageous, stirring up (the more) his humility.

5. The fifth line, divided, shows one who, without being rich, is able to employ his neighbours. He may advantageously use the force of arms. All his movements will be advantageous.

6. The sixth line, divided, shows us humility that has made itself recognised. The subject of it will with advantage put his hosts in motion; but (he will only) punish his own towns and state.

XV. An essay on humility rightly follows that on abundant possessions. The third line, which is a whole line amid five others divided, occupying the topmost place in the lower trigram, is held by the Khang-hsî editors and many others to be 'the lord of the hexagram,' the representative of humility, strong, but abasing itself. There is nothing here in the text to make us enter farther on the symbolism of the figure. Humility is the way to permanent success.

A weak line, at the lowest place of the figure, is the fitting symbol of the superior man adding humility to humility.

Line 2 is weak, central, and in its proper place, representing a humility that has 'crowded;' that is, has proclaimed itself.

Line 3 is strong, and occupies an odd (its proper) place. It is 'the lord of the hexagram,' to whom all represented by the lines above and below turn.

Line 4 is weak and in its proper position. Its subject is sure to

XVI. THE YÜ HEXAGRAM.

Yü indicates that, (in the state which it implies), feudal princes may be set up, and the hosts put in motion, with advantage.

1. The first line, divided, shows its subject proclaiming his pleasure and satisfaction. There will be evil.

2. The second line, divided, shows one who is firm as a rock. (He sees a thing) without waiting till it has come to pass; with his firm correctness there will be good fortune.

3. The third line, divided, shows one looking up (for favours), while he indulges the feeling of pleasure and satisfaction. If he would understand!—If he be late in doing so, there will indeed be occasion for repentance.

4. The fourth line, undivided, shows him from whom the harmony and satisfaction come. Great

be successful and prosperous, but being so near the fifth line, he should still use the greatest precaution.

All men love and honour humility, in itself and without the adjuncts which usually command obedience and respect. Hence his neighbours follow the ruler in the fifth line, though he may not be very rich or powerful. His humility need not keep him from asserting the right, even by force of arms.

The subject of the sixth line, which is weak, is outside the game, so to speak, that has been played out. He will use force, but only within his own sphere and to assert what is right. He will not be aggressive.

is the success which he obtains. Let him not allow suspicions to enter his mind, and thus friends will gather around him.

5. The fifth line, divided, shows one with a chronic complaint, but who lives on without dying.

6. The topmost line, divided, shows its subject with darkened mind devoted to the pleasure and satisfaction (of the time); but if he change his course even when (it may be considered as) completed, there will be no error.

XVI. The Yü hexagram denoted to king Wán a condition of harmony and happy contentment throughout the kingdom, when the people rejoiced in and readily obeyed their sovereign. At such a time his appointments and any military undertakings would be hailed and supported. The fourth line, undivided, is the lord of the figure, and being close to the fifth or place of dignity, is to be looked on as the minister or chief officer of the ruler. The ruler gives to him his confidence; and all represented by the other lines yield their obedience.

Line 1 is weak, and has for its correlate the strong 4. Its subject may well enjoy the happiness of the time. But he cannot contain himself, and proclaims, or boasts of, his satisfaction;—which is evil.

Line 2, though weak, is in its correct position, the centre, moreover, of the lower trigram. Quietly and firmly its subject is able to abide in his place, and exercise a far-seeing discrimination. All is indicative of good fortune.

Line 3 is weak, and in an odd place. Immediately below line 4, its subject keeps looking up to the lord of the figure, and depends on him, thinking of doing nothing, but how to enjoy himself. The consequence will be as described, unless he speedily change.

The strong subject of line 4 is the agent to whom the happy condition is owing; and it is only necessary to caution him to maintain his confidence in himself and his purpose, and his adherents and success will continue.

Line 5 is in the ruler's place; but it is weak, and he is in danger of being carried away by the lust of pleasure. Moreover, proximity to the powerful minister represented by 4 is a source of danger.

XVII. THE SUI HEXAGRAM.

Sui indicates that (under its conditions) there will be great progress and success. But it will be advantageous to be firm and correct. There will (then) be no error.

1. The first line, undivided, shows us one changing the object of his pursuit; but if he be firm and correct, there will be good fortune. Going beyond (his own) gate to find associates, he will achieve merit.

2. The second line, divided, shows us one who cleaves to the little boy, and lets go the man of age and experience.

3. The third line, divided, shows us one who cleaves to the man of age and experience, and lets go the little boy. Such following will get what it seeks; but it will be advantageous to adhere to what is firm and correct.

4. The fourth line, undivided, shows us one followed and obtaining (adherents). Though he be firm and correct, there will be evil. If he be sincere (however) in his course, and make that evident, into what error will he fall?

Hence he is represented as suffering from a chronic complaint, but nevertheless he does not die. See Appendix II on the line.

Line 6, at the very top or end of the hexagram, is weak, and its subject is all but lost. Still even for him there is a chance of safety, if he will but change.

5. The fifth line, undivided, shows us (the ruler) sincere in (fostering all) that is excellent. There will be good fortune.

6. The topmost line, divided, shows us (that sincerity) firmly held and clung to, yea, and bound fast. (We see) the king with it presenting his offerings on the western mountain.

XVII. Sui symbolises the idea of following. It is said to follow Yü, the symbol of harmony and satisfaction. Where there are these conditions men are sure to follow; nor will they follow those in whom they have no complacency. The hexagram includes the cases where one follows others, and where others follow him; and the auspice of great progress and success is due to this flexibility and applicability of it. But in both cases the following must be guided by a reference to what is proper and correct. See the notes on the Thwan and the Great Symbolism.

Line 1 is strong, and lord of the lower trigram. The weak lines ought to follow it; but here it is below them, in the lowest place of the figure. This gives rise to the representation of one changing his pursuit. Still through the native vigour indicated by the line being strong, and in its correct place, its subject will be fortunate. Going beyond his gate to find associates indicates his public spirit, and superiority to selfish considerations.

Line 2 is weak. Its proper correlate is the strong 5; but it prefers to cleave to the line below, instead of waiting to follow 5. Hence the symbolism of the ʒext, the bad omen of which needs not to be mentioned.

Line 3 is also weak, but it follows the strong line above it and leaves line 1, reversing the course of 2;—with a different issue. It is weak, however, and 4 is not its proper correlate; hence the conclusion of the paragraph is equivalent to a caution.

Line 4 is strong, and in the place of a great minister next the ruler in 5. But his having adherents may be injurious to the supreme and sole authority of that ruler, and only a sincere loyalty will save him from error and misfortune.

Line 5 is strong, and in its correct place, with 2 as its proper correlate; thus producing the auspicious symbolism.

The issue of the hexagram is seen in line 6; which represents the ideal of following, directed by the most sincere adherence to

XVIII. THE KŪ HEXAGRAM.

Kū indicates great progress and success (to him who deals properly with the condition represented by it). There will be advantage in (efforts like that of) crossing the great stream. (He should weigh well, however, the events of) three days before the turning point, and those (to be done) three days after it.

1. The first line, divided, shows (a son) dealing with the troubles caused by his father. If he be an (able) son, the father will escape the blame of having erred. The position is perilous, but there will be good fortune in the end.

2. The second line, undivided, shows (a son) dealing with the troubles caused by his mother. He should not (carry) his firm correctness (to the utmost).

3. The third line, undivided, shows (a son) dealing with the troubles caused by his father. There may be some small occasion for repentance, but there will not be any great error.

4. The fourth line, divided, shows (a son) viewing

what is right. This influence not only extends to men, but also to spiritual beings. 'The western hill' is mount K'hi, at the foot of which was the original settlement of the house of K'au, in B.C. 1325. The use of the name 'king' here brings us down from Wăn into the time of king Wû at least.

indulgently the troubles caused by his father. If he go forward, he will find cause to regret it.

5. The fifth line, divided, shows (a son) dealing with the troubles caused by his father. He obtains the praise of using (the fit instrument for his work).

6. The sixth line, undivided, shows us one who does not serve either king or feudal lord, but in a lofty spirit prefers (to attend to) his own affairs.

XVIII. In the 6th Appendix it is said, 'They who follow another are sure to have services (to perform), and hence Sui is followed by Kû.' But Kû means the having painful or troublesome services to do. It denotes here a state in which things are going to ruin, as if through poison or venomous worms; and the figure is supposed to describe the arrest of the decay and the restoration to soundness and vigour, so as to justify its auspice of great progress and success. To realise such a result, however, great efforts will be required, as in crossing the great stream; and a careful consideration of the events that have brought on the state of decay, and the measures to be taken to remedy it is also necessary. See Appendix I on the 'three days.'

The subject of line 1, and of all the other lines, excepting perhaps 6, appears as a son. Yet the line itself is of the yin nature, and the trigram in which it plays the principal part is also yin. Line 2 is strong, and of the yang nature, with the yin line 5 as its proper correlate. In line 2, 5 appears as the mother; but its subject there is again a son, and the upper trigram altogether is yang. I am unable to account for these things. As is said in the note of Regis on line 2:—'*Haec matris filique denominatio ad has lineas mere translatitia est, et, ut ait commentarius vulgaris, ad explicationem sententiarum eas pro matre et filio supponere dicendum est. Nec ratio reddetur si quis in utroque hoc nomine mysterium quaerat. Cur enim aliis in figuris lineae nunc regem, nunc vasallum, jam imperii administrum, mox summum armorum praefectum referre dicantur? Accommodantur scilicet lineae ad verba sententiae et verba sententiae ad sensum, quemadmodum faciendum de methodis libri Shih King docet Mencius, V, i, ode 4. 2.*'

We must leave this difficulty. Line 1 is weak, and its correlate 4 is also weak. What can its subject do to remedy the state of decay? But the line is the first of the figure, and the decay is not

XIX. THE LIN HEXAGRAM.

Lin (indicates that under the conditions supposed in it) there will be great progress and success, while it will be advantageous to be firmly correct. In the eighth month there will be evil.

1. The first line, undivided, shows its subject advancing in company (with the subject of the

yet great. By giving heed to the cautions in the Text, he will accomplish what is promised.

The ruler in line 5 is represented by a weak line, while 2 is strong. Thus the symbolism takes the form of a son dealing with the prevailing decay induced somehow by his mother. But a son must be very gentle in all his intercourse with his mother, and especially so, when constrained by a sense of duty to oppose her course. I do not think there is anything more or better to be said here. The historical interpretation adopted by Regis and his friends, that the father here is king Wăn, the mother Thái-sze, and the son king Wû, cannot be maintained. I have searched, but in vain, for the slightest Chinese sanction of it, and it would give to Kû the meaning of misfortunes endured, instead of troubles caused.

Line 3 is strong, and not central, so that its subject might well go to excess in his efforts. But this tendency is counteracted by the line's place in the trigram Sun, often denoting lowly submission.

Line 4 is weak, and in an even place, which intensifies that weakness. Hence comes the caution against going forward.

The weak line 5, as has been said, is the seat of the ruler; but its proper correlate is the strong 2, the strong siding champion minister, to whom the work of the hexagram is delegated.

Line 6 is strong, and has no proper correlate below. Hence it suggests the idea of one outside the sphere of action, and taking no part in public affairs, but occupied with the culture of himself.

second line). Through his firm correctness there will be good fortune.

2. The second line, undivided, shows its subject advancing in company (with the subject of the first line). There will be good fortune; (advancing) will be in every way advantageous.

3. The third line, divided, shows one well pleased (indeed) to advance, (but whose action) will be in no way advantageous. If he become anxious about it (however), there will be no error.

4. The fourth line, divided, shows one advancing in the highest mode. There will be no error.

5. The fifth line, divided, shows the advance of wisdom, such as befits the great ruler. There will be good fortune.

6. The sixth line, divided, shows the advance of honesty and generosity. There will be good fortune, and no error.

XIX. In Appendix VI Lin is explained as meaning 'great.' The writer, having misunderstood the meaning of the previous Kâ, sub-joins—'He who performs such services may become "great."' But Lin denotes the approach of authority,—to inspect, to comfort, or to rule. When we look at the figure, we see two strong undivided lines advancing on the four weak lines above them, and thence follows the assurance that their action will be powerful and successful. That action must be governed by rectitude, however, and by caution grounded on the changing character of all conditions and events. The meaning of the concluding sentence is given in Appendix I as simply being—that, 'the advancing power will decay in no long time.' Lû Kân-khi (Ming dynasty) says:—'The sun (or the day) is the symbol of what is Yang; and the moon is the symbol of what is Yin. Eight is the number of the second of the four emblematic figures (the smaller Yin), and seven is the number of the third of them (the smaller Yang). Hence to indicate the period of the coming of what is Yin, we use the phrase, "the eighth month;" and to indicate the period of the coming of what is

XX. THE KWÂN HEXAGRAM.

Kwân shows (how he whom it represents should be like) the worshipper who has washed his hands, but not (yet) presented his offerings ;—with sincerity

Yang, we use the phrase, “the seventh day.” The Khang-hsi editors say that this is the best explanation of the language of the Text that can be given :—‘The Yang numbers culminate in 9, the influence then receding and producing the 8 of the smaller Yin. The Yin numbers culminate in 6, and the next advance produces the 7 of the smaller Yang ; so that 7 and 8 are the numbers indicating the first birth of what is Yin and what is Yang.’ ‘If we go to seek,’ they add, ‘any other explanation of the phraseology of the Text, and such expressions as “3 days,” “3 years,” “10 years,” &c., we make them unintelligible.’ Lin is the hexagram of the twelfth month.

Line 1 is a strong line in its proper place. The danger is that its subject may be more strong than prudent, hence the caution in requiring firm correctness.

Line 2, as strong, should be in an odd place ; but this is more than counterbalanced by the central position, and its correlate in line 5.

Line 3 is weak, and neither central, nor in its correct position. Hence its action will not be advantageous ; but being at the top of the trigram Tui, which means being pleased, its subject is represented as ‘well pleased to advance.’ Anxious reflection will save him from error.

Line 4, though weak, is in its proper place, and has for its correlate the strong 1. Hence its advance is ‘in the highest style.’

Line 5 is the position of the ruler. It is weak, but being central, and having for its correlate the strong and central 2, we have in it a symbol of authority distrustful of itself, and employing fit agents ;—characteristic of the wise ruler.

Line 6 is the last of the trigram Khwân, the height therefore of docility. Line 2 is not its correlate, but it belongs to the Yin to seek for the Yang ; and it is so emphatically in this case. Hence the characteristic and issue as assigned.

and an appearance of dignity (commanding reverent regard).

1. The first line, divided, shows the looking of a lad;—not blamable in men of inferior rank, but matter for regret in superior men.

2. The second line, divided, shows one peeping out from a door. It would be advantageous if it were (merely) the firm correctness of a female.

3. The third line, divided, shows one looking at (the course of) his own life, to advance or recede (accordingly).

4. The fourth line, divided, shows one contemplating the glory of the kingdom. It will be advantageous for him, being such as he is, (to seek) to be a guest of the king.

5. The fifth line, undivided, shows its subject contemplating his own life(-course). A superior man, he will (thus) fall into no error.

6. The sixth line, undivided, shows its subject contemplating his character to see if it be indeed that of a superior man. He will not fall into error.

XX. The Chinese character Kwân, from which this hexagram is named, is used in it in two senses. In the Thwan, the first paragraph of the treatise on the Thwan, and the paragraph on the Great Symbolism, it denotes showing, manifesting; in all other places it denotes contemplating, looking at. The subject of the hexagram is the sovereign and his subjects, how he manifests himself to them, and how they contemplate him. The two upper, undivided, lines belong to the sovereign; the four weak lines below them are his subjects,—ministers and others who look up at him. Kwân is the hexagram of the eighth month.

In the Thwan king Wân symbolises the sovereign by a worshipping when he is most solemn in his religious service, at the commencement of it, full of sincerity and with a dignified carriage.

Line 1 is weak, and in the lowest place, improper also for it;—

XXI. THE SHIH HO HEXAGRAM.

Shih Ho indicates successful progress (in the condition of things which it supposes). It will be advantageous to use legal constraints.

1. The first line, undivided, shows one with his feet in the stocks and deprived of his toes. There will be no error.

2. The second line, divided, shows one biting through the soft flesh, and (going on to) bite off the nose. There will be no error.

the symbol of a thoughtless lad, who cannot see far, and takes only superficial views.

Line 2 is also weak, but in its proper place, showing a woman, living retired, and only able to peep as from her door at the subject of the fifth line. But ignorance and retirement are proper in a woman.

Line 3, at the top of the lower trigram Khwăn, and weak, must belong to a subject of the utmost docility, and will wish to act only according to the exigency of time and circumstances.

Line 4, in the place proper to its weakness, is yet in immediate proximity to 5, representing the sovereign. Its subject is moved accordingly, and stirred to ambition.

Line 5 is strong, and in the place of the ruler. He is a superior man, but this does not relieve him from the duty of self-contemplation or examination.

There is a slight difference in the 6th paragraph from the 5th, which can hardly be expressed in a translation. By making a change in the punctuation, however, the different significance may be brought out. Line 6 is strong, and should be considered out of the work of the hexagram, but its subject is still possessed by the spirit of its idea, and is led to self-examination.

3. The third line, divided, shows one gnawing dried flesh, and meeting with what is disagreeable. There will be occasion for some small regret, but no (great) error.

4. The fourth line, undivided, shows one gnawing the flesh dried on the bone, and getting the pledges of money and arrows. It will be advantageous to him to realise the difficulty of his task and be firm,—in which case there will be good fortune.

5. The fifth line, divided, shows one gnawing at dried flesh, and finding the yellow gold. Let him be firm and correct, realising the peril (of his position). There will be no error.

6. The sixth line, undivided, shows one wearing the cangue, and deprived of his ears. There will be evil.

XXI. Shih Ho means literally 'Union by gnawing.' We see in the figure two strong lines in the first and last places, while all the others, with the exception of the fourth, are divided. This suggests the idea of the jaws and the mouth between them kept open by something in it. Let that be gnawed through and the mouth will close and the jaws come together. So in the body politic. Remove the obstacles to union, and high and low will come together with a good understanding. And how are those obstacles to be removed? By force, emblemed by the gnawing; that is, by legal constraints. And these are sure to be successful. The auspice of the figure is favourable. There will be success.

Lines 1 and 6 are much out of the game or action described in the figure. Hence they are held to represent parties receiving punishment, while the other lines represent parties inflicting it. The punishment in line 1 is that of the stocks, administered for a small offence, and before crime has made much way. But if the 'depriving' of the toes is not merely keeping them in restraint, but cutting them off, as the Chinese character suggests, the punishment appears to a western reader too severe.

Line 2 is weak, appropriately therefore in an even place, and it is central besides. The action therefore of its subject should

XXII. THE PĪ HEXAGRAM.

Pī indicates that there should be free course (in what it denotes). There will be little advantage (however) if it be allowed to advance (and take the lead).

be effective; and this is shown by the 'biting through the soft flesh,' an easy thing. Immediately below, however, is a strong offender represented by the strong line, and before he will submit it is necessary to 'bite off his nose;' for punishment is the rule;—it must be continued and increased till the end is secured.

Line 3 is weak, and in an even place. The action of its subject will be ineffective; and is emblemized by the hard task of gnawing through dried flesh, and encountering, besides, what is distasteful and injurious in it. But again comes in the consideration that here punishment is the rule, and the auspice is not all bad.

Of old, in a civil case, both parties, before they were heard, brought to the court an arrow (or a bundle of arrows), in testimony of their rectitude, after which they were heard; in a criminal case, they in the same way deposited each thirty pounds of gold, or some other metal. See the Official Book of Kau, 27. 14, 15. The subject of the fourth line's getting those pledges indicates his exercising his judicial functions; and what he gnaws through indicates their difficulty. Moreover, though the line is strong, it is in an even place; and hence comes the lesson of caution.

The fifth line represents 'the lord of judgment.' As it is a weak line, he will be disposed to leniency; and his judgments will be correct. This is declared by his finding the 'yellow metal;' for yellow is one of the five 'correct' colours. The position is in the centre and that of rule; but the line being weak, a caution is given, as under the previous line.

The action of the figure has passed, and still we have, in the subject of line 6, one persisting in wrong, a strong criminal, wearing the cangue, and deaf to counsel. Of course the auspice is evil.

1. The first line, undivided, shows one adorning (the way of) his feet. He can discard a carriage and walk on foot.

2. The second line, divided, shows one adorning his beard.

3. The third line, undivided, shows its subject with the appearance of being adorned and bedewed (with rich favours). But let him ever maintain his firm correctness, and there will be good fortune.

4. The fourth line, divided, shows one looking as if adorned, but only in white. As if (mounted on) a white horse, and furnished with wings, (he seeks union with the subject of the first line), while (the intervening third pursues), not as a robber, but intent on a matrimonial alliance.

5. The fifth line, divided, shows its subject adorned by (the occupants of) the heights and gardens. He bears his roll of silk, small and slight. He may appear stingy; but there will be good fortune in the end.

6. The sixth line, undivided, shows one with white as his (only) ornament. There will be no error.

XXII. The character Pî is the symbol of what is ornamental and of the act of adorning. As there is ornament in nature, so should there be in society; but its place is secondary to that of what is substantial. This is the view of king Wân in his Thwan. The symbolism of the separate lines is sometimes fantastic.

Line 1 is strong, and in an odd place. It is at the very bottom of the hexagram, and is the first line of Lî, the trigram for fire or light, and suggesting what is elegant and bright. Its subject has nothing to do but to attend to himself. Thus he cultivates—adorns—himself in his humble position; but if need be, righteousness requiring it, he can give up every luxury and indulgence.

XXIII. THE PO HEXAGRAM.

Po indicates that (in the state which it symbolises) it will not be advantageous to make a movement in any direction whatever.

Line 2 is weak and in its proper place, but with no proper correlate above. The strong line 3 is similarly situated. These two lines therefore keep together, and are as the beard and the chin. Line 1 follows 2. What is substantial commands and rules what is merely ornamental.

Line 3 is strong, and between two weak lines, which adorn it, and bestow their favours on it. But this happy condition is from the accident of place. The subject of the line must be always correct and firm to ensure its continuance.

Line 4 has its proper correlate in 1, from whose strength it should receive ornament, but 2 and the strong 3 intervene and keep them apart, so that the ornament is only white, and of no bright colour. Line 4, however, is faithful to 1, and earnest for their union. And finally line 3 appears in a good character, and not with the purpose to injure, so that the union of 1 and 4 takes place. All this is intended to indicate how ornament recognises the superiority of solidity. Compare the symbolism of the second line of *K'un* (3), and that of the topmost line of *Khwei* (38).

Line 5 is in the place of honour, and has no proper correlate in 2. It therefore associates with the strong 6, which is symbolised by the heights and gardens round a city, and serving both to protect and to beautify it. Thus the subject of the line receives adorning from without, and does not of itself try to manifest it. Moreover, in his weakness, his offerings of ceremony are poor and mean. But, as Confucius said, 'In ceremonies it is better to be sparing than extravagant.' Hence that stinginess does not prevent a good auspice.

Line 6 is at the top of the hexagram. Ornament has had its course, and here there is a return to pure, 'white,' simplicity. Substantiality is better than ornament.

1. The first line, divided, shows one overturning the couch by injuring its legs. (The injury will go on to) the destruction of (all) firm correctness, and there will be evil.

2. The second line, divided, shows one overthrowing the couch by injuring its frame. (The injury will go on to) the destruction of (all) firm correctness, and there will be evil.

3. The third line, divided, shows its subject among the overthrowers; but there will be no error.

4. The fourth line, divided, shows its subject having overthrown the couch, and (going to injure) the skin (of him who lies on it). There will be evil.

5. The fifth line, divided, shows (its subject leading on the others like) a string of fishes, and (obtaining for them) the favour that lights on the inmates of the palace. There will be advantage in every way.

6. The topmost line, undivided, shows its subject (as) a great fruit which has not been eaten. The superior man finds (the people again) as a chariot carrying him. The small men (by their course) overthrow their own dwellings.

XXIII. Po is the symbol of falling or of causing to fall, and may be applied, both in the natural and political world, to the process of decay, or that of overthrow. The figure consists of five divided lines, and one undivided, which last thus becomes the prominent and principal line in the figure. Decay or overthrow has begun at the bottom of it, and crept up to the top. The hexagram is that of the ninth month, when the beauty and glory of summer have disappeared, and the year is ready to fall into the arms of sterile winter. In the political world, small men have gradually displaced good men and great, till but one remains; and the lesson for him is to wait. The power operating against him is

XXIV. THE FŪ HEXAGRAM.

Fū indicates that there will be free course and progress (in what it denotes). (The subject of it) finds no one to distress him in his exits and

too strong; but the fashion of political life passes away. If he wait, a change for the better will shortly appear.

The lesser symbolism is chiefly that of a bed or couch with its occupant. The idea of the hexagram requires this occupant to be overthrown, or at least that an attempt be made to overthrow him. Accordingly the attempt in line 1 is made by commencing with the legs of the couch. The symbolism goes on to explain itself. The object of the evil worker is the overthrow of all firm correctness. Of course there will be evil.

Line 2 is to the same effect as 1; only the foe has advanced from the legs to the frame of the couch.

Line 3 also represents an overthrewer; but it differs from the others in being the correlate of 6. The subject of it will take part with him. His association is with the subject of 6, and not, as in the other weak lines, with one of its own kind.

From line 4 the danger is imminent. The couch has been overthrown. The person of the occupant is at the mercy of the destroyers.

With line 5 the symbolism changes. The subject of 5 is 'lord of all the other weak lines,' and their subjects are at his disposal. He and they are represented as fishes, following one another as if strung together. All fishes come under the category of yin. Then the symbolism changes again. The subject of 5, representing and controlling all the yin lines, is loyal to the subject of the yang sixth line. He is the rightful sovereign in his palace, and 5 leads all the others there to enjoy the sovereign's favours.

We have still different symbolism under line 6. Its strong subject, notwithstanding the attempts against him, survives, and acquires fresh vigour. The people again cherish their sovereign, and the plotters have wrought to their own overthrow.

entrances; friends come to him, and no error is committed. He will return and repeat his (proper) course. In seven days comes his return. There will be advantage in whatever direction movement is made.

1. The first line, undivided, shows its subject returning (from an error) of no great extent, which would not proceed to anything requiring repentance. There will be great good fortune.

2. The second line, divided, shows the admirable return (of its subject). There will be good fortune.

3. The third line, divided, shows one who has made repeated returns. The position is perilous, but there will be no error.

4. The fourth line, divided, shows its subject moving right in the centre (among those represented by the other divided lines), and yet returning alone (to his proper path).

5. The fifth line, divided, shows the noble return of its subject. There will be no ground for repentance.

6. The topmost line, divided, shows its subject all astray on the subject of returning. There will be evil. There will be calamities and errors. If with his views he put the hosts in motion, the end will be a great defeat, whose issues will extend to the ruler of the state. Even in ten years he will not be able to repair the disaster.

XXIV. Fû symbolises the idea of returning, coming back or over again. The last hexagram showed us inferior prevailing over superior men, all that is good in nature and society yielding before what is bad. But change is the law of nature and society. When decay has reached its climax, recovery will begin to take place. In Po we had one strong topmost line, and five weak lines below

XXV. THE WŪ WANG HEXAGRAM.

Wū Wang indicates great progress and success, while there will be advantage in being firm and

it; here we have one strong line, and five weak lines above it. To illustrate the subject from what we see in nature,—Po is the hexagram of the ninth month, in which the triumph of cold and decay in the year is nearly complete. It is complete in the tenth month, whose hexagram is Khwăn ; then follows our hexagram Fû, belonging to the eleventh month, in which was the winter solstice when the sun turned back in his course, and moved with a constant regular progress towards the summer solstice. In harmony with these changes of nature are the changes in the political and social state of a nation. There is nothing in the Yî to suggest the hope of a perfect society or kingdom that cannot be moved.

The strong bottom line is the first of K'ăn, the trigram of movement, and the upper trigram is Khwăn, denoting docility and capacity. The strong returning line will meet with no distressing obstacle, and the weak lines will change before it into strong, and be as friends. The bright quality will be developed brighter and brighter from day to day, and month to month.

The sentence, 'In seven days comes his return,' occasions some perplexity. If the reader will refer to hexagrams 44, 33, 12, 20, 23, and 2, he will see that during the months denoted by those figures, the 5th, 6th, 7th, 8th, 9th, and 10th, the yin lines have gradually been prevailing over the yang, until in Khwăn (2) they have extruded them entirely from the lineal figure. Then comes our Fû, as a seventh figure, in which the yang line begins to reassert itself, and from which it goes on to extrude the yin lines in their turn. Explained therefore of the months of the year, we have to take a day for a month. And something analogous—we cannot say exactly what—must have place in society and the state.

correct. If (its subject and his action) be not correct, he will fall into errors, and it will not be advantageous for him to move in any direction.

1. The first line, undivided, shows its subject free from all insincerity. His advance will be accompanied with good fortune.

2. The second line, divided, shows one who reaps without having ploughed (that he might reap), and gathers the produce of his third year's fields without having cultivated them the first year for that end. To such a one there will be advantage in whatever direction he may move.

3. The third line, divided, shows calamity happening to one who is free from insincerity;—as in

The concluding auspice or oracle to him who finds this Fû by divination is what we might expect.

The subject of line 1 is of course the undivided line, meaning here, says *Khǎng-ze*, 'the way of the superior man.' There must have been some deviation from that, or 'returning' could not be spoken of.

Line 2 is in its proper place, and central; but it is weak. This is more than compensated for, however, by its adherence to line 1, the fifth line not being a proper correlate. Hence the return of its subject is called excellent or admirable.

Line 3 is weak, and in the uneven place of a strong line. It is the top line, moreover, of the trigram whose attribute is movement. Hence the symbolism; but any evil issue may be prevented by a realisation of danger and by caution.

Line 4 has its proper correlate in 1; different from all the other weak lines; and its course is different accordingly.

Line 5 is in the central place of honour, and the middle line of *Khwān*, denoting docility. Hence its auspice.

Line 6 is weak; and being at the top of the hexagram, when its action of returning is all concluded, action on the part of its subject will lead to evils such as are mentioned. 'Ten years' seems to be a round number, signifying a long time, as in hexagram 3. 2.

the case of an ox that has been tied up. A passer by finds it (and carries it off), while the people in the neighbourhood have the calamity (of being accused and apprehended).

4. The fourth line, undivided, shows (a case) in which, if its subject can remain firm and correct, there will be no error.

5. The fifth line, undivided, shows one who is free from insincerity, and yet has fallen ill. Let him not use medicine, and he will have occasion for joy (in his recovery).

6. The topmost line, undivided, shows its subject free from insincerity, yet sure to fall into error, if he take action. (His action) will not be advantageous in any way.

XXV. Wang is the symbol of being reckless, and often of being insincere; Wŭ Wang is descriptive of a state of entire freedom from such a condition; its subject is one who is entirely simple and sincere. The quality is characteristic of the action of Heaven, and of the highest style of humanity. In this hexagram we have an essay on this noble attribute. An absolute rectitude is essential to it. The nearer one comes to the ideal of the quality, the more powerful will be his influence, the greater his success. But let him see to it that he never swerve from being correct.

The first line is strong; at the commencement of the inner trigram denoting movement, the action of its subject will very much characterise all the action set forth, and will itself be fortunate.

Line 2 is weak, central, and in its correct place. The quality may be predicated of it in its highest degree. There is an entire freedom in its subject from selfish or mercenary motive. He is good simply for goodness' sake. And things are so constituted that his action will be successful.

But calamity may also sometimes befall the best, and where there is this freedom from insincerity; and line 3 being weak, and in the place of an even line, lays its subject open to this misfortune. 'The people of the neighbourhood' are of course entirely innocent.

Line 4 is the lowest in the trigram of strength, and 1 is not a

XXVI. THE TÂ KHÔ HEXAGRAM.

Under the conditions of Tâ Khô it will be advantageous to be firm and correct. (If its subject do not seek to) enjoy his revenues in his own family (without taking service at court), there will be good fortune. It will be advantageous for him to cross the great stream.

1. The first line, undivided, shows its subject in a position of peril. It will be advantageous for him to stop his advance.

2. The second line, undivided, shows a carriage with the strap under it removed.

3. The third line, undivided, shows its subject urging his way with good horses. It will be advantageous for him to realise the difficulty (of his course), and to be firm and correct, exercising himself daily in his charioteering and methods of defence;

proper correlate, nor is the fourth the place for a strong line. Hence the paragraph must be understood as a caution.

Line 5 is strong, in the central place of honour, and has its proper correlate in 2. Hence its subject must possess the quality of the hexagram in perfection. And yet he shall be sick or in distress. But he need not be anxious. Without his efforts a way of escape for him will be opened.

Line 6 is at the top of the hexagram, and comes into the field when the action has run its course. He should be still, and not initiate any fresh movement.

then there will be advantage in whatever direction he may advance.

4. The fourth line, divided, shows the young bull, (and yet) having the piece of wood over his horns. There will be great good fortune.

5. The fifth line, divided, shows the teeth of a castrated hog. There will be good fortune.

6. The sixth line, undivided, shows its subject (as) in command of the firmament of heaven. There will be progress.

XXVI. *Khû* has two meanings. It is the symbol of restraint, and of accumulation. What is repressed and restrained accumulates its strength and increases its volume. Both these meanings are found in the treatise on the *Thwan*; the exposition of the Great Symbolism has for its subject the accumulation of virtue. The different lines are occupied with the repression or restraint of movement. The first three lines receive that repression, the upper three exercise it. The accumulation to which all tends is that of virtue; and hence the name of *Tâ Khû*, 'the Great Accumulation.'

What the *Thwan* teaches, is that he who goes about to accumulate his virtue must be firm and correct, and may then, engaging in the public service, enjoy the king's grace, and undertake the most difficult enterprises.

Line 1 is subject to the repression of 4, which will be increased if he try to advance. It is better for him to halt.

Line 2 is liable to the repression of 5, and stops its advance of itself, its subject having the wisdom to do so through its position in the central place. The strap below, when attached to the axle, made the carriage stop; he himself acts that part.

Line 3 is the last of *Khien*, and responds to the sixth line, the last of *Kăn*, above. But as they are both strong, the latter does not exert its repressive force. They advance rapidly together; but the position is perilous for 3. By firmness and caution, however, its subject will escape the peril, and the issue will be good.

The young bull in line 4 has not yet got horns. The attaching to their rudiments the piece of wood to prevent him from goring is an instance of extraordinary precaution; and precaution is always good.

XXVII. THE Î HEXAGRAM.

Î indicates that with firm correctness there will be good fortune (in what is denoted by it). We must look at what we are seeking to nourish, and by the exercise of our thoughts seek for the proper aliment.

1. The first line, undivided, (seems to be thus addressed), 'You leave your efficacious tortoise, and look at me till your lower jaw hangs down.' There will be evil.

2. The second line, divided, shows one looking downwards for nourishment, which is contrary to what is proper; or seeking it from the height (above), advance towards which will lead to evil.

3. The third line, divided, shows one acting contrary to the method of nourishing. However firm he may be, there will be evil. For ten years let him not take any action, (for) it will not be in any way advantageous.

A boar is a powerful and dangerous animal. Let him be castrated, and though his tusks remain, he cares little to use them. Here line 5 represents the ruler in the hexagram, whose work is to repress the advance of evil. A conflict with the subject of the strong second line in its advance would be perilous; but 5, taking early precaution, reduces it to the condition of the castrated pig. Not only is there no evil, but there is good fortune.

The work of repression is over, and the strong subject of line 6 has now the amplest scope to carry out the idea of the hexagram in the accumulation of virtue.

4. The fourth line, divided, shows one looking downwards for (the power to) nourish. There will be good fortune. Looking with a tiger's downward unwavering glare, and with his desire that impels him to spring after spring, he will fall into no error.

5. The fifth line, divided, shows one acting contrary to what is regular and proper; but if he abide in firmness, there will be good fortune. He should not, (however, try to) cross the great stream.

6. The sixth line, undivided, shows him from whom comes the nourishing. His position is perilous, but there will be good fortune. It will be advantageous to cross the great stream.

XXVII. ǀ is the symbol of the upper jaw, and gives name to the hexagram; but the whole figure suggests the appearance of the mouth. There are the two undivided lines at the bottom and top, and the four divided lines between them. The first line is the first in the trigram *K'ān*, denoting movement; and the sixth is the third in *K'ān*, denoting what is solid. The former is the lower jaw, part of the mobile chin; and the other the more fixed upper jaw. The open lines are the cavity of the mouth. As the name of the hexagram, ǀ denotes nourishing,—one's body or mind, one's self or others. The nourishment in both the matter and method will differ according to the object of it; and every one must determine what to employ and do in every case by exercising his own thoughts, only one thing being premised,—that in both respects the nourishing must be correct, and in harmony with what is right. The auspice of the whole hexagram is good.

The first line is strong, and in its proper place; its subject might suffice for the nourishing of himself, like a tortoise, which is supposed to live on air, without more solid nourishment. But he is drawn out of himself by desire for the weak 4, his proper correlate, at whom he looks till his jaw hangs down, or, as we say, his mouth waters. Hence the auspice is bad. The symbolism takes the form of an expostulation addressed, we must suppose, by the fourth line to the first.

The weak 2, insufficient for itself, seeks nourishment first from

XXVIII. THE TÂ KWO HEXAGRAM.

Tâ Kwo suggests to us a beam that is weak. There will be advantage in moving (under its conditions) in any direction whatever; there will be success.

1. The first line, divided, shows one placing mats of the white mào grass under things set on the ground. There will be no error.

2. The second line, undivided, shows a decayed

the strong line below, which is not proper, and then from the strong 6, not its proper correlate, and too far removed. In either case the thing is evil.

Line 3 is weak, in an odd place; and as it occupies the last place in the trigram of movement, all that quality culminates in its subject. Hence he considers himself sufficient for himself, without any help from without, and the issue is bad.

With line 4 we pass into the upper trigram. It is next to the ruler's place in 5 moreover, and bent on nourishing and training all below. Its proper correlate is the strong 1; and though weak in himself, its subject looks with intense desire to the subject of that for help; and there is no error.

The subject of line 5 is not equal to the requirements of his position; but with a firm reliance on the strong 6, there will be good fortune. Let him not, however, engage in the most difficult undertakings.

The topmost line is strong, and 5 relies on its subject; but being penetrated with the idea of the hexagram, he feels himself in the position of master or tutor to all under heaven. The task is hard and the responsibility great; but realising these things, he will prove himself equal to them.

willow producing shoots, or an old husband in possession of his young wife. There will be advantage in every way.

3. The third line, undivided, shows a beam that is weak. There will be evil.

4. The fourth line, undivided, shows a beam curving upwards. There will be good fortune. If (the subject of it) looks for other (help but that of line one), there will be cause for regret.

5. The fifth line, undivided, shows a decayed willow producing flowers, or an old wife in possession of her young husband. There will be occasion neither for blame nor for praise.

6. The topmost line, divided, shows its subject with extraordinary (boldness) wading through a stream, till the water hides the crown of his head. There will be evil, but no ground for blame.

XXVIII. Very extraordinary times require very extraordinary gifts in the conduct of affairs in them. This is the text on which king Wăn and his son discourse after their fashion in this hexagram. What goes, in their view, to constitute anything extraordinary is its greatness and difficulty. There need not be about it what is not right.

Looking at the figure we see two weak lines at the top and bottom, and four strong lines between them, giving us the idea of a great beam unable to sustain its own weight. But the second and fifth lines are both strong and in the centre; and from this and the attributes of the component trigrams a good auspice is obtained.

Line 1 being weak, and at the bottom of the figure, and of the trigram Sun, which denotes flexibility and humility, its subject is distinguished by his carefulness, as in the matter mentioned; and there is a good auspice.

Line 2 has no proper correlate above. Hence he inclines to the weak 1 below him; and we have the symbolism of the line. An

XXIX. THE KHAN HEXAGRAM.

Khan, here repeated, shows the possession of sincerity, through which the mind is penetrating. Action (in accordance with this) will be of high value.

1. The first line, divided, shows its subject in the double defile, and (yet) entering a cavern within it. There will be evil.

2. The second line, undivided, shows its subject

old husband with a young wife will yet have children; the action of the subject of 2 will be successful.

Line 3 is strong, and in an odd place. Its subject is confident in his own strength, but his correlate in 6 is weak. Alone, he is unequal to the extraordinary strain on him, and has for his symbol the weak beam.

Line 4 is near 5, the ruler's place. On its subject devolves the duty of meeting the extraordinary exigency of the time; but he is strong; and, the line being in an even place, his strength is tempered. He will be equal to his task. Should he look out for the help of the subject of 1, that would affect him with another element of weakness; and his action would give cause for regret.

Line 5 is strong and central. Its subject should be equal to achieve extraordinary merit. But he has no proper correlate below, and as 2 inclined to 1, so does this to 6. But here the willow only produces flowers, not shoots;—its decay will soon reappear. An old wife will have no children. If the subject of the line is not to be condemned as that of 3, his action does not deserve praise.

The subject of 6 pursues his daring course, with a view to satisfy the extraordinary exigency of the time, and benefit all under the sky. He is unequal to the task, and sinks beneath it; but his motive modifies the judgment on his conduct.

in all the peril of the defile. He will, however, get a little (of the deliverance) that he seeks.

3. The third line, divided, shows its subject, whether he comes or goes (= descends or ascends), confronted by a defile. All is peril to him and unrest. (His endeavours) will lead him into the cavern of the pit. There should be no action (in such a case).

4. The fourth line, divided, shows its subject (at a feast), with (simply) a bottle of spirits, and a subsidiary basket of rice, while (the cups and bowls) are (only) of earthenware. He introduces his important lessons (as his ruler's) intelligence admits. There will in the end be no error.

5. The fifth line, undivided, shows the water of the defile not yet full, (so that it might flow away); but order will (soon) be brought about. There will be no error.

6. The topmost line, divided, shows its subject bound with cords of three strands or two strands, and placed in the thicket of thorns. But in three years he does not learn the course for him to pursue. There will be evil.

XXIX. The trigram Khan, which is doubled to form this hexagram, is the lineal symbol of water. Its meaning, as a character, is 'a pit,' 'a perilous cavity, or defile;' and here and elsewhere in the Yî it leads the reader to think of a dangerous defile, with water flowing through it. It becomes symbolic of danger, and what the authors of the Text had in mind was to show how danger should be encountered, its effect on the mind, and how to get out of it.

The trigram exhibits a strong central line, between two divided lines. The central represented to king Wăn the sincere honesty and goodness of the subject of the hexagram, whose mind was sharpened and made penetrating by contact with danger, and who

XXX. THE LI HEXAGRAM.

Li indicates that, (in regard to what it denotes), it will be advantageous to be firm and correct, and that thus there will be free course and success.

acted in a manner worthy of his character. It is implied, though the Thwan does not say it, that he would get out of the danger.

Line 1 is weak, at the bottom of the figure, and has no correlate above, no helper, that is, beyond itself. All these things render the case of its subject hopeless. He will by his efforts only involve himself more deeply in danger.

Line 2 is strong, and in the centre. Its subject is unable, indeed, to escape altogether from the danger; but he does not involve himself more deeply in it like the subject of 1, and obtains some ease.

Line 3 is weak, and occupies the place of a strong line. Its subject is in an evil case.

Line 4 is weak, and will get no help from its correlate in 1. Its subject is not one who can avert the danger threatening himself and others. But his position is close to that of the ruler in 5, whose intimacy he cultivates with an unostentatious sincerity, symbolled by the appointments of the simple feast, and whose intelligence he cautiously enlightens. In consequence, there will be no error.

The subject of line 5 is on the eve of extrication and deliverance. The waters of the defile will ere long have free vent and disappear, and the ground will be levelled and made smooth. The line is strong, in a proper place, and in the place of honour.

The case of the subject of line 6 is hopeless. When danger has reached its highest point, there he is, represented by a weak line, and with no proper correlate below. The 'thicket of thorns' is taken as a metaphor for a prison; but if the expression has a history, I have been unable to find it.

Let (its subject) also nourish (a docility like that of) the cow, and there will be good fortune.

1. The first line, undivided, shows one ready to move with confused steps. But he treads at the same time reverently, and there will be no mistake.

2. The second line, divided, shows its subject in his place in yellow. There will be great good fortune.

3. The third line, undivided, shows its subject in a position like that of the declining sun. Instead of playing on his instrument of earthenware, and singing to it, he utters the groans of an old man of eighty. There will be evil.

4. The fourth line, undivided, shows the manner of its subject's coming. How abrupt it is, as with fire, with death, to be rejected (by all)!

5. The fifth line, divided, shows its subject as one with tears flowing in torrents, and groaning in sorrow. There will be good fortune.

XXX. LĪ is the name of the trigram representing fire and light, and the sun as the source of both of these. Its virtue or attribute is brightness, and by a natural metaphor intelligence. But LĪ has also the meaning of inhering in, or adhering to, being attached to. Both these significations occur in connexion with the hexagram, and make it difficult to determine what was the subject of it in the minds of the authors. If we take the whole figure as expressing the subject, we have, as in the treatise on the Thwan, 'a double brightness,' a phrase which is understood to denominate the ruler. If we take the two central lines as indicating the subject, we have weakness, dwelling with strength above and below. In either case there are required from the subject a strict adherence to what is correct, and a docile humility. On the second member of the Thwan K'hang-ze says:—'The nature of the ox is docile, and that of the cow is much more so. The subject of the hexagram adhering closely to

6. The topmost line, undivided, shows the king employing its subject in his punitive expeditions. Achieving admirable (merit), he breaks (only) the chiefs (of the rebels). Where his prisoners were not their associates, he does not punish. There will be no error.

what is correct, he must be able to act in obedience to it, as docile as a cow, and then there will be good fortune.'

Line 1 is strong, and at the bottom of the trigram for fire, the nature of which is to ascend. Its subject therefore will move upwards, and is in danger of doing so coarsely and vehemently. But the lowest line has hardly entered into the action of the figure, and this consideration operates to make him reverently careful of his movements; and there is no error.

Line 2 is weak, and occupies the centre. Yellow is one of the five correct colours, and here symbolises the correct course to which the subject of the line adheres.

Line 3 is at the top of the lower trigram, whose light may be considered exhausted, and suggests the symbol of the declining sun. The subject of the line should accept the position, and resign himself to the ordinary amusements which are mentioned, but he groans and mourns instead. His strength interferes with the lowly contentment which he should cherish.

The strength of line 4, and its being in an even place, make its subject appear in this unseemly manner, disastrous to himself.

Line 5 is in the place of honour, and central. But it is weak, as is its correlate. Its position between the strong 4 and 6 fills its subject with anxiety and apprehension, that express themselves as is described. But such demonstrations are a proof of his inward adherence to right and his humility. There will be good fortune.

Line 6, strong and at the top of the figure, has the intelligence denoted by its trigrams in the highest degree, and his own proper vigour. Through these his achievements are great, but his generous consideration is equally conspicuous, and he falls into no error.

TEXT. SECTION II.

XXXI. THE HSIEN HEXAGRAM.

Hsien indicates that, (on the fulfilment of the conditions implied in it), there will be free course and success. Its advantageousness will depend on the being firm and correct, (as) in marrying a young lady. There will be good fortune.

1. The first line, divided, shows one moving his great toes.

2. The second line, divided, shows one moving the calves of his leg. There will be evil. If he abide (quiet in his place), there will be good fortune.

3. The third line, undivided, shows one moving his thighs, and keeping close hold of those whom he follows. Going forward (in this way) will cause regret.

4. The fourth line, undivided, shows that firm correctness which will lead to good fortune, and prevent all occasion for repentance. If its subject be unsettled in his movements, (only) his friends will follow his purpose.

5. The fifth line, undivided, shows one moving the flesh along the spine above the heart. There will be no occasion for repentance.

6. The sixth line, divided, shows one moving his jaws and tongue.

XXXI. With the 31st hexagram commences the Second Section of the Text. It is difficult to say why any division of the hexagrams should be made here, for the student tries in vain to discover any continuity in the thoughts of the author that is now broken. The First Section does not contain a class of subjects different from those which we find in the Second. That the division was made, however, at a very early time, appears from the sixth Appendix on the Sequence of the Hexagrams, where the writer sets forth an analogy between the first and second figures, representing heaven and earth, as the originators of all things, and this figure and the next, representing (each of them) husband and wife, as the originators of all the social relations. This, however, is far from carrying conviction to my mind. The division of the Text of the YĪ into two sections is a fact of which I am unable to give a satisfactory account.

Hsien, as explained in the treatise on the Thwan, has here the meaning of mutual influence, and the duke of Kâu, on the various lines, always uses Kan for it in the sense of 'moving' or 'influencing to movement or action.' This is to my mind the subject of the hexagram considered as an essay,—'Influence; the different ways of bringing it to bear, and their issues.'

The Chinese character called hsien is 咸, the graphic symbol for 'all, together, jointly.' Kan, the symbol for 'influencing,' has hsien in it as its phonetic constituent (though the changes in pronunciation make it hard for an English reader to appreciate this), with the addition of hsin, the symbol for 'the heart.' Thus 感 kan, 'to affect or influence,' = 咸 + 心; and it may have been that while the name or word was used with the significance of 'influencing,' the 心 was purposely dropt from it, to indicate the most important element in the thing,—the absence of all purpose or motive. I venture to think that this would have been a device worthy of a diviner.

With regard to the idea of husband and wife being in the teaching of the hexagram, it is derived from the more recent symbolism of the eight trigrams ascribed to king Wăn, and exhibited on p. 33 and plate III. The more ancient usage of them is given in the paragraph on the Great Symbolism of Appendix II. The figure consists of Kăn (☵), 'the youngest son,' and over it Tui (☱), 'the youngest daughter.' These are in 'happy union.'

XXXII. THE HǎNG HEXAGRAM.

Hǎng indicates successful progress and no error (in what it denotes). But the advantage will come from being firm and correct; and movement in any direction whatever will be advantageous.

1. The first line, divided, shows its subject deeply (desirous) of long continuance. Even with firm

No influence, it is said, is so powerful and constant as that between husband and wife; and where these are young, it is especially active. Hence it is that Hsien is made up of Kǎn and Tui. All this is to me very doubtful. I can dimly apprehend why the whole line (——) was assumed as the symbol of strength and authority, and the broken line as that of weakness and submission. Beyond this I cannot follow Fô-hsi in his formation of the trigrams; and still less can I assent to the more recent symbolism of them ascribed to king Wǎn.

Coming now to the figure, and its lines, the subject is that of mutual influence; and the author teaches that that influence, correct in itself, and for correct ends, is sure to be effective. He gives an instance,—the case of a man marrying a young lady, the regulations for which have been laid down in China from the earliest times with great strictness and particularity. Such influence will be effective and fortunate.

Line 1 is weak, and at the bottom of the hexagram. Though 4 be a proper correlate, yet the influence indicated by it must be ineffective. However much a man's great toes may be moved, that will not enable him to walk.

The calves cannot move of themselves. They follow the moving of the feet. The moving of them indicates too much anxiety to move. Line 2, moreover, is weak. But it is also the central line, and if its subject abide quiet, till he is acted on from above, there will be good fortune.

Neither can the thighs move of themselves. The attempt to

correctness there will be evil; there will be no advantage in any way.

2. The second line, undivided, shows all occasion for repentance disappearing.

3. The third line, undivided, shows one who does not continuously maintain his virtue. There are those who will impute this to him as a disgrace. However firm he may be, there will be ground for regret.

4. The fourth line, undivided, shows a field where there is no game.

5. The fifth line, divided, shows its subject continuously maintaining the virtue indicated by it. In a wife this will be fortunate; in a husband, evil.

6. The topmost line, divided, shows its subject exciting himself to long continuance. There will be evil.

move them is inauspicious. Its subject, however, the line being strong, and in an odd place, will wish to move, and follows the subject of 4, which is understood to be the seat of the mind. He exercises his influence therefore with a mind and purpose, which is not good.

Line 4 is strong, but in an even place. It is the seat of the mind. Its subject therefore is warned to be firm and correct in order to a good issue. If he be wavering and uncertain, his influence will not extend beyond the circle of his friends.

The symbolism of line 5 refers to a part of the body behind the heart, and is supposed therefore to indicate an influence, ineffective indeed, but free from selfish motive, and not needing to be repented of.

Line 6 is weak, and in an even place. It is the topmost line also of the trigram of satisfaction. Its influence by means of speech will only be that of loquacity and flattery, the evil of which needs not to be pointed out.

XXXII. The subject of this hexagram may be given as perseverance in well doing, or in continuously acting out the law of one's

XXXIII. THE THUN HEXAGRAM.

Thun indicates successful progress (in its circumstances). To a small extent it will (still) be advantageous to be firm and correct.

1. The first line, divided, shows a retiring tail. The position is perilous. No movement in any direction should be made.

being. The sixth Appendix makes it a sequel of the previous figure. As that treats, it is said, of the relation between husband and wife, so this treats of the continuous observance of their respective duties. Hsien, we saw, is made up of K'an, the symbol of the youngest son, and Tui, the symbol of the youngest daughter, attraction and influence between the sexes being strongest in youth. H'ang consists of Sun, 'the oldest daughter,' and K'an, the oldest son. The couple are more staid. The wife occupies the lower place; and the relation between them is marked by her submission. This is sound doctrine, especially from a Chinese point of view; but I doubt whether such application of his teaching was in the mind of king W'an. Given two parties, an inferior and superior in correlation. If both be continuously observant of what is correct, the inferior being also submissive, and the superior firm, good fortune and progress may be predicated of their course.

Line 1 has a proper correlate in 4; but between them are two strong lines; and it is itself weak. These two conditions are against its subject receiving much help from the subject of 4. He should be quiet, and not forward for action.

Line 2 is strong, but in the place of a weak line. Its position, however, being central, and its subject holding fast to the due mean, the unfavourable condition of an even place is more than counteracted.

Line 3 is strong, and in its proper place; but being beyond the centre of the trigram, its subject is too strong, and coming under

2. The second line, divided, shows its subject holding (his purpose) fast as if by a (thong made from the) hide of a yellow ox, which cannot be broken.

3. The third line, undivided, shows one retiring but bound,—to his distress and peril. (If he were to deal with his binders as in) nourishing a servant or concubine, it would be fortunate for him.

4. The fourth line, undivided, shows its subject retiring notwithstanding his likings. In a superior man this will lead to good fortune; a small man cannot attain to this.

5. The fifth line, undivided, shows its subject retiring in an admirable way. With firm correctness there will be good fortune.

6. The sixth line, undivided, shows its subject retiring in a noble way. It will be advantageous in every respect.

the attraction of his correlate in 6, he is supposed to be ready to abandon his place and virtue. He may try to be firm and correct, but circumstances are adverse to him.

Line 4 is strong in the place of a weak line, and suggests the symbolism of the duke of Kâu.

The weak 5th line responds to the strong 2nd, and may be supposed to represent a wife conscious of her weakness, and docilely submissive; which is good. A husband, however, and a man generally, has to assert himself, and lay down the rule of what is right.

In line 6 the principle of perseverance has run its course; the motive power of K'án is exhausted. The line itself is weak. The violent efforts of its subject can only lead to evil.

XXXIII. Thun is the hexagram of the sixth month; the yin influence is represented by two weak lines, and has made good its footing in the year. The figure thus suggested to king Wán the growth of small and unprincipled men in the state, before whose advance superior men were obliged to retire. This is the theme of his essay,—how, 'when small men multiply and increase in power,

XXXIV. THE TÂ KWANG HEXAGRAM.

Tâ Kwang indicates that (under the conditions which it symbolises) it will be advantageous to be firm and correct.

the necessity of the time requires superior men to withdraw before them.' Yet the auspice of Thun is not all bad. By firm correctness the threatened evil may be arrested to a small extent.

'A retiring tail' seems to suggest the idea of the subject of the lines hurrying away, which would only aggravate the evil and danger of the time.

'His purpose' in line 2 is the purpose to withdraw. The weak 2 responds correctly to the strong 5, and both are central. The purpose therefore is symbolised as in the text. The 'yellow' colour of the ox is introduced because of its being 'correct,' and of a piece with the central place of the line.

Line 3 has no proper correlate in 6; and its subject allows himself to be entangled and impeded by the subjects of 1 and 2. He is too familiar with them, and they presume, and fetter his movements;—compare Analects, 17. 25. He should keep them at a distance.

Line 4 has a correlate in 1, and is free to exercise the decision belonging to its subject. The line is the first in *K'ien*, symbolic of strength.

In the Shû IV, v, Section 2. 9, the worthy Î Yin is made to say, 'The minister will not for favour or gain continue in an office whose work is done;' and the Khang-hsi editors refer to his words as an illustration of what is said on line 5. It has its correlate in 2, and its subject carries out the purpose to retire 'in an admirable way.'

Line 6 is strong, and with no correlate to detain it in 3. Its subject vigorously and happily carries out the idea of the hexagram.

1. The first line, undivided, shows its subject manifesting his strength in his toes. But advance will lead to evil,—most certainly.

2. The second line, undivided, shows that with firm correctness there will be good fortune.

3. The third line, undivided, shows, in the case of a small man, one using all his strength; and in the case of a superior man, one whose rule is not to do so. Even with firm correctness the position would be perilous. (The exercise of strength in it might be compared to the case of) a ram butting against a fence, and getting his horns entangled.

4. The fourth line, undivided, shows (a case in which) firm correctness leads to good fortune, and occasion for repentance disappears. (We see) the fence opened without the horns being entangled. The strength is like that in the wheel-spokes of a large waggon.

5. The fifth line, divided, shows one who loses his ram(-like strength) in the ease of his position. (But) there will be no occasion for repentance.

6. The sixth line, divided, shows (one who may be compared to) the ram butting against the fence, and unable either to retreat, or to advance as he would fain do. There will not be advantage in any respect; but if he realise the difficulty (of his position), there will be good fortune.

XXXIV. The strong lines predominate in *Tâ Kwang*. It suggested to king Wăn a state or condition of things in which there was abundance of strength and vigour. Was strength alone enough for the conduct of affairs? No. He saw also in the figure that which suggested to him that strength should be held in subordination to the idea of right, and exerted only in harmony with it.

XXXV. THE 3IN HEXAGRAM.

In 3in we see a prince who secures the tranquility (of the people) presented on that account with numerous horses (by the king), and three times in a day received at interviews.

This is the lesson of the hexagram, as sententiously expressed in the Thwan.

Line 1 is strong, in its correct place, and also the first line in *K'ien*, the hexagram of strength, and the first line in *Tâ Kwang*. The idea of the figure might seem to be concentrated in it; and hence we have it symbolised by 'strength in the toes,' or 'advancing.' But such a measure is too bold to be undertaken by one in the lowest place, and moreover there is no proper correlate in 4. Hence comes the evil auspice.

Line 2 is strong, but the strength is tempered by its being in an even place, instead of being excited by it, as might be feared. Then the place is that in the centre. With firm correctness there will be good fortune.

Line 3 is strong, and in its proper place. It is at the top moreover of *K'ien*. A small man so symbolled will use his strength to the utmost; but not so the superior man. For him the position is beyond the safe middle, and he will be cautious; and not injure himself, like the ram, by exerting his strength.

Line 4 is still strong, but in the place of a weak line; and this gives occasion to the cautions with which the symbolism commences. The subject of the line going forward thus cautiously, his strength will produce good effects, such as are described.

Line 5 is weak, and occupies a central place. Its subject will cease therefore to exert his strength; but this hexagram does not forbid the employment of strength, but would only control and

1. The first line, divided, shows one wishing to advance, and (at the same time) kept back. Let him be firm and correct, and there will be good fortune. If trust be not reposed in him, let him maintain a large and generous mind, and there will be no error.

2. The second line, divided, shows its subject with the appearance of advancing, and yet of being sorrowful. If he be firm and correct, there will be good fortune. He will receive this great blessing from his grandmother.

3. The third line, divided, shows its subject trusted by all (around him). All occasion for repentance will disappear.

4. The fourth line, undivided, shows its subject with the appearance of advancing, but like a marmot. However firm and correct he may be, the position is one of peril.

5. The fifth line, divided, shows how all occasion for repentance disappears (from its subject). (But) let him not concern himself about whether he shall fail or succeed. To advance will be fortunate, and in every way advantageous.

6. The topmost line, undivided, shows one advancing his horns. But he only uses them to punish the (rebellious people of his own) city. The position

direct it. All that is said about him is that he will give no occasion for repentance.

Line 6 being at the top of *K'ān*, the symbol of movement, and at the top of *T'ā K'wāng*, its subject may be expected to be active in exerting his strength; and through his weakness, the result would be as described. But he becomes conscious of his weakness, reflects and rests, and good fortune results, as he desists from the prosecution of his unwise efforts.

is perilous, but there will be good fortune. (Yet) however firm and correct he may be, there will be occasion for regret.

XXXV. The Thwan of this hexagram expresses its subject more fully and plainly than that of any of the previous thirty-four. It is about a feudal prince whose services to the country have made him acceptable to his king. The king's favour has been shown to him by gifts and personal attentions such as form the theme of more than one ode in the Shih; see especially III, iii, 7. The symbolism of the lines dimly indicates the qualities of such a prince. Jin means 'to advance.' Hexagrams 46 and 53 agree with this in being called by names that indicate progress and advance. The advance in Jin is like that of the sun, 'the shining light, shining more and more to the perfect day.'

Line 1 is weak, and in the lowest place, and its correlate in 4 is neither central nor in its correct position. This indicates the small and obstructed beginnings of his subject. But by his firm correctness he pursues the way to good fortune; and though the king does not yet believe in him, he the more pursues his noble course.

Line 2 is weak, and its correlate in 5 is also weak. Its subject therefore has still to mourn in obscurity. But his position is central and correct, and he holds on his way, till success comes ere long. The symbolism says he receives it 'from his grandmother;' and readers will be startled by the extraordinary statement, as I was when I first read it. Literally the Text says 'the king's mother,' as P. Regis rendered it,—'*Istam magnam felicitatem a matre regis recipit.*' He also tries to give the name a historical reference;—to Thái-Kiang, the grandmother of king Wăn; Thái-Zăn, his mother; or to Thái-sze, his wife, and the mother of king Wû and the duke of Kâu, all famous in Chinese history, and celebrated in the Shih. But 'king's father' and 'king's mother' are well-known Chinese appellations for 'grandfather' and 'grandmother.' This is the view given on the passage, by K'iang-ze, K'û Hsi, and the Khang-hsi editors, the latter of whom, indeed, account for the use of the name, instead of 'deceased mother,' which we find in hexagram 62, by the regulations observed in the ancestral temple. These authorities, moreover, all agree in saying that the name points us to line 5, the correlate of 2, and 'the lord of the hexagram.' Now the subject of line 5 is the sovereign, who at length acknowledges the worth of the feudal lord, and gives him

XXXVI. THE MING Ĩ HEXAGRAM.

Ming Ĩ indicates that (in the circumstances which it denotes) it will be advantageous to realise the

the great blessing. The 'New Digest of Comments on the Yi (1686),' in its paraphrase of the line, has, 'He receives at last this great blessing from the mild and compliant ruler.' I am not sure that 'motherly king' would not be the best and fairest translation of the phrase.

Canon McClatchie has a very astonishing note on the name, which he renders 'Imperial Mother' (p. 164):—'That is, the wife of Imperial Heaven (Juno), who occupies the "throne of the diagram," viz. the fifth stroke, which is soft and therefore feminine. She is the Great Ancestress of the human race. See Imp. Ed. vol. iv, Sect. v, p. 25, Com.' Why such additions to the written word?

Line 3 is weak, and in an odd place; but the subjects of 1 and 2 are possessed by the same desire to advance as the subject of this. A common trust and aim possess them; and hence the not unfavourable auspice.

Line 4 is strong, but it is in an even place, nor is it central. It suggests the idea of a marmot (? or rat), stealthily advancing. Nothing could be more opposed to the ideal of the feudal lord in the hexagram.

In line 5 that lord and his intelligent sovereign meet happily. He holds on his right course, indifferent as to results, but things are so ordered that he is, and will continue to be, crowned with success.

Line 6 is strong, and suggests the idea of its subject to the last continuing his advance, and that not only with firm correctness, but with strong force. The 'horns' are an emblem of threatening strength, and though he uses them only in his own state, and against the rebellious there, that such a prince should have any occasion to use force is matter for regret.

difficulty (of the position), and maintain firm correctness.

1. The first line, undivided, shows its subject, (in the condition indicated by) Ming Í, flying, but with drooping wings. When the superior man (is revolving) his going away, he may be for three days without eating. Wherever he goes, the people there may speak (derisively of him).

2. The second line, divided, shows its subject, (in the condition indicated by) Ming Í, wounded in the left thigh. He saves himself by the strength of a (swift) horse; and is fortunate.

3. The third line, undivided, shows its subject, (in the condition indicated by) Ming Í, hunting in the south, and taking the great chief (of the darkness). He should not be eager to make (all) correct (at once).

4. The fourth line, divided, shows its subject (just) entered into the left side of the belly (of the dark land). (But) he is able to carry out the mind appropriate (in the condition indicated by) Ming Í, quitting the gate and courtyard (of the lord of darkness).

5. The fifth line, divided, shows how the count of K'í fulfilled the condition indicated by Ming Í. It will be advantageous to be firm and correct.

6. The sixth line, divided, shows the case where there is no light, but (only) obscurity. (Its subject) had at first ascended to (the top of) the sky; his future shall be to go into the earth.

XXXVI. In this hexagram we have the representation of a good and intelligent minister or officer going forward in the service of his country, notwithstanding the occupancy of the throne by a weak

XXXVII. THE *KIÀ ZĀN* HEXAGRAM.

For (the realisation of what is taught in) *K'ia Zăn*, (or for the regulation of the family), what is

and unsympathising sovereign. Hence comes its name of Ming Ī, or 'Intelligence Wounded,' that is, injured and repressed. The treatment of the subject shows how such an officer will conduct himself, and maintain his purpose. The symbolism of the figure is treated of in the same way in the first and second Appendixes. Appendix VI merely says that the advance set forth in 35 is sure to meet with wounding, and hence 3in is followed by Ming Ī.

Line 1 is strong, and in its right place;—its subject should be going forward. But the general signification of the hexagram supposes him to be wounded. The wound, however, being received at the very commencement of its action, is but slight. And hence comes the emblem of a bird hurt so as to be obliged to droop its wings. The subject then appears directly as 'the superior man.' He sees it to be his course to desist from the struggle for a time, and is so rapt in the thought that he can fast for three days and not think of it. When he does withdraw, opposition follows him; but it is implied that he holds on to his own good purpose.

Line 2 is weak, but also in its right place, and central; giving us the idea of an officer, obedient to duty and the right. His wound in the left thigh may impede his movements, but does not disable him. He finds means to save himself, and maintains his good purpose.

Line 3, strong and in a strong place, is the topmost line of the lower trigram. It responds also to line 6, in which the idea of the sovereign, emblemed by the upper trigram, is concentrated. The lower trigram is the emblem of light or brightness, the idea of which again is expressed by the south, to which we turn when we look at the sun in its meridian height. Hence the subject of the

most advantageous is that the wife be firm and correct.

1. The first line, undivided, shows its subject establishing restrictive regulations in his household. Occasion for repentance will disappear.

2. The second line, divided, shows its subject taking nothing on herself, but in her central place attending to the preparation of the food. Through her firm correctness there will be good fortune.

3. The third line, undivided, shows its subject (treating) the members of the household with stern severity. There will be occasion for repentance, there will be peril, (but) there will (also) be good fortune. If the wife and children were to be smirking and chattering, in the end there would be occasion for regret.

4. The fourth line, divided, shows its subject

line becomes a hunter pursuing his game, and successfully. The good officer will be successful in his struggle; but let him not be over eager to put all things right at once.

Line 4 is weak, but in its right place. K'ü Hsi says he does not understand the symbolism, as given in the Text. The translation indicates the view of it commonly accepted. The subject of the line evidently escapes from his position of danger with little damage.

Line 5 should be the place of the ruler or sovereign in the hexagram; but 6 is assigned as that place in Ming I. The officer occupying 5, the centre of the upper trigram, and near to the sovereign, has his ideal in the count of K'ü, whose action appears in the Shü, III, pp. 123, 127, 128. He is a historical personage.

Line 6 sets forth the fate of the ruler, who opposes himself to the officer who would do him good and intelligent service. Instead of becoming as the sun, enlightening all from the height of the sky, he is as the sun hidden below the earth. I can well believe that the writer had the last king of Shang in his mind.

enriching the family. There will be great good fortune.

5. The fifth line, undivided, shows the influence of the king extending to his family. There need be no anxiety; there will be good fortune.

6. The topmost line, undivided, shows its subject possessed of sincerity and arrayed in majesty. In the end there will be good fortune.

XXXVII. *K'ia Z'an*, the name of the hexagram, simply means 'a household,' or 'the members of a family.' The subject of the essay based on the figure, however, is the regulation of the family, effected mainly by the co-operation of husband and wife in their several spheres, and only needing to become universal to secure the good order of the kingdom. The important place occupied by the wife in the family is seen in the short sentence of the *Thwan*. That she be firm and correct, and do her part well, is the first thing necessary to its regulation.

Line 1 is strong, and in a strong place. It suggests the necessity of strict rule in governing the family. Regulations must be established, and their observance strictly insisted on.

Line 2 is weak, and in the proper place for it,—the centre, moreover, of the lower trigram. It fitly represents the wife, and what is said on it tells us of her special sphere and duty; and that she should be unassuming in regard to all beyond her sphere; always being firm and correct. See the *Shih*, III, 350.

Line 3 is strong, and in an odd place. If the place were central, the strength would be tempered; but the subject of the line, in the topmost place of the trigram, may be expected to exceed in severity. But severity is not a bad thing in regulating a family;—it is better than laxity and indulgence.

Line 4 is weak, and in its proper place. The wife is again suggested to us, and we are told, that notwithstanding her being confined to the internal affairs of the household, she can do much to enrich the family.

The subject of the strong fifth line appears as the king. This may be the husband spoken of as also a king; or the real king whose merit is revealed first in his family, as often in the *Shih*, where king *W'an* is the theme. The central place here tempers the display of the strength and power.

XXXVIII. THE KHWEI HEXAGRAM.

Khwei indicates that, (notwithstanding the condition of things which it denotes), in small matters there will (still) be good success.

1. The first line, undivided, shows that (to its subject) occasion for repentance will disappear. He has lost his horses, but let him not seek for them; —they will return of themselves. Should he meet with bad men, he will not err (in communicating with them).

2. The second line, undivided, shows its subject happening to meet with his lord in a bye-passage. There will be no error.

3. In the third line, divided, we see one whose carriage is dragged back, while the oxen in it are pushed back, and he is himself subjected to the shaving of his head and the cutting off of his nose. There is no good beginning, but there will be a good end.

4. The fourth line, undivided, shows its subject solitary amidst the (prevailing) disunion. (But) he meets with the good man (represented by the first

Line 6 is also strong, and being in an even place, the subject of it might degenerate into stern severity, but he is supposed to be sincere, complete in his personal character and self-culture, and hence his action will only lead to good fortune.

line), and they blend their sincere desires together. The position is one of peril, but there will be no mistake.

5. The fifth line, divided, shows that (to its subject) occasion for repentance will disappear. With his relative (and minister he unites closely and readily) as if he were biting through a piece of skin. When he goes forward (with this help), what error can there be?

6. The topmost line, undivided, shows its subject solitary amidst the (prevailing) disunion. (In the subject of the third line, he seems to) see a pig bearing on its back a load of mud, (or fancies) there is a carriage full of ghosts. He first bends his bow against him, and afterwards unbends it, (for he discovers) that he is not an assailant to injure, but a near relative. Going forward, he shall meet with (genial) rain, and there will be good fortune.

XXXVIII. Khwei denotes a social state in which division and mutual alienation prevail, and the hexagram teaches how in small matters this condition may be healed, and the way prepared for the cure of the whole system. The writer or writers of Appendixes I and II point out the indication in the figure of division and disunion according to their views. In Appendix VI those things appear as a necessary sequel to the regulation of the family; while it is impossible to discover any allusion to the family in the Text.

Line 1 is strong, and in an odd place. A successful course might be auspiced for its subject; but the correlate in line 4 is also strong; and therefore disappointment and repentance are likely to ensue. In the condition, however, indicated by Khwei, where people have a common virtue, they will help one another. Through the good services of 4, the other will not have to repent. His condition may be emblemed by a traveller's loss of his horses, which return to him of themselves.

Should he meet with bad men, however, let him not shrink from them. Communication with them will be of benefit. His good

XXXIX. THE KIEN HEXAGRAM.

In (the state indicated by) *Kien* advantage will be found in the south-west, and the contrary in the north-east. It will be advantageous (also) to meet

may overcome their evil, and at least it will help to silence their slanderous tongues.

Line 5 is weak, and its subject is the proper correlate of the strong 2. They might meet openly; but for the separation and disunion that mark the time. A casual, as it were a stolen, interview, as in a bye-lane or passage, however will be useful, and may lead on to a better understanding.

Line 3 is weak, where it ought to be strong. Its correlate, however, in 6 is strong, and the relation between them might seem what it ought to be. But the weak 3 is between the strong lines in 2 and 4; and in a time of disunion there ensue the checking and repulsion emblemized in the Text. At the same time the subject of line 6 inflicts on that of 3 the punishments which are mentioned. It is thus bad for 3 at first, but we are told that in the end it will be well with him; and this will be due to the strength of the sixth line. The conclusion grows out of a conviction in the mind of the author that what is right and good is destined to triumph over what is wrong and bad. Disorder shall in the long run give place to order, and disunion to union.

Line 4 has no proper correlate, and might seem to be solitary. But, as we saw on line 1, in this hexagram, correlates of the same class help each other. Hence the subjects of 4 and 1, meeting together, work with good will and success.

The place of 5 is odd, but the line itself is weak, so that there might arise occasion for repentance. But the strong 2 is a proper correlate to the weak 5. Five being the sovereign's place, the subject of 2 is styled the sovereign's relative, of the same surname

with the great man. (In these circumstances), with firmness and correctness, there will be good fortune.

1. From the first line, divided, we learn that advance (on the part of its subject) will lead to (greater) difficulties, while remaining stationary will afford ground for praise.

2. The second line, divided, shows the minister of the king struggling with difficulty on difficulty, and not with a view to his own advantage.

3. The third line, undivided, shows its subject advancing, (but only) to (greater) difficulties. He remains stationary, and returns (to his former associates).

4. The fourth line, divided, shows its subject advancing, (but only) to (greater) difficulties. He remains stationary, and unites (with the subject of the line above).

5. The fifth line, undivided, shows its subject struggling with the greatest difficulties, while friends are coming to help him.

6. The topmost line, divided, shows its subject going forward, (only to increase) the difficulties,

with him, and head of some branch of the descendants of the royal house. It is as easy for 5, so supported, to deal with the disunion of the time, as to bite through a piece of skin.

Line 6 is an even place, and yet the line is strong;—what can its subject effect? He looks at 3, which, as weak, is a proper correlate; but he looks with the evil eye of disunion. The subject of 3 appears no better than a filthy pig, nor more real than an impossible carriage-load of ghosts. He bends his bow against him, but he unbends it, discovering a friend in 3, as 1 did in 4, and 5 in 2. He acts and with good luck, comparable to the falling rain, which results from the happy union of the yang and yin in nature.

while his remaining stationary will be (productive of) great (merit). There will be good fortune, and it will be advantageous to meet with the great man.

XXXIX. *K'ien* is the symbol for incompetency in the feet and legs, involving difficulty in walking; hence it is used in this hexagram to indicate a state of the kingdom which makes the government of it an arduous task. How this task may be successfully performed, now by activity on the part of the ruler, and now by a discreet inactivity:—this is what the figure teaches, or at least gives hints about. For the development of the meaning of the symbolic character from the structure of the lineal figure, see Appendixes I and II.

The *Thwan* seems to require three things—attention to place, the presence of the great man, and the firm observance of correctness—in order to cope successfully with the difficulties of the situation. The first thing is enigmatically expressed, and the language should be compared with what we find in the *Thwan* of hexagrams 2 and 40. Referring to Figure 2, in Plate III, we find that, according to *Wăn*'s arrangement of the trigrams, the south-west is occupied by *Khwăn* (䷞), and the north-east by *K'ân* (䷊). The former represents the campaign country; the latter, the mountainous region. The former is easily traversed and held; the latter, with difficulty. The attention to place thus becomes transformed into a calculation of circumstances; those that promise success in an enterprise, which should be taken advantage of, and those that threaten difficulty and failure, which should be shunned.

This is the generally accepted view of this difficult passage. The *Khang-hsi* editors have a view of their own. I have been myself inclined to find less symbolism in it, and to take the south-west as the regions in the south and west of the kingdom, which we know from the *Shih* were more especially devoted to *Wăn* and his house, while the strength of the kings of *Shang* lay in the north and east.

'The idea of "the great man," Mencius's "minister of Heaven," is illustrated by the strong line in the fifth place, having for its correlate the weak line in 2. But favourableness of circumstances and place, and the presence of the great man do not dispense from the observance of firm correctness. Throughout these essays of the *Yi* this is always insisted on.

XL. THE KIEH HEXAGRAM.

In (the state indicated by) *Kieh* advantage will be found in the south-west. If no (further) operations be called for, there will be good fortune in coming back (to the old conditions). If some operations be called for, there will be good fortune in the early conducting of them.

1. The first line, divided, shows that its subject will commit no error.

Line 1 is weak, whereas it ought to be strong as being in an odd place. If its subject advance, he will not be able to cope with the difficulties of the situation, but be overwhelmed by them. Let him wait for a more favourable time.

Line 2 is weak, but in its proper place. Its correlation with the strong 5, and consequent significance, are well set forth.

Line 3 is strong, and in a place of strength; but its correlate in 6 is weak, so that the advance of its subject would be unsupported. He waits therefore for a better time, and cherishes the subjects of the two lines below, who naturally cling to him.

Line 4 is weak, and, though in its proper place, its subject could do little of himself. He is immediately below the king or great man, however, and cultivates his loyal attachment to him, waiting for the time when he shall be required to act.

Line 5 is the king, the man great and strong. He can cope with the difficulties, and the subjects of 2 and the other lines of the lower trigram give their help.

The action of the hexagram is over; where can the weak 6 go forward to? Let him abide where he is, and serve the great man immediately below him. So shall he also be great;—in meritorious action at least.

2. The second line, undivided, shows its subject catch, in hunting, three foxes, and obtain the yellow (= golden) arrows. With firm correctness there will be good fortune.

3. The third line, divided, shows a porter with his burden, (yet) riding in a carriage. He will (only) tempt robbers to attack him. However firm and correct he may (try to) be, there will be cause for regret.

4. (To the subject of) the fourth line, undivided, (it is said), 'Remove your toes. Friends will (then) come, between you and whom there will be mutual confidence.'

5. The fifth line, divided, shows (its subject), the superior man (=the ruler), executing his function of removing (whatever is injurious to the idea of the hexagram), in which case there will be good fortune, and confidence in him will be shown even by the small men.

6. In the sixth line, divided, we see a feudal prince (with his bow) shooting at a falcon on the top of a high wall, and hitting it. (The effect of his action) will be in every way advantageous.

XL. *K'ieh* is the symbol of loosing,—untying a knot or unravelling a complication; and as the name of this hexagram, it denotes a condition in which the obstruction and difficulty indicated by the preceding *K'ien* have been removed. The object of the author is to show, as if from the lines of the figure, how this new and better state of the kingdom is to be dealt with. See what is said on the *Thwan* of *K'ien* for 'the advantage to be found in the south-west.' If further active operations be not necessary to complete the subjugation of the country, the sooner things fall into their old channels the better. The new masters of the kingdom should not be anxious to change all the old manners and ways. Let them do, as the duke of *K'âu* actually did do with the subjugated people of Shang. If

XLI. THE SUN HEXAGRAM.

In (what is denoted by) Sun, if there be sincerity (in him who employs it), there will be great good fortune :—freedom from error ; firmness and correctness that can be maintained ; and advantage in every

further operations be necessary, let them be carried through without delay. Nothing is said in the Thwan about the discountenancing and removal of small men,—unworthy ministers or officers ; but that subject appears in more than one of the lines.

There is a weak line, instead of a strong, in the first place ; but this is compensated for by its strong correlate in 4.

K'ü Hsi says he does not understand the symbolism under line 2. The place is even, but the line itself is strong ; the strength therefore is modified or tempered. And 2 is the correlate of the ruler in 5. We are to look to its subject therefore for a minister striving to realise the idea of the hexagram, and pacify the subdued kingdom. He becomes a hunter, and disposes of unworthy men, represented by 'the three foxes.' He also gets the yellow arrows,—the instruments used in war or in hunting, whose colour is 'correct,' and whose form is 'straight.' His firm correctness will be good.

Line 3 is weak, when it should be strong ; and occupying, as it does, the topmost place of the lower trigram, it suggests the symbolism of a porter in a carriage. People will say, 'How did he get there ? The things cannot be his own.' And robbers will attack and plunder him. The subject of the line cannot protect himself, nor accomplish anything good.

What is said on the fourth line appears in the form of an address to its subject. The line is strong in an even place, and 1, its correlate, is weak in an odd place. Such a union will not be productive of good. In the symbolism 1 becomes the toe of the subject of 4. How the friend or friends, who are to come to him on the removal of this toe, are represented, I do not perceive.

Line 5 is weak in an odd place ; but the place is that of the ruler, to whom it belongs to perfect the idea of the hexagram by

movement that shall be made. In what shall this (sincerity in the exercise of Sun) be employed? (Even) in sacrifice two baskets of grain, (though there be nothing else), may be presented.

1. The first line, undivided, shows its subject suspending his own affairs, and hurrying away (to help the subject of the fourth line). He will commit no error, but let him consider how far he should contribute of what is his (for the other).

2. The second line, undivided, shows that it will be advantageous for its subject to maintain a firm correctness, and that action on his part will be evil. He can give increase (to his correlate) without taking from himself.

3. The third line, divided, shows how of three men walking together, the number is diminished by one; and how one, walking, finds his friend.

4. The fourth line, divided, shows its subject diminishing the ailment under which he labours by making (the subject of the first line) hasten (to his help), and make him glad. There will be no error.

5. The fifth line, divided, shows parties adding to (the stores of) its subject ten pairs of tortoise shells, and accepting no refusal. There will be great good fortune.

removing all that is contrary to the peace and good order of the kingdom. It will be his duty to remove especially all the small men represented by the divided lines, which he can do with the help of his strong correlate in 2. Then even the small men will change their ways, and repair to him.

Line 6 is the highest line in the figure, but not the place of the ruler. Hence it appears as occupied by a feudal duke, who carries out the idea of the figure against small men, according to the symbolism employed.

6. The topmost line, undivided, shows its subject giving increase to others without taking from himself. There will be no error. With firm correctness there will be good fortune. There will be advantage in every movement that shall be made. He will find ministers more than can be counted by their clans.

XLI. The interpretation of this hexagram is encompassed with great difficulties. Sun is the symbol for the idea of diminishing or diminution; and what is said in Appendix I has made it to be accepted as teaching the duty of the subject to take of what is his and contribute to his ruler, or the expenses of the government under which he lives; in other words, readily and cheerfully to pay his taxes. P. Regis says, 'Sun seu (vectigalis causa) minuere . . . est valde utile;' and Canon McClatchie in translating Appendix I has:—'Diminishing (by taxation for instance) . . . is very lucky.' Possibly, king Wăn may have seen in the figures the subject of taxation; but the symbolism of his son takes a much wider range. My own reading of the figure and Text comes near to the view of K'hang-ze, that 'every diminution and repression of what we have in excess to bring it into accordance with right and reason is comprehended under Sun.'

Let there be sincerity in doing this, and it will lead to the happiest results. It will lead to great success in great things; and if the correction, or it may be a contribution towards it, appear to be very small, yet it will be accepted;—as in the most solemn religious service. This is substantially the view of the hexagram approved by the Khang-hsi editors.

Line 1 is strong, and its correlate in 4 is weak. Its subject will wish to help the subject of 4; but will not leave anything of his own undone in doing so. Nor will he diminish of his own for the other without due deliberation.

Line 2 is strong, and in the central place. But it is in the place of a weak line, and its subject should maintain his position without moving to help his correlate in 5. Maintaining his own firm correctness is the best way to help him.

Paragraph 3 is to my mind full of obscurity. K'ü Hsî, adopting the view in Appendix I, says that the lower trigram was originally K'ien, three undivided lines, like 'three men walking together,'

XLII. THE YĪ HEXAGRAM.

YĪ indicates that (in the state which it denotes) there will be advantage in every movement which shall be undertaken, that it will be advantageous (even) to cross the great stream.

1. The first line, undivided, shows that it will be advantageous for its subject in his position to make

and that the third line, taken away and made to be the topmost line, or the third, in what was originally Khwān, three divided lines, was 'the putting away of one man;' and that then the change of place by 3 and 6, while they continued their proper correlation, was, one going away, and finding his friend. I cannot lay hold of any thread of reason in this.

Line 4 is weak, and in an even place; like an individual ailing and unable to perform his proper work. But the correlate in 1 is strong; and is made to hasten to its relief. The 'joy' of the line shows the desire of its subject to do his part in the work of the hexagram.

Line 5 is the seat of the ruler, who is here humble, and welcomes the assistance of his correlate, the subject of 2. He is a ruler whom all his subjects of ability will rejoice to serve in every possible way; and the result will be great good fortune.

Line 6 has been changed from a weak into a strong line from line 3; has received therefore the greatest increase, and will carry out the idea of the hexagram in the highest degree and style. But he can give increase to others without diminishing his own resources, and of course the benefit he will confer will be incalculable. Ministers will come to serve him; and not one from each clan merely, but many. Such is the substance of what is said on this last paragraph. I confess that I only discern the meaning darkly.

a great movement. If it be greatly fortunate, no blame will be imputed to him.

2. The second line, divided, shows parties adding to the stores of its subject ten pairs of tortoise shells whose oracles cannot be opposed. Let him persevere in being firm and correct, and there will be good fortune. Let the king, (having the virtues thus distinguished), employ them in presenting his offerings to God, and there will be good fortune.

3. The third line, divided, shows increase given to its subject by means of what is evil, so that he shall (be led to good), and be without blame. Let him be sincere and pursue the path of the Mean, (so shall he secure the recognition of the ruler, like) an officer who announces himself to his prince by the symbol of his rank.

4. The fourth line, divided, shows its subject pursuing the due course. His advice to his prince is followed. He can with advantage be relied on in such a movement as that of removing the capital.

5. The fifth line, undivided, shows its subject with sincere heart seeking to benefit (all below). There need be no question about it; the result will be great good fortune. (All below) will with sincere heart acknowledge his goodness.

6. In the sixth line, undivided, we see one to whose increase none will contribute, while many will seek to assail him. He observes no regular rule in the ordering of his heart. There will be evil.

XLII. Yī has the opposite meaning to Sun, and is the symbol of addition or increasing. What king Wăn had in his mind, in connexion with the hexagram, was a ruler or a government operating

XLIII. THE KWÂI HEXAGRAM.

Kwâi requires (in him who would fulfil its meaning) the exhibition (of the culprit's guilt) in the royal court, and a sincere and earnest appeal (for sym-

so as to dispense benefits to, and increase the resources of all the people. Two indications are evident in the lines;—the strong line in the ruler's seat, or the fifth line, and the weak line in the correlative place of 2. Whether there be other indications in the figure or its component trigrams will be considered in dealing with the Appendixes. The writer might well say, on general grounds, of the ruler whom he had in mind, that he would be successful in his enterprises and overcome the greatest difficulties.

Line 1 is strong, but its low position might seem to debar its subject from any great enterprise. Favoured as he is, however, according to the general idea of the hexagram, and specially responding to the proper correlate in 4, it is natural that he should make a movement; and great success will make his rashness be forgotten.

With paragraph 2 compare paragraph 5 of the preceding hexagram. Line 2 is weak, but in the centre, and is the correlate of 5. Friends give its subject the valuable gifts mentioned; 'that is,' says Kwo Yung (Sung dynasty), 'men benefit him; the oracles of the divination are in his favour,—spirits, that is, benefit him; and finally, when the king sacrifices to God, He accepts. Heaven confers benefit from above.'

Line 3 is weak, neither central, nor in its correct position. It would seem therefore that its subject should have no increase given to him. But it is the time for giving increase, and the idea of his receiving it by means of evil things is put into the line. That such things serve for reproof and correction is well known to Chinese moralists. But the paragraph goes on also to caution and admonish.

Line 4 is the place for a minister, near to that of the ruler. Its subject is weak, but his place is appropriate, and as he follows the

pathy and support), with a consciousness of the peril (involved in cutting off the criminal). He should (also) make announcement in his own city, and show that it will not be well to have recourse at once to arms. (In this way) there will be advantage in whatever he shall go forward to.

1. The first line, undivided, shows its subject in (the pride of) strength advancing with his toes. He goes forward, but will not succeed. There will be ground for blame.

2. The second line, undivided, shows its subject full of apprehension and appealing (for sympathy and help). Late at night hostile measures may be (taken against him), but he need not be anxious about them.

3. The third line, undivided, shows its subject (about to advance) with strong (and determined) looks. There will be evil. (But) the superior man, bent on cutting off (the criminal), will walk alone and encounter the rain, (till he be hated by his proper associates) as if he were contaminated (by the others). (In the end) there will be no blame against him.

due course, his ruler will listen to him, and he will be a support in the most critical movements. Changing the capital from place to place was frequent in the feudal times of China. That of Shang, which preceded *Kâu*, was changed five times.

Line 5 is strong, in its fitting position, and central. It is the seat of the ruler, who has his proper correlate in 2. Everything good, according to the conditions of the hexagram, therefore, may be said of him ;—as is done.

Line 6 is also strong ; but it should be weak. Occupying the topmost place of the figure, its subject will concentrate his powers in the increase of himself, and not think of benefiting those below him ; and the consequence will be as described.

4. The fourth line, undivided, shows one from whose buttocks the skin has been stripped, and who walks slowly and with difficulty. (If he could act) like a sheep led (after its companions), occasion for repentance would disappear. But though he hear these words, he will not believe them.

5. The fifth line, undivided, shows (the small men like) a bed of purslain, which ought to be uprooted with the utmost determination. (The subject of the line having such determination), his action, in harmony with his central position, will lead to no error or blame.

6. The sixth line, divided, shows its subject without any (helpers) on whom to call. His end will be evil.

XLIII. In Kwâi we have the hexagram of the third month, when the last remnant, cold and dark, of winter, represented by the sixth line, is about to disappear before the advance of the warm and bright days of the approaching summer. In the yin line at the top king Wăn saw the symbol of a small or bad man, a feudal prince or high minister, lending his power to maintain a corrupt government, or, it might be, a dynasty that was waxen old and ready to vanish away; and in the five undivided lines he saw the representatives of good order, or, it might be, the dynasty which was to supersede the other. This then is the subject of the hexagram,—how bad men, statesmen corrupt and yet powerful, are to be put out of the way. And he who would accomplish the task must do so by the force of his character more than by force of arms, and by producing a general sympathy on his side.

The Thwan says that he must openly denounce the criminal in the court, seek to awaken general sympathy, and at the same time go about his enterprise, conscious of its difficulty and danger. Among his own adherents, moreover, as if it were in his own city, he must make it understood how unwillingly he takes up arms. Then let him go forward, and success will attend him.

Line 1 is strong, the first line of that trigram, which expresses the idea of strength. But it is in the lowest place. The stage of

XLIV. THE KÂU HEXAGRAM.

Kâu shows a female who is bold and strong. It will not be good to marry (such) a female.

the enterprise is too early, and the preparation too small to make victory certain. Its subject had better not take the field.

Line 2 is strong, and central, and its subject is possessed with the determination to do his part in the work of removal. But his eagerness is tempered by his occupancy of an even place; and he is cautious, and no attempts, however artful, to harm him will take effect.

Line 3 is strong, and its subject displays his purpose too eagerly. Being beyond the central position, moreover, gives an indication of evil. Lines 3 and 6 are also proper correlates; and, as elsewhere in the Yi, the meeting of yin and yang lines is associated with falling rain. The subject of 3, therefore, communicates with 6, in a way that annoys his associates; but nevertheless he commits no error, and, in the end, incurs no blame.

Line 4 is not in the centre, nor in an odd place, appropriate to it as undivided. Its subject therefore will not be at rest, nor able to do anything to accomplish the idea of the hexagram. He is symbolised by a culprit, who, according to the ancient and modern custom of Chinese courts, has been bastinadoed till he presents the appearance in the Text. Alone he can do nothing; if he could follow others, like a sheep led along, he might accomplish something, but he will not listen to advice.

Purslain grows in shady places, and hence we find it here in close contiguity to the topmost line, which is yin. As 5 is the ruler's seat, evil may come to him from such contiguity, and strenuous efforts must be made to prevent such an evil. The subject of the line, the ruler in the central place, will commit no error. It must be allowed that the symbolism in this line is not easily managed.

The subject of the 6th line, standing alone, may be easily disposed of.

1. The first line, divided, shows how its subject should be kept (like a carriage) tied and fastened to a metal drag, in which case with firm correctness there will be good fortune. (But) if he move in any direction, evil will appear. He will be (like) a lean pig, which is sure to keep jumping about.

2. The second line, undivided, shows its subject with a wallet of fish. There will be no error. But it will not be well to let (the subject of the first line) go forward to the guests.

3. The third line, undivided, shows one from whose buttocks the skin has been stripped so that he walks with difficulty. The position is perilous, but there will be no great error.

4. The fourth line, undivided, shows its subject with his wallet, but no fish in it. This will give rise to evil.

5. The fifth line, undivided, (shows its subject as) a medlar tree overspreading the gourd (beneath it). If he keep his brilliant qualities concealed, (a good issue) will descend (as) from Heaven.

6. The sixth line, undivided, shows its subject receiving others on his horns. There will be occasion for regret, but there will be no error.

XLIV. The single, divided, line at the top of Kwâi, the hexagram of the third month, has been displaced, and K'ien has ruled over the fourth month of the year. But the innings of the divided line commence again; and here we have in Kâu the hexagram of the fifth month, when light and heat are supposed both to begin to be less.

In that divided line Wăn saw the symbol of the small or unworthy man, beginning to insinuate himself into the government

XLV. THE 3HUI HEXAGRAM.

In (the state denoted by) 3hui, the king will repair to his ancestral temple. It will be advan-

of the country. His influence, if unchecked, would go on to grow, and he would displace one good man after another, and fill the vacant seats with others like-minded with himself. The object of Wăn in his Thwan, therefore, was to enjoin resistance to the encroachment of this bad man.

Kâu is defined as giving the idea of suddenly and casually encountering or meeting with. So does the divided line appear all at once in the figure. And this significance of the name rules in the interpretation of the lines, so as to set on one side the more common interpretation of them according to the correlation; showing how the meaning of the figures was put into them from the minds of Wăn and Tan in the first place. The sentiments of the Text are not learned from them; but they are forced and twisted, often fantastically, and made to appear to give those sentiments forth of themselves.

Here the first line, divided, where it ought to be the contrary, becomes the symbol of a bold, bad woman, who appears unexpectedly on the scene, and wishes to subdue or win all the five strong lines to herself. No one would contract a marriage with such a female; and every good servant of his country will try to repel the entrance into the government of every officer who can be so symbolised.

Line 1 represents the *bête noire* of the figure. If its subject can be kept back, the method of firm government and order will proceed. If he cannot be restrained, he will become disgusting and dangerous. It is not enough for the carriage to be stopt by the metal drag; it is also tied or bound to some steadfast object. Internal and external restraints should be opposed to the bad man.

The 'wallet of fish' under line 2 is supposed to symbolise the

tageous (also) to meet with the great man ; and then there will be progress and success, though the advantage must come through firm correctness. The use of great victims will conduce to good fortune ; and in whatever direction movement is made, it will be advantageous.

1. The first line, divided, shows its subject with a sincere desire (for union), but unable to carry it out, so that disorder is brought into the sphere of his union. If he cry out (for help to his proper correlate), all at once (his tears) will give place

subject of line 1. It has come into the possession of the subject of 2, by virtue of the meaning of the name Kâu, which I have pointed out. With his strength therefore he can repress the advance of 1. He becomes in fact 'the lord of the hexagram,' and all the other strong lines are merely guests ; and especially is it important that he should prevent 1 from approaching them. This is a common explanation of what is said under this second line. It seems far-fetched ; but I can neither find nor devise anything better.

With what is said on line 3, compare the fourth paragraph of the duke's Text on the preceding hexagram. Line 3 is strong, but has gone beyond the central place ; has no correlate above ; and is cut off from 1 by the intervening 2. It cannot do much therefore against 1 ; but its aim being to repress that, there will be no great error.

Line 1 is the proper correlate of 4 ; but it has already met and associated with 2. The subject of 4 therefore stands alone ; and evil to him may be looked for.

Line 5 is strong, and in the ruler's place. Its relation to 1 is like that of a forest tree to the spreading gourd. But let not its subject use force to destroy or repress the growth of 1 ; but let him restrain himself and keep his excellence concealed, and Heaven will set its seal to his virtue.

The symbolism of line 6 is difficult to understand, though the meaning of what is said is pretty clear. The Khang-hsi editors observe :—'The subject of this line is like an officer who has withdrawn from the world. He can accomplish no service for the time ; but his person is removed from the workers of disorder.'

to smiles. He need not mind (the temporary difficulty); as he goes forward, there will be no error.

2. The second line, divided, shows its subject led forward (by his correlate). There will be good fortune, and freedom from error. There is entire sincerity, and in that case (even the small offerings of) the vernal sacrifice are acceptable.

3. The third line, divided, shows its subject striving after union and seeming to sigh, yet nowhere finding any advantage. If he go forward, he will not err, though there may be some small cause for regret.

4. The fourth line, undivided, shows its subject in such a state that, if he be greatly fortunate, he will receive no blame.

5. The fifth line, undivided, shows the union (of all) under its subject in the place of dignity. There will be no error. If any do not have confidence in him, let him see to it that (his virtue) be great, long-continued, and firmly correct, and all occasion for repentance will disappear.

6. The topmost line, divided, shows its subject sighing and weeping; but there will be no error.

XLV. 3 hui denotes collecting together, or things so collected; and hence this hexagram concerns the state of the kingdom when a happy union prevails between the sovereign and his ministers, between high and low; and replies in a vague way to the question how this state is to be preserved; by the influence of religion, and the great man, who is a sage upon the throne.

He, 'the king,' will repair to his ancestral temple, and meet in spirit there with the spirits of his ancestors. Whatever he does, being correct and right, will succeed. His religious services will be distinguished by their dignity and splendour. His victims will

XLVI. THE SHǎNG HEXAGRAM.

Shǎng indicates that (under its conditions) there will be great progress and success. Seeking by

be the best that can be obtained, and other things will be in harmony with them.

Line 1 is weak, and in the place of a strong line. It has a proper correlate in 4, but is separated from him by the intervention of two weak lines. The consequence of these things is supposed to be expressed in the first part of the symbolism; but the subject of the line is possessed by the desire for union, which is the theme of the hexagram. Calling out to his correlate for help, he obtains it, and his sorrow is turned into joy.

Line 2 is in its proper place, and responds to the strong ruler in 5, who encourages and helps the advance of its subject. He possesses also the sincerity, proper to him in his central position; and though he were able to offer only the sacrifice of the spring, small compared with the fulness of the sacrifices in summer and autumn, it would be accepted.

Line 3 is weak, in the place of a strong line, and advanced from the central place. The topmost line, moreover, is no proper correlate. But its subject is possessed by the desire for union; and though 2 and 4 decline to associate with him, he presses on to 6, which is also desirous of union. That common desire brings them together, notwithstanding 3 and 6 are both divided lines; and with difficulty the subject of 3 accomplishes his object.

[But that an ordinary rule for interpreting the lineal indications may be thus overruled by extraordinary considerations shows how much of fancy there is in the symbolism or in the commentaries on it.]

Line 4 has its correlate in 1, and is near to the ruling line in 5. We may expect a good auspice for it; but its being strong in an odd place, calls for the caution which is insinuated.

Line 5 is strong, central, and in its correct position. Through

(the qualities implied in it) to meet with the great man, its subject need have no anxiety. Advance to the south will be fortunate.

1. The first line, divided, shows its subject advancing upwards with the welcome (of those above him). There will be great good fortune.

2. The second line, undivided, shows its subject with that sincerity which will make even the (small) offerings of the vernal sacrifice acceptable. There will be no error.

3. The third line, undivided, shows its subject ascending upwards (as into) an empty city.

4. The fourth line, divided, shows its subject employed by the king to present his offerings on mount *K'hi*. There will be good fortune; there will be no mistake.

5. The fifth line, divided, shows its subject firmly correct, and therefore enjoying good fortune. He ascends the stairs (with all due ceremony).

6. The sixth line, divided, shows its subject advancing upwards blindly. Advantage will be found in a ceaseless maintenance of firm correctness.

its subject there may be expected the full realisation of the idea of the hexagram.

Line 6, weak, and at the extremity of the figure, is still anxious for union; but he has no proper correlate, and all below are united in 5. Its subject mourns his solitary condition; and his good feeling will preserve him from error and blame.

XLVI. The character *Shǎng* is used of advancing in an upward direction, 'advancing and ascending.' And here, as the name of the hexagram, it denotes the advance of a good officer to the highest pinnacle of distinction. The second line, in the centre of the lower trigram, is strong, but the strength is tempered by its being in an even place. As the representative of the subject of the

XLVII. THE KHWĀN HEXAGRAM.

In (the condition denoted by) Khwān there may (yet be) progress and success. For the firm and

hexagram, it shows him to be possessed of modesty and force. Then the ruler's seat, the fifth place, is occupied by a divided line, indicating that he will welcome the advance of 2. The officer therefore both has the qualities that fit him to advance, and a favourable opportunity to do so. The result of his advance will be fortunate.

It is said that after he has met with the ruler, 'the great man' in 5, 'advance to the south will be fortunate.' Kû Hsi and other critics say that 'advancing to the south' is equivalent simply to 'advancing forwards.' The south is the region of brightness and warmth; advance towards it will be a joyful progress. As P. Regis explains the phrase, the traveller will proceed 'via recta simillima illi qua itur ad austrates felicesque plagas.'

Line 1 is weak, where it should be strong; its subject, that is, is humble and docile. Those above him, therefore, welcome his advance. Another interpretation of the line is suggested by Appendix I; which deserves consideration. As the first line of Sun, moreover, it may be supposed to concentrate in itself its attribute of docility, and be the lord of the trigram.

See on the second line of 3 hui. Line 2 is strong, and the weak 5 is its proper correlate. We have a strong officer serving a weak ruler; he could not do so unless he were penetrated with a sincere and devoted loyalty.

Paragraph 3 describes the boldness and fearlessness of the advance of the third line. According to the Khang-hsi editors, who, I think, are right, there is a shade of condemnation in the line. Its subject is too bold.

Line 4 occupies the place of a great minister, in immediate contiguity to his ruler, who confides in him, and raises him to the highest distinction as a feudal prince. The mention of mount

correct, the (really) great man, there will be good fortune. He will fall into no error. If he make speeches, his words cannot be made good.

1. The first line, divided, shows its subject with bare buttocks straitened under the stump of a tree. He enters a dark valley, and for three years has no prospect (of deliverance).

2. The second line, undivided, shows its subject straitened amidst his wine and viands. There come to him anon the red knee-covers (of the ruler). It will be well for him (to maintain his sincerity as) in sacrificing. Active operations (on his part) will lead to evil, but he will be free from blame.

3. The third line, divided, shows its subject straitened before a (frowning) rock. He lays hold of thorns. He enters his palace, and does not see his wife. There will be evil.

4. The fourth line, undivided, shows its subject proceeding very slowly (to help the subject of the first line), who is straitened by the carriage adorned with metal in front of him. There will be occasion for regret, but the end will be good.

K'hi, at the foot of which was the capital of the lords of *K'âu*, seems to take the paragraph out of the sphere of symbolism into that of history. 'The king' in it is the last sovereign of Shang; the feudal prince in it is *Wân*.

In line 5 the advance has reached the highest point of dignity, and firm correctness is specially called for. 'Ascending the steps of a stair' may intimate, as *K'ü Hsi* says, the ease of the advance; or according to others (the *Khang-hsi* editors among them), its ceremonious manner.

What can the subject of the hexagram want more? He has gained all his wishes, and still he is for going onwards. His advance is blind and foolish; and only the most exact correctness will save him from the consequences.

5. The fifth line, undivided, shows its subject with his nose and feet cut off. He is straitened by (his ministers in' their) scarlet aprons. He is leisurely in his movements, however, and is satisfied. It will be well for him to be (as sincere) as in sacrificing (to spiritual beings).

6. The sixth line, divided, shows its subject straitened, as if bound with creepers; or in a high and dangerous position, and saying (to himself), 'If I move, I shall repent it.' If he do repent of former errors, there will be good fortune in his going forward.

XLVII. The character Khwăn presents us with the picture of a tree within an enclosure; 'a plant,' according to Williams, 'fading for want of room'; 'a tree,' according to Tai Tung, 'not allowed to spread its branches.' However this be, the term conveys the idea of being straitened and distressed; and this hexagram indicates a state of things in which the order and government that would conduce to the well-being of the country can hardly get the development, which, by skilful management on the part of 'the great man' and others, is finally secured for them.

Looking at the figure we see that the two central places are occupied by strong lines; but 2 is confined between 1 and 3, both of which are weak, and 5 (the ruler), as well as 4 (his minister), is covered by the weak 6; all which peculiarities are held to indicate the repression or straitening of good men by bad. For the way in which the same view is derived from the great symbolism, see Appendix II, in loc.

The concluding sentence of the Thwan is literally, 'If he speak, he will not be believed;' but the Khang-hsi editors give sufficient reasons for changing one character so as to give the meaning in the translation. 'Actions,' not words, are what are required in the case.

The symbolism of 'buttocks' is rather a favourite with the duke of Kâu;—'chacun à son goût.' The poor subject of line 1 sitting on a mere stump, which affords him no shelter, is indeed badly off. The line is at the bottom of the trigram indicating peril, and 4, which is its proper correlate, is so circumstanced as not to be able

XLVIII. THE ŠING HEXAGRAM.

(Looking at) Šing, (we think of) how (the site of) a town may be changed, while (the fashion of) its

to render it help; hence comes the unfavourable auspice. 'Three years' is used, as often, for a long time.

The three strong lines in the figure (2, 4, and 5) are all held to represent 'superior men'; and their being straitened is not in their persons or estates, but in their principles which are denied development. Hence the subject of 2 is straitened while he fares sumptuously. His correlate in 5, though not quite proper, occupies the ruler's place, and comes to his help. That it is the ruler who comes appears from his red or vermillion knee-covers, different from the scarlet knee-covers worn by nobles, as in paragraph 5. Let 2 cultivate his sincerity and do the work of the hexagram as if he were sacrificing to spiritual beings; and then, if he keep quiet, all will be well.

For 'a full explanation' of paragraph 3 *K'ü Hsî* refers his readers to what Confucius is made to say on it in Appendix III, ii, 35. The reader, however, will probably not find much light in that passage. The *Khang-hsî* editors say here:—'The subjects of the three divided lines (1, 3, and 6) are all unable to deal aright with the straitened state indicated by the figure. The first is at the bottom, sitting and distressed. The second, occupies the third place, where he may either advance or retreat; and he advances and is distressed. Wounded abroad, he returns to his family, and finds none to receive him; so graphically is there set forth the distress which reckless action brings.'

Line 4 is the proper correlate of 1, but it is a strong line in an even place, and its assistance is given dilatorily. Then 1 is over-ridden by 2, which is represented by 'a chariot of metal.' It is difficult for the subjects of 1 and 4 to come together, and effect much; but 4 is near 5, which is also a strong line. Through a

wells undergoes no change. (The water of a well) never disappears and never receives (any great) increase, and those who come and those who go can draw and enjoy the benefit. If (the drawing) have nearly been accomplished, but, before the rope has quite reached the water, the bucket is broken, this is evil.

1. The first line, divided, shows a well so muddy that men will not drink of it; or an old well to which neither birds (nor other creatures) resort.

2. The second line, undivided, shows a well from which by a hole the water escapes and flows away to the shrimps (and such small creatures among the grass), or one the water of which leaks away from a broken basket.

3. The third line, undivided, shows a well, which has been cleared out, but is not used. Our hearts are sorry for this, for the water might be drawn out and used. If the king were (only) intelligent, both he and we might receive the benefit of it.

common sympathy, the subject of 5 will have a measure of success. So the symbolism of this line has been explained,—not very satisfactorily.

Line 5 is repressed by 6, and pressed on by 4. Above and below its subject is wounded. Especially is he straitened by the minister in 4, with his scarlet knee-covers. But the upper trigram is Tui, with the quality of complacent satisfaction. And this indicates, it is said, that the subject of 5 gets on notwithstanding his straits, especially by his sincerity. This explanation is not more satisfactory than the last.

Line 6 is at the top of the figure, where the distress may be supposed to reach its height. Its subject appears bound and on a perilous summit. But his extremity is also his opportunity. He is moved to think of repenting; and if he do repent, and go forward, his doing so will be fortunate.

4. The fourth line, divided, shows a well, the lining of which is well laid. There will be no error.

5. The fifth line, undivided, shows a clear, limpid well, (the waters from) whose cold spring are (freely) drunk.

6. The topmost line, divided, shows (the water from) the well brought to the top, which is not allowed to be covered. This suggests the idea of sincerity. There will be great good fortune.

XLVIII. *Žing*, which gives its name to this hexagram, is the symbol of a well. The character originally was pictorial (井), intended to represent a portion of land, divided into nine parts, the central portion belonging to the government, and being cultivated by the joint labour of the eight families settled on the other divisions. In the centre of it, moreover, was a well, which was the joint property of all the occupants.

What is said on *Žing* might be styled 'Moralisings on a well,' or 'Lessons to be learned from a well for the good order and government of a country.' What a well is to those in its neighbourhood, and indeed to men in general, that is government to a people. If rulers would only rightly appreciate the principles of government handed down from the good ages of the past, and faithfully apply them to the regulation of the present, they would be blessed themselves and their people with them.

In the Thwan we have the well, substantially the same through many changes of society; a sure source of dependance to men, for their refreshment and for use in their cultivation of the ground. Its form is what I have seen in the plains of northern China; what may be seen among ourselves in many places in Europe. It is deep, and the water is drawn up by a vessel let down from the top; and the value of the well depends on the water being actually raised. And so the principles of government must be actually carried out.

Line 1, being weak, and at the very bottom of the figure, suggests, or is made to suggest, the symbolism of it. Many men in authority are like such a well; corrupt, useless, unregarded.

Line 2 is strong, and might very well symbolise an active spring, ever feeding the well and, through it, the ground and its cultivators; but it is in an inappropriate place, and has no proper correlate.

XLIX. THE KO HEXAGRAM.

(What takes place as indicated by) Ko is believed in only after it has been accomplished. There will be great progress and success. Advantage will come from being firm and correct. (In that case) occasion for repentance will disappear.

1. The first line, undivided, shows its subject (as if he were) bound with the skin of a yellow ox.

Its cool waters cannot be brought to the top. So important is it that the ministers of a country should be able and willing rightly to administer its government. In the account of the ancient Shun it is stated that he once saved his life by an opening in the lining of a well.

Line 3 is a strong line, in its proper place ; and must represent an able minister or officer. But though the well is clear, no use is made of it. I do not find anything in the figure that can be connected with this fact. The author was wise beyond his lines. After the first sentence of the paragraph, the duke of Kâu ceases from his function of making emblems ; reflects and moralises.

Line 4 is weak, but in its proper place. Its subject is not to be condemned, but neither is he to be praised. He takes care of himself, but does nothing for others.

Line 5 is strong, and in its right place. The place is that of the ruler, and suggests the well, full of clear water, which is drawn up, and performs its useful work. Such is the good Head of government to his people.

Line 6 is in its proper place, but weak. If the general idea of the figure was different, a bad auspice might be drawn from it. But here we see in it the symbol of the water drawn up, and the top uncovered so that the use of the well is free to all. Then the mention of 'sincerity' suggests the inexhaustibleness of the elemental supply.

2. The second line, divided, shows its subject making his changes after some time has passed. Action taken will be fortunate. There will be no error.

3. The third line, undivided, shows that action taken by its subject will be evil. Though he be firm and correct, his position is perilous. If the change (he contemplates) have been three times fully discussed, he will be believed in.

4. The fourth line, undivided, shows occasion for repentance disappearing (from its subject). Let him be believed in; and though he change (existing) ordinances, there will be good fortune.

5. The fifth line, undivided, shows the great man (producing his changes) as the tiger (does when he) changes (his stripes). Before he divines (and proceeds to action), faith has been reposed in him.

6. The sixth line, divided, shows the superior man producing his changes as the leopard (does when he) changes (his spots), while small men change their faces (and show their obedience). To go forward (now) would lead to evil, but there will be good fortune in abiding firm and correct.

XLIX. The character called Ko or Keh is used here in the sense of changing. Originally used for the skin of an animal or bird, alive or dead, it received the significance of changing at a very early time. Its earliest appearance, indeed, in the first Book of the Shû, is in that sense. How the transition was made from the idea of a skin or hide to that of change is a subject that need not be entered on here. The author has before him the subject of changes occurring—called for—in the state of the country; it may be on the greatest scale. The necessity of them is recognised, and hints are

L. THE TING HEXAGRAM.

Ting gives the intimation of great progress and success.

1. The first line, divided, shows the caldron overthrown and its feet turned up. (But) there will be

given as to the spirit and manner in which they should be brought about.

For the way in which the notion of change is brought out of the trigrams of the figure, see Appendixes I and II. It is assumed in the Thwan that change is viewed by people generally with suspicion and dislike, and should not be made hastily. When made as a necessity, and its good effects appear, the issues will be great and good. A proved necessity for them beforehand; and a firm correctness in the conduct of them :—these are the conditions by which changes should be regulated.

Line 1, at the bottom of the figure, may be taken as denoting change made at too early a period. It has no proper correlate or helper, moreover, above. Hence its subject is represented as tied up, unable to take any action.

Line 2, though weak, is in its correct place. It is in the centre also of the trigram Lî, signifying brightness and intelligence, and has a proper correlate in the strong 5. Let its subject take action in the way of change.

The symbolism of paragraph 3 is twofold. The line is strong, and in the correct position, but it has passed the centre of Sun and is on its outward verge. These conditions may dispose its subject to reckless and violent changing which would be bad. But if he act cautiously and with due deliberation, he may take action, and he will be believed in.

Line 4 is strong, but in the place of a weak line. This might vitiate any action of its subject in the way of change, and give occasion for repentance. But other conditions are intimated that

advantage in its getting rid of what was bad in it. (Or it shows us) the concubine (whose position is improved) by means of her son. There will be no error.

2. The second line, undivided, shows the caldron with the things (to be cooked) in it. (If its subject can say), 'My enemy dislikes me, but he cannot approach me,' there will be good fortune.

3. The third line, undivided, shows the caldron with (the places of) its ears changed. The progress (of its subject) is (thus) stopped. The fat flesh of the pheasant (which is in the caldron) will not be eaten. But the (genial) rain will come, and the grounds for repentance will disappear. There will be good fortune in the end.

4. The fourth line, undivided, shows the caldron with its feet broken; and its contents, designed for the ruler's use, overturned and spilt. Its subject will be made to blush for shame. There will be evil.

will have a contrary effect; and if he have further secured general confidence, he may proceed to the greatest changes, even to change the dynasty,—'with good fortune.' The conditions favourable to his action are said to be such as these:—The line has passed from the lower trigram into the upper; water and fire come in it into contact; the fourth place is that of the minister immediately below the ruler's seat. All these considerations demand action from the subject of 4 in harmony with the idea of the hexagram.

Line 5 has every quality proper to 'the lord of the hexagram,' and his action will be in every way beneficial. He is symbolised by the tiger; and the changes which he makes by the bright stripes of the tiger when he has changed his coat.

Line 6 is weak, but its subject is penetrated with the spirit of the hexagram. If its subject be a superior man, only inferior to 'the great man,' immediately below, the changes he makes will be inferior only to his. If he be a small man, he will be compliant and submissive. The lesson for him, however, is to abide firm and correct without taking any action of his own.

5. The fifth line, divided, shows the caldron with yellow ears and rings of metal in them. There will be advantage through being firm and correct.

6. The sixth line, undivided, shows the caldron with rings of jade. There will be great good fortune, and all action taken will be in every way advantageous.

L. Ting was originally a pictorial character, representing a caldron with three feet and two ears, used for cooking and preparing food for the table (the mat in old times) and the altar. The picture has disappeared from the character, but it is said that in the hexagram we have an outline from which fancy may construct the vessel. The lower line, divided, represents its feet; lines 2, 3, 4, all undivided, represent the body of it; line 5, divided, represents its two ears; and line 6, undivided, the handle by which it was carried, or suspended from a hook. Appendix VI makes Ting follow Ko in the order of the hexagrams, because there is no changer of the appearance and character of things equal to the furnace and caldron!

Ting and Bing (48) are the only two hexagrams named from things in ordinary use with men; and they are both descriptive of the government's work of nourishing. There are three hexagrams of which that is the theme, $\hat{I}$ (27), under which we are told in Appendix I that 'the sages nourished men of worth, by means of them to reach to the myriads of the people.' Bing treats of the nourishment of the people generally by the government through its agricultural and other methods; Ting treats of the nourishment of men of talents and virtue; and that being understood, it is said, without more ado, that it 'intimates great progress and success.' The Text that follows, however, is more difficult to interpret than that of Bing.

Line 1 is weak, and little or nothing can be expected from its subject. But it has a proper correlate in the strong 4; and the disastrous overthrow, causing the feet to be directed towards 4, is understood to be lucky, as accelerating the co-operation of their two lines! The overturned caldron is thereby emptied of bad stuff that had accumulated in it!! The writer uses another illustration, which comes to the same thing. A concubine is less honourable than a wife,—like the overthrown caldron. But if she have a son,

LI. THE KǎN HEXAGRAM.

Kǎn gives the intimation of ease and development. When (the time of) movement (which it indicates) comes, (the subject of the hexagram) will be found looking out with apprehension, and yet

while the proper wife has none, he will be his father's heir, and the mother, the concubine, will share in the honour of his position. Thus the issue of what was so unpromising is good. At least 'there is no mistake.' The above is what is found in the best commentaries on the paragraph. I give it, but am myself dissatisfied with it.

Line 2 is strong. 'The enemy' is the first line, which solicits 1. One, however, is able to resist the solicitation; and the whole paragraph gives a good auspice. The personal pronoun seems to show that the whole was, or was intended to be, understood as an oracular response in divination. This paragraph is rhymed, moreover, as are also 1, 3, and 4 :—

'In the caldron is good fare,
See my foe with angry glare;
But touch me he does not dare.'

Line 3 is also strong, and in the proper place; and if its correlate were the divided 5, its auspice would be entirely good. But instead of 5, its correlate is the strong 6. The place of the ears at 5 has been changed. Things promise badly. The advance of 3 is stopped. The good meat in the caldron which it symbolises will not be eaten. But 3 keeping firm 5 will by and by seek its society! The yin and the yang will mingle, and their union will be followed by genial rain. The issue will be good.

Line 4 is in the place of a great minister, who is charged with the most difficult duties, which no single man can sustain. Then the strength of 4 is weakened by being in an even place, and its correlate is the weak 1 in the lowest place. Its subject is insufficient of

smiling and talking cheerfully. When the movement (like a crash of thunder) terrifies all within a hundred li, he will be (like the sincere worshipper) who is not (startled into) letting go his ladle and (cup of) sacrificial spirits.

1. The first line, undivided, shows its subject, when the movement approaches, looking out and around with apprehension, and afterwards smiling and talking cheerfully. There will be good fortune.

2. The second line, divided, shows its subject, when the movement approaches, in a position of peril. He judges it better to let go the articles (in his possession), and to ascend a very lofty height. There is no occasion for him to pursue after (the things he has let go); in seven days he will find them.

3. The third line, divided, shows its subject distraught amid the startling movements going on. If those movements excite him to (right) action, there will be no mistake.

himself for his work, and he has no sufficient help; and the result will be evil.

'Paragraph 5,' says the Daily Lecture, 'praises the ruler as condescending to the worthy with his humble virtue.' 'Yellow' has occurred repeatedly as 'a correct colour;' and here 'the yellow ears and strong rings of metal' are intended to intensify our appreciation of the occupant of 5. As the line is divided, a caution is added about being firm and correct.

Line 6 is strong, but the strength is tempered by its being in an even place. It is this which makes the handle to be of jade, which, though very hard, is supposed to have a peculiar and rich softness of its own. The auspice of the line is very good. 'The great minister,' it is said, 'the subject of 6,' performs for the ruler, the subject of 5, in helping his government and nourishing the worthy, the part which the handle does for the caldron.

4. The fourth line, undivided, shows its subject, amid the startling movements, supinely sinking (deeper) in the mud.

5. The fifth line, divided, shows its subject going and coming amidst the startling movements (of the time), and always in peril; but perhaps he will not incur loss, and find business (which he can accomplish).

6. The topmost line, divided, shows its subject, amidst the startling movements (of the time), in breathless dismay and looking round him with trembling apprehension. If he take action, there will be evil. If, while the startling movements have not reached his own person and his neighbourhood, (he were to take precautions), there would be no error, though his relatives might (still) speak against him.

II. *K'ân* among the trigrams represents thunder, and, according to Wân's arrangement and significance of them, 'the oldest son.' It is a phonetic character in which the significant constituent is *Yü*, meaning rain, and with which are formed most characters that denote atmospherical phenomena. The hexagram is formed of the trigram *K'ân* redoubled, and may be taken as representing the crash or peal of thunder; but we have seen that the attribute or virtue of the trigram is 'moving, exciting power;' and thence, symbolically, the character is indicative of movement taking place in society or in the kingdom. This is the meaning of the hexagram; and the subject is the conduct to be pursued in a time of movement—such as insurrection or revolution—by the party promoting, and most interested in, the situation. It is shown how he ought to be aware of the dangers of the time, and how by precaution and the regulation of himself he may overcome them.

The indication of a successful issue given by the figure is supposed to be given by the undivided line at the bottom of the trigram. The subject of it must be superior to the subjects of the two divided lines above. It is in the idea of the hexagram that he should be moving and advancing;—and what can his movement be but successful?

LII. THE KǎN HEXAGRAM.

When one's resting is like that of the back, and he loses all consciousness of self; when he walks

The next sentence shows him sensible of the danger of the occasion, but confident and self-possessed. The concluding sentence shows him rapt in his own important affairs, like a sincere worshipper, thinking only of the service in which he is engaged. Such a symbol is said to be suggested by Wǎn's significance of Kǎn as 'the oldest son (page 33).' It is his to succeed to his father, and the hexagram, as following Ting, shows him presiding over the sacrifices that have been prepared in the caldron. This is too fanciful.

What is said on line 1 is little more than a repetition of the principal part of the Thwan. The line is undivided, and gives the auspice of good fortune.

'The position of peril' to the subject of line 2 is suggested, as Appendix II says, by its position, immediately above 1. But the rest of the symbolism is obscure, and K'ü Hsi says he does not understand it. The common interpretation appears in the version. The subject of the line does what he can to get out of danger; and finally, as is signified by the central position of the line, the issue is better than could have been expected. On the specification of 'seven days,' see what is said in the treatise on the Thwan of hexagram 24. On its use here K'ǎng-ze says:—'The places of a diagram amount to 6. The number 7 is the first of another. When the movement symbolised by Kǎn is gone by, things will be as they were before.'

Line 3 is divided, and where an undivided line should be; but if its subject move on to the fourth place, which would be right for him, the issue will not be bad.

The 4th line, however, has a bad auspice of its own. It is undivided in an even place, and it is pressed by the divided line on

in his courtyard, and does not see any (of the persons) in it,—there will be no error.

1. The first line, divided, shows its subject keeping his toes at rest. There will be no error; but it will be advantageous for him to be persistently firm and correct.

2. The second line, divided, shows its subject keeping the calves of his legs at rest. He cannot help (the subject of the line above) whom he follows, and is dissatisfied in his mind.

3. The third line, undivided, shows its subject keeping his loins at rest, and separating the ribs (from the body below). The situation is perilous, and the heart glows with suppressed excitement.

4. The fourth line, divided, shows its subject keeping his trunk at rest. There will be no error.

5. The fifth line, divided, shows its subject keeping his jawbones at rest, so that his words are (all) orderly. Occasion for repentance will disappear.

6. The sixth line, undivided, shows its subject

either side, hence its subject is represented as supinely sinking in the mud.

Line 5 is divided, in an odd place, and that in which the action of the hexagram may be supposed to be concentrated. Hence its subject is always in peril; but his central position indicates safety in the end.

Line 6 is weak, and has to abide the concluding terrors of the movement. Action on the part of its subject is sure to be evil. If, however, he were to take precautions, he might escape with only the censures of his relatives. But I do not see anything in the figure to indicate this final symbolism. The writer, probably, had a case in his mind, which it suited; but what that was we do not know.

devotedly maintaining his restfulness. There will be good fortune.

LII. The trigram K'ān represents a mountain. Mountains rise up grandly from the surface of the earth, and their masses rest on it in quiet and solemn majesty; and they serve also to arrest the onward progress of the traveller. Hence the attribute ascribed to K'ān is twofold; it is both active and passive—resting and arresting. The character is used in this hexagram with both of those significations. As the name of the figure, it denotes the mental characteristic of resting in what is right; especially resting, as it is expressed by Chinese critics, 'in principle,'—that which is right, on the widest scale, and in the absolute conception of the mind; and that which is right in every different position in which a man can be placed. We find this treated of in the Great Learning (Commentary, chapter 3), and in the Doctrine of the Mean, chapter 14, and other places. This is the theme of the hexagram; and the symbolism of it is all taken from different parts of the human body, as in hexagram 31, and the way in which they are dealt with. Several of the paragraphs are certainly not easy to translate and interpret.

The other parts of the body, such as the mouth, eyes, and ears, have their appetencies, which lead them to what is without themselves. The back alone has nothing to do with anything beyond itself—hardly with itself even; all that it has to do is to stand straight and strong. So should it be with us, resting in principle, free from the intrusion of selfish thoughts and external objects. Amidst society, he who realises the idea of the hexagram is still alone, and does not allow himself to be distracted from the contemplation and following of principle. He is not a recluse, however, who keeps aloof from social life; but his distinction is that he maintains a supreme regard to principle, when alone, and when mingling with others.

In the symbolism the author rises from one part of the body to the other. The first line at the bottom of the figure fitly suggests 'the toes.' The lesson is that from the first men should rest in, and be anxious to do, what is right in all their affairs. The weakness of the line and its being in an odd place give occasion for the caution, with which the paragraph concludes.

Above the toes are the calves, represented by the second line, weak, but in its proper place. Above this, again, are the loins, represented by 3, strong, and in danger of being violent. Line 2

LIII. THE KIEN HEXAGRAM.

Kien suggests to us the marriage of a young lady, and the good fortune (attending it). There will be advantage in being firm and correct.

1. The first line, divided, shows the wild geese gradually approaching the shore. A young officer (in similar circumstances) will be in a position of danger, and be spoken against; but there will be no error.

follows 3, and should help it; but is unable to do so; and there results dissatisfaction.

When the calves are kept at rest, advance is stopped, but no other harm ensues. Not so when the loins are kept at rest, and unable to bend, for the connexion between the upper and lower parts of the body is then broken. The dissatisfaction increases to an angry heat. Paragraph 3 is unusually difficult. For 'loins' P. Regis has *scapulae*, and for ribs *renes*; Canon McClatchie says:—'Third Nine is stopping at a limit, and separating what is in continued succession (i. e. the backbone); thus the mind,' &c.

Line 4 is a weak line resting in a proper place; hence it gives a good auspice. The Khang-hsi editors, however, call attention to the resting of the trunk as being inferior to the resting of the back in the Thwan.

The place of the weak fifth line is not proper for it; and this accounts for the mention of its subject 'repenting,' for which, however, there is not occasion.

The third line of the trigrams, and the sixth of the hexagram, is what makes *K'ien* what it is,—the symbol of a mountain. The subject of it therefore will carry out the resting required by the whole figure in the highest style.

2. The second line, divided, shows the geese gradually approaching the large rocks, where they eat and drink joyfully and at ease. There will be good fortune.

3. The third line, undivided, shows them gradually advanced to the dry plains. (It suggests also the idea of) a husband who goes on an expedition from which he does not return, and of a wife who is pregnant, but will not nourish her child. There will be evil. (The case symbolised) might be advantageous in resisting plunderers.

4. The fourth line, divided, shows the geese gradually advanced to the trees. They may light on the flat branches. There will be no error.

5. The fifth line, undivided, shows the geese gradually advanced to the high mound. (It suggests the idea of) a wife who for three years does not become pregnant; but in the end the natural issue cannot be prevented. There will be good fortune.

6. The sixth line, undivided, shows the geese gradually advanced to the large heights (beyond). Their feathers can be used as ornaments. There will be good fortune.

LIII. *Kien* is ordinarily used in the sense of gradually; but there is connected with that the idea also of progress or advance. The element of meaning in the character is the symbol of water; and the whole of it denotes gradual advance, like the soaking in of water. Three hexagrams contain in them the idea of advance,—*Bin* (35), *Shăng* (46), and this *Kien*; but each has its peculiarity of meaning, and that of *Kien* is the gradual manner in which the advance takes place. The subject then of the hexagram is the advance of men to offices in the state, how it should take place gradually and by successive steps, as well as on certain other

LIV. THE KWEI MEI HEXAGRAM.

Kwei Mei indicates that (under the conditions which it denotes) action will be evil, and in no wise advantageous.

conditions that may be gathered from the Text. P. Regis gives this exposition of the subject, as taken by him from the symbolism, which he ascribes to Confucius :—‘*Viri probi, seu republica digni, in virtutis soliditate instituendi sunt a sapiente, bonisque regulis ut altis radicibus firmandi, nec alii ad rempublicam tractandam promovendi, nisi qui paulatim per varios minoresque gradus ad magnum hoc regimen periculo facto ascendere digni sint.*’ He then illustrates this sentiment by the words of Pliny :—‘*Eligetur multis experimentis eruditus, et qui futura possit ex praeteritis praevidere.*’

But how does the lineal figure give the idea of a gradual advance? We shall see how it is attempted in the Great Symbolism to get this from the component trigrams. The account there is not satisfactory ; and still less so is what else I have been able to find on the subject. E.g., the trigrams were originally Khwăn and K’hien ; but the third line of Khwăn and the first of K’hien have changed places ; and the trigrams now denote ‘the youngest son,’ and ‘the eldest daughter.’ If all this, which is a mere farrago, were admitted, it would not help us to the idea of an advance.

Again, the lines 2, 3, 4, 5 are all in the places proper to them as strong or weak ; we ascend by them as by regular steps to the top of the hexagram ; and this, it is said, gives the notion of the gradual steps of the advance. But neither does this carry conviction with it to the mind. We must leave the question. King Wăn, for reasons which we cannot discover, or without such reasons, determined that the hexagram Kien should denote the gradual advance of men to positions of influence and office.

The marriage of a young lady is mentioned in the Thwan as an illustration of an important event taking place with various

1. The first line, undivided, shows the younger sister married off in a position ancillary to the real wife. (It suggests the idea of) a person lame on

preliminary steps, continued from its initiation to its consummation. But all must be done in an orderly and correct manner. And so must it be with the rise of a man in the service of the state.

The goose from the most ancient times played an important part in the marriage ceremonies of the Chinese; and this may have suggested the use of it in the symbolism of the different lines. Its habits as a bird of passage, and flying in processional order, admirably suited the writer's purpose. In paragraph 1 it appears for the first time in the season approaching the shore. Then comes the real subject of the line; and the facts of its being weak, and without a proper correlate, agree with, if they do not suggest, what is said about him, and the caution added.

The geese have advanced in line 2, and so has the officer, though he is not mentioned. The line is weak or humble, and central, and has a proper correlate in 5. Hence comes the good auspice.

Line 3 is strong, and has passed the central place, to the top of the lower trigram, and has not a proper correlate in 6. Its subject is likely to be violent and at the same time unsuccessful in his movements. He is like a husband who does not care for his wife, or a wife who does not care for her child. But in the case supposed, his strength in the end would be useful.

The web-footed goose is not suited for taking hold on the branches; but on flat branches it can rest. Line 4, weak, but in an even place, does not promise a good auspice for its subject; but it is the first line in the trigram of humility, and it is concluded that he will not fall into error.

Line 5 is a strong line in the ruler's seat; and yet it appears here as the symbol of a wife. Somehow its subject has been at variance with, and kept in disgrace by, calumniating enemies such as the plunderers of paragraph 3; but things come right in the end. The wife, childless for three years, becomes at last a mother; and there is good fortune.

The subject of line 6 has reached the top of the hexagram. There is no more advance for him; and he has no correlate. But he may still do some good work for the state, and verify the auspice derived from the ornamental plumes of the geese.

one leg who yet manages to tramp along. Going forward will be fortunate.

2. The second line, undivided, shows her blind of one eye, and yet able to see. There will be advantage in her maintaining the firm correctness of a solitary widow.

3. The third line, divided, shows the younger sister who was to be married off in a mean position. She returns and accepts an ancillary position.

4. The fourth line, undivided, shows the younger sister who is to be married off protracting the time. She may be late in being married, but the time will come.

5. The fifth line, divided, reminds us of the marrying of the younger sister of (king) Tŭ-yŭ, when the sleeves of her the princess were not equal to those of the (still) younger sister who accompanied her in an inferior capacity. (The case suggests the thought of) the moon almost full. There will be good fortune.

6. The sixth line, divided, shows the young lady bearing the basket, but without anything in it, and the gentleman slaughtering the sheep, but without blood flowing from it. There will be no advantage in any way.

LIV. Mei Kwei is a common way of saying that a young lady is married, or, literally, 'is going home.' If the order of the characters be reversed, the verb kwei will be transitive, and the phrase will signify 'the marrying away of a daughter,' or 'the giving the young lady in marriage.' In the name of this hexagram, Kwei is used with this transitive force. But Mei means 'a younger sister,' and not merely a young lady or a daughter. Kwei Mei might be equivalent to our 'giving in marriage;' but we shall find

LV. THE FǎNG HEXAGRAM.

Fǎng intimates progress and development. When a king has reached the point (which the name denotes)

that the special term has a special appropriateness. The Thwan makes the hexagram give a bad auspice concerning its subject; and for this the following reasons are given :—According to Wǎn's symbolism of the trigrams, Tui, the lower trigram here, denotes the youngest daughter, and Kǎn, the upper trigram, the oldest son. And as the action of the hexagram begins with that of the lower trigram, we have in the figure two violations of propriety. First, the marriage represented is initiated by the lady and her friends. She goes to her future home instead of the bridegroom coming to fetch her. Second, the parties are unequally matched. There ought not to be such disparity of age between them. Another reason assigned for the bad auspice is that lines 2, 3, 4, and 5 are all in places not suited to them, quite different from the corresponding lines in the preceding hexagram.

Is then such a marriage as the above, or marriage in general, the theme of the hexagram? I think not. The marriage comes in, as in the preceding essay, by way of illustration. With all the abuses belonging to it as an institution of his country, as will immediately appear, the writer acknowledged it without saying a word in deprecation or correction of those abuses; but from the case he selected he wanted to set forth some principles which should obtain in the relation between a ruler and his ministers. This view is insisted on in Wan K'ing's 'New Collection of Comments on the Yî (A. D. 1686).'

A feudal prince was said to marry nine ladies at once. The principal of them was the bride who was to be the proper wife, and she was attended by two others, virgins from her father's harem; a cousin, and a half-sister, a daughter of her father by another mother of inferior rank. Under line 1 the younger sister

there is no occasion to be anxious (through fear of a change). Let him be as the sun at noon.

of the hexagram appears in the inferior position of this half-sister. But the line is strong, indicative in a female of firm virtue. The mean condition and its duties are to be deplored, and give the auspice of lameness; but notwithstanding, the secondary wife will in a measure discharge her service. There will be good fortune. Notwithstanding apparent disadvantages, an able officer may do his ruler good service.

Line 2 is strong, and in the centre. The proper correlate is 5, which, however, is weak, and in the place of a strong line. With such a correlate, the able lady in 2 cannot do much in the discharge of her proper work. But if she think only of her husband, like the widow who will die rather than marry again, such devotion will have its effect and its reward. Though blind of one eye, she yet manages to see. And so devoted loyalty in an officer will compensate for many disadvantages.

Line 3 is weak, where it should be strong; and the attribute of pleased satisfaction belonging to Tui culminates in its subject. She turns out to be of so mean a character and such a slave of passion that no one will marry her. She returns and accepts the position of a concubine.

Line 4 is strong, where it should be weak; but in the case of a female the indication is not bad. The subject of the line, however, is in no haste. She waits, and the good time will come.

King Tî-yî has been already mentioned under the fifth line of hexagram 11, and in connexion with some regulation which he made about the marriage of daughters of the royal house. His sister here is honourably mentioned, so as to suggest that the adorning which she preferred was 'the ornament of the hidden man of the heart.' The comparison of her to 'the moon almost full' I am ready to hail as an instance where the duke of K'au is for once poetical. K'äng-ze, however, did not see poetry, but a symbol in it. 'The moon is not full,' he says, 'but only nearly full. A wife ought not to eclipse her husband!' However, the sister of Tî-yî gets happily married, as she deserved to do, being represented by the line in the place of honour, having its proper correlate in 2.

Line 6 is weak, at the top of the hexagram, and without a proper correlate. Hence its auspice is evil. The marriage-contract is broken, according to K'ü Hsî, and does not take effect. The

1. The first line, undivided, shows its subject meeting with his mate. Though they are both of the same character, there will be no error. Advance will call forth approval.

2. The second line, divided, shows its subject surrounded by screens so large and thick that at midday he can see from them the constellation of the Bushel. If he go (and try to enlighten his ruler who is thus emblemed), he will make himself to be viewed with suspicion and dislike. Let him cherish his feeling of sincere devotion that he may thereby move (his ruler's mind), and there will be good fortune.

3. The third line, undivided, shows its subject with an (additional) screen of a large and thick banner, through which at midday he can see (the small) Mei star. (In the darkness) he breaks his right arm; but there will be no error.

4. The fourth line, undivided, shows its subject in a tent so large and thick that at midday he can see from it the constellation of the Bushel. But he meets with the subject of the (first) line, undivided like himself. There will be good fortune.

5. The fifth line, divided, shows its subject bringing around him the men of brilliant ability. There will be occasion for congratulation and praise. There will be good fortune.

6. The topmost line, divided, shows its subject

parties mentioned in the paragraph appear engaged in the temple, offering or sacrificing to the spirits of their ancestors. But the woman's basket which should contain her offerings (The Shih, I, ii, ode 4) is empty, and the man attempts to perform his part in slaying the victim (The Shih, II, vi, ode 6. 5) without effect.

with his house made large, but only serving as a screen to his household. When he looks at his door, it is still, and there is nobody about it. For three years no one is to be seen. There will be evil.

LV. The character Fǎng is the symbol of being large and abundant, and, as the name of this hexagram, denotes a condition of abundant prosperity. In the changes of human affairs a condition of prosperity has often given place to one of an opposite character. The lesson of the hexagram is to show to rulers how they may preserve the prosperity of their state and people. The component trigrams have the attributes of intelligence and of motive force, and the second is under the direction of the first. A ruler with these attributes is not likely to fail in maintaining his crown and prosperity, and it may well be said that the figure intimates progress and development. The king is told not to be anxious, but to study how he may always be like the sun in his meridian height, cheering and enlightening all.

The explanation of the Thwan is thus natural and easy. It will be found that a change is introduced in explaining the symbolism of the lines, which it is as well to point out here. Thus far we have found that to constitute a proper correlation between two lines, one of them must be whole, and the other divided. Here two undivided lines make a correlation. The law, evidently made for the occasion, goes far to upset altogether the doctrine of correlated lines. I have been surprised that the rules about the lines stated in the Introduction, pp. 15, 16, have held good so often. There have been various deviations from them, but none so gross as that in this hexagram.

Line 1 is strong, and in an odd place. Its correlate is 4, which would in other figures be deemed unfortunate. But here even the Text calls 4 (for the reference must be to it) the mate of 1, and makes their belonging to different categories of no account. The lesson taught is that mutual helpfulness is the great instrument for the maintenance of prosperity. The subject of line 1 is encouraged to go forward.

Line 2 is divided, and in its proper place. Occupying the centre of the trigram of brightness, the intelligence of it should be concentrated in its subject; but his correlate is the weak 5, weak and in an improper place, so that he becomes the benighted ruler, and darkness is shed from him down on 2, which is strangely symbolised.

LVI. THE LÜ HEXAGRAM.

Lü intimates that (in the condition which it denotes) there may be some little attainment and progress. If the stranger or traveller be firm and correct as he ought to be, there will be good fortune.

1. The first line, divided, shows the stranger mean and meanly occupied. It is thus that he brings on himself (further) calamity.

The subject of 2 therefore, if he advance, will not be acceptable to his ruler, and will not be employed. The only way in which he can be useful by developing the light that is in him is pointed out in the conclusion. The constellation of the Bushel corresponds to our Ursa Major, or perhaps part of Sagittarius.

Line 3 is strong, in its proper place. It is the last line moreover of the trigram of Brightness. All these conditions are favourable to the employment of its subject; but its correlate is the weak 6, which is at the extremity of the trigram of movement. There is no more power therefore in 6, and the subject of 3 has no one to co-operate with him. His symbolism and auspice are worse than those of 2; but his own proper goodness and capacity will save him from error. Mei is a small star in or near the Bushel.

The symbolism of line 4 is the same as that of 2, till we come to the last sentence. Then there is the strange correlation of the two strong lines in 4 and 1; and the issue is good.

The subject of line 5 is in the ruler's place, himself weak, but 'the lord' of the trigram of movement. He can do little unhelped, but if he can bring into the work and employ in his service the talents of 1, 3, and 4, and even of 2, his correlate, the results will be admirable. Nothing consolidates the prosperity of a country so much as the co-operation of the ruler and able ministers.

All the conditions of line 6 are unfavourable, and its subject is left to himself without any helpers. He is isolated for long, and undone. The issue is only evil.

2. The second line, divided, shows the stranger, occupying his lodging-house, carrying with him his means of livelihood, and provided with good and trusty servants.

3. The third line, undivided, shows the stranger, burning his lodging-house, and having lost his servants. However firm and correct he (try to) be, he will be in peril.

4. The fourth line, undivided, shows the traveller in a resting-place, having (also) the means of livelihood and the axe, (but still saying), 'I am not at ease in my mind.'

5. The fifth line, divided, shows its subject shooting a pheasant. He will lose his arrow, but in the end he will obtain praise and a (high) charge.

6. The sixth line, undivided, suggests the idea of a bird burning its nest. The stranger, (thus represented), first laughs and then cries out. He has lost his ox(-like docility) too readily and easily. There will be evil.

LVI. The name Lû denotes people travelling abroad, and is often translated by 'strangers.' As early as the time of king Wăn, there was a class of men who went about from one state to another, pursuing their business as pedlars or travelling merchants; but in Mencius II, i, chap. 5. 3, it is used for travellers generally, whatever it was that took them out of their own states. Confucius himself is adduced as a travelling stranger; and in this hexagram king Wăn is supposed to have addressed himself to the class of such men, and told them how they ought to comport themselves. They ought to cultivate two qualities,—those of humility and integrity (firm correctness). By means of these they would escape harm, and would make some little attainment and progress. Their rank was too low to speak of great things in connexion with them. It is interesting to find travellers, strangers in a strange land, having thus a place in the YĪ.

For the manner in which the component trigrams are supposed

LVII. THE SUN HEXAGRAM.

Sun intimates that (under the conditions which it denotes) there will be some little attainment and progress. There will be advantage in movement

to give the idea that is in Lü, see Appendix II. In Appendix I there is an endeavour to explain the Thwan by means of the lines and their relation to one another.

Line 1 is weak, in an odd place, and at the very bottom or commencement of the hexagram. These conditions are supposed to account for the unfavourable symbolism and auspice.

Line 2 is weak, but in its proper place. That place, moreover, is the central. Hence the traveller—and he might here very well be a travelling merchant—is represented in the symbolism as provided with everything he can require; and though the auspice is not mentioned, we must understand it as being good.

Line 3 is strong, and in an even place. But it occupies the topmost place in the lower trigram; and its strength may be expected to appear as violence. So it does in the symbolism, and extraordinary violence as well. It seems unreasonable to suppose, as in the conclusion, that one so described could be in any way correct. The Khang-hsi editors remark that the subjects of 2 and 3 are represented as having 'lodging-houses,' and not any of those of the other lines, because these are the only two lines in the places proper to them!

Line 4 is strong, but in an even place. Hence its subject has not 'a lodging-house;' but has found a situation where he has shelter, though he is exposed to perils. Hence he is represented as having an axe, which may be available for defence. Still he is not at peace in his mind. The Khang-hsi editors observe well that the mention of an axe makes us think of caution as a quality desirable in a traveller.

Line 5, though weak, is in the centre of the upper trigram, which

onward in whatever direction. It will be advantageous (also) to see the great man.

1. The first line, divided, shows its subject (now) advancing, (now) receding. It would be advantageous for him to have the firm correctness of a brave soldier.

2. The second line, undivided, shows the representative of Sun beneath a couch, and employing diviners and exorcists in a way bordering on confusion. There will be good fortune and no error.

3. The third line, undivided, shows its subject penetrating (only) by violent and repeated efforts. There will be occasion for regret.

4. The fourth line, divided, shows all occasion for repentance (in its subject) passed away. He takes game for its threefold use in his hunting.

5. The fifth line, undivided, shows that with firm correctness there will be good fortune (to its

has the quality of brightness and elegance. It is held to be the lord of the trigram Lî; and lines 4 and 6 are on either side in loyal duty to defend and help. Then the shooting a pheasant is supposed to be suggested; an elegant bird,—by the trigram of elegance. When an officer was travelling abroad in ancient times, his gift of introduction at any feudal court was a pheasant. The traveller here emblemized is praised by his attached friends, and exalted to a place of dignity by the ruler to whom he is acceptable. It will be seen how the idea of the fifth line being the ruler's seat is dropt here as being alien from the idea of the hexagram, so arbitrary is the interpretation of the symbolism.

Line 6 is strong, in an even place, at the extremity of Lî and of the whole hexagram. Its subject will be arrogant and violent; the opposite of what a traveller should be; and the issue will be evil. The symbolism must be allowed to be extravagant. What bird ever burned its nest? And the character for 'ox' is strangely used for 'ox-like docility.'

subject). All occasion for repentance will disappear, and all his movements will be advantageous. There may have been no (good) beginning, but there will be a (good) end. Three days before making any changes, (let him give notice of them); and three days after, (let him reconsider them). There will (thus) be good fortune.

6. The sixth line, undivided, shows the representative of penetration beneath a couch, and having lost the axe with which he executed his decisions. However firm and correct he may (try to) be, there will be evil.

LVII. With Sun as the fifth of the Fû-hsi trigrams we have become familiar. It symbolises both wind and wood; and has the attributes of flexibility (nearly allied to docility) and penetration. In this hexagram we are to think of it as representing wind with its penetrating power, finding its way into every corner and cranny.

Confucius once said (Analects 12. 19):—‘The relation between superiors and inferiors is like that between the wind and the grass. The grass must bend when the wind blows upon it.’ In accordance with this, the subject of the hexagram must be understood as the influence and orders of government designed to remedy what is wrong in the people. The ‘Daily Lecture’ says that the upper trigram denotes the orders issuing from the ruler, and the lower the obedience rendered to them by the people; but this view is hardly borne out by the Text.

But how is it that the figure represents merely ‘some little attainment?’ This is generally explained by taking the first line of the trigram as indicating what the subject of it can do. But over the weak first line are two strong lines, so that its subject can accomplish but little. The Khang-hsi editors, rejecting this view, contend that, the idea of the whole figure being penetration, line 1, the symbol of weakness and what is bad, will not be able to offer much resistance to the subjects of the other lines, which will enter and dispel its influence. They illustrate this from processes of nature, education, and politics; the effect they say is described as small, because the process is not to revolutionise or renew, but only to

LVIII. THE TUI HEXAGRAM.

Tui intimates that (under its conditions) there will be progress and attainment. (But) it will be advantageous to be firm and correct.

correct and improve. Such as it is, however, it requires the operation of the strong and virtuous, 'the great man.' Even all this criticism is not entirely satisfactory.

Line 1 is weak, where it should be strong. The movements of its subject are expressive of perplexity. He wants vigour and decision.

Line 2 is strong, and in the right place, and has a good auspice. Things are placed or hidden beneath a couch or bed; and the subject of the line appears as searching for them. He calls in divination to assist his judgment, and exorcists to expel for him what is bad. The work is great and difficult, so that he appears almost distracted by it; but the issue is good. For this successful explanation of the line, I am indebted to the Khang-hsi editors. The writer of the Text believed of course in divination and exorcism; which was his misfortune rather than his fault or folly.

Line 3 is in the right place for a strong line. But its position at the top of the lower trigram is supposed to indicate the restlessness, and here the vehemence, of its subject. And 6 is no proper correlate. All the striving is ineffective, and there is occasion for regret.

Line 4 is weak, as is its correlate in 1. But 4 is a proper place for a weak line, and it rests under the shadow of the strong and central 5. Hence the omens of evil are counteracted; and a good auspice is obtained. The game caught in hunting was divided into three portions:—the first for use in sacrifices; the second for the entertainment of visitors; and the third for the kitchen generally. A hunt which yielded enough for all these purposes was deemed very successful.

On line 5 *K'ang-ze* says:—'It is the seat of honour, and the

1. The first line, undivided, shows the pleasure of (inward) harmony. There will be good fortune.

2. The second line, undivided, shows the pleasure arising from (inward) sincerity. There will be good fortune. Occasion for repentance will disappear.

3. The third line, divided, shows its subject bringing round himself whatever can give pleasure. There will be evil.

4. The fourth line, undivided, shows its subject deliberating about what to seek his pleasure in, and not at rest. He borders on what would be injurious, but there will be cause for joy.

5. The fifth line, undivided, shows its subject trusting in one who would injure him. The situation is perilous.

6. The topmost line, divided, shows the pleasure of its subject in leading and attracting others.

place for the lord of Sun, from whom there issue all charges and commands. It is central and correct; we must find in its subject the qualities denoted by Sun in their greatest excellence. But those qualities are docility and accordance with what is right; and the advantage of firm correctness is insisted on. With this all will be right.' With the concluding sentence compare the conclusion of the Thwan of hexagram 18.

The evil that paragraph 6 concludes with would arise from the quality of Sun being carried to excess. I have followed the Khang-hsi editors in adopting a change of one character in the received Text.

LVIII. The trigram Tui symbolises water as collected in a marsh or lake; and its attribute or virtue is pleasure or complacent satisfaction. It is a matter of some difficulty to determine in one's mind how this attribute came to be connected with the trigram. The Khang-hsi editors say:—'When the airs of spring begin to blow, from the collections of water on the earth the moistening vapours rise up (and descend again); so, when the breath of health is vigorous in a man's person, the hue of it is

LIX. THE HWÂN HEXAGRAM.

Hwân intimates that (under its conditions) there will be progress and success. The king goes to his ancestral temple; and it will be advantageous to

displayed in his complexion. Akin to this is the significance of the hexagram Tui representing a marsh, as denoting pleasure. Although the yin lines give it its special character they owe their power and effect to the yang; so when the qualities of mildness and harmony prevail in a man, without true-heartedness and integrity to control and direct them, they will fail to be correct, and may degenerate into what is evil. Hence it is said that it will be advantageous to be firm and correct!

The feeling then of pleasure is the subject of this hexagram. The above quotation sufficiently explains the concluding characters of the T'hwān; but where is the intimation in Tui of progress and attainments? It is supposed to be in the one weak line surmounting each trigram and supported by the two strong lines. Fancy sees in that mildness and benignity energised by a double portion of strength.

Line 1, strong in the place of strength, with no proper correlate above, is thus confined to itself. But its subject is sufficient for himself. There will be good fortune.

Line 2, by the rule of place, should be weak, but it is strong. Without any proper correlate, and contiguous to the weak 3, the subject of it might be injuriously affected, and there would be cause for repentance. But the sincerity natural in his central position counteracts all this.

The view of the third paragraph that appears in the translation is derived from the Khang-hsi editors. The evil threatened in it would be a consequence of the excessive devotion of its subject to pleasure.

'The bordering on what is injurious' in paragraph 4 has reference to the contiguity of line 4 to the weak 3. That might have

cross the great stream. It will be advantageous to be firm and correct.

1. The first line, divided, shows its subject engaged in rescuing (from the impending evil) and having (the assistance of) a strong horse. There will be good fortune.

2. The second line, undivided, shows its subject, amid the dispersion, hurrying to his contrivance (for security). All occasion for repentance will disappear.

3. The third line, divided, shows its subject discarding any regard to his own person. There will be no occasion for repentance.

4. The fourth line, divided, shows its subject scattering the (different) parties (in the state); which leads to great good fortune. From the dispersion (he collects again good men standing out, a crowd) like a mound, which is what ordinary men would not have thought of.

5. The fifth line, undivided, shows its subject amidst the dispersion issuing his great announcements as the perspiration (flows from his body).

an injurious effect; but the subject of 4 reflects and deliberates before he will yield to the seduction of pleasure, and there is cause for joy.

The danger to the subject of line 5 is from the weak 6 above, in whom he is represented as 'trusting.' Possibly his own strength and sincerity of mind may be perverted into instruments of evil; but possibly, they may operate beneficially.

The symbolism of paragraph 6 is akin to that of 3, though no positive auspice is expressed. The subject of line 3 attracts others round itself for the sake of pleasure; the subject of this leads them to follow himself in quest of it.

He scatters abroad (also) the accumulations in the royal granaries. There will be no error.

6. The topmost line, undivided, shows its subject disposing of (what may be called) its bloody wounds, and going and separating himself from its anxious fears. There will be no error.

LIX. Hwân, the name of this hexagram, denotes a state of dissipation or dispersion. It is descriptive primarily of men's minds alienated from what is right and good. This alienation is sure to go on to disorder in the commonwealth; and an attempt is made to show how it should be dealt with and remedied.

The figure is made up of one of the trigrams for water and over it that for wind. Wind moving over water seems to disperse it, and awakes naturally in the beholder the idea of dissipation.

The intimation of progress and success is supposed to be given by the strong lines occupying the central places. The king goes to the ancestral temple, there to meet with the spirits of his ancestors. His filial piety moves them by the sincerity of its manifestation. Those spirits come and are present. Let filial piety—in our language, let sincere religion—rule in men's minds, and there will be no alienation in them from what is right and good or from one another. And if the state of the country demand a great or hazardous enterprise, let it be undertaken. But whatever is done, must be done with due attention to what is right, firmly and correctly.

Line 1, at the commencement of the hexagram, tells us that the evil has not yet made great progress, and that dealing with it will be easy. But the subject of the line is weak, and in an odd place. He cannot cope with the evil himself. He must have help, and he finds that in a strong horse, which description is understood to be symbolical of the subject of the strong second line.

Line 2 is strong, but in an even place. That place is, indeed, the central, but the attribute of the lower trigram Khan is peril. These conditions indicate evil, and action will be dangerous; but the subject of 2 looks to 1 below him, and takes shelter in union with its subject. Since the commentary of *K'hang-ze*, this has been the interpretation of the line.

Line 3 is weak, and in an odd place. A regard for himself that would unfit its subject for contributing any service to the work of

LX. THE K'IEH HEXAGRAM.

K'ieh intimates that (under its conditions) there will be progress and attainment. (But) if the regulations (which it prescribes) be severe and difficult, they cannot be permanent.

I. The first line, undivided, shows its subject not

the hexagram might be feared; but he discards that regard, and will do nothing to be repented of. There is a change of style in the Chinese text at this point. As Wang Shǎn-ze (Yüan dynasty) says:—‘Here and henceforth the scattering is of what should be scattered, that what should not be scattered may be collected.’

Line 4, though weak, is in its correct place, and adjoins the strong 5, which is in the ruler's seat. The subject of 4, therefore, will fitly represent the minister, to whom it belongs to do a great part in remedying the evil of dispersion. And this he does. He brings dissentient partizanship to an end; and not satisfied with that, he collects multitudes of those who had been divided into a great body so that they stand out conspicuous like a hill.

Line 5 gives us the action of the ruler himself;—by his proclamations, and by his benevolence. *K'ü Hsf* and other critics enlarge on the symbolism of the perspiration, which they think much to the point. P. Regis avoids it, translating—‘Ille, magnas leges dissipans, facit ut penetrent(ur?).’ Canon McClatchie has an ingenious and original, so far as my Chinese reading goes, note upon it:—‘As sweat cures fevers, so do proclamations cure rebellions.’ Both of these translators miss the meaning of the other instance of the king's work.

Line 6 is occupied by a strong line, which has a proper correlate in 3; but 3 is at the top of the trigram of peril. The subject of 6 hurries away from association with the subject of it, but does so in the spirit of the hexagram, so that there is no error or blame attaching to him.

quitting the courtyard outside his door. There will be no error.

2. The second line, undivided, shows its subject not quitting the courtyard inside his gate. There will be evil.

3. The third line, divided, shows its subject with no appearance of observing the (proper) regulations, in which case we shall see him lamenting. But there will be no one to blame (but himself).

4. The fourth line, divided, shows its subject quietly and naturally (attentive to all) regulations. There will be progress and success.

5. The fifth line, undivided, shows its subject sweetly and acceptably enacting his regulations. There will be good fortune. The onward progress with them will afford ground for admiration.

6. The topmost line, divided, shows its subject enacting regulations severe and difficult. Even with firmness and correctness there will be evil. But though there will be cause for repentance, it will (by and by) disappear.

LX. The primary application of the character *Kieh* was to denote the joints of the bamboo; it is used also for the joints of the human frame; and for the solar and other terms of the year. Whatever makes regular division may be denominated a *Kieh*; there enter into it the ideas of regulating and restraining; and the subject of this hexagram is the regulations of government enacted for the guidance and control of the people. How the constituent trigrams are supposed to suggest or indicate this meaning will be seen in Appendix II.

K'ü Hsi anticipates that symbolism in trying to account for the statement that the figure gives the promise of success and attainment; but the ground of this is generally made out by referring to the equal division of the undivided and divided lines and our having in 2 and 5, the central places, two undivided lines. An

LXI. THE KUNG FŪ HEXAGRAM.

Kung Fū (moves even) pigs and fish, and leads to good fortune. There will be advantage in cross-

important point concerning 'regulations' is brought out in the conclusion of the *Thwan*,—that they must be adapted to circumstances, and not made too strict and severe.

Line 1 is strong, and in its correct place. Its subject therefore would not be wanting in power to make his way. But he is supposed to be kept in check by the strong 2, and the correlate 4 is the first line in the trigram of peril. The course of wisdom therefore is to keep still. The character here rendered door is that belonging to the inner apartments, leading from the hall into which entrance is found by the outer gate, mentioned under line 2. The courtyard outside the door and that inside the gate is one and the same. The 'Daily Lecture' says that the paragraph tells an officer not to take office rashly, but to exercise a cautious judgment in his measures.

Line 2 is strong, in the wrong place; nor has it a proper correlate. Its subject keeps still, when he ought to be up and doing. There will be evil.

Line 3 should be strong, but it is weak. It is neither central nor correct. It has no proper correlate, and it is the topmost line in the trigram of complacent satisfaction. Its subject will not receive the yoke of regulations; and he will find out his mistake, when it is too late.

Line 4 is weak, as it ought to be, and its subject has respect to the authority of the strong ruler in 5. Hence its good symbolism and auspice.

Line 5 is strong, and in its correct place. Its subject regulates himself, having no correlate; but he is lord of the hexagram, and his influence is everywhere beneficially felt.

ing the great stream. There will be advantage in being firm and correct.

1. The first line, undivided, shows its subject resting (in himself). There will be good fortune. If he sought to any other, he would not find rest.

2. The second line, undivided, shows its subject (like) the crane crying out in her hidden retirement, and her young ones responding to her. (It is as if it were said), 'I have a cup of good spirits,' (and the response were), 'I will partake of it with you.'

3. The third line, divided, shows its subject having met with his mate. Now he beats his drum, and now he leaves off. Now he weeps, and now he sings.

4. The fourth line, divided, shows its subject (like) the moon nearly full, and (like) a horse (in a chariot) whose fellow disappears. There will be no error.

5. The fifth line, undivided, shows its subject perfectly sincere, and linking (others) to him in closest union. There will be no error.

6. The topmost line, undivided, shows its subject in chanticleer (trying to) mount to heaven. Even with firm correctness there will be evil.

Line 6 is weak, in its proper place. The subject of the topmost line must be supposed to possess an exaggerated desire for enacting regulations. They will be too severe, and the effect will be evil. But as Confucius (Analects 3. 3) says, that is not so great a fault as to be easy and remiss. It may be remedied, and cause for repentance will disappear.

LXI. *K'ung Fû*, the name of this hexagram, may be represented in English by 'Inmost Sincerity.' It denotes the highest quality of man, and gives its possessor power so that he prevails with spiritual beings, with other men, and with the lower creatures. It is the

LXII. THE HSIÃO KWO HEXAGRAM.

Hsião Kwo indicates that (in the circumstances which it implies) there will be progress and attain-

subject of the 'Doctrine of the Mean' from the 21st chapter onwards, where Remusat rendered it by 'la perfection,' 'la perfection morale,' and Intorcetta and his coadjutors by 'vera solidaque perfectio.' The lineal figure has suggested to the Chinese commentators, from the author of the first Appendix, two ideas in it which deserve to be pointed out. There are two divided lines in the centre and two undivided below them and above them. The divided lines in the centre are held to represent the heart or mind free from all pre-occupation, without any consciousness of self; and the undivided lines, on each side of it, in the centre of the constituent trigrams are held to denote the solidity of the virtue of one so free from selfishness. There is no unreality in it, not a single flaw.

The 'Daily Lecture' at the conclusion of its paraphrase of the Thwan refers to the history of the ancient Shun, and the wonderful achievements of his virtue. The authors give no instance of the affecting of 'pigs and fishes' by sincerity, and say that these names are symbolical of men, the rudest and most unsusceptible of being acted on. The Text says that the man thus gifted with sincerity will succeed in the most difficult enterprises. Remarkable is the concluding sentence that he must be firm and correct. Here, as elsewhere throughout the Yi, there comes out the practical character which has distinguished the Chinese people and their best teaching all along the line of history.

The translation of paragraph 1 is according to the view approved by the Khang-hsi editors. The ordinary view makes the other to whom the subject of line 1 looks or might look to be the subject of 4; but they contend that, excepting in the case of 3 and 6, the force of correlation should be discarded from the study of this

ment. But it will be advantageous to be firm and correct. (What the name denotes) may be done in small affairs, but not in great affairs. (It is like) the notes that come down from a bird on the wing ;—to descend is better than to ascend. There will (in this way) be great good fortune.

1. The first line, divided, suggests (the idea of) a bird flying, (and ascending) till the issue is evil.

2. The second line, divided, shows its subject passing by his grandfather, and meeting with his

hexagram; for the virtue of sincerity is all centred in itself, thence derived and thereby powerful.

For paragraph 2, see Appendix III, Section i, 42. It is in rhyme, and I have there rendered it in rhyme. The 'young ones of the crane' are represented by line 1. In the third and fourth sentences we have the symbolism of two men brought together by their sympathy in virtue. The subject of the paragraph is the effect of sincerity.

The 'mate' of line 3 is 6. The principle of correlation comes in. Sincerity, not left to itself, is influenced from without, and hence come the changes and uncertainty in the state and moods of the subject of the line.

Line 4 is weak, and in its correct place. The subject of it has discarded the correlate in 1, and hastens on to the confidence of the ruler in 5, being symbolised as the moon nearly full. The other symbol of the horse whose fellow has disappeared has reference to the discarding of the subject of 1. Anciently chariots and carriages were drawn by four horses, two outsides and two insides. Lines 1 and 4 were a pair of these; but 1 disappears here from the team, and 4 goes on and joins 5.

Line 5 is strong and central, in the ruler's place. Its subject must be the sage on the throne, whose sincerity will go forth and bind all in union with himself.

Line 6 should be divided, but is undivided; and coming after 5, what can the subject of it do? His efforts will be ineffectual, and injurious to himself. He is symbolised by a cock—literally, 'the plumaged voice.' But a cock is not fitted to fly high, and in attempting to do so will only suffer hurt.

grandmother ; not attempting anything against his ruler, but meeting him as his minister. There will be no error.

3. The third line, undivided, shows its subject taking no extraordinary precautions against danger ; and some in consequence finding opportunity to assail and injure him. There will be evil.

4. The fourth line, undivided, shows its subject falling into no error, but meeting (the exigency of his situation), without exceeding (in his natural course). If he go forward, there will be peril, and he must be cautious. There is no occasion to be using firmness perpetually.

5. The fifth line, divided, (suggests the idea) of dense clouds, but no rain, coming from our borders in the west. It also (shows) the prince shooting his arrow, and taking the bird in a cave.

6. The sixth line, divided, shows its subject not meeting (the exigency of his situation), and exceeding (his proper course). (It suggests the idea of) a bird flying far aloft. There will be evil. The case is what is called one of calamity and self-produced injury.

LXII. The name Hsião Kwo is explained both by reference to the lines of the hexagram, and to the meaning of the characters. The explanation from the lines appears immediately on comparing them with those of Tâ Kwo, the 28th hexagram. There the first and sixth lines are divided, and between are four undivided lines ; here the third and fourth lines are undivided, and outside each of them are two divided lines. The undivided or yang lines are great, the divided or yin lines are called small. In Hsião Kwo the divided or small lines predominate. But this peculiar structure of the figure could be of no interest to the student, if it were not for the meaning of the name, which is 'small excesses' or 'exceeding in what is small.' The author, accepted by us as king Wăn,

LXIII. THE KĪ 3Ī HEXAGRAM.

Kī 3Ī intimates progress and success in small matters. There will be advantage in being firm

had in his mind our distinction of essentials and non-essentials. Is it ever good to deviate from what is recognised as the established course of procedure? The reply is—never in the matter of right ; but in what is conventional and ceremonial—in what is non-essential—the deviation may be made, and will be productive of good. The form may be given up, but not the substance. But the thing must be done very carefully,—humbly and reverently, and in small matters.

The symbolism of the bird is rather obscure. The whole of it is intended to teach humility. It is better for the bird to descend, keeping near to where it can perch and rest, than to hold on ascending into the homeless regions of the air.

Line 1 is weak, in an odd place, and possessed by the ‘idea of exceeding,’ which belongs to the hexagram. Its correlate is the strong 4, belonging to the trigram *K’ān*, the attribute of which is movement. There is nothing to repress the tendency of 1 ; rather it is stimulated ; and hence the symbolism.

Line 2 is weak, but in its proper place, and in the centre. Its correlate is 5, which is also a weak line. The lines 3 and 4 between them are both strong ; and are supposed to represent the father and grandfather of the subject of 2 ; but he or she goes past them, and meets with the grandmother in 5. Again, 5 is the ruler’s seat. The subject of 2 moves on to him, but not as an enemy ; but humbly and loyally, as his minister according to the attributes of a weak line in the central place. It must be allowed that this view of the symbolism and its interpretation is obscure and strained.

The subject of line 3 is too confident in his own strength, and too defiant of the weak and small enemies that seek his hurt.

and correct. There has been good fortune in the beginning; there may be disorder in the end.

1. The first line, undivided, (shows its subject as a driver) who drags back his wheel, (or as a fox) which has wet his tail. There will be no error.

2. The second line, divided, (shows its subject as) a wife who has lost her (carriage-)screen. There is no occasion to go in pursuit of it. In seven days she will find it.

3. The third line, undivided, (suggests the case of) Kâu Jung who attacked the Demon region, but was three years in subduing it. Small men should not be employed (in such enterprises).

Line 4 is also strong, but the exercise of his strength by its subject is tempered by the position in an even place. He is warned, however, to continue quiet and restrain himself.

Line 5, though in the ruler's seat, is weak, and incapable of doing anything great. Its subject is called king or duke because of the ruler's seat; and the one whom in the concluding sentence he is said to capture is supposed to be the subject of 2.

The first part of the symbolism is the same as that of the Thwan under hexagram 9, q. v. I said there that it probably gave a testimony of the merit of the house of Kâu, as deserving the throne rather than the kings of Shang. That was because the Thwan contained the sentiments of Wăn, while he was yet only lord of Kâu. But the symbolism here was the work of the duke of Kâu, after his brother king Wû had obtained the throne. How did the symbolism then occur to him? May we not conclude that at least the hsiang of this hexagram was written during the troubled period of his regency, after the accession of Wû's son, king K'hang?

The Khang-hsi editors find in the concluding symbolism an incentive to humility:—'The duke, leaving birds on the wing, is content to use his arrows against those in a cave!'

Line 6 is weak, and is at the top of the trigram of movement. He is possessed by the idea of the hexagram in an extreme degree, and is incapable of keeping himself under restraint.

4. The fourth line, divided, shows its subject with rags provided against any leak (in his boat), and on his guard all day long.

5. The fifth line, undivided, shows its subject (as) the neighbour in the east who slaughters an ox (for his sacrifice); but this is not equal to the (small) spring sacrifice of the neighbour in the west, whose sincerity receives the blessing.

6. The topmost line, divided, shows its subject with (even) his head immersed. The position is perilous.

LXIII. The character called *Kî* is used as a symbol of being past or completed. *Û* denotes primarily crossing a stream, and has the secondary meaning of helping and completing. The two characters, combined, will express the successful accomplishment of whatever the writer has in his mind. In dealing with this lineal figure, king Wăn was thinking of the condition of the kingdom, at length at rest and quiet. The vessel of the state has been brought safely across the great and dangerous stream. The distresses of the kingdom have been relieved, and its disorders have been repressed. Does anything remain to be done still? Yes, in small things. The new government has to be consolidated. Its ruler must, without noise or clamour, go on to perfect what has been wrought, with firmness and correctness, and ever keeping in mind the instability of all human affairs. That every line of the hexagram is in its correct place, and has its proper correlate is also supposed to harmonize with the intimation of progress and success.

Line 1, the first of the hexagram, represents the time immediately after the successful achievement of the enterprise it denotes;—the time for resting and being quiet. For a season, at least, all movement should be hushed. Hence we have the symbolism of a driver trying to stop his carriage, and a fox who has wet his tail, and will not tempt the stream again.

Line 2 is weak, and in its proper place. It also has the strong correlate 5; and might be expected to be forward to act. But it occupies its correct and central place, and suggests the symbol of a lady whose carriage has lost its screen. She will not advance

LXIV. THE WEI 31 HEXAGRAM.

Wei 31 intimates progress and success (in the circumstances which it implies). (We see) a young fox that has nearly crossed (the stream), when its tail gets immersed. There will be no advantage in any way.

further so soon after success has been achieved; but keep herself hidden and retired. Let her not try to find the screen. When it is said that she will find this 'after seven days,' the meaning seems to be simply this, that the period of K'î 31 will then have been exhausted, the six lines having been gone through, and a new period, when action will be proper, shall have commenced.

The strong line 3, at the top of the lower trigram, suggests for its subject one undertaking a vigorous enterprise. The writer thinks of Káo Tung, the sacrificial title of Wû Ting, one of the ablest sovereigns of the Shang dynasty (B. C. 1364-1324), who undertook an expedition against the barbarous hordes of the cold and bleak regions north of the Middle States. He is mentioned again under the next hexagram. He appears also in the Shû, IV, ix, and in the Shih, IV, iii, ode 5. His enterprise may have been good, and successful, but it was tedious, and the paragraph concludes with a caution.

Line 4 is weak, and has advanced into the trigram for water. Its subject will be cautious, and prepare for evil, as in the symbolism, suggested probably by the nature of the trigram.

'The neighbour in the East' is the subject of line 5, and 'the neighbour in the West' is the subject of the correlate 2, the former quarter being yang and the latter yin. Line 5 is strong, and 2 is weak; but weakness is more likely to be patient and cautious than strength. They are compared to two men sacrificing. The one presents valuable offerings; the other very poor ones. But the

1. The first line, divided, shows its subject (like a fox) whose tail gets immersed. There will be occasion for regret.

2. The second line, undivided, shows its subject dragging back his (carriage-)wheel. With firmness and correctness there will be good fortune.

3. The third line, divided, shows its subject, with (the state of things) not yet remedied, advancing on; which will lead to evil. But there will be advantage in (trying to) cross the great stream.

4. The fourth line, undivided, shows its subject by firm correctness obtaining good fortune, so that all occasion for repentance disappears. Let him stir himself up, as if he were invading the Demon region, where for three years rewards will come to him (and his troops) from the great kingdom.

5. The fifth line, divided, shows its subject by firm correctness obtaining good fortune, and having no occasion for repentance. (We see in him) the brightness of a superior man, and the possession of sincerity. There will be good fortune.

6. The topmost line, undivided, shows its subject

second excels in sincerity, and his small offering is the more acceptable.

The topmost line is weak, and on the outmost edge of Khân, the trigram of peril. His action is violent and perilous, like that one attempting to cross a ford, and being plunged overhead into the water.

LXIV. Wei 㷘 is the reverse of K'î 㷘. The name tells us that the successful accomplishment of whatever the writer had in his mind had not yet been realised. The vessel of the state has not been brought across the great and dangerous stream. Some have wished that the YĪ might have concluded with K'î 㷘, and the last hexagram have left us with the picture of human affairs all brought to good order. But this would not have been in harmony with the

full of confidence and therefore feasting (quietly). There will be no error. (If he) cherish this con-

idea of the Yî, as the book of change. Again and again it has been pointed out that we find in it no idea of a perfect and abiding state. Just as the seasons of the year change and pursue an ever-recurring round, so is it with the phases of society. The reign of order has been, and has terminated; and this hexagram calls us to see the struggle for its realisation recommenced. It treats of how those engaged in that struggle should conduct themselves with a view to secure the happy consummation.

How the figure sets forth the state of things by its constituent trigrams will appear in Appendix II. A similar indication is supposed to be given by the lines, not one of which is in the correct place; the strong lines being all in even places, and the weak lines in odd. At the same time each of them has a proper correlate; and so the figure gives an intimation of some successful progress. See also Appendix I.

The symbolism of the young fox suggests a want of caution on the part of those, in the time and condition denoted by the hexagram, who try to remedy prevailing disorders. Their attempt is not successful, and they get themselves into trouble and danger. Whatever can be done must be undertaken in another way.

I suppose a fox to be intended by the symbolism of line 1, bringing that animal on from the Thwan. Some of the commentators understand it of any animal. The line is weak, at the bottom of the trigram of peril, and responds to the strong 4, which is not in its correct place. Its subject attempts to be doing, but finds cause to regret his course.

The subject of line 2, strong, and in the centre, is able to repress himself, and keep back his carriage from advancing; and there is good fortune.

The Khang-hsî editors say that it is very difficult to understand what is said under line 3; and many critics suppose that a negative has dropt out, and that we should really read that 'it will not be advantageous to try and cross the great stream.'

Line 4, though strong, is in an even place; and this might vitiate the endeavours of its subject to bring about a better state of things. But he is firm and correct. He is in the fourth place moreover, and immediately above there is his ruler, represented by a weak line, humble therefore, and prepared to welcome his endeavours. Let him exert himself vigorously and long, as Kão Jung did in his

fidence, till he (is like the fox who) gets his head immersed, it will fail of what is right.

famous expedition (see last hexagram, line 3), and he will make progress and have success. Expeditions beyond the frontiers in those days were not very remote. Intercourse was kept up between the army and the court. Rewards, distinctions, and whatever was necessary to encourage the army, were often sent to it.

Line 5 is weak, in an odd place. But its subject is the ruler, humble and supported by the subject of the strong 2; and hence the auspice is very good.

The subject of line 6, when the work of the hexagram has been done, appears disposed to remain quiet in the confidence of his own power, but enjoying himself; and thereby he will do right. If, on the contrary, he will go on to exert his powers, and play with the peril of the situation, the issue will be bad.

THE APPENDIXES.

THE APPENDIXES.

APPENDIX I.

Treatise on the Thwan, or king Wán's Explanations of the entire Hexagrams. ✓

SECTION I.

1. 1. Vast is the 'great and originating (power)' indicated by *K'ien*! All things owe to it their beginning:—it contains all the meaning belonging to (the name) heaven.

2. The clouds move and the rain is distributed; the various things appear in their developed forms.

3. (The sages) grandly understand (the connexion between) the end and the beginning, and how (the indications of) the six lines (in the hexagram) are accomplished, (each) in its season. (Accordingly) they mount (the carriage) drawn by those six dragons at the proper times, and drive through the sky.

4. The method of *K'ien* is to change and transform, so that everything obtains its correct nature as appointed (by the mind of Heaven); and (thereafter the conditions of) great harmony are preserved in union. The result is 'what is advantageous, and correct and firm.'

5. (The sage) appears aloft, high above all things, and the myriad states all enjoy repose.

The name Thwan, and the meaning of the character so-called, are sufficiently established. The Thwan are king Wán's explanations of the entire hexagrams. It seems impossible now to ✓

II. 1. Complete is the 'great and originating (capacity)' indicated by Khwăn! All things owe to it their birth;—it receives obediently the influences of Heaven.

2. Khwăn, in its largeness, supports and contains all things. Its excellent capacity matches the unlimited power (of *K'ien*). Its comprehension is wide, and its brightness great. The various things obtain (by it) their full development.

3. The mare is a creature of earthly kind. Its (power of) moving on the earth is without limit; it is mild and docile, advantageous and firm :—such is the course of the superior man.

ascertain how the character arose, and how it was named Thwan. The treatise on the Thwan is ascribed to Confucius; and I have considered in the Introduction, p. 30, whether the tradition to this effect may to any extent be admitted.

I. The hexagram *K'ien* is made up of six undivided lines, or of the trigram *K'ien*, Fû-hsi's symbol for heaven, repeated. The Thwan does not dwell upon this, but starts, in its exposition, from the word 'heaven,' supposing that the hexagram represented all the meaning which had ever been intended by that term. In paragraphs 1, 2, 4 the four attributes in Wăn's Text (2 being occupied with the second, though it is not expressly named) are illustrated by the phenomena taking place in the physical world.

In paragraphs 3 and 5, the subject is the sage. He is not named indeed; and Khung Ying-tâ (A. D. 574–648) does not introduce him till paragraph 5, when the meaning necessitates the presence of a human agent, who rules in the world of men as heaven does in that of nature. The 'connexion between the end and the beginning,' which he sees, is that of cause and effect in the operations of nature and the course of human affairs. The various steps in that course are symbolised by the lines of the hexagram; and the ideal sage, conducting his ideal government, taking his measures accordingly, is represented as driving through the sky in a carriage drawn by six dragons. *K'ü Hsi* extravagantly says that 'the sage is Heaven, and Heaven is the sage;' but there is nothing like this in the text.

4. 'If he take the initiative, he goes astray :—he misses, that is, his proper course. 'If he follow,' he is docile, and gets into his regular (course). 'In the south-west he will get friends :—he will be walking with those of his own class. 'In the north-east he will lose friends :—but in the end there will be ground for congratulation.

5. 'The good fortune arising from resting in firmness' corresponds to the unlimited capacity of the earth.

III. 1. In *Kun* we have the strong (*Khien*) and the weak (*Khwăn*) commencing their intercourse, and difficulties arising.

2. Movement in the midst of peril gives rise to 'great progress and success, (through) firm correctness.'

3. By the action of the thunder and rain, (which

II. As the writer in expounding the *Thwan* of hexagram 1 starts from the word 'heaven,' so here he does so from the symbolic meaning attached to 'earth.' What I have said on the Text about the difference with which the same attributes are ascribed to *Khien* and *Khwăn*, appears clearly in paragraph 1. It is the difference expressed by the words that I have supplied,—'power' and 'capacity.' *Khien* originates; *Khwăn* produces, or gives birth to what has been originated.

The 'penetrating,' or developing ability of *Khwăn*, as displayed in the processes of growth, is the subject of paragraph 2. 'The brightness' refers to the beauty that shines forth in the vegetable and animal worlds.

Paragraph 3 treats of the symbol of the 'mare,' to lead the mind to the course of 'the superior man,' the good and faithful minister and servant.

See the note, corresponding to paragraph 4, on the Text. 'Resting in firmness' is the normal course of *Khwăn*. Where it is pursued, the good effect will be great, great as the unlimited capacity of the earth.

are symbols of *K'ăn* and *Khan*), all (between heaven and earth) is filled up. But the condition of the time is full of irregularity and obscurity. Feudal princes should be established, but the feeling that rest and peace have been secured should not be indulged (even then).

IV. 1. In *Măng* we have (the trigram for) a mountain, and below it that of a rugged defile with a stream in it. The conditions of peril and arrest

III. *Kun* is made up of the trigrams *K'ăn* and *Khan*; but according to the views on king *Wăn*'s arrangement of the trigrams, as set forth especially in Appendix V, chap. 14, the six others come from *K'kien* and *Khwăn*, and are said to be their children. On the first application of *Khwăn* to *K'kien*, there results *K'ăn*, the first line of *K'kien* taking the place of the last of *Khwăn*; and on the second application, there results *Khan*, the middle line of *K'kien* taking the place of that of *Khwăn*. McClatchie renders here:—'The Thun (*Kun*) diagram represents the hard and the soft (air) beginning to have sexual intercourse, and bringing forth with suffering!' But there is nothing in the *Yi*, from the beginning to the end, to justify such an interpretation. Nor do I see how, from any account of the genesis by the component trigrams, the idea of the result as signifying a state of difficulty and distress can be readily made out.

In paragraph 2 there is an attempt from the virtues or attributes assigned to the trigrams to make out the result indicated in the *Thwan*. To move and excite is the quality of *K'ăn*; perilousness is the quality of *Khan*. The power to move is likely to produce great effects; to do this in perilous and difficult circumstances requires firmness and correctness. But neither is this explanation very satisfactory.

The first part of paragraph 3 depicts a condition of trouble and disorder in the natural world occasioned by the phenomena that are symbols of the significance of *K'ăn* and *Khan*; but this is symbolical again of the disorder and distress, political and social, characteristic of the time. Good princes throughout the nation would help to remedy that; but the supreme authority should not resign itself to indifference, trusting to them.

of progress (suggested by these) give (the idea in) Mǎng.

2. 'Mǎng indicates that there will be progress and success:'—for there is development at work in it, and its time of action is exactly what is right. 'I do not seek the youthful and inexperienced; he seeks me:'—so does will respond to will. 'When he shows (the sincerity that marks) the first recourse to divination, I instruct him:'—for possessing the qualities of the undivided line and being in the central place, (the subject of the second line thus speaks). 'A second and third application create annoyance, and I do not instruct so as to create annoyance:'—annoyance (he means) to the ignorant.

(The method of dealing with) the young and ignorant is to nourish the correct (nature belonging to them);—this accomplishes the service of the sage.

IV. The trigram Kǎn has for its symbol in the natural world a mountain, which stands up frowningly, and stops or arrests the progress of the traveller. Stoppage, understood sometimes actively, and sometimes passively, is called the virtue or attribute indicated by it. Khan, as I said on p. 32, has water for its symbol, and especially in the form of rain. Here, however, the water appears as a stream in a difficult defile, such as ordinarily appears on an approach to a mountain, and suggesting perilousness as the attribute of such a position. From the combination of these symbols and their attributes the writer thinks that he gets the idea of the character (not the entire hexagram) Mǎng, as symbolical of ignorance and inexperience. See on 'the Great Symbolism' below.

Down to the last sentence of paragraph 2, all that is said is intended to show how it is that the figure indicates progress and success. The whole representation is grounded on the undivided line's being in the central place. It is the symbol of active effort for the teaching of the ignorant in the proper place and time; this being responded to by the divided fifth line, representing the ignorance to be taught as docile, 'will responds to will.' But the

V. I. Hsü denotes waiting. (The figure) shows peril in front ; but notwithstanding the firmness and strength (indicated by the inner trigram), its subject does not allow himself to be involved (in the dangerous defile);—it is right he should not be straitened or reduced to extremity.

2. When it is said that, 'with the sincerity declared in Hsü, there will be brilliant success, and with firmness there will be good fortune,' this is shown by the position (of the fifth line) in the place assigned by Heaven, and its being the correct position for it, and in the centre. 'It will be advantageous to go through the great stream ;'—that is, going forward will be followed by meritorious achievement.

subject of line 2 requires sincerity in the applicant for instruction, and feels that he must make his own teaching acceptable and agreeable. All this serves to bring out the idea of progress and success.

Then finally in the young and ignorant there is 'a correct nature,' a moral state made for goodness. The efficient teacher directing his efforts to bring out and nourish that, the progress and success will be 'great ;' the service done will be worthy of 'a sage.'

V. Hsü is composed of *K'ien*, having the quality of strength, and of *Khan*, having the quality of perilousness. The strong one might readily dare the peril, but he restrains himself and waits. This is the lesson of the hexagram,—the benefit of action well considered, of plans well matured.

The fifth line, as we have observed more than once already, is the place of honour, that due to the ruler or king. It is here called 'the Heavenly or Heaven-given seat,' the meaning of which expression is clear from its occurrence in the *Shih*, III, i, ode 2. 1. Five is an odd number, and the fifth is therefore the 'correct' place for an undivided line ; it is also the central place of the trigram, indicating how its occupant is sure to walk in the due mean. See further the notes on the Text, p. 68.

VI. 1. The upper portion of Sung is (the trigram representing) strength, and the lower (that representing) peril. (The coming together of strength and peril gives (the idea in) Sung.

2. 'Sung intimates how, though there is sincerity in one's contention, he will yet meet with opposition and obstruction; but if he cherish an apprehensive caution, there will be good fortune:'—a strong (line) has come and got the central place (in the lower trigram).

'If he must prosecute the contention to the (bitter) end, there will be evil:'—contention is not a thing to be carried on to extremity.

'It will be advantageous to meet with the great man:'—what he sets a value on is the due mean, and the correct place.

'It will not be advantageous to cross the great stream:'—one (attempting to do so) would find himself in an abyss.

VI. Paragraph 1 here is much to the same effect as the first sentence in the notes on the Thwan of the Text. It is said, 'Strength without peril would not produce contention; peril without strength would not be able to contend.'

2. 'A strong line has come and got the central place:'—this sentence has given rise to a doctrine about the changes of trigrams and hexagrams, which has obscured more than anything else the interpretation of the Yî. Where has the strong second line come from? From a hundred critics we receive the answer,—'From Tun (, or Sung. The doctrine of changing the figures by the manipulation of the stalks did spring up between the time of Wăn and his son and that of the composition of the Appendixes; but there is no trace of it in the real Text of the Yî; and it renders any scheme for the interpretation of the figures impossible. The

VII. 1. (The name) Sze describes the multitude (of the host). The 'firmness and correctness' (which the hexagram indicates) refer to (moral) correctness (of aim). When (the mover) is able to use the multitude with such correctness, he may attain to the royal sway.

2. There is (the symbol of) strength in the centre (of the trigram below), and it is responded to (by its proper correlate above). The action gives rise to perils, but is in accordance (with the best sentiments of men). (Its mover) may by such action distress all the country, but the people will follow him;—there will be good fortune, and what error should there be?

VIII. 1. 'Pî indicates that there is good fortune:—(the name) Pî denotes help; (and we see in the figure) inferiors docilely following (their superior).

editors of the imperial Yî allow this, and on the present passage discard the doctrine entirely, referring to the language of the Th w an on hexagrams 11 and 12 as fatal to it. See the notes there, and the Introduction, pp. 11–16. 'A strong line has come' is to be taken as equivalent simply to 'a strong line is there.'

What 'the great man sets a value on being the due mean and the correct place,' his decision in any matter of contention is sure to be right.

VII. That 'multitude' is given here as if it were the meaning of the name Sze arose, probably, from there being but one undivided line in the figure. That is the symbol of the general, all the other lines, divided, suggest the idea of a multitude obedient to his orders. The general's place in the centre of the lower trigram, with the proper correlate in line 5, suggests the idea of firmness and correctness that dominates in the hexagram. But in the last sentence it is the ruler, and not the general of the host, who is the subject. Compare what is said of him with Mencius, I, i, chap. 3; ii, chap. 5, &c.

2. 'Let (the principal party intended in it) re-examine himself, (as if) by divination, whether his virtue be great, unintermitting, and firm;—if it be so, there will be no error:—all this follows from the position of the strong line in the centre (of the upper trigram). 'Those who have not rest will come to him:—high and low will respond to its subject. 'With those who are (too) late in coming it will be ill:—(for them) the way (of good fortune here indicated) has been exhausted.

IX. 1. In Hsião *K'ü* the weak line occupies its (proper) position, and (the lines) above and below respond to it. Hence comes the name of Hsião *K'ü* (Small Restraint).

2. (It presents the symbols of) strength and flexibility. Strong lines are in the central places, and the will (of their subjects) will have free course. Thus it indicates that there will be progress and success.

3. 'Dense clouds but no rain' indicate the movement (of the strong lines) still going forward. The

'Perilousness' is the attribute of Khan, the lower trigram, and 'docility,' or 'accordance with others,' that of Khwân, the upper. War is like 'poison' to a country, injurious, and threatening ruin to it, and yet the people will endure and encounter it in behalf of the sovereign whom they esteem and love.

VIII. There is some error in the text here,—as all the critics acknowledge. I have adopted the decision of *K'ü Hsî*, which by a very small change makes the whole read consistently, and in harmony with other explanations of the Thwan. 'The inferiors' are the subjects of all the other lines gathering round their superior, represented in the fifth line.

'The way has been exhausted:—they do not seek to promote and enjoy union till it is too late. The sentiment is the same as that in the lines of Shakespeare about the tide in the affairs of men.

'Commencing at our western border' indicates that the (beneficial) influence has not yet been widely displayed.

X. 1. In *Lí* we have (the symbol of) weakness treading on (that of) strength.

2. (The lower trigram) indicates pleasure and satisfaction, and responds to (the upper) indicating strength. Hence (it is said), 'He treads on the tail of a tiger, which does not bite him; there will be progress and success.'

3. (The fifth line is) strong, in the centre, and in

IX. 'The weak line' is said to occupy 'its proper position,' because it is in the fourth,—an even place. The 'responding' on the part of all the other lines above and below is their submitting to be restrained by it; and this arises simply from the meaning which king *Wăn* chose to attach to the hexagram.

But the restraint can only be small. The attributes of the two parts of the figure do not indicate anything else. The undivided line represents vigour and activity, and such a line is in the middle of each trigram. There cannot but be progress and success.

It is not easy to explain the symbolism of the last paragraph in harmony with the appended explanations. What *K'ǎng-ze*, Wang Fǎng, and other scholars say is to this effect:—Dense clouds ought to give rain. That they exist without doing so, shows the restraining influence of the hexagram to be still at work. But the other and active influence is, according to the general idea of the figure, continuing in operation;—there will be rain ere long. And this was taking place in the western regions subject to the House of *K'âu*, which still was only a fief of Shang. It was not for the inferior House to rule the superior. *K'âu* was for a time restrained by Shang. Let their positions be reversed by *K'âu* superseding Shang, and the rain of beneficent government would descend on all the kingdom. This seems to be the meaning of the paragraph. This is the answer to the riddle of it. Confucius, in his treatise on the *Thwan*, hints at it, but no Chinese critic has the boldness to declare it fully.

its correct place. (Its subject) occupies the God-(given) position, and falls into no distress or failure;—(his) action will be brilliant.

XI. 'The little come and the great gone in Thâi, and its indication that there will be good fortune with progress and success' show to us heaven and earth in communication with each other, and all things in consequence having free course, and (also) the high and the low, (superiors and inferiors), in communication with one another, and possessed by the same aim. The inner (trigram) is made up of the strong and undivided lines, and the outer of the weak and divided; the inner is (the symbol of) strength, and the outer of docility; the inner (represents) the superior man, and the outer the small man. (Thus) the way of

X. '(The symbol of) weakness' in paragraph 1, according to Wang Shăn-ze (Yüan dynasty), is line 3, urged by the two strong lines below, and having to encounter the three strong lines above. Hû Ping-wan (also of the Yüan dynasty) says that the whole of the lower trigram, Tui, partaking of the yin nature, is the symbol of weakness, and the whole of *K'ien* that of strength. The *K'ung* editors say that, to get the full meaning, we must hold both views.

Paragraph 2 has been sufficiently explained on the Thwan itself.

Paragraph 3 has also been explained; but there remains something to be said on the Chinese text for 'occupies the God-given position,' or, literally, 'treads on the seat of Tî.' Canon McClatchie has—'The imperial throne is now occupied.' I think that 'the seat of Tî' is synonymous with 'the seat of Heaven,' in paragraph 2 of this treatise on hexagram 5. If Confucius, or whoever was the writer, had before him the phrase as it occurs in the Shû, I, 12, the force of Tî will depend on the meaning assigned to it in that part of the Shû. That the fifth line occupies the place of authority is here the only important point.

the superior man appears increasing, and that of the small man decreasing.

XII. 'The want of good understanding between the (different classes of) men in Pht, and its indication as unfavourable to the firm and correct course of the superior man; with the intimation that the great are gone and the little come:—all this springs from the fact that in it heaven and earth are not in communication with each other, and all things in consequence do not have free course; and that the high and the low (superiors and inferiors) are not in communication with one another, and there are no (well-regulated) states under the sky. The inner (trigram) is made up of the weak and divided lines, and the outer of the strong and undivided: the inner is (the symbol of) weakness, and the outer of strength; the inner (represents) the small man, and the outer the superior man. Thus the way of the small man appears increasing, and that of the superior man decreasing.

XI. There is nothing to be said on the explanation of the Thwan here beyond what has been noticed on the different paragraphs of the Text. Canon McClatchie translates:—'The Thwan means that Heaven and Earth have now conjugal intercourse with each other . . . and the upper and lower (classes) unite together.' But in both clauses the Chinese characters are the same. Why did he not go on to say—'the upper and lower classes have conjugal intercourse together;' or rather, why did he not dismiss the idea of such intercourse from his mind altogether? Why make the Yî appear to be gross, when there is not the shadow of grossness in it? The paragraph here well illustrates how the ruling idea in all the antinomies of the Yî is that of authority and strength on the one side, and of inferiority and weakness on the other.

XII. All the symbolism here springs from the trigram Khwân occupying in the figure the inner or lower place, and K'ien the outer or upper. It is for the inner trigram to take the initiative;

XIII. 1. In Thung Zǎn the weak (line) has the place (of influence), the central place, and responds to (the corresponding line in) *Khien* (above); hence comes its name of Thung Zǎn (or 'Union of men').

2. Thung Zǎn says:—

3. The language, 'Thung Zǎn appears here (as we find it) in (the remote districts of) the country, indicating progress and success, and that it will be advantageous to cross the great stream,' is moulded by its containing the strength (symbolled) in *Khien*. (Then) we have (the trigram indicating) elegance and intelligence, supported by (that indicating) strength; with the line in the central, and its correct, position, and responding (to the corresponding line above):—(all representing) the correct course of the superior man. It is only the superior man who can comprehend and affect the minds of all under the sky.

XIV. 1. In Tâ Yû the weak (line) has the place of honour, is grandly central, and (the strong lines) above and below respond to it. Hence comes its name of Tâ Yû (Having what is Great).

but how can earth (symbolised by *Khwǎn*) take the place of heaven (symbolised by *Khien*)? As in nature it is heaven that originates and not earth, so in a state the upper classes must take the initiative, and not the lower.

XIII. To understand the various points in this commentary, it is only necessary to refer to the Text of the hexagram. The proper correlate of line 2 is line 5, and I have said therefore that it 'responds to (the corresponding line in) *Khien*.' The editors of the Khang-hsi edition, however, would make the correlate to it all the lines of *Khien*, as being more agreeable to the idea of union.

I do not think that a second paragraph has been lost. The

2. The attributes (of its component trigrams) are strength and vigour with elegance and brightness. (The ruling line in it) responds to (the ruling line in the symbol of) heaven, and (consequently) its action is (all) at the proper times. In this way (it is said to) indicate great progress and success.

XV. 1. *K'ien* indicates progress and success. It is the way of heaven to send down its beneficial influences below, where they are brilliantly displayed. It is the way of earth, lying low, to send its influences upwards and (there) to act.

2. It is the way of heaven to diminish the full and augment the humble. It is the way of earth to overthrow the full and replenish the humble. Spiritual Beings inflict calamity on the full and bless the humble. It is the way of men to hate the full and love the humble. Humility in a position of honour makes that still more brilliant; and in a low position men will not (seek to) pass beyond it. Thus it is that 'the superior man will have a (good) issue (to his undertakings).'

'Thung Z'an says' is merely a careless repetition of the three concluding characters of paragraph 1.

XIV. The position in the fifth place indicates the dignity, and its being central, in the centre of the upper trigram, indicates the virtue, of the lord of the figure.

The strength of the lord, moreover, is directed by intelligence; and his actions are always at the proper time, like the seasons of heaven.

XV. The Thwan on this hexagram was so brief, that the writer here deals generally with the subject of humility, showing how it is valued by heaven and earth, by spirits and by men. The descent of the heavenly influences, and the low position of the earth in paragraph 1, are both emblematic of humility. The heavenly influences have their 'display' in the beauty and fertility of the earth.

XVI. 1. In Yü we see the strong (line) responded to by all the others, and the will (of him whom it represents) being carried out; and (also) docile obedience employing movement (for its purposes). (From these things comes) Yü (the Condition of harmony and satisfaction).

2. In this condition we have docile obedience employing movement (for its purposes), and therefore it is so as between heaven and earth;—how much more will it be so (among men) in ‘the setting up of feudal princes and putting the hosts in motion!’

3. Heaven and earth show that docile obedience in connexion with movement, and hence the sun and moon make no error (in time), and the four seasons do not deviate (from their order). The sages show such docile obedience in connexion with their movements, and hence their punishments and penalties are entirely just, and the people acknowledge it by their submission. Great indeed are the time and significance indicated in Yü!

The way of heaven is seen, e.g. in the daily declining of the sun, and the waning of the moon after it is full; the way of earth in the fall of the year. On the meaning of ‘Spiritual Beings (Kwei Shān),’ see the Introduction, pp. 34, 35. It is difficult to say what idea the writer attached to the name. What he says of man’s appreciation of humility is striking, and, I believe, correct.

XVI. What is said in paragraph 1 about the lines has been pointed out in the notes on the Text. ‘Obedience’ is the attribute of Khwān, the lower trigram, which takes the initiative in the action of the figure; and here makes use of the movement, which is the attribute of K’ān, the upper trigram.

I can hardly trace the connexion between the different parts of paragraph 2. Does it not proceed on the harmony produced by the thunderous explosion between heaven and earth, as declared

XVII. 1. In Sui we see the strong (trigram) come and place itself under the weak; we see (in the two) the attributes of movement and pleasure:—this gives (the idea of) Sui.

2. 'There will be great progress and success; and through firm correctness no error:'—all under heaven will be found following at such a time.

3. Great indeed are the time and significance indicated in Sui.

XVIII. 1. In Kû we have the strong (trigram) above, and the weak one below; we have (below) pliancy, and (above) stopping:—these give the idea of Kû (a Troublous Condition of affairs verging to ruin).

2. 'Kû indicates great progress and success:'—(through the course shown in it), all under heaven, there will be good order. 'There will be advantage in crossing the great stream:'—he who advances will encounter the business to be done. '(He should

in Appendix II? Then the analogy between natural phenomena and human and social experiences comes into play.

Paragraph 3 is also tantalising. Why does the writer introduce the subject of punishments and penalties? Are they a consequence of putting the hosts in motion? .

XVII. The trigrams *K'ăn* and *Tui* are distinguished as strong and weak, *K'ăn* representing, on king Wăn's scheme, 'the eldest son,' and *Tui*, 'the youngest daughter.' But 'the strong' here may mean the strong line, the lowest in the hexagram. As Wang Jung-kwan (Sung dynasty) says:—'The yang and strong line should not be below a yin and weak line, as we find it here. That is, in Sui the high places himself below the low, and the noble below the mean:'—esteeming others higher than himself, and giving the idea of following. Then *K'ăn* denotes the production or excitement of motion, and *Tui* denotes pleasure; and the union of these things suggests the same idea.

weigh well, however, the events of) three days before (the turning-point), and those (to be done) three days after it:—the end (of confusion) is the beginning (of order); such is the procedure of Heaven.

XIX. 1. In Lin (we see) the strong (lines) gradually increasing and advancing.

2. (The lower trigram is the symbol of) being pleased, and (the upper of) being compliant. The strong (line) is in the central position, and is properly responded to.

3. 'There is great progress and success, along with firm correctness:—this is the way of Heaven.

4. 'In the eighth month there will be evil:—(the advancing power) will decay after no long time.

XX. 1. The great Manifester occupies an upper place (in the figure), which consists of (the trigrams

XVIII. The symbolism here is the opposite of that in Sui. The upper trigram *K'ân* is strong, denoting, according to king Wăn, 'the youngest son; ' and the lower, Sun, is weak, denoting 'the eldest daughter.' For the eldest daughter to be below the youngest son is eminently correct, and helps to indicate the auspice of great success. The attribute of Sun is pliancy, and that of *K'ân* stoppage or arrest. The feeble pliancy confronted by the arresting mountain gives an idea of the evil state implied in *K'û*.

'Three days before and after the turning-point' is, literally, 'three days before and after *kiâ*,' *kiâ* being the name of the first of the 'earthly stems' among the cyclical characters. Hence it has the meaning of 'beginning,' and here denotes the turning-point, at which disorder gives place to order. According to 'the procedure of Heaven,' history is a narrative of change, one condition of affairs constantly giving place to another and opposite. 'A kingdom that cannot be moved' does not enter into the circle of Chinese ideas.

XIX. See what has been said on the fourth paragraph in pp. 98, 99 on the Text. The other paragraphs need no explanation beyond what appears in the supplemented translation.

whose attributes are) docility and flexibility. He is in the central position and his correct place, and thus exhibits (his lessons) to all under heaven.

2. 'Kwan shows its subject like a worshipper who has washed his hands, but not (yet) presented his offerings;—with sincerity and an appearance of dignity (commanding reverent regard):'—(all) beneath look to him and are transformed.

3. When we contemplate the spirit-like way of Heaven, we see how the four seasons proceed without error. The sages, in accordance with (this) spirit-like way, laid down their instructions, and all under heaven yield submission to them.

XXI. 1. The existence of something between the jaws gives rise to the name Shih Ho (Union by means of biting through the intervening article).

2. The Union by means of biting through the intervening article indicates 'the successful progress (denoted by the hexagram).'

The strong and weak (lines) are equally divided (in the figure). Movement is denoted (by the lower trigram), and bright intelligence (by the upper); thunder and lightning uniting in them, and having brilliant manifestation. The weak (fifth) line is in

XX. 'The great Manifester' is the ruler, the principal subject of the hexagram, and represented by line 5, near the top of the figure. In that figure the lower trigram is Khwăn, representing the earth, with the attribute of docility, and the upper is Sun, representing wind, with the attributes of flexibility and penetration. As is the place of line 5, so are the virtues of the ruler.

'The spirit-like way of Heaven' is the invisible and unfathomable agency ever operating by general laws, and with invariable regularity, in what we call nature. Compare with this paragraph, the definition of Shăn or Spirit in Appendix III, i, 32; and the doctrine of the agency of God, taught in Appendix VI, 8, 9.

the centre, and acts in its high position. Although it is not in its proper position, this is advantageous for the use of legal constraints.

XXII. 1. (When it is said that) P1 indicates that there should be free course (in what it denotes):—

2. (We see) the weak line coming and ornamenting the strong lines (of the lower trigram), and hence (it is said that ornament) 'should have free course.' On the other hand, the strong line above ornaments the weak ones (of the upper trigram), and hence (it is said) that 'there will be little advantage, if (ornament) be allowed to advance (and take the lead).' (This is illustrated in the) appearances that ornament the sky.

3. Elegance and intelligence (denoted by the lower trigram) regulated by the arrest (denoted by the upper) suggest the observances that adorn human (society).

4. We look at the ornamental figures of the sky, and thereby ascertain the changes of the seasons. We look at the ornamental observances of society, and understand how the processes of transformation are accomplished all under heaven.

XXI. The 'equal division of the strong and weak lines' is seen by taking them in pairs, though the order in the first pair is different from that in the two others. This is supposed to indicate the intelligence of the judgments in the action of the hexagram. *K'ān*, the lower trigram, symbolises movement; *Lî*, the upper, intelligence. The fifth line's acting in its high position does not intimate the formation of the figure from *Yî*, the 42nd hexagram, but calls attention to the fact that a weak line is here 'lord of judgment.' This does not seem natural, but the effect is good;—judgment is tempered by leniency.

XXII. The first paragraph is either superfluous or incomplete.

The language of paragraph 2 has naturally been pressed into the

XXIII. 1. Po denotes overthrowing or being overthrown. We see (in the figure) the weak lines (threatening to) change the (last) strong line (into one of themselves).

2. That 'it will not be advantageous to make a movement in any direction whatever' appears from the fact that the small men are (now) growing and increasing. The superior man acts according to (the exigency of the time), and stops all forward movement, looking at the (significance of the) symbolic figures (in the hexagram). He values the processes of decrease and increase, of fulness and decadence, (as seen) in the movements of the heavenly bodies.

service of the doctrine of changing the figures by divining manipulation; see p. 219, on paragraph 2 of the Thwan of hexagram 6. But as the Khang-hsi editors point out, 'the weak line coming and ornamenting the two strong lines' simply indicates how substantiality should have the help of ornament, and 'the strong line above (or ascending) and ornamenting the two weak lines' indicates that ornament should be restrained by substantiality. Ornament has its use, but it must be kept in check.—The closing sentence has no connexion with what precedes. Some characters are wanting, to show how the writer passes on to speak of 'the ornamental figures of the sky.' The whole should then be joined on to paragraph 3. The 'figures of the sky' are all the heavenly bodies in their relative positions and various movements, producing day and night, heat and cold, &c. The observances of society are the ceremonies and performances which regulate and beautify the intercourse of men, and constitute the transforming lessons of sagely wisdom.

XXIII. 'The symbolic figures in the hexagram' are Khwăn, below, the representative of docility, acting as circumstances require; and Kăn, the representative of a mountain, which arrests the progress of the traveller. The superior man of the topmost line thus interprets them, and acts accordingly. Yet he is not left without hope. Winter is followed by spring; night is

XXIV. 1. 'Fû indicates the free course and progress (of what it denotes):'—it is the coming back of what is intended by the undivided line.

2. (Its subject's) actions show movement directed by accordance with natural order. Hence 'he finds no one to distress him in his exits and entrances,' and 'friends come to him, and no error is committed.'

3. 'He will return and repeat his proper course; in seven days comes his return:'—such is the movement of the heavenly (revolution).

4. 'There will be advantage in whatever direction movement is made:'—the strong lines are growing and increasing.

5. Do we not see in Fû the mind of heaven and earth?

XXV. In Wû Wang we have the strong (first) line come from the outer (trigram), and become in the inner trigram lord (of the whole figure); we have (the attributes of) motive power and strength; we have the strong line (of the fifth place) in the

succeeded by day; the moon wanes, and then begins to wax again. So will it be in political life. As we read in the Hebrew prophet Isaiah, 'In returning and rest shall ye be saved; in quietness and in confidence shall be your strength.'

XXIV. 'The movement of the heavenly revolution' in paragraph 3 has reference to the regular alternations of darkness and light, and of cold and heat, as seen in the different months of the year. Hâu Hsing-kwo (of the Thang dynasty) refers to the expressions in the Shih, I, xv, ode 1, 'the days of (our) first (month), second (month),' &c., as illustrating the use of day for month, as we have it here; but that is to explain what is obscure by what is more so; though I believe, as stated on the Text, that 'seven days' is here equivalent to 'seven months.'

'The mind of heaven and earth' is the love of life and of all goodness that rules in the course of nature and providence.

central position, and responded to (by the weak second):—there will be ‘great progress proceeding from correctness; such is the appointment of Heaven.

‘If (its subject and his action) be not correct, he will fall into errors, and it will not be advantageous for him to move in any direction:’—whither can he (who thinks he is) free from all insincerity, (and yet is as here described) proceed? Can anything be done (advantageously) by him whom the (will and) appointment of Heaven do not help?

XXVI. 1. In (the trigrams composing) Tâ K’û we have (the attributes) of the greatest strength and of substantial solidity, which emit a brilliant light; and indicate a daily renewal of his virtue (by the subject of it).

2. The strong line is in the highest place, and suggests the value set on talents and virtue; there is power (in the upper trigram) to keep the strongest in restraint:—all this shows ‘the great correctness’ (required in the hexagram).

3. ‘The good fortune attached to the subject’s not seeking to enjoy his revenues in his own family’ shows how talents and virtue are nourished.

XXV. The advocates of one trigram’s changing into another, which ought not to be admitted, we have seen, into the interpretation of the Yî, make Wû Wang to be derived from Sung (No. 6), the second line there being manipulated into the first of this; but this representation is contrary to the words of the text, which make the strong first line come from the outer trigram, i. e. from K’ien. And so it does, as related, not very intelligibly, in Appendix V, 10, K’ân, the lower trigram here, being ‘the eldest son,’ resulting from the first application of Khwân to K’ien. The three peculiarities in the structure of the figure afford the auspice of progress and success; and very striking is the brief and emphatic declaration, that such progress is ‘the appointment of Heaven.’

4. 'It will be advantageous to cross the great stream:—(the fifth line, representing the ruler,) is responded to by (the second, the central line of *K'hien*, representing) Heaven.

XXVII. 1. 'Î indicates that with firm correctness there will be good fortune:—when the nourishing is correct, there will be good fortune. 'We must look at what we are seeking to nourish:—we must look at those whom we wish to nourish. 'We must by the exercise of our thoughts seek the proper aliment:—we must look to our own nourishing of ourselves.

2. Heaven and earth nourish all things. The sages nourish men of talents and virtue, by them to reach to the myriads of the people. Great is (the work intended by this) nourishing in its time!

XXVI. In paragraph 1, *Tâ K'û* evidently means the 'grand accumulation' of virtue, indicated by the attributes of its component trigrams. 'Substantial solidity' may very well be given as the attribute of mountains.

'The strong line in the highest place' of paragraph 2 is line 6, whose subject is thus above the ruler represented by 5, and has the open firmament for his range in doing his work. This, and his ability to repress the strongest opposition, show how he is supported by all that is correct and right.

In a kingdom where the object of the government is the accumulation of virtue, good and able men will not be left in obscurity.

What will not a high and good purpose, supported by the greatest strength, be able to do?

XXVII. Many of the critics, in illustration of paragraph 1, refer appropriately to Mencius, VI, i, chap. 14.

In illustration of paragraph 2 they refer to the times and court of Yáo and Shun, sage rulers, from whose cherishing and nourishing came Yü to assuage the waters of the deluge, 3î to teach the people agriculture, Hsieh as minister of instruction, Káo Yáo as minister of crime, and others;—all to do the work of nourishing the people.

XXVIII. 1. Tâ Kwo shows the great ones (= the undivided lines) in excess.

2. In 'the beam that is weak' we see weakness both in the lowest and the topmost (lines).

3. The strong lines are in excess, but (two of them) are in the central positions. The action (of the hexagram is represented by the symbols of) flexibility and satisfaction. (Hence it is said), 'There will be advantage in moving in any direction whatever; yea, there will be success.'

4. Great indeed is (the work to be done in) this very extraordinary time.

XXIX. 1. Khan repeated shows us one defile succeeding another.

2. This is the nature of water;—it flows on, without accumulating its volume (so as to overflow); it pursues its way through a dangerous defile, without losing its true (nature).

3. That 'the mind is penetrating' is indicated by the strong (line) in the centre. That 'action (in accordance with this) will be of high value' tells us that advance will be followed by achievement.

4. The dangerous (height) of heaven cannot be ascended; the difficult places of the earth are moun-

XXVIII. Paragraph 3. In the Great Symbolism 'wood' appears as the natural object symbolised by Sun, and not 'wind,' which we find more commonly. The attribute of 'flexibility,' however, is the quality of Sun, whether used of wind or of wood.

Paragraph 4. Such a time, it is said, was that of Yáo and Shun, of Thang the Successful, and of king Wû. What these heroes did, however, was all called for by the exigency of their times, and not by whim or principle of their own, which they wished to make prominent.

tains, rivers, hills, and mounds. Kings and princes arrange, by means of such strengths, to maintain their territories. Great indeed is the use of (what is here) taught about seasons of peril.

XXX. 1. Li means being attached to. The sun and moon have their place in the sky. All the grains, grass, and trees have their place on the earth. The double brightness (of the two trigrams) adheres to what is correct, and the result is the transforming and perfecting all under the sky.

2. The weak (second line) occupies the middle and correct position, and gives the indication of 'a free and successful course;' and, moreover, 'nourishing (docility like that of) the cow' will lead to good fortune.

XXIX. On paragraph 2 Liang Yin says:—'Water stops at the proper time, and moves at the proper time. Is not this an emblem of the course of the superior man in dealing with danger?'

On paragraph 4 the Khang-hsi editors say that to exercise one's self in meeting difficulty and peril is the way to establish and strengthen the character, and that the use of such experience is seen in all measures for self-defence, there being no helmet and mail like leal-heartedness and good faith, and no shield and tower like propriety and righteousness.

XXX. 'The double brightness' in paragraph 1 has been much discussed. Some say that it means 'the ruler,' becoming brighter and brighter. Others say that it means both the ruler and his ministers, combining their brightness. The former view seems to me the better. The analogy between the natural objects and a transforming and perfecting rule is far fetched.

'The central and correct position' in paragraph 2 can be said only of the second line, and not of the fifth, where an undivided line would be more correct. The 'and moreover' of the translation is 'therefore' in the original; but I cannot make out the force and suitability of that conjunction.

SECTION II.

XXXI. 1. Hsien is here used in the sense of Kan, meaning (mutually) influencing.

2. The weak (trigram) above, and the strong one below; their two influences moving and responding to each other, and thereby forming a union; the repression (of the one) and the satisfaction (of the other); (with their relative position), where the male is placed below the female:—all these things convey the notion of 'a free and successful course (on the fulfilment of the conditions), while the advantage will depend on being firm and correct, as in marrying a young lady, and there will be good fortune.'

3. Heaven and earth exert their influences, and there ensue the transformation and production of all things. The sages influence the minds of men, and the result is harmony and peace all under the sky. If we look at (the method and issues) of those influences, the true character of heaven and earth and of all things can be seen.

XXXII. 1. Hǎng denotes long continuance. The strong (trigram) is above, and the weak one below; (they are the symbols of) thunder and wind,

XXXI. Paragraph 2. Tui, the upper trigram, is weak and yin; and Kǎn, the lower, is strong and yang; see Appendixes III, ii, 4, and V, 10. Kǎn is below Tui; whereas the subject of the lower trigram should always take the initiative in these figures.

which are in mutual communication ; (they have the qualities of) docility and motive force ; their strong and weak (lines) all respond, each to the other :—these things are all found in Hǎng.

2. (When it is said that) ‘Hǎng indicates successful progress and no error (in what it denotes) ; but the advantage will come from being firm and correct,’ this indicates that there must be long continuance in its way of operation. The way of heaven and earth is to be long continued in their operation without stopping.

3. (When it is said that) ‘Movement in any direction whatever will be advantageous,’ this implies that when (the moving power) is spent, it will begin again.

4. The sun and moon, realising in themselves (the course of Heaven), can perpetuate their shining. The four seasons, by their changing and transforming, can perpetuate their production (of things). The sages persevere long in their course, and all under the sky are transformed and perfect. When we look at what they continue doing long, the natural tendencies of heaven, earth, and all things can be seen.

XXXII. All the conditions in paragraph 1 must be understood as leading to the indication of progress and success, which is explained in paragraph 2, and illustrated by the analogy of the course of heaven and earth.

‘Movement in any direction,’ as explained in paragraph 3, indicates the ever-occurring new modes and spheres of activity, to which he who is firm and correct is called.

Paragraph 4, and especially its concluding sentence, are of a meditative and reflective character not uncommon in the treatise on the Thwan.

XXXIII. 1. 'Thun indicates successful progress:'—that is, in the very retiring which Thun denotes there is such progress. The strong (line) is in the ruling place, (the fifth), and is properly responded to (by the second line). The action takes place according to (the requirement of) the time.

2. 'To a small extent it will (still) be advantageous to be firm and correct:'—(the small men) are gradually encroaching and advancing.

3. Great indeed is the significance of (what is required to be done in) the time that necessitates retiring.

XXXIV. 1. In *Tâ K'wang* we see that which is great becoming strong. We have the (trigram) denoting strength directing that which denotes movement, and hence (the whole) is expressive of vigour.

2. '*Tâ K'wang* indicates that it will be advantageous to be firm and correct:'—that which is great (should be) correct. Given correctness and greatness (in their highest degree), and the character and tendencies of heaven and earth can be seen.

XXXIII. 'The superior man,' it is said, 'advances or withdraws according to the character of the time. The strength and correct position of the fifth line show that he is able to maintain himself; and as it is responded to by the weak second line, no opposition to what is correct in him would come from any others. He might therefore keep his place; but looking at the two weak lines, 1 and 2, he recognises in them the advance and irrepressible progress of small men, and that for a time it is better for him to give way and withdraw from the field. Thus there is successful progress even in his retiring.'

XXXIV. Paragraph 1. 'That which is great' denotes, in the first place, the group of four strong lines which strikes us on

XXXV. 1. 3in denotes advancing.

2. (In 3in we have) the bright (sun) appearing above the earth; (the symbol of) docile submission cleaving to that of the Great brightness; and the weak line advanced and moving above:—all these things give us the idea of ‘a prince who secures the tranquillity (of the people), presented on that account with numerous horses (by the king), and three times in a day received at interviews.’

XXXVI. 1. (The symbol of) the Earth and that of Brightness entering into the midst of it give the idea of Ming Î (Brightness wounded or obscured).

2. The inner (trigram) denotes being accomplished and bright; the outer, being pliant and submissive. The case of king Wăn was that of one

looking at the figure, and then the superior man, or the strong men in positions of power, of whom these are the representatives. *K'ien* is the trigram of strength, and *K'ăn* that of movement.

Paragraph 2. ‘That which is great (should be) correct:’—that the ‘should be’ must be supplied in the translation appears from this, that the paragraph is intended to illustrate the text that ‘it will be advantageous to be firm and correct.’ The power of man becomes then a reflexion of the great power which we see working in nature, ‘impartially,’ ‘unselfishly.’

XXXV. To those who advocate the view that the hexagrams of the Yî have been formed by changes of the lines in manipulating with the divining stalks, the words of paragraph 2, that we have in the figure ‘the weak line advanced and moving above,’ suggest the derivation of 3in from Kwan, whose 4th and 5th lines are made to change places (). But we have seen that that view is inadmissible in the interpretation of the Yî. And a simple explanation of the language at once presents itself. As Hsiang An-shih (Sung dynasty) says, ‘Of the three “daughter” trigrams it is only L1 which has its divided line occupying the central place of honour, when it is the upper trigram in a hexagram.’

who with these qualities was yet involved in great difficulties.

3. 'It will be advantageous to realise the difficulty (of the position), and maintain firm correctness:—that is, (the individual concerned) should obscure his brightness. The case of the count of *K'1* was that of one who, amidst the difficulties of his House, was able (thus) to maintain his aim and mind correct.

XXXVII. 1. In *Kiâ Zăn* the wife has her correct place in the inner (trigram), and the man his correct place in the outer. That man and woman occupy their correct places is the great righteousness shown (in the relation and positions of) heaven and earth.

2. In *Kiâ Zăn* we have the idea of an authoritative ruler;—that, namely, represented by the parental authority.

3. Let the father be indeed father, and the son son; let the elder brother be indeed elder brother, and the younger brother younger brother; let the husband be indeed husband, and the wife wife:—then will the family be in its normal state. Bring the family to that state, and all under heaven will be established.

XXXVI. The sun disappearing, as we say, 'below the earth,' or, as the Chinese writer conceives it, 'into the midst of, or within the earth,' sufficiently indicates the obscuration or wounding of brightness,—the repression and resistance of the good and bright.

King Wăn was not of the line of Shang. Though opposed and persecuted by its sovereign, he could pursue his own course, till his line came in the end to supersede the other. It could not be so with the count of *K'1*, who was a member of the House of Shang. He could do nothing that would help on its downfall.

XXXVII. Paragraph 1 first explains the statement of the

XXXVIII. 1. In Khwei we have (the symbol of) Fire, which, when moved, tends upwards, and that of a Marsh, whose waters, when moved, tend downwards. We have (also the symbols of) two sisters living together, but whose wills do not move in the same direction.

2. (We see how the inner trigram expressive of) harmonious satisfaction is attached to (the outer expressive of) bright intelligence; (we see) the weak line advanced and acting above, and how it occupies the central place, and is responded to by the strong (line below). These indications show that 'in small matters there will (still) be good fortune.'

3. Heaven and earth are separate and apart, but the work which they do is the same. Male and female are separate and apart, but with a common will they seek the same object. There is diversity between the myriad classes of beings, but there is an analogy between their several operations. Great indeed are the phenomena and the results of this condition of disunion and separation.

Thwan, about the wife, represented by line 2; and then proceeds to the husband, represented by line 5. The two trigrams become representative of the family circle, and the wide world without it. In the reference to heaven and earth it is not supposed that they are really husband and wife; but in their relation and positions they symbolise that social relation and the individuals in it.

Paragraph 2, more closely rendered, would be—'That in K'ia Z'an there is an authoritative ruler is a way of naming father and mother.' Does the writer mean to say that while the assertion of authority was indispensable in a family, that authority must have combined in it both force and gentleness?

XXXVIII. In paragraph 1 we have first an explanation of the meaning of Khwei from the symbolism of Fû-hsi. Then follows

XXXIX. 1. *K'ien* denotes difficulty. There is (the trigram expressive of) perilousness in front. When one, seeing the peril, can arrest his steps (in accordance with the significance of the lower trigram), is he not wise?

2. (The language of) *K'ien*, that 'advantage will be found in the south-west,' refers to the (strong fifth line) advanced and in the central place. That 'there will be no advantage in the north-east,' intimates that the way (of dealing with the *K'ien* state) is exhausted. That 'it will be advantageous to see the great man,' intimates that advance will lead to achievement. That the places (of the different lines after the first) are those appropriate to them indicates firm correctness and good fortune, with which the regions (of the kingdom) are brought to their normal state. Great indeed is the work to be done in the time of *K'ien*!

an explanation from that ascribed to king Wăn, where Tui represents the youngest daughter and Lî the second. The Khang-hsi editors observe that in many hexagrams we have two daughters dwelling together, but that only in this and 49 is attention called to it. The reason, they say, is that in those two diagrams the sisters are the second and third daughters, while in the others one of them is the eldest, whose place and superiority are fixed, so that between her and either of the others there can be no division or collision.

About what is said, in paragraph 2, on the weak line, as advanced and acting above, see the note on hexagram 35.

The lesson of paragraph 3 is not unity in diversity, but union with diversity.

XXXIX. The upper or front trigram is *Khân*, the attribute of which is perilousness; the lower is *Kân*, of which the arresting, actively or passively, of movement or advance is the attribute. We can understand how the union of these attributes gives the ideas of difficulty and prudent caution.

The explanations in paragraph 2 of the phraseology of the *Thwan*

XL. 1. In *K'ieh* we have (the trigram expressive of) peril going on to that expressive of movement. By movement there is an escape from the peril:—(this is the meaning of) *K'ieh*.

2. 'In (the state indicated by) *K'ieh*, advantage will be found in the south-west:—the movement (thus) intimated will win all. That 'there will be good fortune in coming back (to the old conditions)' shows that such action is that of the due medium. That 'if some operations be necessary, there will be good fortune in the early conducting of them' shows that such operations will be successful.

3. When heaven and earth are freed (from the grasp of winter), we have thunder and rain. When these come, the buds of the plants and trees that produce the various fruits begin to burst. Great indeed are the phenomena in the time intimated by *K'ieh*.

are not all easily followed. It is said that the advantageousness of the south-west is due to the central line in 5; but if we are to look for the meaning of south-west in *Khwăn*, as in the diagram of king Wăn's trigrams, there is no strong central line in it. May *Khân*, as a yang trigram, be used for *Khwăn*?

XL. 1. The meaning of the hexagram is brought out sufficiently well in paragraph 1 by means of the attributes of the constituent trigrams.

2. How it is that the movement indicated in the first condition will 'win' all does not immediately appear. The Khang-hsî editors say that 'moving to the south and west' is the same as 'returning back to the old conditions,' and that 'winning all' and acting 'according to the due medium' are descriptive of the effect and method without reference to the symbolism. Another explanation might be devised; but I prefer to leave the matter in doubt.

3. Paragraph 3 shows the analogy of what takes place in nature to the beneficent social and political changes described in the text, as is done very frequently in this Appendix.

XLI. 1. In Sun (we see) the lower (trigram) diminished, and the upper added to. (But) the method (of action) implied in this operates also above (or, mounts upwards (also) and operates).

2. 'If there be sincerity in this method of diminution, there will be great good fortune; freedom from error; firmness and correctness that can be maintained; and advantage in every movement that shall be made. In what shall this (sincerity in the exercise of Sun) be employed? (Even) in sacrifice, two baskets of grain, (though there be nothing else), may be presented:'—for these two baskets there ought to be the fitting time. There is a time when the strong should be diminished, and the weak should be strengthened. Diminution and increase, overflowing and emptiness:—these take place in harmony with the conditions of the time.

XLI. 1. All that we see is two undivided lines in the lower trigram, and then a divided one, and exactly the opposite in the upper. But the whole figure could not but have this form from the process of its formation, whether by the gradual addition of the two primitive lines, or by the imposition of the whole trigrams on one another. To say that the upper lines of *K'ien* and *Khwan* changed places to express the idea of subjects contributing in taxes to the maintenance of their ruler is absurd; and if that thought were in the mind of king Wăn (which I very much doubt), it would only show how he projected his own idea, formed independently of the figure, into its lines.

On the second sentence, the Khang-hsi editors say:—'When a minister devotes his life in the service of his lord, or the people undertake their various labours in behalf of their government, these are instances of the ministering of those below to increase those above. But in this way the intercourse of the two becomes close and their aims become the same;—does not the method of action of those below communicate itself to those above?'

In paragraph 2 the subject of contribution, such as the payment of

XLII. 1. In Yt we see the upper (trigram) diminished, and the lower added to. The satisfaction of the people (in consequence of this) is without limit. What descends from above reaches to all below, so great and brilliant is the course (of its operation).

2. That 'there will be advantage in every movement which shall be undertaken' appears from the central and correct (positions of the second and fifth lines), and the (general) blessing (the dispensing of which they imply).

That 'it will be advantageous (even) to cross the great stream' appears from the action of wood (shown in the figure).

3. Yt is made up of (the trigrams expressive of) movement and docility, (through which) there is daily advancement to an unlimited extent. We have (also) in it heaven dispensing and earth producing, leading to an increase without restriction

taxes, passes into the background. The Khang-hsi editors say:— 'What is meant by diminishing in this hexagram is the regulation of expenditure or contribution according to the time. This would vary in a family according to its poverty or wealth; and in a state according to the abundance or scantiness of its resources. When it is said that there must be sincerity along with a diminution, it means that though such a diminution cannot be helped, yet what is given should be given sincerely. A small sacrifice sincerely offered is accepted. In the language, "There is a time when the strong should be diminished and the weak be strengthened," we are not to find the two baskets in the diminution of the strong. "The strong" is what is essential,—in this case sincerity; "The weak" is what is unimportant,—the amount and manner of the offering. If one supplement the insufficiency of his offering with the abundance of his sincerity, the insignificance of his two baskets will not be despised.'

of place. Everything in the method of this increase proceeds according to the requirements of the time.

XLII. 1. The process of the formation of the trigrams here is the reverse of that in the preceding hexagram; and is open to the remarks I have made on that. Of course the people are full of complacency and pleasure in the labours of their ruler for their good.

2. The mention of 'the action of wood' has reference to the upper trigram Sun, which is the symbol both of wind and wood. From wood boats and ships are made, on which the great stream may be crossed. In three hexagrams, this, 59, and 61, of which Sun is a part, we find mention made of crossing the great stream. It is generally said that the lower trigram K'ăn also symbolises wood; but that is obtained by a roundabout process. K'ăn occupies the place of the east in Wan's arrangement of the trigrams; but the east symbolises spring, when the growth of vegetation begins; and therefore K'ăn may symbolise wood! It was stated on p. 33, that the doctrine of 'the five elements' does not appear in the Yî. K'ăng-ze takes wood (木 mû), 'as a misprint for increase (益 yî).'

3. The words 'heaven dispensing and earth producing' are based on the fancied genesis of the figure from K'ien and Khwăn (䷀), the first lines in each changing places. It was the author of this Appendix, probably, who first introduced that absurd notion in connexion with the formation of Sun and Yî.

One rhyme runs through and connects these three paragraphs thus:—

'Yî spoils the high, gives to the low;
The people feel intense delight.
Down from above to all below,
The blessing goes, so large and bright.
Success will every movement mark,
Central its source, its course aright.
The great stream even may be crossed,
When planks of wood their strength unite.
Yî movement shows and docile feet,
Which progress day by day invite.
Heaven gives; productive earth responds;
Increase crowns every vale and height;

XLIII. 1. Kwâi is the symbol of displacing or removing. We see (in the figure) the strong (lines) displacing the weak. (We have in it the attributes of) strength and complacency. There is displacement, but harmony (continues).

2. 'The exhibition (of the criminal's guilt) in the royal courtyard' is suggested by the (one) weak (line) mounted on the five strong lines.

There 'is an earnest and sincere appeal (for sympathy and support), and a consciousness of the peril (involved in the undertaking):'—it is the realisation of this danger, which makes the method (of compassing the object) brilliant.

'He should make an announcement in his own city, and show that it will not be well to have recourse at once to arms:'—(if he have recourse to arms), what he prefers will (soon) be exhausted.

'There will be advantage in whatever he shall go forward to:'—when the growth of the strong (lines) has been completed, there will be an end (of the displacement).

And ceaselessly it hastens on,
Each season's gifts quick to requite.'

XLIII. 1. The last clause of paragraph 1 is good in itself, showing that the strong and worthy statesman in removing a bad man from the state is not actuated by any private feelings. The sentiment, however, as it is expressed, can hardly be said to follow from the symbolism.

Paragraph 2. The same may be said of all the notes appended to the different clauses of this second paragraph. Hû Ping-wăn (Yüan dynasty) says:—'If but a single small man be left, he is sufficient to make the superior man anxious; if but a single inordinate desire be left in the mind, that is sufficient to disturb the harmony of heavenly principles. The eradication in both cases must be complete, before the labour is ended.'

XLIV. 1. Kâu has the significance of unexpectedly coming on. (We see in it) the weak (line) coming unexpectedly on the strong ones.

2. 'It will not be good to marry (such) a female : '—one (so symbolised) should not be long associated with.

3. Heaven and earth meeting together (as here represented), all the variety of natural things become fully displayed.

4. When a strong (line) finds itself in the central and correct position, (good government) will greatly prevail all under the sky.

5. Great indeed is the significance of what has to be done at the time indicated by Kâu !

XLV. 1. 3hui indicates (the condition of union, or) being collected. We have in it (the symbol of) docile obedience going on to (what is expressed by that of) satisfaction. There is the strong line in the central place, and rightly responded to. Hence comes the (idea of) union.

2. 'The king will repair to his ancestral temple : '—

XLIV. On paragraph 1 the Khang-hsi editors say :—“The weak line meets with (or comes unexpectedly on) the strong ones ;”—the weak line, that is, plays the principal part. The case is like that of the minister who assumes the power of deciding for himself on all measures, or of a hen's announcing the morning ;—is not the name of (shameless) boldness rightly applied to it? Hence nothing more is said about the symbol of the bold female ; but attention is called to the second part of the Thwan.’

Paragraph 2 needs no remark. Paragraphs 3, 4, and 5 all speak of the importance of powers and parties meeting together,—in the world of nature, and in the sphere of human affairs. But I do not see how this sentiment is a natural sequel to that in 1 and 2, nor that it has any connexion with the teaching of the Thwan and Symbolism.

with the utmost filial piety he presents his offerings (to the spirits of his ancestors).

'It will be advantageous to meet the great man, and there will then be prosperity and success:—the union effected by him will be on and through what is correct.

'The use of great victims will conduce to good fortune; and in whatsoever direction movement is made, it will be advantageous:—all is done in accordance with the ordinances of Heaven.

3. When we look at the way in which the gatherings (here shown) take place, the natural tendencies (in the outward action) of heaven and earth and of all things can be seen.

XLVI. 1. (We find) the weak (line), as it finds the opportunity, ascending upwards.

2. We have (the attribute) of flexibility and that of obedience; we have the strong line (below) and its proper correlate above:—these things indicate that there will be 'great progress and success.'

XLV. The lower trigram in 3hui is Khwăn, whose attribute is docile obedience; and the upper is Tui, whose attribute is pleased satisfaction. Then we have the strong line in 5, and its proper correlate in 2. These things may give the idea of union. They might also give the idea of other good things.

The Khang-hsi editors say that though 'all is done in accordance with the ordinances of Heaven' follows the concluding clauses of the Thwan, yet the sentiment of the words must be extended to the other clauses as well. *Khâng-ze* says that 'the ordinances of Heaven' are simply the natural and practical outcome of 'heavenly principle';—in this case what should and may be done according to the conditions and requirements of the time. So do the critics of China try to shirk the idea of personality in 'Heaven.'

With paragraph 3, compare the concluding paragraphs of the Thwan *Kwan* on hexagrams 31, 32.

3. 'Seeking (by the qualities implied in Shǎng) to meet with the great man, its subject need have no anxiety:—there will be ground for congratulation.

'Advance to the south will be fortunate:—his aim will be carried out.

XLVII. 1. In Khwǎn (we see) the strong (lines) covered and obscured (by the weak).

2. We have in it (the attribute of) perilousness going on to that of satisfaction. Who is it but the superior man that, though straitened, still does not fail in making progress to his proper end?

'For the firm and correct, the (really) great man, there will be good fortune:—this is shown by the central positions of the strong (lines).

'If he make speeches, his words cannot be made good:—to be fond of arguing or pleading is the way to be reduced to extremity.

XLVI. The explanation of the first paragraph has given occasion to much difference of opinion. Some will have 'the weak (line)' to be 4; some 5; and some the whole of Khwǎn, the upper trigram. The advocates of 4, make it come from hexagram 40, the weak 3 of which ascends to the strong 4, displaces it, and takes its place; but we have seen repeatedly the folly of the doctrine of changing lines and figures. The great symbolism of Appendix II suggests the proper explanation. The lower trigram, Sun, represents here not wind but wood. The first line, weak, is the root of a tree planted beneath the earth. Its gradual growth symbolises the advance upwards of the subject of the hexagram, fostered, that is, by the circumstances of the time.

XLVII. 1. One sees the relative position of the strong and weak lines in the figure; but to deduce from that the idea expressed by Khwǎn requires a painful straining of the imagination. That idea was in the mind, and then the lines were interpreted accordingly.

2. 'Perilousness' is the attribute of the lower trigram, and 'satisfaction' that of the upper. The superior man, however straitened,

XLVIII. 1. (We have the symbol of) wood in the water and the raising of the water ; which (gives us the idea of) a well. A well supplies nourishment and is not (itself) exhausted.

2. 'The site of a town may be changed, while the fashion of its wells undergoes no change :—this is indicated by the central position of the strong lines (in the second and fifth places).

'The drawing is nearly accomplished, but the rope has not yet reached the water of the well :—its service has not yet been accomplished.

'The bucket is broken :—it is this that occasions evil.

XLIX. 1. In Ko (we see) water and fire extinguishing each other ; (we see also) two daughters dwelling together, but with their minds directed to

remains master of himself, and pursues the proper end of principle settled in his mind.

Why should the subject of Khwăn make speeches, be fond of arguing or pleading,—as the characters say, if we could translate them literally, 'setting a value on the mouth?' The reply to this is found in the trigram denoting 'satisfaction,' or 'being pleased.' The party in the extremity of Khwăn yet wishes and tries to make men pleased with him.

XLVIII. K'ang Khang-K'ang says :—'Khân, the upper trigram, represents water, and Sun, the lower, wood. This wood denotes the water-wheel or pulley with its bucket, which descends into the mouth of the spring, and brings the water up to the top.' This may be a correct explanation of the figure, though the reading of it from bottom to top seems at first to be strange.

Paragraph 2. That the fashion of the well does not undergo any (great) change is dwelt upon as illustrating the unchangeableness of the great principles of human nature and of government. But that this truth may be learned from the strong and central lines only produces a smile. So do the remarks on the other two sentences of the Thwan.

different objects :—(on account of these things) it is called (the hexagram of) Change.

2. 'It is believed in (only) after it has been accomplished :—when the change has been made, faith is accorded to it.

(We have) cultivated intelligence (as the basis of) pleased satisfaction, (suggesting) 'great progress and success,' coming from what is correct.

When change thus takes place in the proper way, 'occasion for repentance disappears.'

3. Heaven and earth undergo their changes, and the four seasons complete their functions. Thang changed the appointment (of the line of Hsiâ to the throne), and Wû (that of the line of Shang), in accordance with (the will of) Heaven, and in response to (the wishes of) men. Great indeed is what takes place in a time of change.

L. 1. In Ting we have (symbolically) the figure of a caldron. (We see) the (symbol of) wood entering into that of fire, which suggests the idea of cook-

XLIX. Paragraph 1. Lî, the lower trigram, represents fire, and Tui, the upper, represents water. Water will extinguish fire, and fire again will dry up water. Each, to all appearance, produces a change in the other. Again, according to king Wăn's scheme of the trigrams, as shown on p. 33, and in Figure 1, Plate III, Lî is the second, and Tui the youngest daughter. Their wills are likely to differ in love and other things; but this symbolism does not so readily suggest the idea of change.

2. The first sentence suggests how the dislike to change on the part of people generally is overcome.

The second suggests how change proceeding from intelligence and giving general satisfaction will be successful.

Paragraph 3 tells us how the greatest natural and the greatest political changes are equally successful and admirable when conducted aright.

ing. The sages cooked their offerings in order to present them to God, and made great feasts to nourish their wise and able (ministers).

2. We have the symbol of) flexible obedience, and that (which denotes) ears quick of hearing and eyes clear-sighted. (We have also) the weak (line) advanced and acting above, in the central place, and responded to by the strong (line below). All these things give the idea of 'great progress and success.'

LI. 1. *Kǎn* (gives the intimation of) ease and development.

2. 'When the (time of) movement (which it indicates) comes, (its subject) will be found looking out with apprehension : '—that feeling of dread leads to happiness. 'And yet smiling and talking cheerfully : '—the issue (of his dread) is that he adopts (proper) laws (for his course).

'The movement (like a crash of thunder) terrifies

L. 1. See the notes on the Text of the Thwan about the figure of a caldron in Ting. Its component trigrams are Sun representing wood, and Li representing fire ; which may very well suggest the idea of cooking. The last sentence of the paragraph is entirely after the style of 'the Great Symbolism.' The Khang-hs' editors say that the distinction between *3ing* and *Ting* appears here very clearly, the former relating to the nourishment of the people, and the latter to the nourishing men of worth. They add that the reality of the offerings to God is such nourishing. 'God' is here *Shang Ti*, which Canon McClatchie translates 'the First Emperor,' adding in a note, 'The Chinese Jupiter, the Emperor of gods and men!'

2. The first sentence deduces the sentiment of the Thwan from the attributes or virtues of the trigrams with considerable amplification of the virtue of Li. The second line of Li, as being divided, calls forth in other hexagrams the same notice as here. It is the most important line in the figure, and being responded to by the strong 2, gives an indication of the 'great progress and success.'

all within a hundred li:—it startles the distant and frightens the near.

‘He will be like the sincere worshipper, who is not startled into letting go his ladle and cup of sacrificial spirits:’—he makes his appearance, and maintains his ancestral temple and the altars of the spirits of the land and grain, as presiding at all sacrifices.

LII. 1. Kǎn denotes stopping or resting;—resting when it is the time to rest, and acting when it is the time to act. When one’s movements and restings all take place at the proper time for them, his way (of proceeding) is brilliant and intelligent.

2. Resting in one’s resting-point is resting in one’s proper place. The upper and lower (lines of the hexagram) exactly correspond to each other, but are without any interaction; hence it is said that ‘(the subject of the hexagram) has no consciousness of self; that when he walks in his courtyard, he does not see (any of) the persons in it; and that there will be no error.’

LI. Paragraph 1. See what is said on the Text.

2. The explanations of the Thwan here are good; but in no way deduced from the figure.

3. The portion of the text printed in a different type is supposed to have dropt out of the Chinese copies. The explanation of it that follows is based on Wǎn’s view of Kǎn as representing the oldest son. See on the Text.

LII. 1. The Khang-hsi editors give their opinion that what is said in the first sentence of this paragraph, after the explanation of the name, illustrates the first sentence of the Thwan, and that the other sentence illustrates the rest of the Thwan. It may be so, but the whole of the Thwan appears in paragraph 2.

2. The hexagram being made up of Kǎn repeated, lines 1, 2, 3 are of course the same as 4, 5, and 6. But it will be seen that there is not a proper correlation among them all. I do not see,

LIII. 1. The advance indicated by *K'ien* is (like) the marrying of a young lady which is attended by good fortune.

2. (The lines) as they advance get into their correct places:—this indicates the achievements of a successful progress.

The advance is made according to correctness:—(the subject of the hexagram) might rectify his country.

3. Among the places (of the hexagram) we see the strong undivided line in the centre.

4. 'In (the attributes of) restfulness and flexible penetration we have (the assurance of) an (onward) movement that is inexhaustible.

LIV. 1. By *K'wei Mei* (the marrying away of a younger sister) the great and righteous relation between heaven and earth (is suggested to us). If heaven and earth were to have no intercommunication, things would not grow and flourish as they do. The marriage of a younger sister is the end (of her maidenhood) and the beginning (of her motherhood).

2. We have (in the hexagram the desire of)

however, that this furnishes any ground for the entire obliviousness of self, which the *Thwan* makes out to be in the figure.

LIII. The first sentence of paragraph 2 describes the lines from 2 to 5 all getting into their proper places, as has been pointed out on the Text, and that sentence is symbolical of what is said in the second. 'The rectification of the country' is the reality of 'the successful progress.'

'The strong undivided line' in paragraph 3 is the fifth of the figure.

Out of rest comes movement to go on for an indefinite time, and be succeeded by rest again;—as says paragraph 4.

pleasure and, on the ground of that, movement following. The marrying away is of a younger sister.

3. 'Any action will be evil : '—the places (of the lines) are not those appropriate to them.

'It will be in no wise advantageous : '— the weak (third and fifth lines) are mounted on strong lines.

LV. 1. Fǎng has the signification of being great. It is made up of the trigrams (representing)

LIV. 1. Kwei Mei in this Appendix has the meaning simply of marriage, and for Mei we might substitute Nü, 'daughter' or 'young lady.' This appears from the writer's going on to point out, as elsewhere, the analogy between the growth of things in nature from the interaction of heaven and earth and the increase of mankind through marriage. He does this with a delicate touch. There is no grossness in the original any more than there is in the translation.

But how are we to reconcile this reference to the action of heaven and earth with the bad auspice of the Thwan? The Khang-hsi editors felt the pressure of this difficulty, and they adduce a similar inconsistency in the account of hexagram 44 in this treatise, adding, 'From this we may say that the interaction of the yin and yang cannot be dispensed with, but that we ought to be careful about it in the beginning in order to prevent mischief in the end. This is the doctrine of the Yi.' This is very well, but it is no solution of the difficulty. The editors could not admit that the author of the Appendix did not understand or did not deal fairly with the Text; for that author, they thought, was Confucius.

2. The same editors say that paragraph 2 implies both that the desire for the marriage originated with the lady, and that she was aware that the gentleman was older than herself.

3. The position of a divided line above an undivided is always represented as an evil omen; it is difficult to understand why. There is less of an appearance of reason about it than in some other things which are said about the lines. The lines are where they cannot but be from the way in which the figures were formed.

intelligence and movement directed by that intelligence. It is thus that it has that signification.

2. 'The king has reached the condition (denoted by Fǎng):'—he has still to make it greater.

'There is no occasion to be anxious. Let him be as the sun at noon:'—it is for him to cause his light to shine on all under the sky.

3. When the sun has reached the meridian height, it begins to decline. When the moon has become full, it begins to wane. The (interaction of) heaven and earth is now vigorous and abundant, now dull and scanty, growing and diminishing according to the seasons. How much more must it be so with (the operations of) men! How much more also with the spiritual agency!

LVI. 1. 'Lü indicates that there may be some small attainment and progress:'—the weak (line) occupies the central place in the outer (trigram), and is obedient to the strong (lines on either side of it). (We have also the attributes of quiet) resting closely attached to intelligence (in the com-

LV. The Khang-hsi editors remark that paragraph 1 is not so much explaining the meaning of the name Fǎng, as accounting for the hexagram, composed of Lî and Kǎn, having such a meaning.

Paragraph 3 seems rather contrary to the lesson of the hexagram. According to it, prosperity cannot be maintained, any more than we can have the other seasons without winter or perpetual day without night; but the object of the essay is to exhort to the maintenance of prosperity. Is it the case that the rise of every commonwealth and cause must be followed by its decay and fall? The mind refuses to admit the changes of the seasons, &c., as a true analogy for all moral and intellectual movements. See an important remark on the concluding sentence in the Introduction, pp. 34, 35.

ponent trigrams). Hence it is said, 'There may be some small attainment and progress. If the stranger or traveller be firm and correct as he ought to be, there will be good fortune.'

2. Great is the time and great is the right course to be taken as intimated in Lü!

LVII. 1. The double Sun shows how, in accordance with it, (governmental) orders are reiterated.

2. (We see that) the strong (fifth line) has penetrated into the central and correct place, and the will (of its subject) is being carried into effect; (we see also) the weak (first and fourth lines) both obedient to the strong lines (above them). It is hence said, 'There will be some little attainment and progress. There will be advantage in movement onward in whatever direction. It will be advantageous also to see the great man.'

LVI. What is said in paragraph 1 is intended to explain the Thwan, and not to account for the meaning of the name Lü. It is assumed that Lü means a stranger; and the writer from the position of the fifth line, and from the attributes of the component trigrams, derives the ideas of humility, docility, a quiet restfulness, and intelligence as the characteristics proper to a stranger, and which are likely to lead to his attaining what he desires, and then advancing.

LVII. 1. The language of this paragraph has often occurred to me in reading commands and addresses issued by the emperors of China, such as the essays on the precepts in what is called the Sacred Edict, the reiteration employed in many of which is remarkable.

Paragraph 2. The 'obedience of the weak lines to the strong ones' grows, in a way not very perceptible, from the idea of the hexagram, and the quality of the trigram as denoting penetration and flexibility.

LVIII. 1. Tui has the meaning of pleased satisfaction.

2. (We have) the strong (lines) in the centre, and the weak (lines) on the outer edge (of the two trigrams), (indicating that) in pleasure what is most advantageous is the maintenance of firm correctness. Through this there will be found an accordance with (the will of) heaven, and a correspondence with (the feelings of) men. When (such) pleasure goes before the people, (and leads them on), they forget their toils; when it animates them in encountering difficulties, they forget (the risk of) death. How great is (the power of) this pleased satisfaction, stimulating in such a way the people!

LIX. 1. 'Hwan intimates that there will be progress and success:—(we see) the strong line (in the second place) of the lower trigram, and not suffering any extinction there; and (also) the weak line occupying its place in the outer trigram, and uniting (its action) with that of the line above.

2. 'The king goes to his ancestral temple:—the king's (mind) is without any deflection.

3. 'It will be advantageous to cross the great stream:—(the subject of the hexagram) rides in

LVIII. The feeling of pleasure going before the people and leading them on to endure toil and encounter death must be supposed to be produced in them by the example and lessons of their ruler. Lü Faû-hsien paraphrases this portion of the text thus:—'When the sage with this precedes them, he can make them endure toil without any wish to decline it, and go with him into difficulty and danger without their having any fear.' I think this was intended to be the teaching of the hexagram, but the positive expression of it is hardly discernible.

(a vessel of) wood (over water), and will do so with success.

LX. 1. 'K'ieh intimates progress and attainment:—the strong and weak (lines) are equally divided, and the strong lines occupy the central places.

2. 'If the regulations (which K'ieh prescribes) be severe and difficult, they cannot be permanent:—its course (of action) will in that case come to an end.

3. (We have the feeling of) pleasure and satisfaction directing the course amidst peril. (We have) all regulations controlled (by authority) in its proper place. (We have) free action proceeding from the central and correct position.

4. Heaven and earth observe their regular terms, and we have the four seasons complete. (If rulers) frame their measures according to (the due) regulations, the resources (of the state) suffer no injury, and the people receive no hurt.

LIX. 1. This paragraph has been partially anticipated in the notes on the Thwan. The second line is said to suffer 'no extinction,' because the lower trigram is that of peril. The Khang-hsî editors say that the former part of this paragraph shows how the root of the work of the hexagram is strengthened, and the latter part how the execution of that work is secured.

The conclusion of paragraph 2 is, literally, 'The king indeed is in the middle.' This does not mean, as some say, that the king is in the middle of the temple, but that his mind or heart is exactly set on the central truth of what is right and good.

The upper trigram Sun represents both wind and wood. To explain the meaning of Hwan, the significance of wind is taken; the writer here seizes on that of wood, as furnishing materials for a boat in which the great stream can be crossed.

LX. Paragraph 1. See what is said on the Text of the Thwan.

LXI. 1. In *Kung Fû* we have the (two) weak lines in the innermost part (of the figure), and strong lines occupying the central places (in the trigrams). (We have the attributes) of pleased satisfaction and flexible penetration. Sincerity (thus symbolled) will transform a country.

2. 'Pigs and fish (are moved), and there will be good fortune:—sincerity reaches to (and affects even) pigs and fishes.

'There will be advantage in crossing the great stream:—(we see in the figure) one riding on (the emblem of) wood, which forms an empty boat.

3. In (the exercise of the virtue denoted by) *Kung Fû*, (it is said that) 'there will be advantage in being firm and correct:—in that virtue indeed we have the response (of man) to Heaven.

'Its course will come to an end' is the opposite of the intimation in *Kieh* of progress and attainment.

In paragraph 3 the writer returns to this intimation of the figure:—by the attributes of the trigrams; by the appropriate positions of lines 4 and 5; and by the central and correct place of 5.

Paragraph 4 illustrates the importance of doing things according to rule by reference to the operations of nature and the enactments and institutions of sage rulers.

LXI. 1. The structure of the lineal figure which is here insisted on has been pointed out in explaining the *Thwan*. On what is further said as to the attributes of the trigrams and their effect, *K'ang-ze* observes:—'We have in the sincerity shown in the upper trigram superiors condescending to those below them in accordance with their peculiarities, and we have in that of the lower those below delighted to follow their superiors. The combination of these two things leads to the transformation of the country and state.'

Paragraph 2. The two divided lines in the middle of the figure are supposed to give the semblance of an empty boat, and an

LXII. 1. In Hsião Kwo (we see) the small (lines) exceeding the others, and (giving the intimation of) progress and attainment.

2. Such 'exceeding, in order to its being advantageous, must be associated with firmness and correctness:—that is, it must take place (only) according to (the requirements of) the time.

3. The weak (lines) are in the central places, and hence (it is said that what the name denotes) may be done in small affairs, and there will be good fortune.

4. Of the strong (lines one) is not in its proper place, and (the other) is not central, hence it is said that (what the name denotes) 'should not be done in great affairs.'

5. (In the hexagram) we have 'the symbol of a bird on the wing, and of the notes that come down from such a bird, for which it is better to descend than to ascend, thereby leading to great good fortune:—to ascend is contrary to what is reasonable in the case, while to descend is natural and right.

empty boat, it is said (with doubtful truth), is not liable to be upset. The trigram Sun symbolises both wind and wood.

A good commentary on paragraph 3 is supplied in many passages of 'the Doctrine of the Mean,' e. g. chap. 20. 18:—'Sincerity is the way of Heaven. The attainment of sincerity is the way of men.'

LXII. Paragraph 1. That the small lines exceed the others appears at a glance. The intimation of progress and attainment is less clear. Compare the first paragraph of Appendix I to hexagram 33.

'The requirements of the time' in paragraph 2 cannot make

LXIII. 1. 'K'î 3î intimates progress and success:—in small matters, that is, there will be that progress and success.

2. 'There will be advantage in being firm and correct:—the strong and weak (lines) are correctly arranged, each in its appropriate place.

3. 'There has been good fortune in the beginning:—the weak (second line) is in the centre.

4. 'In the end' there is a cessation (of effort), and 'disorder arises:—the course (that led to rule and order) is (now) exhausted.

LXIV. 1. 'Wei 3î intimates progress and success (in the circumstances which it implies):—the weak (fifth) line is in the centre.

2. 'The young fox has nearly crossed the stream:—but he has not yet escaped from the midst (of the danger and calamity).

right wrong or wrong right; but they may modify the conventional course to be taken in any particular case.

It is easy to explain paragraphs 3 and 4, but what is said in them carries no conviction to the mind.

The sentiment of paragraph 5 is good, apart from the symbolism, which is only perplexing.

LXIII. For paragraphs 1 and 2, see the note on the Text of the Thwan.

It is difficult to see the concatenation in paragraph 3 between the sentiment of the Thwan and the nature of the second line. The Khang-hsî editors compare this hexagram and the next with 11 and 12, observing that the goodness of Thâi (11) is concentrated, as here, in the second line.

The sentiment of paragraph 4 is that which we have often met with,—that things move on with a constant process of change. Disorder succeeds to order, and again order to disorder.

‘Its tail gets immersed. There will be no advantage in any way:’—there is not at the end a continuance (of the purpose) at the beginning. Although the places (of the different lines) are not those appropriate to them, yet a strong (line) and a weak (line always) respond to each other.

LXIV. Paragraph 1. The indication is derived from the fifth line, divided, which is in the ruler’s place. It occupies a strong place, has for its correlate the strong 2, and is itself in the centre of the yin trigram Lî.

Paragraph 2. Line 2 represents ‘the young fox.’ A strong line in the midst of the trigram of peril, its subject will be restless; and responding to the ruler in 5, he will be forward and incautious in taking action. The issue will be evil, and the latter end different from the beginning. What is said in the last sentence shows further how Wei 3î indicates progress.

APPENDIX II.

Treatise on the Symbolism of the Hexagrams, and of the duke /
of Kâu's Explanations of the several Lines.

SECTION I.

I. Heaven, in its motion, (gives the idea of) strength. The superior man, in accordance with this, nerves himself to ceaseless activity.

1. 'The dragon lies hid in the deep;—it is not the time for active doing : '—(this appears from) the strong and undivided line's being in the lowest place.

2. 'The dragon appears in the field : '—the diffusion of virtuous influence has been wide.

3. 'Active and vigilant all the day : '—(this refers to) the treading of the (proper) path over and over again.

4. 'He seems to be leaping up, but is still in the deep : '—if he advance, there will be no error.

5. 'The dragon is on the wing in the sky : '—the great man rouses himself to his work.

6. 'The dragon exceeds the proper limits;—there will be occasion for repentance : '—a state of fulness, that is, should not be indulged in long.

7. 'The same undivided line is used' (in all the places of this hexagram), but the attribute of heaven (thereby denoted) should not (always) take the foremost place.

Like the Text under each hexagram, what is said under each in this treatise on its symbolism is divided into two portions. The

II. The (capacity and sustaining) power of the earth is what is denoted by *Khwān*. The superior man, in accordance with this, with his large virtue supports (men and) things.

1. 'He is treading on hoarfrost;—the strong ice will come (by and by):'—the cold (air) has begun to take form. Allow it to go on quietly according to its nature, and (the hoarfrost) will come to strong ice.

2. The movement indicated by the second line, divided, is 'from the straight (line) to the square.' '(Its operation), without repeated effort, in every way advantageous,' shows the brilliant result of the way of earth.

3. 'He keeps his excellence under restraint, but firmly maintains it:'—at the proper time he will manifest it. 'He may have occasion to engage in the king's service:'—great is the glory of his wisdom.

first is called 'the Great Symbolism,' and is occupied with the tri-grammatic composition of the hexagram, to the statement of which is always subjoined an exhibition of the use which should be, or has been, made of the lesson suggested by the meaning of the whole figure in the administration of affairs, or in self-government. If the treatise be rightly ascribed to Confucius, this practical application of the teaching of the symbols is eminently characteristic of his method in inculcating truth and duty; though we often find it difficult to trace the connexion between his premiss and conclusion. This portion of the treatise will be separated by a double space from what follows,—'the Lesser Symbolism,' in the explanations of the several lines.

I. *K'ien* is formed by redoubling the trigram of the same name. In the case of other hexagrams of similar formation, the repetition of the trigram is pointed out. That is not done here, according to *K'ü Hsi*, 'because there is but one heaven.' But the motion of heaven is a complete revolution every day, resumed again the next; so moves 'the unwearied sun from day to day,' making it a good symbol of renewed, untiring effort.

4. 'A sack tied up;—there will be no error:—this shows how, through carefulness, no injury will be received.

5. 'The yellow lower-garment;—there will be great good fortune:—this follows from that ornamental (colour's) being in the right and central place.

6. 'The dragons fight in the wild:—the (onward) course (indicated by Khwăn) is pursued to extremity.

7. '(The lines are all weak and divided, as appears from) the use of the number six:—but (those who are thus represented) becoming perpetually correct and firm, there will thereby be a great consummation.

II. Khwăn is formed by redoubling the trigram of the same name and having 'the earth for its symbol.' As in the former hexagram, the repetition is emphatic, not otherwise affecting the meaning of the hexagram. 'As there is but one heaven,' says Kû Hsi, 'so there is but one earth.' The first part of 'the Great Symbolism' appears in Canon McClatchie's version as—'Khwăn is the generative part of earth.' By 'generative part' he probably means 'the productive or prolific faculty.' If he mean anything else, there comes out a conclusion antagonistic to his own view of the 'mythology' of the Yî. The character Shî, which he translates by 'generative part,' is defined in Dr. Williams' dictionary as 'the virility of males.' Such is the special significance of it. If it were so used here, the earth would be masculine.

It is difficult to say exactly what the writer meant by—'The superior man, in accordance with this, and with his large nature, supports (men and) things.' Lin Hsi-yüan (Ming dynasty) says:—'The superior man, in his single person, sustains the burden of all under the sky. The common people depend on him for their rest and enjoyment. Birds and beasts and creeping things, and the tribes of the vegetable kingdom, depend on him for the fulfilment of their destined being. If he be of a narrow mind and cold virtue, how can he help them? Their hope in him would be in vain.'

'The Smaller Symbolism' is sufficiently dealt with in the notes on the Text.

III. (The trigram representing) clouds and (that representing) thunder form *Kun*. The superior man, in accordance with this, (adjusts his measures of government) as in sorting the threads of the warp and woof.

1. Although 'there is a difficulty in advancing,' the mind (of the subject of the line) is set on doing what is correct. While noble, he humbles himself to the mean, and grandly gains the people.

2. The difficulty (to the subject of) the second line, divided, arises from its place over the undivided line below it. 'The union and children after ten years' shows things resuming their regular course.

3. 'One pursues the deer without the (guidance of the) forester:—(he does so) in (his eagerness to) follow the game. 'The superior man gives up the chase, (knowing that) if he go forward he will regret it:—he would be reduced to extremity.

4. 'Going forward after such a search (for a helper)' shows intelligence.

5. 'Difficulty is experienced (by the subject of the fifth line) in bestowing his rich favours:—the extent to which they reach will not yet be conspicuous.

6. 'He weeps tears of blood in streams:—how can the state (thus emblemed) continue long?

III. *Khan* represents water, especially in the form of rain. Here its symbol is a cloud. The whole hexagram seems to place us in the atmosphere of a thunderous sky overhung with thick and gloomy clouds, when we feel oppressed and distressed. This is not a bad emblem of the political state in the mind of the writer. When the thunder has pealed, and the clouds have discharged their

IV. (The trigram representing) a mountain, and beneath it that for a spring issuing forth from Mǎng. The superior man, in accordance with this, strives to be resolute in his conduct and nourishes his virtue.

1. 'It will be advantageous to use punishment:'—the object being to bring under the influence of correcting law.

2. 'A son able to (sustain the burden of) his family:'—as appears from the reciprocation between this strong line and the weak (fifth line).

3. 'A woman (such as is here represented) should not be taken in marriage:'—her conduct is not agreeable to what is right.

4. 'The regret arising from ignorance bound in chains' is due to the special distance of (the subject of this line) from the solidity (shown in lines 2 and 6).

5. 'The good fortune belonging to the simple lad without experience' comes from his docility going on to humility.

burden of rain, the atmosphere is cleared, and there is a feeling of relief. But I fail again to discern clearly the connexion between the symbolism and the lesson about the superior man's administration of affairs.

The subject of the first line of the Smaller Symbolism is represented by the undivided line, and therefore is firm and correct. He is noble, but his place is below the divided lines, symbols of the weak and mean (see Appendix IV, i, 1).

Line 2. 'Things resume their regular course:'—the subject is now at liberty to seek a union with the subject of line 5, according to the rules of the symbolism. Lines 1 and 4, 2 and 5, 3 and 6, the corresponding lines of the trigrams, are correlates.

The subject of line 4 naturally recurs to the correlate in line 1. He is the natural helper in the case, and he has the ability.

6. 'Advantage will come from warding off injury:'—(the subject of this line) above and (the ignorant) below, all do and are done to in accordance with their nature.

V. (The trigram for) clouds ascending over that

IV. 'The spring here issuing forth' is different from the defile with a stream in it, in the explanation of the Thwan; different moreover from 'rain,' mentioned also as the phenomenon which is the natural symbol of Khan. The presence of water, however, is common to the three. But the water of the spring, or of the stream, would flow away from the hill, and not be stopped by it; as an emblem therefore of the ignorance and inexperience denoted by Măng it is not suitable. Kû Hsî says that 'the water of a spring is sure to move on and gradually advance.' This may serve as a symbol of the general process and progress of education, though it gives no account of the symbolism of the hill. It serves also to explain in part the transition of the writer to the subject of the superior man, and his dealing apparently with himself.

Does line 1 set forth the use of punishment as the dernier resort, undesirable, but possibly unavoidable, to bring men in subjection to law?

The force of line 2 comes out fully in the Thwan.

That a woman such as is represented in line 3 should not be taken in marriage is clear enough; but I do not see the bearing of the illustration on the proper lesson in the hexagram.

Line 3 separates 4 from 2, and 5 separates it from 6. Weak in itself, it is farther removed than any other from the two strong lines in the hexagram, and is represented as 'cribbed' in its ignorance.

The fifth is the most honourable place in the figure, and here is occupied by a weak line. This looks, however, to the occupant of line 2, less honourable than itself, and is marked by the two attributes that are named. Compare what is said on line 2.

A strong line in the topmost place must represent, according to the scheme of the hexagram, one who uses force in the cause of education; but the force is put forth not on the ignorant, but on those who would keep them ignorant, or increase their ignorance. The subject of this line, therefore, acts according to his nature, and the subjects of all the weak lines below are cared for as is best for them.

for the sky forms Hsü. The superior man, in accordance with this, eats and drinks, feasts and enjoys himself (as if there were nothing else to employ him).

1. 'He is waiting in the (distant) border:—he makes no movement to encounter rashly the difficulties (of the situation). 'It will be advantageous for him constantly to maintain (the purpose thus shown), in which case there will be no error:—he will not fail to pursue that regular course.

2. 'He is waiting on the sand:—he occupies his position in the centre with a generous forbearance. Though 'he suffer the small injury of being spoken (against),' he will bring things to a good issue.

3. 'He is waiting in the mud:—calamity is (close at hand, and as it were) in the outer (trigram). 'He himself invites the approach of injury:—if he be reverent and careful, he will not be worsted.

4. 'He is waiting in (the place of) blood:—he accommodates himself (to the circumstances of the time), and hearkens to (its requirements).

5. 'The appliances of a feast, and the good fortune through being firm and correct,' are indicated by (the position in) the central and correct place.

6. 'Guests come unurged (to give their help), and if (the subject of the line) receive them respectfully, there will be good fortune in the end:—though the occupant and the place are not suited to each other, there has been no great failure (in what has been done).

V. 'The cloud,' it is said, 'that has risen to the top of the sky, has nothing more to do till it is called on, in the harmony of heaven

VI. (The trigram representing) heaven and (that representing) water, moving away from each other, form Sung. The superior man, in accordance with this, in the transaction of affairs takes good counsel about his first steps.

1. 'He does not perpetuate the matter about which (the contention is):'—contention should not be prolonged. Although 'he may suffer the small (injury) of being spoken against,' his argument is clear.

2. 'He is unequal to the contention; he retires and keeps concealed, stealthily withdrawing from it:'—for him from his lower place to contend with (the stronger one) above, would be to (invite) calamity, as if he brought it with his hand to himself.

3. 'He confines himself to the support assigned

and earth, to discharge its store of rain.' This gives to the writer the idea of waiting; and the superior man is supposed to be taught by this symbolism to enjoy his idle time, while he is waiting for the approach of danger and occasion for action.

'The regular course' of the subject of line 1 seems to be the determination to wait, at a distance from danger, the proper time to act.

The subject of line 2, which is undivided and in the centre, is thereby shown to be possessed of a large and generous forbearance.

The recognition of the circumstances of the time, and hearkening to its requirements, explain, in paragraph 4, 'the retreat from the cavern,' which is not here repeated from the Text. The line being weak and divided, its subject knows his own incompetency, and takes this prudent step.

K'û says that he does not understand what is said under line 6,—that the occupant and the place are not suited to each other, for the yin line being in the sixth, an even place, seems to be where it ought to be. We are only surprised that cases of inconsistency in these explanations are not more numerous.

to him of old:’—(thus) following those above him, he will have good fortune.

4. ‘He returns to (the study of Heaven’s) ordinances, changes (his wish to contend), and rests in being firm and correct:’—he does not fail (in doing what is right).

5. ‘He contends;—and with great fortune:’—this is shown by his holding the due mean and being in the correct place.

6. ‘He receives the robe through his contention:’—but still he is not deserving of respect.

VII. (The trigram representing) the earth and in the midst of it that representing water, form Sze. The superior man, in accordance with this, nourishes and educates the people, and collects (from among them) the multitudes (of the hosts).

I. ‘The host goes forth according to the rules (for) such a movement:’—if those rules be not observed, there will be evil.

VI. The symbolism here is different from that in the Text of the Thwan. We have the visible sky ascending and water or rain descending, which indicate, one hardly sees how, opposition and contention. The lesson as to the course of the superior man is a good one, but might with equal propriety be deduced from many other hexagrams.

Hsiang An-shih (Sung dynasty) says that the first part of paragraph 2 is all to be taken as the language of the duke of Kâu, the characters being varied; the rest is the remark of the writer of this treatise.

It is observed that the returning to (the study of Heaven’s) ordinances, and changing the wish to contend, in paragraph 4, are not two things, but only one; ‘the ordinances (ming) meaning what is right in principle.’ The wish to contend was wrong in principle, and is now abandoned.

‘The robe’ takes the place of ‘the leathern sash’ in paragraph 6; but the sash was merely an appendage of the robe.

2. 'He is in the midst of the host, and there will be good fortune:—he has received the favour of Heaven. 'The king has thrice conveyed to him the orders (of) his favour:—(the king) cherishes the myriad regions in his heart.

3. 'The host with the possibility of its having many idle leaders:—great will be its want of success.

4. 'The host is in retreat; but there is no error:—there has been no failure in the regular course.

5. 'The oldest son leads the host:—its movements are directed by him in accordance with his position in the centre. 'Younger men idly occupy their positions:—the employment of such men is improper.

6. 'The great ruler delivers his charges:—thereby he rightly apportions merit. 'Small men should not be employed:—they are sure to throw the states into confusion.

VII. 'The Great Symbolism' here is not more satisfactory than in other paragraphs of it which have already come before us. *K'ü Hsi* says:—'As the water is not outside the earth, so soldiers are not outside the people. Therefore if (a ruler) be able to nourish the people, he can get the multitudes (of his hosts).' Is the meaning this,—that originally the people and soldiers are one body; that a portion of the people are taken out from among the mass, as occasion requires, to do the duty of soldiers; and that the nourishment and education of the people is the best way to have good soldiers ready for use on any emergency? Compare the saying of Confucius in *Analects XIII, xxx*.

What is said on the second line, that the general 'has received the favour of Heaven,' refers of course to the entire confidence reposed in him by the ruler or king, the subject of line 5. In this way Thien here is equal to Thien wang, so frequent in the 'Spring and Autumn,' and meaning—'King by the grace of

VIII. (The trigram representing) the earth, and over it (that representing) water, form P1. The ancient kings, in accordance with this, established the various states and maintained an affectionate relation to their princes.

1. From 'the seeking union with its object' shown in the first line, divided, there will be other advantages.

2. 'The movement towards union and attachment proceeds from the inward (mind):'—(the party concerned) does not fail in what is proper to himself.

3. 'Union is sought with such as ought not to be associated with:'—but will not injury be the result?

4. 'Union is sought (by the party intended here) with one beyond himself, and (in this case) with a worthy object:'—he is following (the ruler) above him.

5. 'The good fortune belonging to the most illustrious instance of seeking union and attachment' appears in the correct and central position (of the fifth line, undivided).

(The king's) neglecting (the animals) confronting him (and then fleeing), and (only) taking those who present themselves as it were obediently, is seen in

Heaven.' But the great powers given to the general are from the king's wish through him to promote the good of all the nation.

In military operations there must be one ruling will and mind. A divided authority is sure to be a failure. But 'a retreat' is no evidence of failure in a campaign. When advance would lead to disaster, retreat is the regular course to pursue.

Other ways can be found to reward small men. They ought not to be placed in situations where the condition of others will depend on them.

'his allowing the escape of those in front of him.' 'That the people of his towns do not warn one another (to prevent such escape),' shows how he, in his high eminence, has made them pursue the due course.

6. 'He seeks union and attachment without taking the first (step to such an end):'—there is no possibility of a (good) issue.

IX. (The trigram representing) the sky, and that representing wind moving above it, form Hsiao *K'ên*. The superior man, in accordance with this, adorns the outward manifestation of his virtue.

1. 'He returns and pursues his own path:'—it is right that there should be good fortune.

2. 'By the attraction (of the subject of the former line) he returns (to its own course),' and is in the central place:—neither will he err in what is due from him.

3. 'Husband and wife look on each other with averted eyes:'—(the subject of line three is like a

VIII. 'Water upon the face of the earth' is supposed to be an emblem of close union. Of the mere fact of close union this may be accepted as a fair illustration, and of its completeness. Some other symbolism might set forth better the tendency of parties to union, and their seeking it. What is said about the ancient kings is more pertinent to the meaning of the hexagram than in many other applications in 'the Great Symbolism.' The king appears in it not only as the centre, but as the cause, of union.

'The other advantages' under line 1 refer to all the benefits that will result from sincerity and union, which are in themselves good.

It is hardly possible to make what is said under line 5, on the royal huntings, agree with the account of them given on the same line in the duke of *K'âu*'s text. I suspect that there is some corruption of the text. The two verbs 'neglecting' and 'taking' seem to be used, the one for the other.

husband who) cannot maintain correctly his relations with his wife.

4. 'He is possessed of sincerity; his (ground for) apprehension is dismissed:—(the subjects of the lines) above agree in aim with him.

5. 'He is possessed of sincerity, and draws others to unite with him:—he does not use only his own rich resources.

6. 'The rain has fallen and (the onward progress) is stayed:—the power (denoted in the figure) has accumulated to the full. 'If the superior man prosecute his measures, there will be evil:—he will find himself obstructed.

IX. The suitability of the symbolism here is made all to turn on the wind. 'Wind,' says *K'ü*, 'is simply the air, without solid substance; it can restrain, but not for long.' The wind moves in the sky for a time, and then ceases. The process of thought from the symbol to the lesson is not easily traced. Is it meant to say that virtue manifesting itself outwardly—in the carriage and speech—is, however good, but a small matter, admirable in an officer, or even a feudal lord, but that we look for more in a king, the Head of a nation?

K'äng-ze calls attention to the addition to the duke of *K'âu*'s explanation in the notice on line 2, that 'it is in the central place,' adding that this explains how the subject of the line restrains himself, and does not go beyond what is due from him.

Only half of the symbolism in the Text of line 3 is taken up here. Line 1, it is said, is far from line 4, the *mauvais sujet* of the hexagram, and little affected by it; line 2 is nearer, but, being in the centre, suffers little; line 3 is close on it, and, not being in the centre, comes under its evil influence; while line 6 gives no help.

Line 4 is weak, and in an even place, appropriate to it; and hence its subject is said to 'have sincerity.' Being the first line, moreover, of Sun, the two others take their character from it.

Line 5, being undivided, and occupying the most important place in the figure, according to the value usually attached to the lines, is

X. (The trigram representing) the sky above, and below it (that representing the waters of) a marsh, form Lt. The superior man, in accordance with this, discriminates between high and low, and gives settlement to the aims of the people.

1. 'He treads his accustomed path and goes forward:—singly and exclusively he carries out his (long-cherished) wishes.

2. 'A quiet and solitary man, to whom, being firm and correct, there will be good fortune:—holding the due mean, he will not allow himself to be thrown into disorder.

3. 'A one-eyed man (who thinks that he) can see:—he is not fit to see clearly. 'A lame man (who thinks that he can) tread well:—one cannot walk along with him. 'The ill fortune of being bitten' arises from the place not being the proper one for him. 'A (mere) bravo acting the part of a great ruler:—this is owing to his aims being (too) violent.

4. 'He becomes full of apprehensive caution, and in the end there will be good fortune:—his aim takes effect.

5. 'He treads resolutely; and though he be firm and correct, there is peril:—this is due to his being in the position that is correct and appropriate to him.

said 'to be rich,' or 'to have rich resources.' With these he unites with the 'subjects' of line 4 to effect their common object.

Under line 6 we are told that the restraint is at its height, and the restrained should keep still for a time. The paragraph is metrical. The paragraphs to lines 1, 2, 3, all rhyme together. So do those to 4, 5; and now under 6, we have a couplet:—

'Lo! rain, lo! rest, the power is full!
Good man! hold hard. Obstructions rule.'

6. 'There will be great good fortune,' and that in the occupancy of the topmost line :—this is great matter for congratulation.

XI. (The trigrams for) heaven and earth in communication together form Thâi. The (sage) sovereign, in harmony with this, fashions and completes (his regulations) after the courses of heaven and earth, and assists the application of the adaptations furnished by them,—in order to benefit the people.

1. 'The good fortune of advance, (as suggested by the emblem of) the grass pulled up,' arises from the will (of the party intended) being set on what is external to himself.

2. 'He bears with the uncultivated, and proves himself acting in accordance with the due mean :—for (his intelligence is) bright and (his capacity is) great.

3. 'There is no going away so that there shall not be a return' refers to this as the point where the interaction of heaven and earth takes place.

4. 'He comes fluttering (down), not relying on

X. 'The sky above and a marsh lying below it is true,' says *Khâng-ze*, 'in nature and reason; and so should be the rules of propriety on which men tread.' This symbolism is far-fetched; and so is the application of it, if in any way drawn from it. But it is true that the members of a community or nation must keep their several places and duties in order to its being in a state of good order.

For lines 1, 2, 3, and 4, see notes on the Text.

If we might translate the conclusion of what is said on line 5, by—'in the position that is correctly appropriate to him,' the meaning would be more clear, though still the assumption which I have pointed out on the Text would underlie the statement; and as evidently as there, what is said under line 6 is but a truism.

his own rich resources:—both he and his neighbours are out of their real (place where they are). ‘They have not received warning, but (come) in the sincerity (of their hearts):’—this is what they have desired in the core of their hearts.

5. ‘By such a course there is happiness, and there will be great good fortune:’—(the subject of the line) employs the virtue proper to his central position to carry his wishes into effect.

6. ‘The city wall returned back into the moat’ shows how the (governmental) orders have (long) been in disorder.

XII. (The trigrams of) heaven and earth, not in intercommunication, form Phī. The superior man, in accordance with this, restrains (the manifestation) of his virtue, and avoids the calamities (that threaten him). There is no opportunity of conferring on him the glory of emolument.

XI. It is difficult to translate the application of ‘the Great Symbolism’ here, so that it shall be intelligible to a reader. *Khǎng-ze* says:—‘A ruler should frame his laws and regulations so that the people may avail themselves of the seasons of heaven, and of the advantages afforded by the earth, assisting their transforming and nourishing services, and completing their abundant and admirable benefits. Thus the breath of spring, calling forth all vegetable life, gives the law for sowing and planting; the breath of autumn, completing and solidifying all things, gives the law for ingathering and storing,’ &c.

The subject of line 1 has ‘his will on what is external to himself:’—he is bent on going forward.

K’û Hsî explains what is said on paragraph 4, that the upper lines ‘are out of their real place where they are,’ or, literally, ‘have lost their substantiality,’ by the remark that ‘their proper place, as being weak lines, is below.’ The editors of the imperial edition prefer another explanation, on which I need not enter.

1. 'The good fortune through firm goodness, (suggested by) the pulling up of the grass,' arises from the will (of the parties intended) being bent on (serving) the ruler.

2. 'The great man, comporting himself as the distress and obstruction require, will have success:'—he does not allow himself to be disordered by the herd (of small men).

3. That 'his shame is folded in his breast' is owing to the inappropriateness of his position.

4. 'He acts in accordance with the ordination (of Heaven), and commits no error:'—the purpose of his mind can be carried into effect.

5. 'The good fortune of the great man' arises from the correctness of his position.

6. 'The distress and obstruction having reached its end, it is overthrown and removed:'—how could it be prolonged?

XII. 'The Great Symbolism' here is sufficiently explained in the first Appendix. The application, however, is here again difficult, though we may try to find in it a particular instance of the interruption of communication,—in great merit not meeting with its reward.

The subject of the first line is one of the cluster of small men who are able to change their mind, and set their hearts to love their ruler.

The subject of the second line is a 'great man,' and occupies the place in the centre.

The subject of the third line is weak, and does not occupy his correct position;—hence the symbolism.

The fourth line is near the fifth, the ruler's place. It is a strong line in an even place; but acting according to the will of Heaven or of the ruler, its subject gets his purpose carried out.

The subject of the fifth line is the great man, the ruler in his right place. Hence he is successful, and in the last line, we see

XIII. (The trigrams for) heaven and fire form Thung Zăn. The superior man, in accordance with this), distinguishes things according to their kinds and classes.

1. '(The representative of) the union of men is just issuing from his gate : '—who will blame him ?

2. '(The representative of) the union of men appears in relation with his kindred : '—that is the path to regret.

3. 'He hides his arms in the thick grass : '—because of the strength of his opponent. 'For three years he makes no demonstration : '—how can he do anything ?

4. 'He is mounted on his city-wall ; ' but yielding to the right, 'he does not proceed to make the attack (he contemplated).' (Where it is said), 'There will be good fortune,' (that shows how) he feels the strait he is in, and returns to the rule of law.

5. The first action of (the representative of) the union of men (here described) arises from his central position and straightforward character. 'The meeting secured by his great host' intimates that the opponents of it have been overcome.

6. '(The representative of) the union of men appears in the suburbs : '—his object has not yet been attained.

how the distress and obstruction are come to an end. It was in the order of change that they should do so.

XIII. The style of 'heaven and fire form Thung Zăn' is such as to suggest the appearance of fire ascending up, blazing to the sky, and uniting with it. The application of the symbolism is again perplexing.

In line 1, the party just issuing from his gate has all the world

XIV. (The trigram for) heaven and (that of) fire above it form Tâ Yû. The superior man, in accordance with this, represses what is evil and gives distinction to what is good, in sympathy with the excellent Heaven-conferred (nature).

1. This first line, undivided, of Tâ Yû shows no approach to what is injurious.

2. 'A large waggon with its load' refers to the (virtue) accumulated (in the subject of the line), so that he will suffer no loss (in the conduct of affairs).

3. 'A feudal prince presents his offerings to the son of Heaven:'—a small man (in such a position) does (himself) harm.

4. 'He keeps his great resources under restraint:'—his wisdom discriminates clearly (what he ought to do).

5. 'His sincerity is reciprocated by all the others:'—his sincerity serves to stir and call out what is in their minds. 'The good fortune springing from a display of proper majesty' shows how they might (otherwise) feel too easy, and make no preparation (to serve him).

before him, with which to unite. Selfish thoughts disposing to union have no place in him.

In line 2, union (only) with kindred implies narrowness of mind.

For line 3, see note on the Text.

In line 4, stress should be laid on 'yielding to the right.'

For line 5, see note on the Text.

The Khang-hsi editors append the following note to the last paragraph:—'Under line 1 it is said that "union in the open country indicates progress and success," while here it is only said that "with union in the suburbs there is no cause for repentance." Beyond the suburbs was the open country, and till the union reached so far, the object of the hexagram was not attained. We may truly say that Confucius was a skilful reader of the duke of Kâu.' Of course the editors did not doubt Confucius' authorship of all the Appendixes.

6. 'The good' fortune attached to the topmost line of Tâ Yû' arises from the help of Heaven.

XV. (The trigram for) the earth and (that of) a mountain in the midst of it form *K'ien*. The superior man, in accordance with this, diminishes what is excessive (in himself), and increases where there is any defect, bringing about an equality, according to the nature of the case, in his treatment (of himself and others).

1. 'The superior man who adds humility to humility' is one who nourishes his (virtue) in lowliness.

2. 'The good fortune consequent on being firm and correct, where the humility has made itself recognised,' is owing to the possessor's having (the virtue) in the core of his heart.

3. 'The superior man of (acknowledged) merit, and yet humble:'—the myriads of the people will submit to him.

4. 'One, whose action would be in every way advantageous, stirs up his humility the more:'—(but in doing so) he does not act contrary to the (proper) rule.

5. 'He may advantageously use the force of arms:'—correcting, that is, those who do not submit.

XIV. 'Fire above the sky' will shine far; and this is supposed to symbolise the vastness of the territory or of the wealth implied in the possession of what is great. The superior man, in governing men, especially in a time of prosperity and wealth, must set himself to develop what is good in them, and repress what is evil. And this will be in accordance with the will of Heaven, which has given to all men a nature fitted for goodness.

All the comment that is necessary on the symbolism of the several lines may be gathered from the comments on the Text.

6. 'His humility has made itself recognised :— (but) all his aims have not yet been attained. 'He may employ the force of arms, (but only) in correcting (his own) towns and state.'

XVI. (The trigrams for) the earth and thunder issuing from it with its crashing noise form Yü. The ancient kings, in accordance with this, composed their music and did honour to virtue, presenting it especially and most grandly to God,

XV. The earth is low, and in the midst of it is a high mountain; but I fail to see how this can symbolise humility. Nor does Regis' representation of it much improve the case:—'Monte' (ait glossa) 'nihil est altius in terra, quae est summe abjecta. At cum is declivis sit, imago esse potest humilis modestiae.' I find the following note on the paragraph in my copy of the 'Daily Lessons' (see Preface):—'The five yin lines above and below symbolise the earth; the one yang line in the centre is "the mountain in the midst of the earth." The many yin lines represent men's desires; the one yang line, heavenly principle. The superior man, looking at this symbolism, diminishes the multitude of human desires within him, and increases the single shoot of heavenly principle; so does he become grandly just, and can deal with all things evenly according to the nature of each. In whatever circumstances or place he is, he will do what is right.' This is certainly very ingenious, but one shrinks from accepting a view that is not based on the component trigrams.

Under line 1, 'nourishes his (virtue)' is, literally, 'pastures himself.' He is all humility. That makes him what he is.

Under line 4, 'the (proper) rule' is the rule proper for the subject of the line in his circumstances so near the place of the ruler.

Under line 5, 'the refusal to submit' makes an appeal to force necessary. Even the best and humblest ruler bears the sword, and must not bear it in vain.

K'ü Hsi bases all that is said under line 6 on its being a weak line; so that the humble ruler is unable even at the close of the action described in the figure to accomplish all his objects, and must limit his field even in appealing to arms.

when they associated with Him (at the service) their highest ancestor and their father.

1. 'The (subject of the) first line proclaims his pleasure and satisfaction : '—there will be evil ; his wishes have been satisfied to overflowing.

2. '(He sees a thing) without waiting till it has come to pass ; with his firm correctness there will be good fortune : '—this is shown by the central and correct position (of the line).

3. 'He looks up (for favours), while he indulges the feeling of satisfaction ; there will be occasion for repentance : '—this is intimated by the position not being the appropriate one.

4. 'From him the harmony and satisfaction come ; great is the success which he obtains : '—his aims take effect on a grand scale.

5. '(The subject of) the fifth line has a chronic complaint : '—this is shown by his being mounted on the strong (line). 'He still lives on without dying : '—he is in the central position, (and its memories of the past) have not yet perished.

6. 'With darkened mind devoted to the harmony and satisfaction (of the time), 'as shown in the top-most (line) :—how can one in such a condition continue long ?

XVI. 'The Great Symbolism' here is more obscure than usual. A thunderstorm clears the air and removes the feeling of oppression, of which one is conscious before its occurrence. Is this all that is meant by making the trigrams of the earth and thunder form Yü, the hexagram of harmony and satisfaction? What is meant, moreover, by making the thunder 'issue,' as the Chinese text says, from the earth? Then as to the application of this symbolism, I can trace the author's idea but imperfectly. To say that the thunder crash suggested the use of music, as some critics do, is

XVII. (The trigram for the waters of) a marsh and (that for) thunder (hidden) in the midst of it form Sui. The superior man in accordance with this, when it is getting towards dark, enters (his house) and rests.

1. 'He is changing the object of his pursuit:'—but if he follow what is correct, there will be good fortune. 'He goes beyond (his own) gate to find associates:'—he will not fail (in the method he pursues).

2. 'He cleaves to the little boy:'—he cannot be with the two at the same time.

3. 'He cleaves to the man of age and experience:'—by the decision of his will, he abandons (the youth) below.

4. 'He is followed and obtains adherents:'—according to the idea (of the hexagram), this is evil. 'He is sincere in his course:'—showing his intelligence, and leading to achievement.

5. 'He is sincere in fostering what is excellent:'—his position is correct and in the centre.

absurd. The use of music at sacrifices, however, as assisting the union produced by those services between God and his worshippers, and the present and past generations, agrees with the general idea of the figure. I must suppose that the writer had in mind the sacrifices instituted by the duke of Kâu, as related in the Hsião King, chap. ix.

Pleasure has operated injuriously on the subject of line 1. He calls attention to himself.

Only a part of the symbolism of line 2 is referred to here. Such an omission is not uncommon;—as in lines 3 and 4 also.

With 'the memories of the past not perishing' compare Mencius, II, Section i, chap. 1. 6-13.

In line 6 the action of the hexagram is over. If one puts off changing his evil way any longer, there remains no more hope for him.

6. 'The sincerity is firmly held and clung to, as shown in the topmost line:—(the idea of the hexagram) has reached its extreme development.

XVIII. (The trigram for) a mountain, and below it that for wind, form Kû. The superior man, in accordance with this, (addresses himself to) help the people and nourish his own virtue.

1. 'He deals with the troubles caused by his father:—he feels that he has entered into the work of his father.

2. 'He deals with the troubles caused by his mother:—he holds to the course of the due mean.

3. 'He deals with the troubles caused by his father:—in the end there will be no error.

4. 'He views indulgently the troubles caused by his father:—if he go forward, he will not succeed.

5. 'He deals with the troubles caused by his father, and obtains praise:—he is responded to (by the subject of line two) with all his virtue.

XVII. An explosion of thunder amidst the waters of a marsh would be succeeded by a tremulous agitation of those waters; so far there would be a following of the movement of the lower trigram by the upper. Then in the application of the symbolism we have an illustration of action following the time, that is, according to the time; which is a common use of the Chinese character Sui. Neither the symbolism, however, nor its application adds much to our understanding of the text.

Paragraph 1 consists of two lines that rhyme; and paragraphs 4 (two lines), 5, and 6 do the same. According to Kû Yen-wû, paragraphs 2 and 3 also rhyme; but this appears to me doubtful. The symbolism of these paragraphs is sufficiently explained in the notes on the Text. Some peculiarities in their style (in Chinese) are owing to the bonds of the rhyme.

6. 'He does not serve either king or feudal lord:—
but his aim may be a model (to others).

XIX. (The trigram for) the waters of a marsh
and that for the earth above it form Lin. The
superior man, in accordance with this, has his pur-
poses of instruction that are inexhaustible, and
nourishes and supports the people without limit.

1. 'The good fortune through the firm correct-
ness of (the subject of the first line) advancing in
company (with the subject of the second)' is due to
his will being set on doing what is right.

2. 'The good fortune and every possible advan-
tage attending the advance (of the subject of the
second line), in company (with the subject of the
first),' arises from the fact that those (to whom the
advance is made) are not yet obedient to the ordi-
nances (of Heaven).

3. 'He (shows himself) well pleased to advance:—
his position is not that appropriate to him. 'If he
become anxious, however, about his action,' his error
will not be continued.

4. 'The freedom from error consequent on the

XVIII. 'When the wind,' says *K'äng-ze*, 'encounters the
mountain, it is driven back, and the things about are all scattered
in disorder; such is the emblem of the state denoted by Kû.'
'The nourishing of virtue' appears especially in line 6; all the
other lines belong to the 'helping of the people.'

The subject of line 1 has entered into the work of his father,
and brings it about that his father is looked on as blameless. The
'due mean' of line 2 is according to the caution in the Text.
The Khang-hsi editors interpret the explanation of line 5 as 'he
takes up (the course of his father) with all his virtue.' I think they
are wrong.

advance in the highest mode' is due to the (various) appropriateness of the position.

5. 'What befits the great ruler' means the pursuing the course of the due mean.

6. 'The good fortune consequent on the advance of honesty and generosity' is due to the will (of the subject of the line) being set on the subjects of (the first two lines of) the inner (trigram).

XX. (The trigram representing) the earth, and that for wind moving above it, form Kwan. The ancient kings, in accordance with this, examined the (different) regions (of the kingdom), to see the (ways of the) people, and set forth their instructions.

1. 'The looking of a lad shown by the first line, divided,' indicates the way of the inferior people.

XIX. 'The earth descending or approaching the marsh' is, according to K'ü Hsî, symbolical of the approach of superiors to the inferior people, and then the two predicates about the superior man are descriptive of him in that approach, the instruction being symbolised by Tui, and the supporting by Khwân. The Khang-hsî editors, wishing to defend the explanation of lin by 'great,' in Appendix VI, which they ascribe to Confucius, say:—'Lin means "great." The earth above the waters of the marsh shows how full those waters are, rising to the level of the earth, and thus expressing the idea of greatness.' This representation is lame and impotent.

K'ü Hsî says he does not understand what is said on line 2. The interpretation in my version is the ordinary one, but I am not satisfied with it. The Khang-hsî editors try to solve the difficulty; but I am not able to follow them.

The same editors compare the conclusion of paragraph 6 in the symbolism of hexagram 11. 'What is external' there, and 'what is internal here,' have, they say, the same reference,—the state, namely, of the whole kingdom, the expressions differing according to the different standpoints from which they are made. The view in the translation is that of K'ü Hsî. It is difficult to hold the balance between them. The newer view, perhaps, is the preferable.

2. 'The firm correctness of a woman, in peeping out from a door' is also a thing to be ashamed of (in a superior man).

3. 'He looks at (the course of) his own life, to advance or recede (accordingly):'—he will not err in the path (to be pursued).

4. 'He contemplates the glory of the kingdom:'—(thence) arises the wish to be a guest (at court).

5. 'He contemplates his own life(-course):'—he should (for this purpose) contemplate (the condition of) the people.

6. 'He contemplates his own character:'—he cannot even yet let his mind be at rest.

XXI. (The trigrams representing) thunder and lightning form Shih Ho. The ancient kings, in accordance with this, framed their penalties with intelligence, and promulgated their laws.

1. 'His feet are in the stocks, and he is deprived of his toes:'—there is no walking (to do evil).

2. 'He bites through the soft flesh, and (goes on)

XX. Wind moving above the earth has the widest sweep, and nothing escapes its influence; it penetrates everywhere. This symbolism is more appropriate to the subject in hand than that of many other hexagrams. Personal influence in a ruler effects much; but the ancient kings wished to add to that the power of published instructions, specially adapted to the character and circumstances of the people. Sun, representing the wind, is well adapted to denote this influence;—see the Analects, XII, xix.

The looking in line 1 is superficial, and does not reach far.

Line 3. 'He will not err in the path to be pursued;'—advancing or receding as is best.

Line 4. 'The glory of the kingdom' is the virtue of the sovereign and the character of his administration. With the sentiment compare Mencius, VII, i, chap. 21. 2.

to bite off the nose : '—(the subject of the line) is mounted on the strong (first line).

3. 'He meets with what is disagreeable and hurtful : '—his position is not the proper one for him.

4. 'It will be advantageous to him to realise the difficulty of his task and be firm, in which case there will be good fortune : '—his light has not yet been sufficiently displayed.

5. 'Let him be firm and correct, realising the peril (of his position), and there will be no error : '—he will possess every quality appropriate (to his position and task).

6. 'He wears the cangue and is deprived of his ears : '—he hears, but will not understand.

XXII. (The trigram representing) a mountain and that for fire under it form Pi. The superior man, in accordance with this, throws a brilliancy around his various processes of government, but does not dare (in a similar way) to decide cases of criminal litigation.

XXI. *Khǎng-ze* says that thunder and lightning are always found together, and hence their trigrams go together to give the idea of union intended in Shih Ho. The one trigram symbolising majesty and the other brightness or intelligence, the application of the hexagram here is easier and more natural than in many other cases.

1. 'There is no walking : '—that is, the subject of the line will not dare to offend any more.

2. "Being mounted on the strong first line" means,' says *Khǎng-ze*, 'punishing a strong and vehement man, when severity is required, as is denoted by the central position of the line.'

4. 'His light has not been sufficiently displayed ; ' that is, there is still something for him to do :—he has to realise the difficulty of his position and be firm.

1. 'He can discard a carriage and walk on foot :—righteousness requires that he should not ride.

2. 'He adorns his beard :—he rouses himself to action (only) along with the (subject of the) line above.

3. 'The good fortune consequent on his ever maintaining firm correctness' is due to this,—that to the end no one will insult him.

4. 'The place occupied by the fourth line, divided,' affords ground for doubt (as to its subject); but '(as the subject of the third pursues) not as a robber, but as intent on a matrimonial alliance,' he will in the end have no grudge against him.

5. 'The good fortune falling to the fifth line, divided,' affords occasion for joy.

6. 'The freedom from error attached to (the subject of) the topmost line, with no ornament but the (simple white),' shows how he has attained his aim.

XXII. 'A mountain,' says *Khāng-ze*, 'is a place where we find grass, trees, and a hundred other things. A fire burning below it throws up its light, and brings them all out in beauty; and this gives the idea of ornament, or being ornamented. The various processes of government are small matters, and elegance and ornament help their course; but great matters of judgment demand the simple, unornamented truth.'

The subject of line 1 does not care for and does not need ornament. He will walk in the way of righteousness without it.

Paragraph 3 tells us that it is not ornament, but correct firmness, which secures the respect of others.

In the fourth place, and cut off from line 1 by 2 and 3, we might doubt how far the subject of 4 would continue loyal to the subject of 1. But he does continue loyal, through the character and object of the subject of 3.

The *Khang-hsi* editors say :—'Line 5 occupies the place of honour, and yet prefers simplicity and exalts economy; its subject

XXIII. (The trigrams representing) the earth, and (above it) that for a mountain, which adheres to the earth, form Po. Superiors, in accordance with this, seek to strengthen those below them, to secure the peace and stability of their own position.

1. 'He overthrows the couch by injuring its legs:'—thus (he commences) his work of ruin with what is lowest (in the superior man).

2. 'He destroys the couch by injuring its frame:'—(the superior man) has as yet no associates.

3. That 'there will be no error on the part of this one among the overthrowers' arises from the difference between him and the others above and below.

4. 'He has overthrown the couch, and (proceeds to injure) the skin (of him who lies on it):'—calamity is very near at hand.

5. 'He obtains for them the favour that lights on the inmates of the palace:'—in the end there will be no grudge against him.

6. 'The superior man finds himself in a carriage:'—he is carried along by the people. 'The small men (by their course) overthrow their own dwellings:'—they can never again be of use to them.

might change and transform manners and customs;'—it is a small matter to say of him that he affords occasion for joy.

The subject of line 6 has more of the spirit of the hexagram than in most hexagrams. His being clothed in simple white crowns the lesson that ornament must be kept in a secondary place.

XXIII. 'A mountain,' says Yü Fan (towards the end of the Han dynasty), 'stands out high above the earth; here it appears as lying on the earth:—plainly it has been overturned.' On the

XXIV. (The trigram representing) the earth and that for thunder in the midst of it form Fû. The ancient kings, in accordance with this, on the day of the (winter) solstice, shut the gates of the passes (from one state to another), so that the travelling merchants could not (then) pursue their journeys, nor the princes go on with the inspection of their states.

1. 'Returning (from an error) of no great extent' is the prelude to the cultivation of the person.

2. 'The good fortune attendant on the admirable return (of the subject of the second line)' is due to his condescension to the virtuous (subject of the line) below.

3. Notwithstanding 'the perilous position of him

other hand, Liû Mû (early in the Sung dynasty) says:—'A mountain has the earth for its foundation. If the earth be thick, the mountain preserves its height. So it is with the sovereign and people.' The application might be deduced from either view.

It is hard to tell whether 'the lowest' in paragraph 1 should be supplemented as I have done. If not, then the explanation is a mere truism.

Khăng-ze is precise and decisive in supplementing the explanation of paragraph 2 as in the translation.

See on the Text of lines 3 and 4.

On paragraph 5, the *Khang-hsi* editors say admirably:—'The fifth line is weak, and yet occupies the most honourable place in the figure,—emblematic of a queen; and as its subject leads on the subjects of the other lines to obtain the favours given to the inmates of the palace, she, it is plain, has neither jealousy nor any other injurious temper that might incur blame for tending to overthrow the ruler.'

Paragraph 6 shows the ruler restored to the favour of the people, and the restoration of concord in the state. The small men have done their worst, and there is an end of their attempts—for a time.

who has made many returns,' there will be no error through (his aiming after righteousness).

4. 'He moves right in the centre (among those represented by the other divided lines), and yet returns alone :—his object is to pursue the (proper) path.

5. 'The noble return, giving no ground for repentance,' is due to (the subject of the line) striving to perfect himself in accordance with his central position.

6. 'The evil consequent on being all astray on the subject of returning' is because the course pursued is contrary to the proper course for a ruler.

XXIV. 'Thunder in the midst of the earth' is thunder shut up and silent, just able to make its presence felt. So is it with the first genial stirrings of life after the winter solstice ; so is it with the first returning steps of the wanderer to virtue. As the spring of life has to be nursed in quietness, so also has the purpose of good. The ancient statutes here referred to must have been like the present cessation from public and private business at the time of the new year, when all the Chinese people are for a time dissolved in festivity and joy.

Canon McClatchie translates here :—'The ancient kings on this culminating day (i. e. the seventh) closed their gates,' &c. 'Culminating day' does not give us the meaning so well as 'the day of the solstice ;' but where does the translator find the explanatory 'the seventh,' which he puts in parentheses? In my own 'salad' days of Chinese knowledge I fancied there might be in paragraph 1 of the Text some allusion to a primitive sabbath ; but there is no ground for introducing 'seven days,' or 'the seventh day,' into this paragraph of the Great Symbolism.

'The virtuous subject of the first line' is in paragraph 2 called *zăn*, 'the benevolent' or 'loving.' It is the only case in all the symbolism of the *Yî* where we find that term used as an adjective. It is emphatic here for 'humanity,' man in his ideal.

The other paragraphs present nothing for remark beyond what has been said on the Text of the duke of *Kâu*.

XXV. The thunder rolls all under the sky, and to (every)thing there is given (its nature), free from all insincerity. The ancient kings, in accordance with this, (made their regulations) in complete accordance with the seasons, thereby nourishing all things.

1. When 'he who is free from insincerity makes any movement,' he will get what he desires.

2. 'He reaps without having ploughed :'(the thought of) riches to be got had not risen (in his mind).

3. 'The passer-by gets the ox :'(this proves a calamity to the people of the neighbourhood.

4. 'If he can remain firm and correct there will be no error :'(he firmly holds fast (his correctness).

5. 'Medicine in the case of one who is free from insincerity!'—it should not be tried (at all).

6. 'The action (in this case) of one who is free from insincerity' will occasion the calamity arising from action (when the time for it is) exhausted.

XXV. The composition of the hexagram is given here in a manner different from what we have met with in the account of any of the preceding figures; and as the text is not called in question, I have made the best I could in the translation of the two commencing clauses. The application of the symbolism to what the ancient kings did is also hard to comprehend.

The paragraph on line 1 is another way of saying that in the course of things real goodness may be expected to be fortunate,—'by the appointment of Heaven.'

Paragraph 2. 'The thought of getting rich had not risen in his mind :'(he did what he did, because it was right, not because of the gain it would bring him.

On paragraph 3, it is said, 'The superior man seeks simply to be free from insincerity, and leaves the questions of happiness and calamity to Heaven.'

Paragraph 5. 'Sickness ought not to happen to one who

XXVI. (The trigram representing) a mountain, and in the midst of it that (representing) heaven, form Tâ K'û. The superior man, in accordance with this, stores largely in his memory the words and deeds of former men, to subserve the accumulation of his virtue.

1. 'He is in a position of peril; it will be advantageous for him to stop his advance:—he should not rashly expose himself to calamity.

2. '(He is as) a carriage from which the strap under it has been removed:—being in the central position, he will incur no blame.

3. 'There will be advantage in whatever direction he may advance:—(the subject of) the topmost line is of the same mind with him.

4. 'The great good fortune indicated by the fourth line, divided,' shows that there is occasion for joy.

5. 'The good fortune indicated by the fifth line, divided,' shows that there is occasion for congratulation.

6. 'In command of the firmament of heaven:—the way is grandly open for movement.

is perfectly sincere. If it do happen, he must refer it to some inexplicable will of Heaven. As that has afflicted, so it will cure.'

Paragraph 6. 'When a thing is over and done, submission and acquiescence are what are required, and not renewed attempts at action.'

XXVI. I have quoted, in the Introduction, p. 37, K'û Hsi's remark on the Great Symbolism here. K'ang-ze says:—'Heaven is the greatest of all things, and its being in the midst of a mountain gives us the idea of a very large accumulation. And so great

XXVII. (The trigram representing) a mountain and under it that for thunder form 1̂. The superior man, in accordance with this, (enjoins) watchfulness over our words, and the temperate regulation of our eating and drinking.

1. 'You look at me till your (lower) jaw hangs down : '—(the subject of the line) is thus shown unfit to be thought noble.

2. 'The evil of advance by the subject of the second line, divided,' is owing to his leaving in his movements his proper associates.

3. 'For ten years let him not take any action : '—his course is greatly opposed (to what is right).

4. 'The good fortune attached to looking downwards for (the power to) nourish,' shows how brilliant will be the diffusion (of that power) from (the subject of the line's) superior position.

5. 'The good fortune from abiding in firmness' is due to the docility (of the subject of the line) in following (the subject of the line) above.

6. 'The good fortune, notwithstanding the peril

is the labour of the superior man in learning, acquiring, and remembering, to accumulate his virtue.'

Paragraph 1. The 'calamity' is that of opposition from, or repression by, the subject of line 4.

Paragraph 3. When the action of the hexagram has reached line 6, its work is done. The subject of 6 will no longer exercise repression, but join with that of 3, assisting him to advance.

Paragraph 4. The subject of line 4 has indeed occasion for joy. Without the use of punishment for crimes committed, by precaution anticipating them, without any trouble he has repressed evil. The 'joy' gives place in paragraph 5 to 'congratulation,' the people being all interested in the action of the ruler.

of his position, of him from whom comes the nourishing,' affords great cause for congratulation.

XXVIII. (The trigram representing) trees hidden beneath that for the waters of a marsh forms Tâ Kwo. The superior man, in accordance with this, stands up alone and has no fear, and keeps retired from the world without regret.

1. 'He places mats of the white mâo grass under things set on the ground:'—he feels his weakness and his being in the lowest place, (and uses extraordinary care).

2. 'An old husband and a young wife:'—such association is extraordinary.

3. 'The evil connected with the beam that is weak' arises from this, that no help can be given (to the condition thus represented).

4. 'The good fortune connected with the beam curving upwards' arises from this, that it does not bend towards what is below.

5. 'A decayed willow produces flowers:'—but how can this secure its long continuance? 'An old

XXVII. I do not think that the Great Symbolism here is anything but that of a thunderstorm, dispersing the oppression that hangs over nature, and followed by genial airs, and the reviving of all vegetation. But there is nothing analogous to the thunder in the application. 'Words,' it is said, 'nourish virtue; food and drink nourish the body.'

Paragraph 1. As Mencius said, 'He that nourishes the little belonging to him is a little man.'

Paragraph 2. Neither the subject of line 1, nor of line 6, is the proper associate of 2.

The other paragraphs are sufficiently illustrated in the notes on the Text.

wife and a young husband : '—this also is a thing to be ashamed of.

6. 'Evil follows wading with (extraordinary) boldness (through the stream) : '—but (the act) affords no ground for blame.

XXIX. (The representation of) water flowing on continuously forms the repeated Khan. The superior man, in accordance with this, maintains constantly the virtue (of his heart) and (the integrity of) his conduct, and practises the business of instruction.

1. 'In the double defile, he enters a cavern within it : '—he has missed his (proper) way, and there will be evil.

2. 'He will get a little (of the deliverance) that he seeks : '—he will not yet escape from his environed position.

3. 'Whether he comes or goes, he is confronted by a defile : '—he will never (in such circumstances) achieve any success.

XXVIII. *K'ang-ze* says on the Great Symbolism :—'The waters of a marsh moisten and nourish the trees. When here it is said that they destroy and extinguish the trees, their action is very extraordinary.' This explanation is very far-fetched ; and so is what the same scholar says on the application of it. I need not give it here, nor have I found, or myself made out, any other more easy and natural.

Paragraph 2. 'Such an association is extraordinary : '—the characters also imply, perhaps, that it is successful.

Paragraph 3. The beam being broken, any attempt to sustain it will have no effect in supporting the roof.

Paragraph 5. The shoots produced in line 2 will grow into a new and vigorous tree. The flowers here will soon decay, and the withered trunk continue the same. For what will a young man marry an old woman ? There will be no children ;—it can only be from some mercenary object.

4. ' (Nothing but) a bottle of spirits and a subsidiary basket of rice: '—(these describe) the meeting at this point of (those who are represented by) the strong and weak lines.

5. ' The water in the defile is not full (so as to flow away): '—(the virtue indicated by) the central situation is not yet (sufficiently) great.

6. ' The sixth line, divided, shows its subject missing his (proper) course: '—' there will be evil for three years.'

XXX. (The trigram for) brightness, repeated, forms Li. The great man, in accordance with this, cultivates more and more his brilliant (virtue), and diffuses its brightness over the four quarters (of the land).

1. ' The reverent attention directed to his confused steps ' is the way by which error is avoided.

2. ' The great good fortune (from the subject of the second line) occupying his place in yellow ' is owing to his holding the course of the due mean.

3. ' A position like that of the declining sun: '—how can it continue long ?

4. ' How abrupt is the manner of his coming ! '—none can bear with him.

5. ' The good fortune attached to the fifth line,

XXIX. The application of the Great Symbolism is here more perplexing even than usual. What is said of the superior man is good, but there is no reference in it to the subject of danger.

The subject of line 3 goes and comes, moves up and down, backwards and forwards; making no advance. This can be of no use in extricating him from the danger.

Those represented in line 4 by the strong and weak lines are the ruler and his minister.

divided,' is due to its occupying the place of a king or a prince.

6. 'The king employs him in his punitive expeditions:'—the object is to bring the regions to a correct state.

SECTION II.

XXXI. (The trigram representing) a mountain and above it that for (the waters of) a marsh form Hsien. The superior man, in accordance with this, keeps his mind free from pre-occupation, and open to receive (the influences of) others.

1. 'He moves his great toe:'—his mind is set on what is beyond (himself).

2. Though 'there would be evil; yet, if he abide (quiet) in his place, there will be good fortune:'—through compliance (with the circumstances of his condition and place) there will be no injury.

3. 'He moves his thighs:'—he still does not (want to) rest in his place. His will is set on 'following others:'—what he holds in his grasp is low.

4. 'Firm correctness will lead to good fortune,

XXX. In the Great Symbolism Lî is used in the sense of brightness. There was no occasion to refer to its other meaning. 'The great man' rather confirms the interpretation of the 'double brightness' in the treatise on the Thwan as indicating the ruler.

Paragraph 2. As yellow is a 'correct' colour, so is the due mean the correct course.

Paragraph 3. 'The declining sun,' say the Khang-hsî editors, 'is an emblem of the obscuration coming over the virtue of the mind.'

Paragraph 4. 'None can bear with him' refers to the second part of the symbolism of the line, which is not given here.

and prevent all occasion for repentance : '—there has not yet been any harm from (a selfish wish to) influence. 'He is unsettled in his movements : '—(his power to influence) is not yet either brilliant or great.

5. 'He (tries to) move the flesh along the spine above the heart : '—his aim is trivial.

6. 'He moves his jaws and tongue : '—he (only) talks with loquacious mouth.

XXXI. In various ways the waters of a marsh, placed high above the adjacent land, will descend to water and fertilise them. This symbolism agrees sufficiently well with the idea of influence passing between a superior and inferior party in relation with each other. There is nothing in the representation, however, to suggest particularly the relation between husband and wife ; and the more I think of it, the more doubtful it becomes to me that king Wan intended by the trigrams of this figure to give the idea of man and wife. The application of the symbolism is sufficiently appropriate. The commentators see in it especially the lesson of humility—emptiness of self, or poverty of spirit—in order that the influences to which we are subjected may have free course.

Paragraph 1. What is beyond one's self is represented by line 4, a proper correlate of 1. There is the desire to influence ; but it is ineffectively exhibited.

Paragraph 2. 'Compliance (with the circumstances of his condition and place)' is merely another way of 'being firm and correct.'

Paragraph 3. The language, 'What he holds in his grasp is low,' makes *K'ü Hsü* and the older commentators generally understand low of lines 1 and 2, and their weak subjects. But 'following' leads the mind to the lines above, as the *Khang-hsü* editors point out. 'Low' is to be understood in the sense of 'mean.'

Paragraph 4. The 'being firm and correct' appears here as equivalent to the want of 'a selfish wish to influence.'

Paragraph 5. The triviality of the aim explains the ineffectiveness of the movement, but not its giving no occasion for repentance. That the *mei* which are moved are behind and above the region of the heart seems too mechanical and trivial an explanation.

XXXII. (The trigram representing) thunder and that for wind form Hǎng. The superior man, in accordance with this, stands firm, and does not change his method (of operation).

1. 'The evil attached to the deep desire for long continuance (in the subject of the first line)' arises from the deep seeking for it at the commencement (of things).

2. 'All occasion for repentance on the part of the subject of the second line, undivided, disappears:—he can abide long in the due mean.

3. 'He does not continuously maintain his virtue:—nowhere will he be borne with.

4. (Going) for long to what is not his proper place, how can he get game?

5. 'Such firm correctness in a wife will be fortunate:—it is hers to the end of life to follow with an unchanged mind. The husband must decide what is right, and lay down the rule accordingly:—for him to follow (like) a wife is evil.

6. 'The subject of the topmost line is exciting himself to long continuance:—far will he be from achieving merit.

XXXII. How the interaction of wind and thunder symbolises the lesson of the hexagram, and especially the application in this paragraph of that symbolism, is a question I have not been able to solve.

Paragraph 1. The stress of what is said under line 1 is here made to lie on its being the first line of the figure.

Paragraph 2. Line 2 is in the centre of its trigram, and that position, here as often elsewhere, symbolises the course of its subject.

Paragraph 3. The Khang-hsi editors make the application here= 'nowhere can he bear (to remain).'

XXXIII. (The trigram representing) the sky and below it that for a mountain form Thun. The superior man, in accordance with this, keeps small men at a distance, not by showing that he hates them, but by his own dignified gravity.

1. There is 'the perilousness of the position shown by the retiring tail : '—but if 'no movement' be made, what disaster can there be?

2. 'He holds it as by (a thong from the hide of) a yellow ox : '—his purpose is firm.

3. 'The peril connected with the case of one retiring, though bound,' is due to the (consequent) distress and exhaustion. 'If he were (to deal as in) nourishing a servant or concubine, it would be fortunate for him : '—but a great affair cannot be dealt with in this way.

4. 'A superior man retires notwithstanding his likings; a small man cannot attain to this.'

5. 'He retires in an admirable way, and with firm correctness there will be good fortune : '—this is due to the rectitude of his purpose.

6. 'He retires in a noble way, and his doing so will be advantageous in every respect : '—he who does so has no doubts about his course.

From paragraph 5 it appears that what is right will vary in different cases. The lesson of the hexagram is perseverance in what is right in each particular case.

XXXIII. K'ü Hsî says :—'The sky is illimitable; a mountain is high, but has its limits; the union of these is an emblem of retiring.' I do not understand such emblemizing. K'häng-ze says :—'Below the sky is a mountain. The mountain rises up below the sky, and its height is arrested, while the sky goes up higher and higher, till they come to be apart from each other. In this we have an emblem of retiring and avoiding.' We feel somewhat as

XXXIV. (The trigram representing) heaven and above it that for thunder form Tâ Kwang. The superior man, in accordance with this, does not take a step which is not according to propriety.

1. 'He manifests his vigour in his toes : '—this will certainly lead to exhaustion.

2. 'The second line, undivided, shows that with firm correctness there will be good fortune : '—this is due to its being in the centre, (and its subject exemplifying the due mean).

3. 'The small man uses all his strength ; in the case of the superior man it is his rule not to do so.'

4. 'The fence is opened and the horns are not entangled : '—(the subject of the line) still advances.

5. 'He loses his ram and hardly perceives it : '—he is not in his appropriate place.

6. 'He is unable either to retreat or to advance : '—this is owing to his want of care. 'If he realise the difficulty (of his position), there will be good fortune : '—his error will not be prolonged.

if there were a meaning in this ; but, as in many other cases, both the symbolism and its application are but dimly apprehended.

The symbolism of the various lines is sufficiently explained on the Text. Paragraph 5 is but a repetition of the Text without additional explanation.

XXXIV. In illustration of the symbolism of the trigrams here, *Kháng-ze* says well :—'Thunder rolling above in the sky and making all things shake is the emblem of great power.' In passing on to its application he starts with a beautiful saying of antiquity, that 'the strong man is he who overcomes himself.' That this thought was in the mind of the writer of the paragraph on the Great Symbolism I can well believe ; but the analogy between the natural and the moral and spiritual worlds in passing from the phenomenon of thunder to this truth is a thing to be felt, and that can hardly be described.

XXXV. (The trigram representing) the earth and that for the bright (sun) coming forth above it form 3in. The superior man, according to this, gives himself to make more brilliant his bright virtue.

1. 'He appears wishing to advance, but (at the same time) being kept back :—all-alone he pursues the correct course. 'Let him maintain a large and generous mind, and there will be no error :—he has not yet received an official charge.

2. 'He will receive this great blessing :—for he is in the central place and the correct position for him.

3. 'All (around) trust him :—their (common) aim is to move upwards and act.

4. '(He advances like) a marmot. However firm and correct he may be, his position is one of peril :—his place is not that appropriate for him.

5. 'Let him not concern himself whether he fails or succeeds :—his movement in advance will afford ground for congratulation.

6. 'He uses his horns only to punish (the rebellious people of) his city :—his course of procedure is not yet brilliant.

Paragraph 1. 'This will lead to exhaustion ;' and from that will follow distress and other evils.

The central position and the due moral mean in paragraph 2 is another instance of the felt analogy referred to above.

In paragraph 3 nothing is added to the Text ; and on the symbolism nothing is said.

Paragraph 5. 'He is not in his appropriate place :' this is said simply because an odd place ought to be filled by a strong line.

XXXV. The sun rising above the earth, and then travelling up to his meridian height, readily suggests the idea of advancing. On

XXXVI. (The trigram representing) the earth and that for the bright (sun) entering within it form Ming Í. The superior man, in accordance with this, conducts his management of men ;—he shows his intelligence by keeping it obscured.

1. 'The superior man (is revolving his) going away: '—(in such a case) he feels it right not to eat.

2. 'The good fortune of (the subject of) the second line, divided,' is due to the proper fashion of his acting according to his circumstances.

3. With the aim represented by 'hunting in the south' a great achievement is accomplished.

4. 'He has (just) entered into the left side of the belly (of the dark land): '—he is still able to carry out the idea in his (inner) mind.

5. 'With the firm correctness of the count of Kí,' his brightness could not be (quite) extinguished.

6. 'He had at first ascended to (the top of) the sky: '—he might have enlightened the four quarters

the application of this symbolism, Hû Ping-wăn (Yüan dynasty) says :—'Of strong things there is none so strong as heaven ; and hence the superior man after its pattern makes himself strong ; of bright things there is none so bright as the sun, and after its pattern he makes himself bright.'

If the subject of line 1 had received an official charge, then when unrecognised by his sovereign, and obstructed in his progress, his correct course would have been to cease to advance, and retire from the office in which he was not allowed to carry out his principles.

There is nothing said on line 2 to explain particularly the symbolism of 'the grandmother' in the Text.

'The course of procedure' in paragraph 6 has still an element of force in it, which is more than 'the firm correctness' that was to king Wăn the ideal character of a feudal lord, and therefore his light is not yet that of the full-orbed sun.

of the kingdom. 'His future shall be to go into the earth:'—he has failed to fulfil the model (of a ruler).

XXXVII. (The trigram representing) fire, and that for wind coming forth from it, form *K'ia Z'an*. The superior man, in accordance with this, orders his words according to (the truth of) things, and his conduct so that it is uniformly consistent.

1. 'He establishes restrictive regulations in his household:'—(he does so), before any change has taken place in their wills.

2. 'The good fortune attached to the second line, divided,' is due to the docility (of its subject), operating with humility.

3. When 'the members of the household are treated with stern severity,' there has been no (great) failure (in the regulation of the family). When 'wife and children are smirking and chattering,' the (proper) economy of the family has been lost.

4. 'The family is enriched, and there is great

XXXVI. The application of the Great Symbolism here is in itself sufficiently natural; but this meaning of the hexagram hardly appears in the text, till we come to the sixth line.

Paragraph 1. 'He thinks it right not to eat;'—he does not purposely fast; but when he has nothing to eat, he does not complain. He thinks it right that it should be so in the case.

Paragraph 2. 'The proper fashion of acting' is suggested by the weak line's being in the central place.

Paragraph 3. 'The great achievement is accomplished;' but such achievement was not what prompted to action.

Paragraph 4. 'The idea in his inner mind' is the idea of withdrawing from the position and escaping; but the meaning is obscure. See on the Text.

good fortune:—this is due to the docility (belonging to the subject of the line), and its being in its correct place.

5. 'The influence of the king extends to his family:—the intercourse between them is that of mutual love.

6. 'The good fortune connected with the display of majesty' describes (the result of) the recovery of the true character.

XXXVII. The Symbolism here is certainly far-fetched. 'As wind,' it is said, 'comes first from fire, so does transforming influence emanate from the family.' But the subject of the hexagram is the regulation and not the influence of the family. Then the application is good for the superior man's cultivation of himself; but this again is only connected indirectly with the regulation of the family.

The sooner preventive measures are presented to the youthful mind the better; but does not prohibition imply that a change in the good will has taken place?

In paragraph 2 'docility' is suggested by the weak line. 'The humility' comes out of Sun, the upper trigram, whose attribute is pliant flexibility.

Yü Yen (Yüan dynasty) ingeniously observes on paragraph 4 that the riches of a family are not to be sought in its wealth, but in the affection and harmony of its members. Where these prevail, the family is not likely to be poor, and whatever it has will be well preserved.

The mention 'of mutual love' is unusual in Chinese writings, and must be considered remarkable here. 'The husband,' says *K'ang-ze*, 'loves his helpmate in the house; the wife loves him who is the pattern for the family.' But however admirable the sentiment is, it comes from the mind of the writer, and is not drawn from the Text.

Paragraph 6. It is said on this, that the majesty is not designedly assumed or put on; but the effect of the character remoulded and perfected. The words of Mencius are aptly quoted in illustration of the lesson:—'If a man himself do not walk in the (right) path, it will not be walked in (even) by his wife and children.'

XXXVIII. (The trigram representing) fire above, and that for (the waters of) a marsh below, form Khwei. The superior man, in accordance with this, where there is a general agreement, yet admits diversity.

1. 'He meets with bad men (and communicates with them):'—(he does so), to avoid the evil of their condemnation.

2. 'He happens to meet with his lord in a bye-passage:'—but he has not deviated (for this meeting) from the (proper) course.

3. 'We see his carriage dragged back:'—this is indicated by the inappropriateness of the position (of the line).

'There is no (good) beginning, but there will be a (good) end:'—this arises from his meeting with the strong (subject of the topmost line).

4. 'They blend their sincere desires together, and there will be no error:'—their (common) aim is carried into effect.

5. 'With his hereditary minister (he unites closely and easily) as if he were biting through a piece of skin:'—his going forward will afford ground for congratulation.

6. 'The good fortune symbolised by meeting with (genial) rain' springs from the passing away of all doubts.

XXXVIII. The application here of the Symbolism is correct, but neither of them comes up to the idea of disunion which is in Khwei.

The various paragraphs seem to need no illustration beyond what may be found in the notes on the Text.

XXXIX. (The trigram representing) a mountain, and above it that for water, form *K'ien*. The superior man, in accordance with this, turns round (and examines) himself, and cultivates his virtue.

1. 'Advancing will conduct to (greater) difficulties, while remaining stationary will afford ground for praise:—the proper course is to wait.

2. 'The minister of the king struggles with difficulty on difficulty:—in the end no blame will be attached to him.

3. 'He advances, (but only) to (greater) difficulty; he remains stationary, and returns to his former associates:—they, (represented in) the inner (trigram), rejoice in him.

4. 'To advance will (only be to) encounter (greater) difficulties; he remains stationary, and unites (with the subject of the line above):—that is in its proper place and has the solidity (due to it in that position).

5. 'He struggles with the greatest difficulties, while friends are coming (to help him):—he is in the central position, and possesses the requisite virtue.

6. 'To advance will (only) increase the difficulties, while his remaining stationary will (be productive of) great (merit):—his aim is to assist the (subject of the line) inside of him.

'It will be advantageous to meet the great man:—by his course he follows that noble (lord of the figure).

XXXIX. The Symbolism is described here a little differently from the form of it in Appendix I. *K'hang-ze* brings the same meaning out of it, however, in the following way:—'We have here a steep and difficult mountain, and again on the top of that there

XL. (The trigram representing) thunder and that for rain, with these phenomena in a state of manifestation, form *K'ieh*. The superior man, in accordance with this, forgives errors, and deals gently with crimes.

1. The strong (fourth) line and the weak line here are in correlation:—we judge rightly in saying that 'its subject will commit no error.'

2. 'The good fortune springing from the firm correctness of the second line, undivided,' is due to its subject holding the due mean.

3. For 'a porter with his burden to be riding in a carriage' is a thing to be ashamed of. 'It is he himself that tempts the robbers to come:—on whom besides can we lay the blame? (See Appendix III, i, 48.)

4. 'Remove your toes:—the places (of this line

is water; each of the two trigrams is an emblem of perilousness. There is peril, both above and below, in the figure; and hence it represents the difficulties of the state.' The application of the symbolism is illustrated by the words of Mencius, 'When we do not, by what we do, realise (what we desire), we must turn inwards and examine ourselves in every point.'

From the lesson in paragraph 2 we saw that the moral value of conduct is independent of failure or success. It is said, 'Though the difficulties be too great for him to overcome, the sage accepts his desire, in order to stimulate others to loyal devotedness.'

On paragraph 3, Khung Ying-tâ says:—'Of the three lines of the lower trigram only the third is yang, above the two others which are of the yin nature. They cling to it, and are represented as if rejoicing in it.

The view given of paragraph 4 is that of the Khang-hsî editors.

'The friends' in paragraph 5 are the subjects of the second line, the correlate of 5, and also of the two other lines of the lower trigram.

Sû Shih (A. D. 1036–1101) remarks on paragraph 6 that by 'the inside,' and 'the noble,' we are to understand the subject of line 5.

and of the third and first) are all inappropriate to them.

5. When 'the superior man executes his function of removing (whatever is injurious to the idea of the hexagram),' small men will of themselves retire.

6. 'A prince with his bow shoots a falcon:—thus he removes (the promoters of) rebellion.

XLI. (The trigram representing) a mountain and beneath it that for the waters of a marsh form Sun. The superior man, in accordance with this, restrains his wrath and represses his desires.

1. 'He suspends his own affairs and hurries away (to help the subject of the fourth line):'—the (subject of that) upper (line) mingles his wishes with his.

XL. It is a common saying that thunder and rain clear the atmosphere, and a feeling of oppression is relieved. The last paragraph of Appendix I, however, leads us to understand the Symbolism of the phenomena of spring. The application seems to refer to the gentle policy of a conqueror forward to forgive the opposition of those who offer no more resistance.

The subject of line 2 is a minister or officer; and the Khang-hsi editors say that while straightforwardness, symbolised by the arrow, is the first duty of an officer, if he do not temper that quality by pursuing the due medium, which is symbolised by the yellow colour of the arrow, but proceed by main force, and that only, to remove what is evil, he will provoke indignation and rebellion. The 'three foxes' are not alluded to in this second paragraph.

On paragraph 4 the same editors say:—'The subject of this line is not in the central nor in an odd place; he has for his correlate the subject of line 1 and for his close associate that of line 3, both of which lines are weak in strong places. Hence it is said, that they are all in places inappropriate to them.'

What paragraph 5 says, that 'the small men retire,' means that believing in the sincerity of the ruler's determination to remove all evil men, they retire of themselves, or strive to conform to his wishes.

2. 'It will be advantageous for (the subject of) the second line, undivided, to maintain his firm correctness : '—his central position gives its character to his aim.

3. 'One man, walking,' (finds his friend) :—when three are together, doubts rise among them.

4. 'He diminishes the ailment under which he labours : '—this is matter for joy.

5. 'The great good fortune attached to the fifth line, divided,' is due to the blessing from above.

6. 'He gives increase to others without taking from what is his own : '—he obtains his wish on a grand scale.

XLI. 'The waters of a marsh are continually rising up in vapour to bedew the hill above it, and thus increase its verdure ; what is taken from the marsh gives increase to the hill.' This is very far-fetched. In the application again the superior man acts only on himself, and for himself ;—which has nothing to do with those of low degree giving to those above them. This application, however, agrees with what, as we have seen on the Text, was *Kháng-ze's* view of the meaning of the hexagram.

The explanation appended to paragraph 1 seems to be to account for the subject of line 1 hurrying away to the help of line 4.

'His aim' is to abide where he is, and help the subject of 5 by the exhibition of 'firm correctness.'

The *Khang-hsü* editors observe that paragraph 3 is true indeed of three men ; and not of three men only, but of many repetitions of thought or action.

The same editors say on paragraph 5 that 'the blessing from above is explained, by many, of the oracles obtained through divining with the tortoise-shell ; but that looking at the text on line 2 of the next hexagram, and that *Ti* (spoken of there) is the lord of all spirits, the term "above" here is most naturally explained of Heaven's mind, whose acceptance cannot be gainsaid by men or spirits.'

Kháng-ze says on paragraph 6, though I do not see the rele-

XLII. (The trigram representing) wind and that for thunder form Yt. The superior man, in accordance with this, when he sees what is good, moves towards it; and when he sees his errors, he turns from them.

1. 'If the movement be greatly fortunate, no blame will be imputed to him : '—though it is not for one in so low a position to have to do with great affairs.

2. 'Parties add to his stores : '—they come from beyond (his immediate circle) to do so.

3. 'Increase is given by means of what is evil and difficult : '—as he has in himself (the qualities called forth).

4. 'His advice to his prince is followed : '—his (only) object in it being the increase (of the general good).

5. '(The ruler) with sincere heart seeks to benefit (all below) : '—there need be no question (about the result). '(All below) with sincere heart acknowledge (his goodness) : '—he gets what he desires on a great scale.

6. 'To his increase none will contribute : '—this expresses but half the result. 'Many will seek to assail him : '—they will come from beyond (his immediate circle) to do so.

vancy of his remarks :—' Dwelling on high, and taking nothing from those below him, but on the contrary giving more to them, the superior man accomplishes his aim on a grand scale. The aim of the superior man is simply to be increasing what others have ;—that and nothing else.'

XLII. The Symbolism here is different from what we gather from the former Appendix. Sun no longer symbolises wood, but, as

XLIII. (The trigram representing) heaven and that for the waters of a marsh mounting above it form Kwâi. The superior man, in accordance with this, bestows emolument on those below him, and dislikes allowing his gifts to accumulate (undispensed).

1. 'Without (being able to) succeed, he goes forward:—this is an error.

2. 'Though hostile measures be taken against him, he need not be anxious:—he pursues the course of the due mean.

3. 'The superior man looks bent on cutting off the culprit:—there will in the end be no error.

4. 'He walks slowly and with difficulty:—he is not in the place appropriate to him.

'He hears these words, but does not believe them:—he hears, but does not understand.

5. 'If his action be in harmony with his central

it more commonly does, wind. Thunder and wind, it is supposed, increase each the other; and their combination gives the idea of increase. Then the application, good in itself, must be treated very nicely, as it is by the Khang-hsf editors, in order to make out any connexion between it and the Symbolism.

Paragraph 1. 'One in a low position should not move in great affairs;—not a son, it is said, while his father is alive; nor a minister, while his ruler governs; nor a member of an official department, while its head directs its affairs. If such a one do initiate such an affair, only great success will excuse his rashness.

Paragraph 2. Line 5 is the proper correlate of 2; and its subject will be among the contributing parties. But others 'beyond' will be won to take part with him.

Paragraph 3. There is a soul of good even in men who seem only evil; and adversity may quicken it.

Paragraph 6. As in line 2 the attractive power of benevolence is shown, so in line 6 we have the repulsive power of selfishness exhibited. Mark the 'from beyond' in both paragraphs.

position, there will be no error :—but his standing in the due mean is not yet clearly displayed.

6. 'There is the misery of having none on whom to call :—the end will be that he cannot continue any longer.

XLIV. (The trigram representing) wind and that for the sky above it form Kâu. The sovereign, in accordance with this, delivers his charges, and promulgates his announcements throughout the four quarters (of the kingdom).

1. 'Tied and fastened to a metal drag :—(this

XLIII. We can only understand the mounting of the waters of a marsh up into the sky of the phenomenon of evaporation ; and certainly the waters so formed into clouds will be condensed, and come down again as rain. This may be taken as an image of dispersion, but not of displacement in the sense of the Text of the hexagram.

The first clause of the application follows naturally enough from the above interpretation of the Symbolism. Kû Hsi says he does not understand the second clause. Many critics adopt the view of it which appears in the translation.

Paragraph 2 does not mention the precautionary measures taken in the Text by the subject of the line, from which the conclusion would follow quite as naturally as from his central position. The Khang-hsi editors, however, say that the not having recourse lightly to force is itself the due course.

Line 3 responding, and alone of all the strong lines responding to 6, may appear at first irresolute, and not prepared for decided measures ; but 'in the end' its subject does what is required of him.

The contiguity of line 5 to the divided 6, is supposed to have some bad effect on its subject, so that while he does what his central position requires, it is not without an effort. 'If a man,' says K'ang-ze, 'cherish a single illicit desire in his mind, he has left the right way. The admonition here conveyed is deep.'

describes the arrest of) the weak (line) in its advancing course.

2. 'He has a wallet of fish : '—it is right for him not to allow (the subject of the first line) to get to the guests.

3. 'He walks with difficulty : '—but his steps have not yet been drawn (into the course of the first line).

4. 'The evil' indicated by there being 'no fish in the wallet' is owing to (the subject of the line) keeping himself aloof from the people.

5. 'The subject of the fifth line, undivided, keeps his brilliant qualities concealed : '—as is indicated by his central and correct position.

'(The good issue) descends (as) from Heaven : '—his aim does not neglect the ordinances (of Heaven).

6. 'He receives others on his horns : '—he is exhausted at his greatest height, and there will be cause for regret.

XLIV. Wind, blowing all-under the sky, penetrates everywhere, and produces its natural effect; and it is a good application of this phenomenon that follows; but it has nothing to do with the meaning of Kâu and the interpretation of the hexagram, as taught in the Text. The Khang-hsi editors perceive this, and deal with the Symbolism after a method of their own, on which it is unnecessary to enter.

Paragraph 1. My supplement, 'This describes the arrest of,' is a conclusion from the whole of the Text on the line. All the commentaries have it.

In the 'Daily Lecture' it is said that the lesson of paragraph 2 is that 'the subject of the line should make the repression of 1 his own exclusive work, and not allow it to pass on to the subject of any of the other lines.' That view is rather different from the one indicated in my supplement.

'His steps have not been drawn into the course of the first

XLV. (The trigram representing the) earth and that for the waters of a marsh raised above it form 3hui. The superior man, in accordance with this, has his weapons of war put in good repair, to be prepared against unforeseen contingencies.

1. 'In consequence disorder is brought into the sphere of his union : '—his mind and aim are thrown into confusion.

2. 'He is led forward ; there will be good fortune, and freedom from error : '—(the virtue proper to) his central place has not undergone any change.

3. 'If he go forward, he will not err : '—in the subject of the topmost line there is humility and condescension.

4. 'If he be grandly fortunate, he will receive no blame : '—(this condition is necessary, because) his position is not the one proper to him.

5. 'There is the union (of all) under him in the place of dignity : '—(but) his mind and aim have not yet been brilliantly displayed.

line : '—we have to supply, 'and therefore there will be no great error.'

Paragraph 4. See what is said on the Text. But that the subject of the line stands alone is owing, it is here implied, to his own impatience. If he could exercise forbearance, he would find a proper opportunity to check the advance of the subject of line 1.

The subject of line 5, while mindful of his task in the hexagram,—to repress the advance symbolised by 1,—yet keeps his wise plans concealed till the period of carrying them into execution, determined by the ordinances of Heaven, has arrived. Then comes the successful stroke of his policy as if it were directly from Heaven.

The subject of line 6 really accomplishes nothing to repress the advance of the unworthy ; but he keeps himself from evil communication with them. He is not to be charged with blameable error, though more and better might have been expected of him.

6. 'He sighs and weeps : '—he does not yet rest in his topmost position.

XLVI. (The trigram representing) wood and that for the earth with the wood growing in the midst of it form Shǎng. The superior man, in accordance with this, pays careful attention to his virtue, and accumulates the small developments of it till it is high and great.

1. 'He is welcomed in his advance upwards, and there will be great good fortune : '—(the subjects of) the upper (trigram) are of the same mind with him.

2. 'The sincerity of the subject of the second line, undivided,' affords occasion for joy.

3. 'He advances upwards (as into) an empty city : '—he has no doubt or hesitation.

4. 'The king employs him to prevent his offerings on mount K'hi : '—such a service (of spiritual Beings) is according to (their mind).

XLV. What has this Great Symbolism to do with the idea and preservation of union? The question is answered in this way :—A marsh whose waters are high up above the earth must be kept in by banks and dykes, to keep them together, to preserve them from being dispersed. So the union of a people must be preserved by precautions against what would disturb and destroy it. Of such precautions the chief is to be prepared to resist attack from without, and to put down internal sedition.

Paragraph 3. The topmost line is the last in Tui, whose attribute is complacent satisfaction, appearing in flexibility or docility.

Paragraph 5. 'His mind and aim have not yet been brilliantly displayed : '—this is in explanation of the case that some may even still not have confidence in him.

Paragraph 6. The topmost position is that of the trigram ; the subject of the line might bid farewell to all the work of the hexagram ; but he cannot bear to do so.

5. 'He is firmly correct, and will therefore enjoy good fortune. He ascends the stairs (with all due ceremony):'—he grandly succeeds in his aim.

6. 'He blindly advances upwards,' and is in the highest place:—but there is decay in store for him, and he will not (preserve) his riches.

XLVII. (The trigram representing) a marsh, and (below it that for a defile, which has drained the other dry so that there is) no water in it, form Khwăn. The superior man, in accordance with this, will sacrifice his life in order to carry out his purpose.

1. 'He enters a dark valley:'—so benighted is he, and without clear vision.

2. 'He is straitened amidst his wine and viands:'—(but) his position is central, and there will be ground for congratulation.

XLVI. See what has been said on the Great Symbolism in Appendix I. The application which is made of it here may be accepted, though it has nothing to do with the teaching of the Text about the gradual rise of a good officer to high social distinction and influence.

Paragraph 1. Instead of finding in this the three lines of Khwăn and their subjects, *Khǎng-ze* makes 'the upper' denote only line 2.

Paragraph 2. The subject of line 2 in his loyal devotion to 5, will do much good and benefit many; hence we have the words, 'affords occasion for joy.'

Paragraph 3. 'He has no doubt or hesitation:'—but this is presuming rather on his strength.

Paragraph 4. The Khang-hsî editors say:—'Such an employment of men of worth to do service to spiritual Beings is serving them according to their mind.'

Paragraph 6. When one has reached the greatest height, he should think of retiring. Ambition otherwise may overleap itself.

3. 'He lays hold of thorns : '—(this is suggested by the position of the line) above the strong (line).

'He enters his palace, and does not see his wife : '—this is inauspicious.

4. 'He proceeds very slowly (to help the subject of the first line) : '—his aim is directed to (help) that lower (line). Although he is not in his appropriate place, he and that other will (in the end) be together.

5. 'His nose and feet are cut off : '—his aim has not yet been gained.

'He is leisurely, however, in his movements, and is satisfied : '—his position is central and (his virtue) is correct.

'It will be well for him to be (as sincere as) in sacrificing : '—so shall he receive blessing.

6. 'He is straitened as if bound with creepers : '—(his spirit and action) are unsuitable.

'(He says), "If I move, I shall repent of it." And he does repent (of former errors), which leads to good fortune : '—so he (now) goes on.

XLVII. The first sentence of the Great Symbolism is constructed differently from any which has presented itself in the previous 46 hexagrams. Literally translated, it would be 'a marsh with no water is Khwân ;' and this might certainly suggest to us a condition of distress. But how does this come out of the trigrams? The upper one is Tui, representing a marsh ; and the lower is Khân, representing water in a defile. The collocation of the two suggests the running of the water from the marsh or lake into the stream, which will soon empty the other. Such is the view which occurred to myself ; and it is the same as that given by K'ü Hsi :—'The water descending and leaking away, the marsh above will become dry.' The application is good in itself, but the concatenation between it and the Symbolism is hardly discernible.

XLVIII. (The trigram representing) wood and above it that for water form 3ing. The superior man, in accordance with this, comforts the people, and stimulates them to mutual helpfulness.

1. 'A well so muddy that men will not drink of it:—this is indicated by the low position (of the line).

'An old well to which the birds do not come:—it has been forsaken in the course of time.

2. 'A well from which by a hole the water escapes, and flows away to the shrimps:—(the subject of this second line has) none co-operating with him (above).

3. 'The well has been cleared out, but is not used:—(even) passers-by would be sorry for this.

A prayer is made 'that the king were intelligent:—for then blessing would be received.

4. 'A well the lining of which is well laid. There will be no error:—the well has been put in good repair.

5. 'The waters from the cold spring are (freely) drunk:—this is indicated by the central and correct position (of the line).

6. 'The great good fortune' at the topmost place

So stupid is the subject of line 1 that by his own act he increases his distress.

The Khang-hsi editors say that the 'ground for congratulation in paragraph 2 is the banqueting and sacrificing.' I rather think it is the measure of help, which it is intimated the subject will give in removing the straitness and distress of the time.

See the extract from the Khang-hsi editors on the symbolism of the third line of the Text.

The difficulties attending the symbolism of the Text of lines 4, 5, and 6 are not lightened by what we find in this Appendix.

indicates the grand accomplishment (of the idea in the hexagram).

XLIX. (The trigram representing the waters of) a marsh and that for fire in the midst of them form Ko. The superior man, in accordance with this, regulates his (astronomical) calculations, and makes clear the seasons and times.

1. 'He is bound with (the skin of) a yellow ox:—he should in his circumstances be taking action.

2. 'He makes his changes when some time has passed:—what he does will be matter of admiration.

3. 'The change (contemplated) has been three times fully discussed:—to what else should attention (now) be directed?

4. 'The good fortune consequent on changing (existing) ordinances' is due to the faith reposed in his aims.

5. 'The great man produces his changes as the tiger does when he changes his stripes:—their beauty becomes more brilliant.

XLVIII. The Great Symbolism here may well enough represent a well, it being understood that the water which is above the wood is that raised by it for irrigation and other uses. What is said, moreover, in the application is more akin to the idea of the hexagram than in most of the other cases. It is certainly one way in which the ruler should nourish the people.

It is said on paragraph 1:—'Those who have a mind to do something in the world, when they look at this line, and its symbolism, will learn how they ought to exert themselves.'

Rather in opposition to what I have said on the Text of line 4, the 'Daily Lecture' observes here:—'The cultivation of one's self, which is represented here, is fundamental to the government of others.'

6. 'The superior man produces his changes as the leopard does when he changes his spots:—their beauty becomes more elegant.

'Small men change their faces:—they show themselves prepared to follow their ruler.

L. (The trigram representing) wood and above it that for fire form Ting. The superior man, in accordance with this, keeps his every position correct, and maintains secure the appointment (of Heaven).

1. 'The caldron is overturned, and its feet turned upwards:—but this is not (all) contrary (to what is right).

'There will be advantage in getting rid of what was bad:—thereby (the subject of the line) will follow the more noble (subject of the fourth line).

2. 'There is the caldron with the things (to be cooked) in it:—let (the subject of the line) be careful where he goes.

'My enemy dislikes me:—but there will in the end be no fault (to which he can point).

3. 'There is the caldron with (the places for) its

XLIX. Wise men, occupying themselves with the determination of the seasons and questions of time, have in all ages based their judgments on the observation of the heavenly bodies. We find this insisted on in the first book of the Shû, by the ancient Yáo. But how this application of the Great Symbolism really flows from it, I must confess myself unable to discover. Once, however, when I was conversing about the Yî with a high Chinese dignitary, who was a well-read scholar also so far as his own literature was concerned, he referred to this paragraph as proving that all our western science had been known to Fû-hsî and Confucius!

What is said on the several lines is sufficiently illustrated in the notes on the Text.

ears changed :—(its subject) has failed in what was required of him (in his situation).

4. 'The contents designed for the ruler's use are overturned and spilt :—how can (the subject of the line) be trusted ?

5. 'The caldron has yellow ears :—the central position (of the line) is taken as (a proof of) the solid (virtue of its subject).

6. 'The rings of jade' are at the very top :—the strong and the weak meet in their due proportions.

LI. (The trigram representing) thunder, being repeated, forms *K'ān*. The superior man, in accordance with this, is fearful and apprehensive, cultivates (his virtue), and examines (his faults).

1. 'When the (time of) movement comes, he will be found looking out with apprehension :—that feeling of dread leads to happiness.

L. The Great Symbolism here has come before us in the treatise on the *Thwan*. Of the application of that symbolism I can only say that, as has been seen in many other hexagrams, while good enough in itself, it is far-fetched.

The same remark may be made on the explanation of the Text of the first line. I can myself do little more than guess at its meaning. The *Khang-hsi* editors observe that nothing is said about the case of the 'concubine' in the Text; but that it is covered by the 'following the more noble,' 'so condensed and complete are the words of the sage!'

The same editors find a pregnant sense in the conclusion of paragraph 2 :—'There will be no fault in me to which my enemy can point, and his disposition to find fault will be diminished.'

'What was required of the caldron in the third line was that that line and line 5, instead of 6, should be correlates;' but there is little meaning in such a statement.

The subject of line 4 cannot be trusted again. He has failed in doing what was his proper work.

'He yet smiles and talks cheerfully:'—the issue (of his dread) is that he adopts (proper) laws (for his course).

2. 'When the movement approaches, he is in a position of peril:'—(a weak line) is mounted on a strong (one).

3. 'He is distraught amid the startling movements going on:'—(the third line) is in a position unsuitable to it.

4. 'Amid the startling movements, he sinks supinely in the mud:'—the light in him has not yet been brilliantly developed.

5. 'He goes and comes amid the startling movements, and (always) in peril:'—full of risk are his doings.

'What he has to do has to be done in his central position:'—far will he be from incurring any loss.

6. 'Amid the startling movements he is in breathless dismay:'—he has not found out (the course of) the due mean.

'Though evil (threatens), he will not fall into error:'—he is afraid of being warned by his neighbours.

LII. (Two trigrams representing) a mountain, one over the other, form Kǎn. The superior man, in

LI. The account of the Great Symbolism here calls for no remark. Nor does the application of it; but may it not be too late to fear, and order anew one's thoughts and actions when the retributions in providence are taking place? Commentators are haunted by the shadow of this question; but they are unable rightly to meet it.

Paragraph 1 is the same as 2 in Appendix I.

Paragraph 4. Compare paragraph 4 of hexagram 21, Appendix II.

accordance with this, does not go in his thoughts beyond the (duties of the) position in which he is.

1. 'He keeps his toes at rest : '—he does not fail in what is correct (according to the idea of the figure).

2. 'He cannot help him whom he follows : '—(he whom he follows) will not retreat to listen to him.

3. 'He keeps the loins at rest : '—the danger (from his doing so) produces a glowing heat in the heart.

4. 'He keeps the trunk of his body at rest : '—he keeps himself free (from agitation).

5. 'He keeps his cheek bones at rest : '—in harmony with his central position he acts correctly.

6. 'There is good fortune through his devotedly maintaining his restfulness : '—to the end he shows himself generous and good.

LII. According to the view of the Khang-hsî editors, the application should be translated :—'The superior man, in accordance with this, thinks anxiously how he shall not go beyond the duties of his position.' It is difficult to decide between this shade of the meaning, and the more common one which I have followed.

The toes play a great part in walking ; but they are here kept at rest, and so do not lose the correct idea of Kăn.

There is no correlation between lines 2 and 3, and thence the subject of 3 will hold on its upward way without condescending to 2.

K'ang-ze finds an unsatisfactory auspice in paragraph 4. Line 4 represents a great minister who should be able to guide all to rest where they ought to be ; but he can only keep himself from agitation.

Yü P'ăn (Ming dynasty) says on paragraph 5 :—'Words should not be uttered rashly. Then, when uttered, they will be found

LIII. (The trigram representing) a mountain and above it that for a tree form *K'ien*. The superior man, in accordance with this, attains to and maintains his extraordinary virtue, and makes the manners of the people good.

1. 'The danger of a small officer (as represented in the first line)' is owing to no fault of his in the matter of what is right.

2. 'They eat and drink joyfully and at ease : '—but not without having earned their food.

3. 'A husband goes and does not return : '—he separates himself from his comrades.

'A wife is pregnant, but will not nourish her child : '—she has failed in her (proper) course.

'It might be advantageous in resisting plunderers : '—by acting as here indicated men would preserve one another.

4. 'They may light on the flat branches : '—there is docility (in the line) going on to flexible penetration.

5. 'In the end the natural issue cannot be prevented. There will be good fortune : '—(the subject of the line) will get what he desires.

6. 'Their feathers can be used as ornaments. There will be good fortune : '—(the object and character of the subject of the line) cannot be disturbed.

accordant with principle. But it is only the master of the virtue belonging to the due mean who can attain to this.'

LIII. The Khang-hsi editors, to bring out the suitability of the Great Symbolism and its application, say :—'A tree springing up on the ground is a tree as it begins to grow. A tree on a hill is high and large. Every tree when it begins to grow, shows its

LIV. (The trigram representing the waters of) a marsh and over it that for thunder form Kwei Mei. The superior man, in accordance with this, having regard to the far-distant end, knows the mischief (that may be done at the beginning).

1. 'The younger sister is married off in a position ancillary to that of the real wife:'—it is the constant practice (for such a case).

'Lame on one leg, she is able to tramp along:'—she can render helpful service.

2. 'There will be advantage in maintaining the firm correctness of a solitary widow:'—(the subject of

branches and twigs gradually becoming long. Every morning and every evening show some difference; and when the tree is high and great, whether it be of an ordinary or extraordinary size, it has taken years to reach its dimensions. This illustrates the difference between the advance in Shāng (46) and that in K'ien. Then the maintenance of extraordinary virtue in the application and the improvement of manners is a gradual process. The improvement of the manners, moreover, flows from the maintenance of the extraordinary virtue; which implies also a gradual operation and progress.'

Paragraph 1. The danger is the result of circumstances; the small officer has not brought it on himself.

Paragraph 2. Only the geese appear in this paragraph; but the writer is thinking of the advancing officer. I cannot but think that in the language and sentiment also there is an echo of the Shih King, I, ix, ode 6.

The 'separation from his comrades' has respect to line 3 not finding its correlate in 6. 'The wife's failing in her proper course' has respect to the line being undivided and not in the centre.

K'hang-ze says, on paragraph 4, that humility and right-doing will find rest and peace in all places and circumstances.

Paragraph 5. 'The natural issue cannot be prevented:'—the wife will have a child; minister and ruler will meet happily.

Paragraph 6. See on the Text. But it is difficult to see the aptness of the symbolism.

the line) has not changed from the constancy (proper to a wife).

3. 'The younger sister who was to be married off is in a mean position : '—this is shown by the improprieties (indicated in the line).

4. (The purpose in) 'protracting the time' is that, after waiting, the thing may be done (all the better).

5. 'The sleeves of the younger sister of (king) T'i-yü, when she was married away, were not equal to those of her (half-) sister, who accompanied her : '—such was her noble character, indicated by the central position of the line.

6. '(What is said in) the sixth line, divided, about there being nothing in the basket' shows that the subject of it is carrying an empty basket.

LV. (The trigrams representing) thunder and lightning combine to form Fäng. The superior man, in accordance with this, decides cases of litigation, and apports punishments with exactness.

1. 'Though they are both of the same character, there will be no error : '—if the subject of this

LIV. Thunder rolling above is supposed to produce movement in the waters of the marsh below. The combination of this symbolism in Kwei Mei is recognised as an evil omen in the case which the name denotes. The application of it is not inappropriate.

Paragraph 1. 'It is the constant practice (for such a case)' seems to mean that an ancillary wife has no right to the disposition of herself, but must do what she is told. Thus it is that the mean position of the younger sister does not interfere with the service she can render.

The addition to the Text of 'the purpose' in paragraph 4 is to show that the putting marriage off is on the part of the lady and not on the other side.

line seek to overpass that similarity, there will be calamity.

2. 'Let him cherish his feeling of sincere devotion, that it shall appear being put forth:'—it is by sincerity that the mind is affected.

3. 'There is an (additional) screen of a large and thick banner:'—great things should not be attempted (in such circumstances).

'He breaks his right arm:'—in the end he will not be fit to be employed.

4. 'He is surrounded by a screen large and thick:'—the position of the line is inappropriate.

'At midday he sees the constellation of the Bushel:'—there is darkness and no light.

'He meets with the subject of the line, undivided like himself. There will be good fortune:'—action may be taken.

5. 'The good fortune indicated by the fifth line, divided,' is the congratulation (that is sure to arise).

6. 'He has made his house large:'—he soars (in his pride) to the heavens.

'He looks at his door, which is still, with no one about it:'—he (only) keeps himself withdrawn from all others.

LV. Lightning appears here as the natural phenomenon of which Lî is the symbol. The virtues attributed to the two trigrams are certainly required in the application of them which is subjoined; but that application has little or nothing to do with the explanation of the hexagram supplied by the Text.

I hardly understand the conclusion of paragraph 1. My translation of it is according to the view of Kû Hsî, if I rightly understand that.

Paragraph 2. It is by such sincerity that the mind is affected,—that is, the mind of the ruler occupying line 5.

LVI. (The trigram representing) a mountain and above it that for fire form Lü. The superior man, in accordance with this, exerts his wisdom and caution in the use of punishments and not allowing litigations to continue.

1. 'The stranger is mean and meanly occupied :—his aim is become of the lowest character, and calamity will ensue.

2. 'He is provided with good and trusty servants :—he will in the end have nothing of which to complain.

3. 'The stranger burns his lodging-house :—and he himself also suffers hurt thereby. When, as a stranger, he treats those below him (as the line indicates), the right relation between him and them is lost.

4. 'The stranger is in a resting-place :—but he has not got his proper position.

'He has the means of livelihood, and the axe :—but his mind is not at ease.

5. 'In the end he will obtain praise and a (high) charge :—he has reached a high place.

6. 'Considering that the stranger is here at the very height (of distinction), with the spirit that possesses him, it is right he (should be emblemed by a bird) burning (its nest).

Line 3 has a correlate in 6, which is weak, and as it were out of the game. The light in 3 moreover is hidden. Hence the symbolism ; and through the blindness of its subject his hurt, which unfits him to be employed.

The line undivided like 4 is 1 ; perhaps we might translate—'He meets with the subject of the parallel line.'

No one but himself has any confidence in the subject of line 6. He holds himself aloof from others, and they leave him to himself.

‘He loses his ox(-like docility) too readily and easily :’—to the end he would not listen to (the truth about the course to be pursued).

LVII. (Two trigrams representing) wind, following each other, form Sun. The superior man, in accordance with this, reiterates his orders, and secures the practice of his affairs.

1. ‘(Now) he advances, (now) he recedes :’—his mind is perplexed.

‘It would be advantageous for him to have the

LVI. Different attempts are made to bring the idea of a travelling stranger out of the trigrams Kǎn and Lî; but none of them is satisfactory. Let Khung Ying-tá’s view serve as a specimen of them :—‘A fire on a mountain lays hold of the grass, and runs with it over the whole space, not stopping anywhere long, and soon disappearing ;—such is the emblem of the traveller.’ The application may be derived well enough from the attributes of the trigrams ; but does not fit in with the lessons of the Thwan and Hsiang.

The meanness of the subject of line 1 does not arise from the nature of his occupation ; but from his mind and aim being emptied of all that is good and ennobling.

Strong and trusty servants are the most important condition for the comfort and progress of the traveller ; and therefore it alone is resumed and expanded.

The subject of line 3 treats those below him with violence and arrogance, which of course alienates them from him.

‘He has not got into his proper position’ seems to say no more than that 4 is a strong line in an even place.

It is difficult to say what ‘he has reached a high place’ means. The fifth line is not in this hexagram the ruler’s seat ; but by his qualities and gifts the subject of it attracts the attention and regard of his friends and of his ruler.

The spirit that possesses the subject of line 6 is one of haughty arrogance, with which the humility that ought to characterise him cannot co-exist. His careless self-sufficiency has shut his mind against all lessons of wisdom.

firmness of a brave soldier:—his mind would in that case be well governed.

2. 'The good fortune springing from what borders on confusion' is due to the position (of the line) in the centre.

3. 'The regret arising from the violent and repeated efforts to penetrate' shows the exhaustion of the will.

4. 'He takes game in his hunting, enough for the threefold use of it:—he achieves merit.

5. 'The good fortune of (the subject of) the fifth line, undivided,' is owing to its correct position and its being in the centre.

6. 'The representative of penetration is beneath a couch:—though occupying the topmost place, his powers are exhausted.

'He has lost the axe with which he executed his decisions:—though he try to be correct, there will be evil.

LVII. I have said on the Thwan that some commentators make the upper trigram symbolical of the ordinances of the ruler and the lower symbolical of the obedience of the people. E. g., *Khǎng-ze* says:—'Superiors, in harmony with the duty of inferiors, issue their commands; inferiors, in harmony with the wishes of their superiors, follow them. Above and below there are that harmony and deference; and this is the significance of the redoubled Sun. When governmental commands and business are in accordance with what is right, they agree with the tendencies of the minds of the people who follow them.'

Paragraph 2 seems to say that the sincerity of purpose indicated by the central position of the second line conducts its subject to the right course, despite the many considerations that might distract him.

'The will is exhausted' in paragraph 3 intimates that 'the repeated efforts' made by its subject have exhausted him. He can now only regret his failures.

LVIII. (Two symbols representing) the waters of a marsh, one over the other, form Tui. The superior man, in accordance with this, (encourages) the conversation of friends and (the stimulus of) their (common) practice.

1. 'The good fortune attached to the pleasure of (inward) harmony' arises from there being nothing in the conduct (of the subject of the line) to awaken doubt.

2. 'The good fortune attached to the pleasure arising from (inward sincerity)' is due to the confidence felt in the object (of the subject of the line).

3. 'The evil predicated of one's bringing around himself whatever can give pleasure' is shown by the inappropriateness of the place (of the line).

4. 'The joy in connexion with (the subject of) the fourth line, undivided,' is due to the happiness (which he will produce).

5. 'He trusts in one who would injure him:'—his place is that which is correct and appropriate.

6. 'The topmost line, divided, shows the pleasure (of its subject) in leading and attracting others:'—his (virtue) is not yet brilliant.

What is said in paragraph 6 proceeds on a different view of the Text from that which I have followed.

LVIII. The application of the Great Symbolism here will recall to many readers the Hebrew maxims in Proverbs xxvii. 17, 19. The sentiment of it, however, does not readily fit in to the teaching of the hexagram as set forth in the Text.

There is nothing in the conduct of the subject of line 1 to awaken suspicion. He has as yet taken no action; but it was not necessary to say anything like this about the subject of line 2, his central position being an assurance that he would never do anything of a doubtful character.

LIX. (The trigram representing) water and that for wind moving above the water form Hwân. The ancient kings, in accordance with this, presented offerings to God and established the ancestral temple.

1. 'The good fortune attached to the first line, divided,' is due to the natural course (pursued by its subject).

2. 'Amidst the prevailing dispersion, he hurries to his contrivance (for security):'—he gets what he desires.

3. 'He has no regard to his own person:'—his aim is directed to what is external to himself.

4. 'He scatters the (different) parties (in the state), and there is great good fortune:'—brilliant and great (are his virtue and service).

5. 'The accumulations of the royal (granaries) are dispersed, and there is no error:'—this is due to the correctness of the position.

6. 'His bloody wounds are gone:'—he is far removed from the danger of injury.

Line 3 should be strong, and the desire of pleasure which is the idea of the hexagram leads its weak subject to the course which is so emphatically condemned.

Paragraph 5 is incomplete. Does the correctness and appropriateness of the position of the subject of the line afford any explanation of his trusting the subject of the weak line above, who would only injure him? It ought to keep him on the contrary from doing so. The commentators have seen this, and say that the paragraph is intended by way of caution.

The action of the hexagram should culminate and end in line 5. But the subject of it has not made brilliant attainment in the firmness and correctness by which the love of pleasure should be controlled.

LIX. The 'in accordance with this' must be equivalent to—'to remedy the state of things thus symbolised.' What follows certainly

LX. (The trigram representing) a lake, and above it that for water, form *Kieh*. The superior man, in accordance with this, constructs his (methods of) numbering and measurement, and discusses (points of) virtue and conduct.

1. 'He does not quit the courtyard outside his door:—he knows when he has free course and when he is obstructed.

2. 'He does not quit the courtyard inside his gate. There will be evil:—he loses the time (for action) to an extreme degree.

3. In 'the lamentation for not observing the (proper) regulations,' who should there be to blame?

4. 'The progress and success of the quiet and natural (attention) to all regulations' is due to the deference which accepts the ways of (the ruler) above.

5. 'The good fortune arising from the regulations enacted sweetly and acceptably' is due to (the line)

amounts to this, that the ancient kings considered the services of religion, sincerely and earnestly attended to, as calculated to counteract the tendency to mutual alienation and selfishness in the minds of men. How they operated to have this beneficial effect we are not told. Nor is it easy to account for the extension of what is said in the Text about the establishment of the ancestral temple to the presentation also of offerings to God. Probably the writer had the same idea in his mind as in the Great Symbolism of hexagram 16, q. v.

'The natural course' pursued by the subject of line 1 is, probably, that required by the time.

'What the subject of line 2 desired' would be his success in counteracting the prevailing tendency to disunion.

The view given of paragraph 5 is that propounded by *K'ü Hsi*.

For paragraph 6 see the note on line 6 under the Text.

occupying the place (of authority) and being in the centre.

6. 'The regulations are severe and difficult. Even with firm correctness there will be evil:—the course (indicated by the hexagram) is come to an end.

LXI. (The trigram representing the waters of) a marsh and that for wind above it form *K'ung Fû*. The superior man, in accordance with this, deliberates about cases of litigation and delays (the infliction of) death.

1. 'The first line, undivided, shows its subject resting (in himself). There will be good fortune:—no change has yet come over his purpose.

2. 'Her young ones respond to her:—from the (common) wish of the inmost heart.

3. 'Now he beats his drum, and now he leaves off:—the position (of the line) is the appropriate one for it.

LX. Various explanations of the Great Symbolism have been attempted. E. g., *K'ang-ze* says:—'The water which a lake or marsh will contain is limited to a certain quantity. If the water flowing in exceed that, it overflows. This gives us the idea of *K'ieh*.' What is found on the application of it is to my mind equally unsatisfactory.

The subject of line 1 knows when he might have free course and when he is obstructed, and acts accordingly. He is regulated by a consideration of the time.

The subject of line 1 ought not to act, and he is still. The subject of line 2 ought to act, and he also is still. The error and the effect of it are great.

The subject of line 3 shows by his lamentation how he blames himself.

The other three paragraphs are sufficiently explained in what is said on the Text.

4. 'A horse the fellow of which disappears:—he breaks from his (former) companions, and mounts upwards.

5. 'He is perfectly sincere, and links others to him in closest union:—the place (of the line) is the correct and appropriate one.

6. 'Chanticleer (tries to) mount to heaven:—but how can (such an effort) continue long?

LXII. (The trigram representing) a hill and that for thunder above it form Hsião Kwo. The superior man, in accordance with this, in his conduct exceeds in humility, in mourning exceeds in sorrow, and in his expenditure exceeds in economy.

1. 'There is a bird flying (and ascending) till the result is evil:—nothing can be done to avoid this issue.

2. 'He does not attempt to reach his ruler:—

LXI. Dissatisfied with previous attempts to explain the Great Symbolism, the Khang-hsi editors say:—'The wind penetrates things. The grass and trees of the level ground are shaken and tossed by it; the rocky valleys and caverns in their sides have it blowing round about them; and it acts also on the depths of the collected waters, the cold of which disappears and the ice is melted before it. This is what makes it the emblem of that perfect sincerity which penetrates everywhere. The litigations of the people are like the deep and dark places of the earth. The kings examine with discrimination into all secret matters connected with them, even those which are here mentioned, till there is nothing that is not penetrated by their perfect sincerity.' But all this is greatly strained. The symbolism of the eight trigrams gets pretty well played out in the course of the 64 hexagrams.

1. 'No change has come over the purpose:—the sincerity, that is, perfect in itself and of itself, continues.

2. One bond of loving regard unites the mother bird and her young; so answers the heart of man to man.

a minister should not overpass the distance (between his ruler and himself).

3. 'Some in consequence find opportunity to assail and injure him. There will be evil :—how great will it be !

4. 'He meets the exigency (of his situation), without exceeding (the proper course) :—(he does so), the position being inappropriate (for a strong line).

'If he go forward, there will be peril, and he must be cautious :—the result would be that his course would not be long pursued.

5. 'There are dense clouds, but no rain :—(the line) is in too high a place.

6. 'He does not meet the exigency (of his situation), and exceeds (his proper course) :—(the position indicates) the habit of domineering.

LXIII. (The trigram representing) fire and that for water above it form *K'1* 31. The superior

LXII. The Khang-hsü editors endeavour to show the appropriateness of the Great Symbolism in this way :—'When thunder issues from the earth, the sound of it comes with a rush and is loud ; but when it reaches the top of a hill it has begun to die away and is small.' There is nothing in the Chinese about the hills being high ; and readers will only smile at the attempted explanation. The application of the symbolism, or rather of the idea of the hexagram, is good, and in entire accordance with what I have stated that idea to be.

Nothing can be done to avoid the issue mentioned in paragraph 1, for the subject of the line brings it on himself.

Paragraph 2 deals only with the symbolism in the conclusion of what is stated under line 2. The writer takes the view which I have given on the Text.

For paragraphs 3 and 4 see the notes on the Text.

In line 5 the yin line is too high. If the line were yang, the auspice would be different.

man, in accordance with this, thinks of evil (that may come), and beforehand guards against it.

1. 'He drags back his wheel:'—as we may rightly judge, there will be no mistake.

2. 'In seven days she will find it:'—for the course pursued is that indicated by the central position (of the line).

3. 'He was three years in subduing it:'—enough to make him weary.

4. 'He is on his guard all the day:'—he is in doubt about something.

5. 'The slaughtering of an ox by the neighbour in the east is not equal to (the small sacrifice of) the neighbour in the west:'—because the time (in the latter case is more important and fit).

'His sincerity receives the blessing:'—good fortune comes on a great scale.

6. 'His head is immersed; the position is perilous:'—how could such a state continue long?

LXIV. (The trigram representing) water and that for fire above it form Wei 31. The superior man, in accordance with this, carefully discriminates among (the qualities of) things, and the (different) positions they (naturally) occupy.

1. 'His tail gets immersed:'—this is the very height of ignorance.

LXIII. Water and fire coming together as here, fire under the water, each element occupies its proper place, and their interaction will be beneficial. Such is the common explanation of the Great Symbolism; but the connexion between it and the application of it, which also is good in itself, is by no means clear.

The notes on the different lines present nothing that has not been dealt with in the notes on the Text.

2. 'The second line, undivided, shows good fortune arising from being firm and correct:'—it is in the central place, and the action of its subject thereby becomes correct.

3. '(The state of things is) not yet remedied. Advancing will lead to evil:'—the place (of the line) is not that appropriate for it.

4. 'By firm correctness there is good fortune, and cause for repentance disappears:'—the aim (of the subject of the line) is carried into effect.

5. '(We see) the brightness of a superior man:'—the diffusion of that brightness tends to good fortune.

6. 'He drinks and gets his head immersed:'—he does not know how to submit to the (proper) regulations.

LXIV. In this last hexagram we have water below and fire above, so that the two cannot act on each other, and the Symbolism may represent the unregulated condition of general affairs, the different classes of society not harmonising nor acting together. The application follows naturally.

K'ü Hsî and others suspect an error in the text of paragraph 1; yet a tolerable meaning comes from it as it stands.

The Khang-hsî editors observe on paragraph 2 that an undivided line in the second place, and a divided line in the fifth place, are both incorrect, and yet it is often said of them that with firm correctness in their subjects there will be good fortune;—such is the virtue of the central position. This principle is at last clearly enunciated in this paragraph.

K'hang-ze says:—'The subject of line 4 has the ability which the time requires, and possesses also a firm solidity. He can carry out therefore his purpose. There will be good fortune, and all cause for repentance will disappear. The smiting of the demon region was the highest example of firm correctness.'

Both the symbols in paragraph 6 indicate a want of caution, and an unwillingness to submit one's impulses to the regulation of reason and prudence.

APPENDIX III.

THE GREAT APPENDIX. SECTION I.

Chapter I. 1. Heaven is lofty and honourable; earth is low. (Their symbols), *K'ien* and *Khwăn*, (with their respective meanings), were determined (in accordance with this).

Things low and high appear displayed in a similar relation. The (upper and lower trigrams, and the relative position of individual lines, as) noble and mean, had their places assigned accordingly.

Movement and rest are the regular qualities (of their respective subjects). Hence comes the definite distinction (of the several lines) as the strong and the weak.

(Affairs) are arranged together according to their tendencies, and things are divided according to their classes. Hence were produced (the interpretations in the *Yi*, concerning) what is good [or lucky] and evil [or unlucky].

In the heavens there are the (different) figures there completed, and on the earth there are the (different) bodies there formed. (Corresponding to them) ^{hence} were the changes and transformations exhibited (in the *Yi*).

2. After this fashion a strong and a weak line were manipulated together (till there were the eight trigrams), and those eight trigrams were added, each to itself and to all the others, (till the sixty-four hexagrams were formed).

3. We have the exciting forces of thunder and lightning; the fertilising influences of wind and rain; and the revolutions of the sun and moon, which give rise to cold and warmth.

4. The attributes expressed by *Khien* constitute the male; those expressed by *Khwăn* constitute the female.

5. *Khien* (symbolises Heaven, which) directs the great beginnings of things; *Khwăn* (symbolises Earth, which) gives to them their completion.

6. It is by the ease with which it proceeds that *Khien* directs (as it does), and by its unhesitating response that *Khwăn* exhibits such ability.

7. (He who attains to this) ease (of Heaven) will be easily understood, and (he who attains to this) freedom from laborious effort (of the Earth) will be easily followed. He who is easily understood will have adherents, and he who is easily followed will achieve success. He who has adherents can continue long, and he who achieves success can become great. To be able to continue long shows the virtue of the wise and able man; to be able to become great is the heritage he will acquire.

8. With the attainment of such ease and such freedom from laborious effort, the mastery is got of all principles under the sky. With the attainment of that mastery, (the sage) makes good his position in the middle (between heaven and earth).

Chapter I is an attempt to show the correspondency between the phenomena of external nature ever changing, and the figures of the *Yi King* ever varying. The first four paragraphs, it is said, show, from the phenomena of production and transformation in external

Chapter II. 9. The sages set forth the diagrams, inspected the emblems contained in them, and appended their explanations;—in this way the good fortune and bad (indicated by them) were made clear.

10. The strong and the weak (lines) displace each other, and produce the changes and transformations (in the figures).

11. Therefore the good fortune and evil (mentioned in the explanations) are the indications of the right and wrong (in men's conduct of affairs), and the repentance and regret (similarly mentioned) are the indications of their sorrow and anxiety.

nature, the principles on which the figures of the Yî were made. The fifth and sixth paragraphs show, particularly, how the attributes represented by the figures *K'ien* and *Khwân* are to be found in (the operations of) heaven and earth. The last two paragraphs show both those attributes embodied or realised in man. The realisation takes place, indeed, fully only in the sage or the ideal man, who thus becomes the pattern for all men.

In paragraph 3 we have five of the six derivative trigrams;—the six 'children,' according to the nomenclature of the *Wân* arrangement. 'Thunder' stands for *k'ăn* (䷳), 'lightning' for *lî* (䷲), 'wind' for *sun* (䷺), and 'rain' for *khan* (䷴). 'The sun,' however, is also an emblem of *lî*, and 'the moon' one of *k'ăn* (䷳), generally said to represent 'mountains,' while *tui* (䷗), representing 'collections of water,' has no place in the enumeration. *K'û Hsî* says that in paragraph 3 we have the natural changes seen in the phenomena of the sky, while in 4 we have such changes as find body and figure on the earth.

Paragraphs 5 and 6 have both been misunderstood from neglect of the peculiar meaning of the character *zhî* (知), and from taking it in its common acceptance of 'knowing.' Both commentaries and dictionaries point out that it is here used in the sense of 'directing,' 'presiding over.' In paragraph 7, however, it resumes its ordinary significancy.

12. The changes and transformations (of the lines) are the emblems of the advance and retrogression (of the vital force in nature). Thus what we call the strong and the weak (lines) become the emblems of day and night. The movements which take place in the six places (of the hexagram) show the course of the three extremes (i. e. of the three Powers in their perfect operation).

13. Therefore what the superior man rests in, in whatever position he is placed, is the order shown in the Yî; and the study which gives him the greatest pleasure is that of the explanations of the several lines.

14. Therefore the superior man, when living quietly, contemplates the emblems and studies the explanations of them; when initiating any movement, he contemplates the changes (that are made in divining), and studies the prognostications from them. Thus 'is help extended to him from Heaven; there will be good fortune, and advantage in every movement.'

Chapter II, paragraphs 9-14, is divided into two parts. The former contains paragraphs 9-12, and tells us how the sages, king Wân and the duke of Kâu, proceeded in making the Yî, so that the good fortune and bad of men's courses should be indicated by it in harmony with right and wrong, and the processes of nature. Paragraphs 13, 14 form the second part, and speak of the study of the Yî by the superior man, desirous of doing what is right and increasing his knowledge, and the advantages flowing from it.

I can follow to some extent the first two statements of paragraph 12, so far as the ideas of the writer are concerned, though asserting any correspondence between the changes of the lines of the diagrams, and the operations of external nature, as in the succession of day and night, is merely an amusement of the fancy. I all but fail, however, to grasp the idea in the last statement. In the trigram, the first line represents earth; the second, man; and the

Chapter III. 15. The Thwan speak of the emblematic figures (of the complete diagrams). The Yáo speak of the changes (taking place in the several lines).

16. The expressions about good fortune or bad are used with reference to (the figures and lines, as) being right or wrong (according to the conditions of time and place); those about repentance or regret refer to small faults (in the satisfying those conditions); when it is said 'there will be no error,' or 'no blame,' there is reference to (the subject) repairing an error by what is good.

17. Therefore the distinction of (the upper and lower trigrams and of the individual lines) as noble or mean is decided by the (relative) position (of the lines); the regulations of small and great are found in the diagrams, and the discriminations of good and bad fortune appear in the (subjoined) explanations.

18. Anxiety against (having occasion for) repentance or regret should be felt at the boundary line (between good and evil). The stirring up the thought of (securing that there shall be) no blame arises from (the feeling of) repentance.

third, heaven; in the hexagram, the first and second lines are assigned to earth; the third and fourth, to man; and the fifth and sixth, to heaven. These are the three Powers, and each Power has 'a Grand Extreme,' where its nature and operation are seen in their highest ideal. This is to some extent conceivable; but when I try to follow our author, and find an analogy between the course of these extremes and the movements in the places of the diagrams, I have no clue by which to trace my way. For the concluding sentence of paragraph 14 see the duke of Káu on the last line of hexagram 14.

19. Thus of the diagrams some are small, and some are great; and of the explanations some are startling, and some are unexciting. Every one of those explanations has reference to the tendencies (indicated by the symbols).

Chapter IV. 20. The Yî was made on a principle of accordance with heaven and earth, and shows us therefore, without rent or confusion, the course (of things) in heaven and earth.

21. (The sage), in accordance with (the Yî), looking up, contemplates the brilliant phenomena of the heavens, and, looking down, examines the definite arrangements of the earth;—thus he knows the causes of darkness (or, what is obscure) and light (or, what is bright). He traces things to their beginning, and follows them to their end;—thus he knows what can be said about death and life. (He

Chapter III, paragraphs 15-19, gives additional information about the constituent parts of the Yî, that is, the Text of the classic as we have it from king Wăn and his son. The imperial editors say that it expands the meaning of the fourth paragraph, the third of chapter 2. It does do so, but this account hardly covers all its contents.

To understand the names 'small and great,' as used of the diagrams in paragraphs 17 and 19, it should be noted that hexagrams to which the divided or yin line gives their character are termed 'small,' and those where the undivided or yang line rules are called 'great.' Kâu (44, ) , Thun (33, ) , and Phei (12, ) are instances of the former class; Fû (24, ) , Lin (19, ) , and Thâi (11, ) of the other.

It is observed by Shâi K'ing (early in the Ming dynasty) that the terms 'diagrams' and 'explanations' must be understood not only of the whole figures but also as embracing the several lines.

perceives how the union of) essence and breath form things, and the (disappearance or) wandering away of the soul produces the change (of their constitution);—thus he knows the characteristics of the *anima* and *animus*.

22. There is a similarity between him and heaven and earth, and hence there is no contrariety in him to them. His knowledge embraces all things, and his course is (intended to be) helpful to all under the sky;—and hence he falls into no error. He acts according to the exigency of circumstances without being carried away by their current; he rejoices in Heaven and knows its ordinations;—and hence he has no anxieties. He rests in his own (present) position, and cherishes (the spirit of) generous benevolence;—and hence he can love (without reserve).

23. (Through the *Yî*), he comprehends as in a mould or enclosure the transformations of heaven and earth without any error; by an ever-varying adaptation he completes (the nature of) all things without exception; he penetrates to a knowledge of the course of day and night (and all other connected phenomena);—it is thus that his operation is spirit-like, unconditioned by place, while the changes which he produces are not restricted to any form.

Chapter IV, paragraphs 20–23, is intended still more to exalt the *Yî*, and seems to say that the sage by means of it can make an exhaustive study of all principles and of human nature, till he attains to the knowledge of the ordinances of Heaven. Such is the account of the chapter given by *K'û Hsî*; but the second character in paragraph 21 must be understood in the signification which it has in all the sixty-four sentences which explain the emblematic structure of the hexagrams, as=‘in accordance with’ and not ‘by means of.’ The

Chapter V. 24. The successive movement of the inactive and active operations constitutes what is called the course (of things).

imperial editors append to their statement of *K'ü*'s account, that it must be borne in mind that the sages had not to wait till the *Yî* was made to conduct their exhaustive study. They had done that before, and the *Yî* may be considered as a talk on the results, drawn out in its own peculiar style. It holds the mirror up to nature; but its authors knew nature before they made it.

In paragraph 21, 'the brilliant phenomena of the heavens' are the various shining bodies of the sky, with their rising and setting; 'the definite arrangements of the earth' are the different situations of its parts according to the points of the compass, and its surface as diversified by mountain and valley; and by the study of these the causes of day and night are known as being the expansion and contraction of the elementary ether. The same thing produces the facts of birth or life and death.

Ĵing, which I have translated 'essence,' denotes the more subtle and pure part of matter, and belongs to the grosser form of the elementary ether; *k'hi*, or 'spirit,' is the breath, still material, but purer than the *Ĵing*, and belongs to the finer, and more active form of the ether. Here *k'hi* is 'the breath of life.' In the *hwun* or 'soul (animus),' the *k'hi* predominates, and the *Ĵing* in the *pho* or animal soul. At death the *hwun* wanders away, ascending, and the *pho* descends and is changed into a ghostly shade. So did the ancient Chinese grope their way from material things to the concept and representation of what was immaterial.

For my 'characteristics of the anima and animus,' Dr. Medhurst rendered 'the circumstances and conditions of the *Kwei Shāns*' (Theology of the Chinese, pp. 10-12); but he observes that 'the *Kwei Shāns* in the passage are evidently the expanding and contracting principles of human life.' The *kwei shāns* are brought about by the dissolution of the human frame, and consist of the expanding and ascending *shān*, which rambles about in space, and of the contracted and shrivelled *kwei*, which reverts to earth and nonentity. It is difficult to express one's self clearly on a subject treated so briefly and enigmatically in the text.

We must understand that the subject of the predicates in this and the next two paragraphs is 'the sage,' who has endeavoured to give a transcript of his views and doings in the *Yî*. The character,

25. That which ensues as the result (of their movement) is goodness; that which shows it in its completeness is the natures (of men and things).

26. The benevolent see it and call it benevolence. The wise see it and call it wisdom. The common people, acting daily according to it, yet have no knowledge of it. Thus it is that the course (of things), as seen by the superior man, is seen by few.

27. It is manifested in the benevolence (of its operations), and (then again) it conceals and stores up its resources. It gives their stimulus to all things, without having the same anxieties that possess the sage. Complete is its abundant virtue and the greatness of its stores!

28. Its rich possessions is what is intended by 'the greatness of its stores;' the daily renovation which it produces is what is meant by 'the abundance of its virtue.'

29. Production and reproduction is what is called (the process of) change.

30. The formation of the semblances (shadowy forms of things) is what we attribute to *K'ien*; the giving to them their specific forms is what we attribute to *Khwăn*.

31. The exhaustive use of the numbers (that turn

which I have translated by 'spirit-like' in paragraph 23, is different from *shên* in paragraph 21. It is *shên*, a character of the phonetic class, while its primary material signification has not been satisfactorily ascertained. 'The Chinese,' says P. Regis (vol. ii. p. 445), 'use it in naming the soul, true angels, and the genii of idolaters; and the Christian Chinese use it when they speak of God, of the Holy Spirit, of angels, and of the soul of man. For what else could they do?'

up in manipulating the stalks), and (thereby) knowing (the character of) coming events, is what we call prognosticating; the comprehension of the changes (indicated leads us to) what we call the business (to be done).

32. That which is unfathomable in (the movement of) the inactive and active operations is (the presence of a) spiritual (power).

Chapter V, paragraphs 24-32, still shows us the Yî fashioned so as to give a picture of the phenomena of the external universe; but the writer dwells more on the latter, and the different paragraphs give an interesting view of his ideas on the subject. He supposes a constant change from rest to movement and from movement to rest, through which all things are formed, now still, now in motion, now expanding, now contracting. It is customary to speak of two forms of an original ether as the two elementary principles, but they are really one and the same ether, in a twofold condition, with a twofold action. By their successive movement the phenomena of existence are produced,—what I have called ‘the course (of things)’ in paragraph 24. It is attempted, however, by many native scholars and by some sinologists, to give to *tão*, the last character in that paragraph, the meaning of ‘reason,’ that which intelligently guides and directs the movements of the two elements. But this view is not in harmony with the scope of the chapter, nor can the characters be fairly construed so as to justify such an interpretation.

The imperial editors say that the germ of the Mencian doctrine about the goodness of human nature is in paragraph 25; but it says more widely, that ‘every creature is good,’ according to its ideal as from the plastic yin and yang. But few, the next paragraph tells us, can understand the measure of this goodness.

‘The benevolent operations’ in the course of things in paragraph 27 are illustrated from the phenomena of growth and beauty in spring and summer; and the cessation of these in autumn and winter may be called ‘a concealing and storing them up.’

Paragraph 29 seems to state the origin of the name Yî as applied to the book, the Yî King.

In paragraph 30 the names *Khien* and *Khwän* take the place of yin and yang, as used in paragraphs 24 and 32. In *Khien*,

Chapter VI. 33. Yes, wide is the Yt and great! If we speak of it in its farthest reaching, no limit can be set to it; if we speak of it with reference to what is near at hand, (its lessons are) still and correct; if we speak of it in connexion with all between heaven and earth, it embraces all.

34. There is *Khien*. In its (individual) stillness it is self-absorbed; when exerting its motive power it goes straight forward; and thus it is that its productive action is on a grand scale. There is *Khwăn*. In its (individual) stillness, it is self-collected and capacious; when exerting its motive power, it develops its resources, and thus its productive action is on a wide scale.

35. In its breadth and greatness, (the Yt) corre-

the symbol of heaven, every one of its three lines is undivided; it is the concentration of the yang faculty; so *Khwăn*, the symbol of the earth, is the concentration of the yin. The critics themselves call attention to the equivalence of the symbolic names here given to yin and yang. The connexion of the two is necessary to the production of any one substantial thing. The yang originates a shadowy outline which the yin fills up with a definite substance. So actually in nature Heaven (*Khien*) and Earth (*Khwăn*) operate together in the production of all material things and beings.

The 'numbers,' mentioned in paragraph 31, are not all or any numbers generally, but 7, 8, 9, 6, those assigned to the four 'emblematic figures,' that grow out of the undivided and divided lines, and by means of which the hexagrams are made up in divination. The 'future or coming events' which are prognosticated are not particular events, which the diviner has not already forecast, but the character of events or courses of actions already contemplated, as good or evil, lucky or unlucky, in their issue.

The best commentary on paragraph 32 is supplied by paragraphs 8-10 of Appendix VI. The 'Spirit' is that of 'God;' and this settles the meaning of *tão* in paragraph 24, as being the course of nature, in which, according to the author, 'God worketh all in all.'

sponds to heaven and earth; in its ever-recurring changes, it corresponds to the four seasons; in its mention of the bright or active, and the dark or inactive operation, it corresponds to the sun and moon; and the excellence seen in the ease and ready response (of its various operations) corresponds to the perfect operations (presented to us in the phenomena of nature).

Chapter VII. 36. The Master said:—‘Is not the Yi a perfect book?’ It was by the Yi that the sages exalted their virtue, and enlarged their sphere of occupation. Their wisdom was high, and their rules of conduct were solid. That loftiness was after the pattern of heaven; that solidity, after the pattern of earth.

Chapter VI, paragraphs 33–35, goes on further to celebrate the Yi as holding up the mirror to nature in all its operations and its widest extent. The grandiloquent language, however, amounts only to this, that, when we have made ourselves acquainted with the phenomena of nature, we can, with a heated fancy, see some analogy to them in the changes of the diagrams and lines of the Yi book.

K'ien and *Khwan* must be taken as the same names are understood in paragraph 30 above.

‘The Yi,’ with which paragraph 33 begins, must be understood also at the commencement of paragraph 35. The character which I have translated by ‘corresponds’ throughout this last chapter, should not, it is observed, have stress laid upon it. *K'ü Hsi* says that it is simply equal to the ‘there is a similarity’ of paragraph 22. ‘The bright or active element’ and ‘the dark or inactive’ are in the original, ‘the yang and the yin.’ The correspondence predicated between them and the sun and moon, the brightness and warmth of the one, and the paleness and coldness of the other, shows us how those names arose, and that it is foreign to the original concept of them to call them ‘the male and female principles:’—with the last clause compare paragraphs 6–8.

37. Heaven and earth having their positions as assigned to them, the changes (of nature) take place between them. The nature (of man) having been completed, and being continually preserved, it is the gate of all good courses and righteousness.

Chapter VIII. 38. The sage was able to survey all the complex phenomena under the sky. He then considered in his mind how they could be figured, and (by means of the diagrams) represented their material forms and their character. Hence these (diagrams) are denominated *Semblances* (or emblematic figures, the *Hsiang*).

39. A (later) sage was able to survey the motive influences working all under the sky. He contemplated them in their common action and special nature, in order to bring out the standard and proper tendency of each. He then appended his

Chapter VII, paragraphs 36, 37, is understood to set forth how the sages embodied the teachings of the *Yi* in their character and conduct. But when it is said that 'it was by the *Yi* that they exalted their virtue and enlarged their sphere of occupation,' the meaning can only be that what they did in these directions was in harmony with the principles which they endeavoured to set forth in the symbols of the *Yi*.

'Their rules of conduct were solid,' in paragraph 36, is, literally, 'their rules were low.' To the height of heaven reached by the wisdom of the sages, the author opposes the low-lying earth, between which and their substantial practices and virtues he discovered some analogy.

It will be seen that the chapter commences with 'The Master said.' *K'ü Hsi* observes that 'as the Ten Appendixes were all made by the Master, these words are out of place, and that he conjectures that wherever they occur here and elsewhere, they were added after the sage's time.' Their occurrence very seriously affects the question of the authorship of the Appendixes, which I have discussed in the Introduction, pages 28-31.

explanation (to each line of the diagrams), to determine the good or evil indicated by it. Hence those (lines with their explanations) are denominated Imitations (the Yâo).

40. (The diagrams) speak of the most complex phenomena under the sky, and yet there is nothing in them that need awaken dislike ; the explanations of the lines speak of the subtlest movements under the sky, and yet there is nothing in them to produce confusion.

41. (A learner) will consider what is said (under the diagrams), and then speak ; he will deliberate on what is said (in the explanations of the lines), and then move. By such consideration and deliberations he will be able to make all the changes which he undertakes successful.

42. 'Here hid, retired, cries out the crane ;
Her young's responsive cry sounds there.
Of spirits good I drain this cup ;
With thee a cup I'll freely share.'

The Master said :—'The superior man occupies his apartment and sends forth his words. If they be good, they will be responded to at a distance of more than a thousand li ;—how much more will they be so in the nearer circle ! He occupies his apartment and sends forth his words. If they be evil, they will awaken opposition at a distance of more than a thousand li ;—how much more will they do so in the nearer circle ! Words issue from one's person, and proceed to affect the people. Actions proceed from what is near, and their effects are seen at a distance. Words and actions are the hinge and spring of the superior man. The movement of that

hinge and spring determines glory or disgrace. His words and actions move heaven and earth ;—may he be careless in regard to them?’

43. ‘(The representative of) the union of men first cries out and weeps, and afterwards laughs.’ The Master said, on this :—

‘The ways of good men (different seem).
This in a public office toils ;
That in his home the time beguiles.
One man his lips with silence seals ;
Another all his mind reveals.
But when two men are one in heart,
Not iron bolts keep them apart ;
The words they in their union use,
Fragrance like orchid plants diffuse.’

44. ‘The first line, undivided, shows its subject placing mats of the white grass beneath what he sets on the ground.’ The Master said :—‘To place the things on the ground might be considered sufficient ; but when he places beneath them mats of the white grass, what occasion for blame can there be ? Such a course shows the height of carefulness. The white grass is a trivial thing, but, through the use made of it, it may become important. He who goes forward using such careful art will not fall into any error.’

45. ‘A superior man toiling laboriously and yet humble ! He will bring things to an end, and with good fortune.’ The Master said on this :—‘He toils with success, but does not boast of it ; he achieves merit, but takes no virtue to himself from it ;—this is the height of generous goodness, and speaks of the man who with (great) merit yet places

himself below others. He wishes his virtue to be more and more complete, and in his intercourse with others to be more and more respectful;—he who is so humble, carrying his respectfulness to the utmost, will be able to preserve himself in his position.'

46. 'The dragon (is seen) beyond his proper haunts; there will be occasion for repentance.' The Master said on this:—'He is noble, but is not in his correct place; he is on high, but there are no people to acknowledge him; there is a man of virtue and ability below, but he will not assist him. Hence whatever movement he may make will give occasion for repentance.'

47. 'He does not quit the courtyard before his door;—there will be no occasion for blame.' The Master said on this:—'When disorder arises, it will be found that (ill-advised) speech was the stepping-stone to it. If a ruler do not keep secret (his deliberations with his minister), he will lose that minister. If a minister do not keep secret (his deliberations with his ruler), he will lose his life. If (important) matters in the germ be not kept secret, that will be injurious to their accomplishment. Therefore the superior man is careful to maintain secrecy, and does not allow himself to speak.'

48. The Master said:—'The makers of the Yî may be said to have known (the philosophy of) robbery. The Yî says, "He is a burden-bearer, and yet rides in a carriage, thereby exciting robbers to attack him." Burden-bearing is the business of a small man. A carriage is the vehicle of a gentleman. When a small man rides in the vehicle of a gentle-

man, robbers will think of taking it from him. (When one is) insolent to those above him, and oppressive to those below, robbers will wish to attack him. Careless laying up of things excites to robbery, (as a woman's) adorning of herself excites to lust. What the Yî says about the burden-bearer's riding in a carriage, and exciting robbers to attack him, (shows how) robbery is called out.'

Chapter VIII, paragraphs 38-48. In the first two paragraphs here we have an account of the formation of the diagrams, and of the explanation of the whole hexagrams and of the individual lines. 'The sage' in paragraph 38 is intended presumably of Fû-hsî; but we cannot say, from it, whether the writer thought of him as having formed only the eight trigrams, or all the sixty-four hexagrams. In the diagrams, however, we have semblances, or representations, of the phenomena of nature, even the most complex, and hard to be disentangled. Paragraph 39 goes on to speak of the explanation more especially of the individual lines, by the duke of K'âu, as symbolical of good luck or evil, as they turned up in the processes of divination.

Paragraph 40 declares the usability (so to speak) of the diagrams and the explanations of them; and 41 shows us how a learner or consulter of the Yî would actually proceed in using it.

In paragraphs 42-48 we have the words of Confucius on seven lines in so many hexagrams, or rather his amplification of the words of the duke of K'âu's explanations of their symbolism. The lines are 2 of hexagram 61; 5 of 13; 1 of 28; 3 of 15; 6 of 1; 1 of 60; and 3 of 40. What Confucius says is not without interest, but does not make the principles on which the Yî was made any clearer to us. It shows how his object was to turn the symbolism that he found to a moral or ethical account; and no doubt he could have varied the symbolism, if he had been inclined to do so.

I have spoken in the preceding chapter of the difficulty which the phrase 'The Master said' presents to our accepting the Appendix as from the hand of Confucius himself. But his words in paragraph 43 are in rhyme. He did not speak so. If he rhymed his explanation of the symbolism of the line that is the groundwork of that paragraph, why did he not rhyme his explanations of

Chapter IX. 49. To heaven belongs (the number) 1; to earth, 2; to heaven, 3; to earth, 4; to heaven, 5; to earth, 6; to heaven, 7; to earth, 8; to heaven, 9; to earth, 10.

50. The numbers belonging to heaven are five, and those belonging to earth are (also) five. The numbers of these two series correspond to each other (in their fixed positions), and each one has another that may be considered its mate. The heavenly numbers amount to 25, and the earthly to 30. The numbers of heaven and earth together amount to 55. It is by these that the changes and transformations are effected, and the spirit-like agencies kept in movement.

51. The numbers of the Great Expansion, (multiplied together), make 50, of which (only) 49 are used (in divination). (The stalks representing these) are divided into two heaps to represent the two (emblematic lines, or heaven and earth). One is then taken (from the heap on the right), and placed (between the little finger of the left hand and the next), that there may thus be symbolised the three (powers of heaven, earth, and man). (The heaps on both sides) are manipulated by fours to represent the four seasons; and then the remainders are returned, and placed (between) the two middle fingers of the left hand, to represent the intercalary month. In five years there are two intercalations, and therefore there are two operations; and afterwards the whole process is repeated.

52. The numbers (required) for *K'ien* (or the

the other lines? To answer these questions categorically is beyond our power. The facts that suggest them increase the difficulty in ascribing this and the other additions to the Yî to the later sage.

undivided line) amount to 216; those for Khwăn (or the divided line), to 144. Together they are 360, corresponding to the days of the year.

53. The number produced by the lines in the two parts (of the Yî) amount to 11,520, corresponding to the number of all things.

54. Therefore by means of the four operations is the Yî completed. It takes 18 changes to form a hexagram.

55. (The formation of) the eight trigrams constitutes the small completion (of the Yî).

56. If we led on the diagrams and expanded them, if we prolonged each by the addition of the proper lines, then all events possible under the sky might have their representation.

57. (The diagrams) make manifest (by their appended explanations), the ways (of good and ill fortune), and show virtuous actions in their spiritual relations. In this way, by consulting them, we may receive an answer (to our doubts), and we may also by means of them assist the spiritual (power in its agency in nature and providence).

58. The Master said:—‘He who knows the method of change and transformation may be said to know what is done by that spiritual (power).’

Chapter IX, paragraphs 49–58, is of a different character from any of the preceding, and treats, unsatisfactorily, of the use of numbers in connexion with the figure of the Yî and the practice of divination.

In the Thang edition of the Yî, published in the seventh century, paragraph 49 is the first of the eleventh chapter according to the arrangement now followed. *Khâng-ze* restored it to its present place, which it occupied, as has been proved, during the Han

Chapter X. 59. In the Yî there are four things characteristic of the way of the sages. We should set the highest value on its explanations to guide

dynasty, and to which it properly belongs. It and the next paragraph should be taken together, and are distinct from what follows, though the Thang edition is further confused in placing 51 before 50.

In 49 and 50 'heaven' and 'earth' are used as we have seen *K'ien* and *Khwan* are in paragraphs 30 and 34. Odd numbers belong to the strong or undivided line, which is symbolical of the active operation in nature, and the even numbers to the weak or divided line, symbolical of its inaction. The phraseology of the paragraphs, however, can only be understood by a reference to 'the river map,' which has been given in the Introduction, pages 15, 16.

The map, as it appeared on the back of 'the dragon-horse,' consisted of so many circles, and so many dark circular markings, the former, it was assumed, being of the yang character, and the latter of the yin. Fû-hsî for the circle substituted the strong or undivided line (——), and for the dark markings the weak or divided (— —). It will be seen that the yang symbols are the 1, 3, 5, 7 and 9 circles, and the yin are the 2, 4, 6, 8 and 10 circular markings, which is the pictorial delineation of paragraph 49. The only thing to be said upon it is that the arrangement of the five circles and ten circular markings is peculiar, and evidently devised 'for a purpose.' So far, however, as we know, no figure of the map was attempted till after the beginning of our twelfth century.

The same figure is supposed to illustrate what is said in paragraph 50: 'The numbers of the two series correspond to each other in their fixed positions.' 1 and 2, and 3 and 4 certainly front each other, and perhaps 5 and 6; but 7 and 8, and 9 and 10 do not do so in the same way. It is said also that 'each has another that may be considered its mate.' So it is with 1 and 6, 2 and 7, 3 and 8, 4 and 9, but hardly with 5 and 10. Further, $1+3+5+7+9=25$; $2+4+6+8+10=30$; and $25+30=55$; all of which points are stated.

The last statement in the paragraph, however, derives no illustration, so far as I can see, from the figure. How can the numbers effect the things that are predicated of them? There is a

us in speaking; on its changes for (the initiation of) our movements; on its emblematic figures for (definite action as in) the construction of implements;

jargon indeed about the formation of the five elements, but in order to make it appear not reasonable, but capable of being related, writers call in 'the Lo writing' to the aid of 'the Ho map;' and 'the five elements' is a division of the constituents of material things, which is foreign to the Yî.

Paragraph 51 is intended to describe the process of divination in manipulating the stalks, but the description is confused by introducing into it the four seasons and the subject of intercalation, so as to be very difficult to understand.

In the middle of the Ho map are the five circles symbolical of heaven and the ten dark terrestrial markings (five above and five below the others). These multiplied together give fifty, which form 'the great expansion.' But 50 divining stalks or slips, when divided, give either two odd numbers or two even; and therefore one was put on one side. The remaining 49, however divided, were sure to give two parcels of stalks, one containing an even number of stalks, and the other an odd, and so might be said fancifully to represent the undivided or strong, and the divided or weak line. It is needless to go minutely into the other steps of the process. Then comes in the counting the stalks by four, because there are four seasons in the year, and those that remain represent the intercalary days. But how could such a process be of any value to determine the days necessary to be intercalated in any particular year? The paragraph shows, however, that, when it was written, the rule was to intercalate two months in five years. But it does not say how many days would remain to be carried on to the sixth year after the second intercalation.

Paragraph 52. The actual number of the undivided and divided lines in the hexagrams is the same, 192 of each. But the representative number of an undivided line is 9, and of a divided line 6. Now 9×4 (the number of the emblematic figures) $\times 6$ (the lines of each hexagram) = 216; and $6 \times 4 \times 6 = 144$. The sum of these products is 360, which was assumed, for the purpose of working the intercalation, as the standard length of the year. But this was derived from observation, and other considerations;—it did not come out of the Yî.

Paragraphs 53–56. The number in 53 arises thus:—192 (the

and on its prognostications for our practice of divination.

60. Therefore, when a superior man is about to take action of a more private or of a public character, he asks (the Yî), making his inquiry in words. It receives his order, and the answer comes as the echo's response. Be the subject remote or near, mysterious or deep, he forthwith knows of what kind will be the coming result. (If the Yî) were not the most exquisite thing under heaven, would it be concerned in such an operation as this?

61. (The stalks) are manipulated by threes and fives to determine (one) change; they are laid on opposite sides, and placed one up, one down, to make sure of their numbers; and the (three necessary)

number of each series of lines in the sixty-four hexagrams) $\times 36$ (obtained as above) = 6912, and $192 \times 24 = 4608$, the sum of which = 11,520. This is said to be 'the number of all things,' the meaning of which I do not know. The 'four operations' are those described in paragraph 31. They were thrice repeated in divination to determine each new line, and of course it took eighteen of them to form a hexagram. The diagrams might be extended ad infinitum, both in the number of lines and of figures, by the natural process of their formation as shown in the Introduction, page 14, without the aid of the divining stalks; and no sufficient reason can be given why the makers of the figures stopped at sixty-four.

It is difficult to believe the first statement in paragraph 57 and to understand the second. What is it 'to Shān or spiritualise virtuous actions?' The concluding statement approximates to impiety.

We may grant what is affirmed in paragraph 58, but does the Yî really give us any knowledge of the processes of change and transformation in nature? What wiser are we after all the affirmations about numbers? 'Change' = changings, understood actively:—the work of Heaven; 'transformations' = evolution:—the finish given by earth to the changing caused by Heaven.

changes are gone through with in this way, till they form the figures pertaining to heaven or to earth. Their numbers are exactly determined, and the emblems of (all things) under the sky are fixed. (If the Yî were not the thing most capable of change of all things under heaven, how could it effect such a result as this ?

62. In (all these operations forming) the Yî, there is no thought and no action. It is still and without movement ; but, when acted on, it penetrates forthwith to all phenomena and events under the sky. If it were not the most spirit-like thing under the sky, how could it be found doing this ?

63. The (operations forming the) Yî are the method by which the sages searched out exhaustively what was deep, and investigated the minutest springs (of things).

64. 'Those operations searched out what was deep : '—therefore they could penetrate to the views of all under the sky. 'They made apparent the minutest springs of (things) : '—therefore they could bring to a completion all undertakings under the sky. 'Their action was spirit-like : '—therefore they could make speed without hurry, and reached their destination without travelling.

65. This is the import of what the Master said, that 'In the Yî there are four things indicating the way of the sages.'

Chapter X, paragraphs 59–65, enlarges on the service rendered to men by the Yî, owing to the way in which it was made by the sages to express their views and carry into effect their wishes.

Paragraph 59 mentions the four things in which its usefulness appears. 'The emblematic figures' are the four hsiang, which are produced by the manipulation of the undivided and divided

Chapter XI. 66. The Master said :—‘What is it that the Yî does? The Yî opens up (the knowledge of the issues of) things, accomplishes the undertakings (of men), and embraces under it (the way of) all things under the sky. This and nothing more is what the Yî does. Thereby the sages, through (divination by) it, would give their proper course to the aims of all under the sky, would give stability to their undertakings, and determine their doubts.’

67. Therefore the virtue of the stalks is versatile

lines, and whose representative numbers are 9, 8, 7, 6. ‘Divination’ appears in the paragraph as pû-shih, which means ‘divination by the tortoise-shell and by the stalks.’ But the tortoise-shell had nothing to do with the use of the Yî. Before the composition of these Appendixes the two terms must have been combined to express the practice of divination, without reference to its mode.

Paragraph 60 speaks of the explanations and prognostications of the Yî. The ‘exquisiteness’ ascribed to it would be due to the sages who had devised it, and appended their explanations to it; but the whole thing has no existence save in cloud-land.

Paragraph 61 speaks of the operations with the stalks till the various changes in the results issued in the determination of the emblematic figures, and then in the fixing of the individual lines and entire hexagrams. Even Kû Hsi admits that the references to the different processes are now hardly intelligible.

Paragraph 62. How could the writer speak of the Yî without thought or action as being most ‘spirit-like?’ If it did what he asserts, those who contrived it might be so described? They would have been beings whose operation was indeed like that of spirits, inscrutable, ‘unfathomable’ (paragraph 32), even like that of the Spirit of God (VI, 10).

Paragraphs 63 and 64 ought not to be taken as saying that the sages did the things described for themselves by the Yî. They knew them of themselves, and made the Yî that others might come by it to do the same. So the writer imagined. No words could indicate more clearly than those of paragraph 65 that the paragraphs between it and 59 did not come from Confucius, but from the compiler of the Great Appendix, whoever he was.

and spirit-like; that of the diagrams is exact and wise; and the meaning given by the six lines is changeful to give (the proper information to men). The sages having, by their possession of these (three virtues), cleansed their minds, retired and laid them up in the secrecy (of their own consciousness). But their sympathies were with the people in regard both to their good fortune and evil. By their spirit-like ability they knew (the character of) coming events, and their wisdom had stored up (all experiences of) the past. Who could be able to accomplish all this? (Only our) ancient sages, quick in apprehension and clear in discernment, of far-reaching intelligence, and all-embracing knowledge, and with a majesty, going spirit-like to its objects;—it was only they who could do so.

68. Therefore (those sages), fully understanding the way of Heaven, and having clearly ascertained the experience of the people, instituted (the employment of) these spirit-like things, as a provision for the use of the people. The sages went about the employment of them (moreover) by purifying their hearts and with reverent caution, thereby giving (more) spirituality and intelligence to their virtue.

69. Thus, a door shut may be pronounced (analogous to) *Kh wăn* (or the inactive condition), and the opening of the door (analogous to) *K'ien* (or the active condition). The opening succeeding the being shut may be pronounced (analogous to what we call) a change; and the passing from one of these states to the other may be called the constant course (of things).

The (first) appearance of anything (as a bud) is

what we call a semblance ; when it has received its complete form, we call it a definite thing.

(The divining-plant having been produced, the sages) set it apart and laid down the method of its employment,—what we call the laws (of divination). The advantage arising from it in external and internal matters, so that the people all use it, stamps it with a character which we call spirit-like.

70. Therefore in (the system of) the Y† there is the Grand Terminus, which produced the two elementary Forms. Those two Forms produced the Four emblematic Symbols, which again produced the eight Trigrams.

71. The eight trigrams served to determine the good and evil (issues of events), and from this determination was produced the (successful prosecution of the) great business (of life).

72. Therefore of all things that furnish models and visible figures there are none greater than heaven and earth ; of things that change and extend an influence (on others) there are none greater than the four seasons ; of things suspended (in the sky) with their figures displayed clear and bright, there are none greater than the sun and moon ; of the honoured and exalted there are none greater than he who is the rich and noble (one) ; in preparing things for practical use, and inventing and making instruments for the benefit of all under the sky, there are none greater than the sages ; to explore what is complex, search out what is hidden, to hook up what lies deep, and reach to what is distant, thereby determining (the issues) for good or ill of all events under the sky, and making all men under heaven full of strenuous endeavours, there

are no (agencies) greater than those of the stalks and the tortoise-shell.

73. Therefore Heaven produced the spirit-like things, and the sages took advantage of them. (The operations of) heaven and earth are marked by (so many) changes and transformations; and the sages imitated them (by means of the Yî). Heaven hangs out its (brilliant) figures from which are seen good fortune and bad, and the sages made their emblematic interpretations accordingly. The Ho gave forth the map, and the Lo the writing, of (both of) which the sages took advantage.

74. In the (scheme of the) Yî there are the four symbolic figures by which they inform men (in divining of the lines making up the diagrams); the explanations appended to them convey the significance (of the diagrams and lines); and the determination (of the divination) as fortunate or the reverse, to settle the doubts (of men).

Chapter XI, paragraphs 66–74, treats of divination, and the scheme of it supplied in the Yî. That scheme must be referred first to Heaven, which produced the spirit-like things,—the divining-plant and the tortoise; and next to the sages, who knew the mind of Heaven, and made the plant and shell subservient to the purpose for which they were intended.

Paragraph 66 answers the question of what the Yî does; and if there were truth or reason in it, the book and its use would be most important. I have closed the quotation of “the Master’s” words at the end of the paragraph; but really we do not know if they extend so far, or farther.

Paragraphs 67 and 68 glorify the sages and their work. The virtues of the divining-plant all belonged to them, and it was thus that they were able to organise the scheme of divination. The production of ‘the spirit-like things’ is, in paragraph 73, ascribed to ‘Heaven;’ the characters about them in these paragraphs mean no more than is expressed in the translation.

Chapter XII. 75. It is said in the Yî, 'Help is given to him from Heaven. There will be good fortune ; advantage in every respect.' The Master

Paragraph 69 shows how the antinomy of the yin and yang pervades all nature, and how the sages turned it, as existing pre-eminently in the divining-plant, to account.

Paragraph 70. Evidently the author had in view here the genesis of the diagrams of the Yî, the number of figures increasing in a geometrical progression with the ratio of 2, while the lines of the figures form an arithmetical progression with the common difference of 1. This is quite plain after 'the two elementary forms (—— and — —)' have been made. They give birth to 'the four emblematic symbols,' each of two lines (====, ====, ====, == ==, known, in this order, as the Grand or old Yang, the young Yin, the young Yang, and the Grand or old Yin). By the addition to each of these symbols first of the yang line, and then of the yin, there arise the eight trigrams, each of three lines ; and the process of formation might be continued indefinitely.

But how was the first step taken in the formation of the two elementary lines? Here, it is said, they were produced by the Thái Kî, or the Grand Terminus. This is represented in K'ü Hsî's 'Youth's Introduction to the Study of the Yî,' by a circle ; but he tells us that that representation of it was first made by K'âu-ze (A.D. 1017-1073, called also K'âu Tun-fî, K'âu Mâu-shû, and, most of all, K'âu Lien-khi), and that his readers must be careful not to suppose that Fû-hsî had such a figure in his mind's eye. I fail myself to understand how there can be generated from a circle the undivided and the broken line. Given those two lines, and the formation of the sixty-four hexagrams proceeds regularly according to the method above described. We must start from them, whether we can account or not for the rise of the idea of them in the mind of Fû-hsî.

Leaving the subject of the figure of the Thái Kî, the name gives us hardly any clue to its meaning. Kî is used for the extreme term of anything, as the ridge-pole of a house, or the pinnacle of a pagoda. The comment on the first sentence in the paragraph by Wang Pi (A.D. 226-249) is:—'Existence must begin in non-existence, and therefore the Grand Terminus produced the two elementary Forms. Thái Kî is the denomination of what has no denomination. As it cannot be named, the text takes the extreme

said:—‘Yü (祐) is the symbol of assisting. He whom Heaven assists is observant (of what is right); he whom men assist is sincere. The individual here indicated treads the path of sincerity and desires to be observant (of what is right), and studies to exalt the worthy. Hence “Help is given to him from Heaven. There will be good fortune, advantage in every respect.”’

76. The Master said:—‘The written characters are

point of anything that exists as an analogous term for the *Thâi K'î*.' Expanding Wang's comment, Khung Ying-tâ says:—‘*Thâi K'î* means the original subtle matter, that formed the one chaotic mass before heaven and earth were divided;’ and then he refers to certain passages in Láo-ze's *T'ao Teh King*, and identifies the *Thâi K'î* with his *T'ao*. This would seem to give to *Thâi K'î* a material meaning. The later philosophers of the Sung school, however, insist on its being immaterial, now calling it *lî*, the principle of order in nature, now *t'ao*, the defined course of things, now *T'î*, the Supreme Power or God, now *shân*, the spiritual working of God. According to *K'ang-ze*, all these names are to be referred to that of ‘Heaven,’ of which they express so many different concepts.

Paragraph 71 speaks of divination in practice, and paragraph 72 celebrates the service done by that through the plant and shell, as equal to, and indeed the complement of, all the other services rendered by heaven and earth, the seasons, the sun and moon, the sages, and the greatest potentates. Surely, it is all very extravagant.

The last two paragraphs resume the theme of the making of the *Yi* by the sages, and their teaching the practice of divination. Of the *Ho* map and the *Lo* writing, I have spoken in the Introduction, pages 14–18. But if we accept the statement that the *Lo* writing had anything to do with the making of the *Yi*, we must except *Fû-hsî* from the sages to whom we are indebted for it. It was to the Great *Yü*, more than a thousand years later than *Fû-hsî*, that the *Lo* disclosed its writing; and *Yü* is never said to have had anything to do with the *Yi*. Nor is either of these things mentioned in Section ii, paragraph 11, where the work of *Fû-hsî* is described more in detail.

not the full exponent of speech, and speech is not the full expression of ideas;—is it impossible then to discover the ideas of the sages?’ The Master said:—‘The sages made their emblematic symbols to set forth fully their ideas; appointed (all) the diagrams to show fully the truth and falsehood (of things); appended their explanations to give the full expression of their words; and changed (the various lines) and made general the method of doing so, to exhibit fully what was advantageous. They (thus) stimulated (the people) as by drums and dances, thereby completely developing the spirit-like (character of the Yi).’

77. May we not say that *Khien* and *Khwan* [= the *yang* and *yin*, or the undivided and divided lines] are the secret and substance of the *Yi*? *Khien* and *Khwan* being established in their several places, the system of changes was thereby constituted. If *Khien* and *Khwan* were taken away, there would be no means of seeing that system; and if that system were not seen, *Khien* and *Khwan* would almost cease to act.

78. Hence that which is antecedent to the material form exists, we say, as an ideal method, and that which is subsequent to the material form exists, we say, as a definite thing.

Transformation and shaping is what we call change; carrying this out and operating with it is what we call generalising the method; taking the result and setting it forth for all the people under heaven is, we say, (securing the success of) the business of life.

79. Hence, to speak of the emblematic figures:—(The sage) was able to survey all the complex phe-

nomena under the sky. He then considered in his mind how they could be figured, and (by means of the diagrams) represented their material forms and their character. Hence those (diagrams) are denominated Semblances. A (later) sage was able to survey the motive influences working all under the sky. He contemplated them in their common action and special nature, in order to bring out the standard and proper tendency of each. He then appended his explanation (to each line), to determine the good or evil indicated by it. Hence those (lines with their explanations) are denominated Imitations (the Yáo).

80. The most thorough mastery of all the complex phenomena under the sky is obtained from the diagrams. The greatest stimulus to movement in adaptation to all affairs under the sky is obtained from the explanations.

81. The transformations and shaping that take place are obtained from the changes (of the lines); the carrying this out and operating with it is obtained from the general method (that has been established). The seeing their spirit-like intimations and understanding them depended on their being the proper men; and the completing (the study of) them by silent meditation, and securing the faith of others without the use of words, depended on their virtuous conduct.

Chapter XII, paragraphs 75-81, endeavours to show how we have in the Yí a representation of the changing phenomena of nature, and such a representation as words or speech could not convey.

Paragraph 75 has a good meaning, taken by itself; but it has no apparent connexion with the rest of the chapter. K'ü Hsi thought

SECTION II.

Chapter I. 1. The eight trigrams having been completed in their proper order, there were in each the (three) emblematic lines. They were then

it was misplaced in its present position, and should be at the end of chapter 8. Compare paragraph 14.

The first two statements of paragraph 76 are general, but made here specially to exalt the Yî, as teaching more clearly and fully than written characters could have done. The Khang-hsi editors decide that 'the emblematic figures' here are the eight trigrams of Fû-hsî,—against the view of Kû Hsî, which restricts them to signify the undivided and divided lines. The repetition of the words, 'The Master said,' is probably the error of an early transcriber.

Paragraphs 77 and 78 refer to the phenomena of nature and the course of human affairs, as suggesting and controlling the formation of the system of the Yî. The formation of that becomes the subject in paragraph 79. *K'ien* and *Khwan* are used, as we have already seen them more than once, for the active and inactive conditions in nature, indicated by the divided and undivided lines. It is difficult to translate what is said in paragraph 78, about T'ao and *K'hi*;—what I have called, 'an ideal method' and 'a definite' thing. P. Regis translates the text by—'Quod non est inter figurata aut corporea sed supereminet est rationale, est ratio, T'ao; quod (est) inter figurata subjacetque certae figurae est sensibile, est instrumentum.' But *t'ao* cannot here signify ratio or reason; for *t'ao* and *k'hi* are names for the same thing under different conditions; first as a possibility, and next as an actuality. Such is the natural interpretation of the text, and so all the great scholars of the Sung dynasty construed it, as may be seen in the 'Collected Comments' of the imperial edition. So far they were correct, however many of them might stumble and fall in confounding this 'ideal method' with God.

What follows in the paragraph has no connexion with these two statements. P. Regis, who divides his translation into two paragraphs, says:—'Satis patet utramque textus hujus partem non cohaerere.

multiplied by a process of addition till the (six) component lines appeared.

2. The strong line and the weak push themselves each into the place of the other, and hence the changes (of the diagrams) take place. The appended explanations attach to every form of them its character (of good or ill), and hence the movements (suggested by divination) are determined accordingly.

3. Good fortune and ill, occasion for repentance or regret, all arise from these movements.

4. The strong and the weak (lines) have their fixed and proper places (in the diagrams); their changes, however varied, are according to the requirements of the time (when they take place).

5. Good fortune and ill are continually prevailing each against the other by an exact rule.

6. By the same rule, heaven and earth, in their course, continually give forth (their lessons); the sun and moon continually emit their light; all the movements under the sky are constantly subject to this one and the same rule.

Quod ergo illas divisimus, id fecimus majoris perspicuitatis causa, non ratione ordinis qui certe nullus est, ut in re potius assuta quam connexa.'

Paragraph 79 is a repetition of paragraphs 38, 39, 'to introduce,' says *K'ü Hsi*, 'the two paragraphs' that follow.

The editors of the imperial edition find in 80, 81, an amplification mainly of 76, showing how what is said there of the natural phenomena is exhibited in the *Yî*. The concluding sentence is a declaration (hardly necessary) about the sage makers, to the effect that they were as distinguished for virtuous conduct as for wisdom,—'the proper men' to stand between Heaven and the mass of men as they did.

7. *K'ien*, (the symbol of heaven, and) conveying the idea of strength, shows to men its easy (and natural) action. *K'wăn*, (the symbol of earth, and) conveying the idea of docility, shows to men its compendious (receptivity and operation).

8. The *Yáo* (or lines) are imitative representations of this. The *Hsiang*, or emblematic figures, are pictorial representations of the same.

9. The movements of the lines and figures take place (at the hand of the operator), and are unseen; the good fortune or ill is seen openly and is beyond. The work to be done appears by the changes; the sympathies of the sages are seen in their explanations.

10. The great attribute of heaven and earth is the giving and maintaining life. What is most precious for the sage is to get the (highest) place—(in which he can be the human representative of heaven and earth). What will guard this position for him? Men. How shall he collect a large population round him? By the power of his wealth. The right administration of that wealth, correct instructions to the people, and prohibitions against wrong-doing;—these constitute his righteousness.

Chapter I, paragraphs 1–10, is an amplification, according to *Khung Ying-tâ* and the editors of the imperial edition of the present dynasty, of the second chapter of Section i. The latter say that as all the chapters of Section i from the third onwards serve to elucidate chapter 2, so it is with this chapter and all that follow in this Section. The formation of the diagrams, and of their several lines, their indication of good fortune and bad, and the analogy between the processes of nature and the operations of divination, and other kindred subjects, are all touched on.

The order of the eight trigrams in paragraph 1, is *k'ien*, *tui*,

Chapter II. 11. Anciently, when Pão-hsi had come to the rule of all under heaven, looking up, he contemplated the brilliant forms exhibited in the sky, and looking down he surveyed the patterns shown on the earth. He contemplated the ornamental appearances of birds and beasts and the (different) suitabilities of the soil. Near at hand, in his own person, he found things for consideration, and the same at a distance, in things in general. On this he devised the eight trigrams, to show fully the

lí, kǎn, sun, khan, kǎn, khwǎn. The three lines of each are emblematic,—the first of heaven, the second of man, the third of earth. This is the most likely explanation of hsiang, ‘the emblems’ or ‘similitudes’ here. Why the maker—‘sages’—stopt at sixty-four figures, of six lines each, is a question that cannot be answered.

Paragraph 2. Of course it was a great delusion to suppose that the changes of lines consequent on divination could be so connected with the movements of life as to justify the characterising them as good or evil, or afford any guidance in the ordering of conduct.

Paragraph 4. Who can tell ‘the requirements of the time’ amid the complexity of the phenomena of nature or the ever-varying events of human experience and history? The wiser men are, the more correct will be their judgments in such matters; but is there any reason for trusting to divination about them?

Paragraphs 5, 6. It is difficult to say what is ‘the exact rule’ intended here; unless it be that the factors in every movement shall act according to their proper nature. The Khang-hsi editors say:—‘We see the good sometimes meeting with misfortune, and the bad with good fortune; but such is not the general rule.’ ‘The lessons that heaven and earth give forth’ are those concerning the method of their operation as stated in paragraph 7, and more fully in 6, 7, 8 of Section i.

What is said in paragraph 10 is striking and important, and in harmony with the general strain of Confucian teaching;—as in the Great Learning, chapter 10, and many other places; but I fail to see its appropriateness in its present place in the Yi.

attributes of the spirit-like and intelligent (operations working secretly), and to classify the qualities of the myriads of things.

12. He invented the making of nets of various kinds by knitting strings, both for hunting and fishing. The idea of this was taken, probably, from Li (the third trigram, and thirtieth hexagram).

13. On the death of Pão-hsi, there arose Shǎn-nǎng (in his place). He fashioned wood to form the share, and bent wood to make the plough-handle. The advantages of ploughing and weeding were then taught to all under heaven. The idea of this was taken, probably, from Yi (the forty-second hexagram).

14. He caused markets to be held at midday, thus bringing together all the people, and assembling in one place all their wares. They made their exchanges and retired, every one having got what he wanted. The idea of this was taken, probably, from Shih Ho (the twenty-first hexagram).

15. After the death of Shǎn-nǎng, there arose Hwang Tí, Yáo, and Shun. They carried through the (necessarily occurring) changes, so that the people did (what was required of them) without being wearied; yea, they exerted such a spirit-like transformation, that the people felt constrained to approve their (ordinances) as right. When a series of changes has run all its course, another change ensues. When it obtains free course, it will continue long. Hence it was that 'these (sovereigns) were helped by Heaven; they had good fortune, and their every movement was advantageous.' Hwang Tí, Yáo, and Shun (simply) wore their upper and

lower garments (as patterns to the people), and good order was secured all under heaven. The idea of all this was taken, probably, from *Khien* and *Khwăn* (the first and eighth trigrams, or the first and second hexagrams).

16. They hollowed out trees to form canoes; they cut others long and thin to make oars. Thus arose the benefit of canoes and oars for the help of those who had no means of intercourse with others. They could now reach the most distant parts, and all under heaven were benefited. The idea of this was taken, probably, from *Hwân* (the fifty-ninth hexagram).

17. They used oxen (in carts) and yoked horses (to chariots), thus providing for the carriage of what was heavy, and for distant journeys,—thereby benefiting all under the sky. The idea of this was taken, probably, from *Sui* (the seventeenth hexagram).

18. They made the (defence of the) double gates, and (the warning of) the clapper, as a preparation against the approach of marauding visitors. The idea of this was taken, probably, from *Yü* (the sixteenth hexagram).

19. They cut wood and fashioned it into pestles; they dug in the ground and formed mortars. Thus the myriads of the people received the benefit arising from the use of the pestle and mortar. The idea of this was taken, probably, from *Hsião Kwo* (the sixty-second hexagram).

20. They bent wood by means of string so as to form bows, and sharpened wood so as to make arrows. This gave the benefit of bows and arrows, and served to produce everywhere a feeling of awe.

The idea of this was taken, probably, from Khwei (the thirty-eighth hexagram).

21. In the highest antiquity they made their homes (in winter) in caves, and (in summer) dwelt in the open country. In subsequent ages, for these the sages substituted houses, with the ridge-beam above and the projecting roof below, as a provision against wind and rain. The idea of this was taken, probably, from Tâ K'wang (the thirty-fourth hexagram).

22. When the ancients buried their dead, they covered the body thickly with pieces of wood, having laid it in the open country. They raised no mound over it, nor planted trees around; nor had they any fixed period for mourning. In subsequent ages the sages substituted for these practices the inner and outer coffins. The idea of this was taken, probably, from Tâ K'wo (the twenty-eighth hexagram).

23. In the highest antiquity, government was carried on successfully by the use of knotted cords (to preserve the memory of things). In subsequent ages the sages substituted for these written characters and bonds. By means of these (the doings of) all the officers could be regulated, and (the affairs of) all the people accurately examined. The idea of this was taken, probably, from Kwâi (the forty-third hexagram).

Chapter II, paragraphs 11-23, treats of the progress of civilisation in China, and how the great men of antiquity who led the way in the various steps of that progress were guided by the Yî. Only five of these are mentioned;—the first, Fû-hsî, the beginning of whose reign, according to the least unlikely of the chronological accounts, must be placed in the 34th century B.C., while Shun's

Chapter III. 24. Therefore what we call the Yî is (a collection of) emblematic lines. They are styled emblematic as being resemblances.

reign ended in B.C. 2203. The time embraced in this chapter therefore is about twelve centuries and a half. But the writer gives his own opinion that the various discoveries and inventions mentioned were suggested to their authors by certain hexagrams of the Yî. The most commonly received view, however, is that Fû-hsî had only the eight trigrams, and that the multiplication of them to the 64 hexagrams was the work of king Wăn, fully a thousand years later than Shun. This is the view of the editors of the imperial Yî. If it be contended that Fû-hsî himself multiplied his trigrams, and gave their names to the resulting hexagrams, how could he have wrapped up in them the intimations of discoveries which were not made till many centuries after his death? The statements in the chapter cannot be received as historical. It came from another hand, and not from Confucius himself. The writer or compiler gives the legends current about the various inventions of his time. The making of the trigrams is placed first of all to do honour to the Yî. The account of it is different from that given in paragraph 73 of the former Section, and we hear nothing of the Ho map or Lo writing.

Paragraph 11. Pão-hsî here and in 13 is the same as Fû-hsî. As Pão is written here, there is no meaning in it; but another character Phão (庖) is more common, and Phão-hsî would mean the inventor of the kitchen and cookery. This was the first step towards civilisation, and was appropriately followed by the hunting and fishing—both by means of nets—in paragraph 12.

Paragraphs 13, 14 celebrate the work of Shăn-năng, 'the marvellous or spirit-like husbandman.' There was no metal about the primitive plough. The market for the exchange of commodities, without the use of coin, was an important advance.

The invention of the robes, or of dress, mentioned in paragraph 15, would seem to show that previously men had been in a very rude state. The passage indicates, however, the courtesies and proprieties of social life, in which dress plays an important part, and which now began to be organised.

The infant navigation in paragraph 16 was as little indebted to the use of metal as the agriculture of 13.

Paragraphs 17 and 18 show that in those primitive times there

25. What we call the Thwan (or king Wǎn's explanations) are based on the significance (of each hexagram as a whole).

26. We call the lines (of the figures) Yáo from their being according to the movements taking place all under the sky.

27. In this way (we see) the rise of good fortune and evil, and the manifestation of repentance and regret.

were already the practices of rapine and war. 'The double gates' were those of the city wall, and of the enclosed suburb. The clapper may still be heard all over China. Bows and arrows, however, came rather later, as in 20.

I suppose 'the sages' in paragraphs 21, 22, 23 refer generally to the great names mentioned in the previous chapters; nor can we define the distinction in the writer or compiler's mind between 'antiquity' and 'the highest antiquity.' Compare what is said on the rise of the coffin in 22 with Mencius' remarks on the same subject in Book III, ii, 5. 4. He would hardly have expressed himself as he did, if he had been familiar with this text. The invention of written characters is generally ascribed to Fû-hsî. Paragraph 23 does not say so, but the inventor is said to have been a sage of a subsequent age to the time of 'high antiquity.' That 'high antiquity' must stretch back very far.

Chapter III, paragraphs 24-27, treats of the Yî as made up of figurative diagrams, which again are composed of lines ever changing, in accordance with the phenomena of nature and human experience, while to the resulting figures their moral character and providential issues are appended by the sages. It may be regarded as an epitome of chapter 2 in Section i.

Paragraph 24. It is observed by the editors of the imperial edition that a chapter should not begin with a 'therefore;' and they are inclined to agree with many critics who would enter this as the last paragraph of the preceding chapter. In that case it would be a summing-up of the concluding sentences of the different paragraphs, the truth and genuineness of which are deservedly suspected. The characters for 'therefore,' however, are very loosely used in these Appendixes.—The lines, as they were intended by

Chapter IV. 28. In the Yang trigrams (or those of the undivided line) there are more of the Yin lines, and in the Yin trigrams (or those of the divided line) there are more of the Yang lines.

29. What is the cause of this? It is because the Yang lines are odd (or made by one stroke), and the Yin lines are even (or made by two strokes).

30. What (method of) virtuous conduct is thus intimated? In the Yang trigrams we have one ruler, and two subjects,—suggesting the way of the superior man. In the Yin trigrams we have two rulers, and one subject,—suggesting the way of the small man.

Fû-hsí, were emblematic; and they are still more so, as interpreted by the duke of K'áu. Meanings are drawn from the figures that resemble or illustrate principles in the subjects to which they are applied.

Paragraph 25. The character rendered 'the significance' means materials, and is illustrated by reference to all the different materials out of which a house is composed. So there are half-a-dozen things about the diagrams, their lineal structure, emblematic intention, their attributes, &c., out of which their interpretation is fashioned.

Paragraph 26. E. g. an undivided line may appear in an odd place, which is right, or in an even place, which is wrong; and the case is the opposite with the divided lines. But what has this to do with the right or wrong of the events divined about?

Chapter IV, paragraphs 28–30. Of the distinction of the trigrams into Yang and Yin.

The trigrams that contain only one undivided line—*hân* (☰☷), *khan* (☷☰), and *k'ân* (☰☰)—are called Yang. The undivided line is called 'the lord' in them. It is just the opposite with the Yin trigrams, in which there are two undivided lines, and one divided,—*sun* (☷☷), *li* (☷☶), and *tui* (☶☷). These together constitute the 'six children,' or 'three

Chapter V. 31. It is said in the Yt, 'Full of anxious thoughts you go and come; (only) friends will follow you and think with you.' The Master said:—'In all (the processes taking place) under heaven, what is there of thinking? what is there of anxious scheming? They all come to the same (successful) issue, though by different paths; there is one result, though there might be a hundred anxious schemes. What is there of thinking? what is there of anxious scheming?'

32. The sun goes and the moon comes; the moon goes and the sun comes;—the sun and moon thus take the place each of the other, and their shining is the result. The cold goes and the heat comes; the heat goes and the cold comes;—it is by this mutual succession of the cold and heat that the year is completed. That which goes becomes less and less, and that which comes waxes more and more;—it is by the influence on each other of this contraction and expansion that the advantages (of the different conditions) are produced.

33. When the looper coils itself up, it thereby straightens itself again; when worms and snakes

sons' and 'three daughters' in the later arrangement of the trigrams, ascribed to king Wăn.

Paragraph 29. Each part of the divided line counts as one; hence a yang trigram counts as $1 + 2 + 2 = 5$ strokes, four of which are yin, while a yin trigram counts as $2 + 1 + 1 = 4$, only two of which are yang. But this is mere trifling.

In explanation of paragraph 30 it is said that 'we have in the yang trigrams two (or more) subjects serving one ruler, and in the yin one subject serving two rulers, and two rulers striving together for the allegiance of one subject.' This is ingenious, but fanciful; as indeed this distinction of the trigrams into a yang class and a yin is a mere play of fancy.

go into the state of hybernation, they thereby keep themselves alive. (So), when we minutely investigate the nature and reasons (of things), till we have entered into the inscrutable and spirit-like in them, we attain to the largest practical application of them; when that application becomes the quickest and readiest, and all personal restfulness is secured, our virtue is thereby exalted.

34. Going on beyond this, we reach a point which it is hardly possible to know. We have thoroughly comprehended the inscrutable and spirit-like, and know the processes of transformation;—this is the fulness of virtue.

35. It is said in the Yt, ‘(The third line shows its subject) distressed before a rock, and trying to lay hold of thorns; entering into his palace and not seeing his wife:—there will be evil.’ The Master said:—‘If one be distressed by what need not distress him, his name is sure to be disgraced; if he lay hold on what he should not touch, his life is sure to be imperilled. In disgrace and danger, his death will (soon) come;—is it possible for him in such circumstances to see his wife?’

36. It is said in the Yt, ‘The duke with (his bow) shoots at the falcon on the top of the high wall; he hits it:—his every movement will be advantageous.’ The Master said:—‘The falcon is a bird (of prey); the bow and arrow is a weapon (of war); the shooter is a man. The superior man keeps his weapon concealed about his person, and waits for the proper time to move;—doing this, how should his movement be other than successful? There is nothing to fetter or embarrass his movement; and hence, when he comes forth, he succeeds in his object.

The language speaks of movement when the instrument necessary to it is ready and perfect.'

37. The Master said:—'The small man is not ashamed of what is not benevolent, nor does he fear to do what is not righteous. Without the prospect of gain he does not stimulate himself to what is good, nor does he correct himself without being moved. Self-correction, however, in what is small will make him careful in what would be of greater consequence;—and this is the happiness of the small man. It is said in the Yt, "His feet are in the stocks, and he is disabled in his toes:—there will be no (further) occasion for blame."'

38. If acts of goodness be not accumulated, they are not sufficient to give its finish to one's name; if acts of evil be not accumulated, they are not sufficient to destroy one's life. The small man thinks that small acts of goodness are of no benefit, and does not do them; and that small deeds of evil do no harm, and does not abstain from them. Hence his wickedness becomes great till it cannot be covered, and his guilt becomes great till it cannot be pardoned. This is what the Yt says, 'He wears the cangue and his ears are destroyed:—there will be evil.'

39. The Master said:—'He who keeps danger in mind is he who will rest safe in his seat; he who keeps ruin in mind is he who will preserve his interests secure; he who sets the danger of disorder before him is he who will maintain the state of order. Therefore the superior man, when resting in safety, does not forget that danger may come; when in a state of security, he does not forget the possibility of ruin; and when all is in a state of order, he does not

forget that disorder may come. Thus his person is kept safe, and his states and all their clans can be preserved. This is according to what the Yî says, "(Let him say), 'Shall I perish? shall I perish?' (so shall this state be firm, as if) bound to a clump of bushy mulberry trees."'

40. The Master said:—'Virtue small and office high; wisdom small and plans great; strength small and burden heavy:—where such conditions exist, it is seldom that they do not end (in evil). As is said in the Yî, "The tripod's feet are overthrown, and the ruler's food is overturned. The body of him (who is thus indicated) is wet (with shame):—there will be evil."'

41. The Master said:—'Does not he who knows the springs of things possess spirit-like wisdom? The superior man, in his intercourse with the high, uses no flattery, and, in his intercourse with the low, no coarse freedom:—does not this show that he knows the springs of things? Those springs are the slight beginnings of movement, and the earliest indications of good fortune (or ill). The superior man sees them, and acts accordingly without waiting for (the delay of) a single day. As is said in the Yî, "He is firm as a rock, (and acts) without the delay of a single day. With firm goodness there will be good fortune." Firm as a rock, how should he have to wait a single day to ensure his knowing (those springs and his course)? The superior man knows the minute and the manifested; he knows what is weak, and what is strong:—he is a model to ten thousand.'

42. The Master said:—'I may venture to say that the son of the Yen family had nearly attained (the

standard of perfection). If anything that he did was not good, he was sure to become conscious of that; and when he knew it, he did not do the thing again. As is said in the Yt, "(The first line shows its subject) returning from an error that has not led him far away. There is no occasion for repentance. There will be great good."

43. There is an intermingling of the genial influences of heaven and earth, and transformation in its various forms abundantly proceeds. There is an intercommunication of seed between male and female, and transformation in its living types proceeds. What is said in the Yt, 'Three individuals are walking together and one is made to disappear; there is (but) one man walking, and he gets his mate,' tells us of the effort (in nature) at oneness (of operation).

44. The Master said:—"The superior man (in a high place) composes himself before he (tries to) move others; makes his mind restful and easy before he speaks; settles (the principles of) his intercourse with others before he seeks anything from them. The superior man cultivates these three things, and so is complete. If he try to move others while he is himself in unrest, the people will not (act) with him; if he speak while he is himself in a state of apprehension, the people will not respond to him; if without (certain principles of) intercommunication, he issue his requests, the people will not grant them. When there are none to accord with him, those who (work to) injure him will make their appearance. As is said in the Yt, "(We see one) to whose advantage none will contribute, while some will seek to assail him. He observes no

regular rule in the ordering of his heart:—there will be evil.”’

Chapter V, paragraphs 31–44, gives the words of the duke of Kâu on eleven different lines in the Text of the Yî, along with remarks of Confucius in farther illustration of them. But they seem also to be intended to bring forth more fully the meaning of certain previous utterances about the structure and scope of the Yî.

Paragraphs 31–34 start from the fourth line of the 31st hexagram, which would seem merely to require a steady and unvarying purpose in any one, in order to the full development of his influence. The editors of the imperial edition, however, make the whole a sequel of paragraph 5. But granted that there is no ‘anxious scheming’ in the processes of the natural world or in the phenomena of insect life, there is really no analogy to their proceedings in the course of the man who makes himself master of ‘the nature and reasons of things,’ as described in 33 and 34. Nor are ‘the nature and reasons of things’ to be found in the Yî, as the writer believed they were. Such as it is, it requires immense thought to understand it, and when we have laid hold of it, there is nothing substantial in our grasp. The ‘virtue’ predicated of such attainment is not so much moral excellence, as apprehension and the power and ability to invent, and to affect others.

Paragraph 35. See on the third line of Khwân, the 47th hexagram. If we were to translate the explanations of the line after Confucius, we should put the first two statements hypothetically; but the four that compose it seem to run on in the same way. They are all, I apprehend, hypothetical.

Paragraph 36. See on the last line of Kieh, the 40th hexagram.

Paragraph 37. See on the first line of Shih Ho, the 21st hexagram. The ‘self-correction in what is small’ implies of course that the small man has been ‘awed.’ What is said about him here is true; but we hardly expect it in this place.

Paragraph 38 should probably begin, like those before and after it, with ‘The Master said.’ The characters quoted from the Yî are again from the text of Shih Ho, on the last line.

Paragraph 39. See on the fifth line of Phî, the 12th hexagram.

Paragraph 40 gives Confucius’ views on the fourth line of Ting, the 50th hexagram.

In paragraph 41 we are conducted to the 16th hexagram,—the

Chapter VI. 45. The Master said :—‘(The tri-grams) *K’hien* and *Khwăn* may be regarded as the gate of the *Yi*.’ *K’hien* represents what is of the yang nature (bright and active); *Khwăn* what is of the yin nature (shaded and inactive). These two unite according to their qualities, and there comes the embodiment of the result by the strong and weak (lines). In this way we have the phenomena of heaven and earth visibly exhibited, and can comprehend the operation of the spiritual intelligence.

46. The appellations and names (of the diagrams and lines) are various, but do not go beyond (what is to be ascribed to the operation of these two conditions). When we examine the nature and style

second line of it. The being ‘firm as a rock’ is understood to symbolise the state of ‘rest,’ the quiet self-possession out of which successful movement and action is understood to spring.

In paragraph 42, ‘the son of the Yen family’ is Yen Hui, the favourite disciple of Confucius. The passage quoted from the *Yi* is that on the first line of *Fû*, the 24th hexagram.

To paragraph 43, as to paragraph 38, I would prefix the characters for ‘The Master said.’ ‘Male and female’ is to be taken generally, and not confined to the individuals of the human pair. One Chinese writer says that in the transformations ascribed to heaven and earth, birds, fishes, animals, and plants are included, but from the ‘transformation in its living types’ plants are excluded, because in their generation there is nothing analogous to the emission and reception of seed. Other Chinese writers, however, are well enough acquainted with the sexual system of plants. It would seem to me that Confucius, if the paragraph were really his, intended only plants or the vegetable world in his reference to the operation of heaven and earth, and had all living tribes in view in his mention of male and female. The passage of the *Yi* referred to is on the third line of *Sun*, the 41st hexagram. The application of it is far-fetched.

Paragraph 44. See on the fifth line of *Yî*, the 42nd hexagram.

(of the appended explanations), they seem to express the ideas of a decaying age.

47. The Yî exhibits the past, and (teaches us to) discriminate (the issues of) the future; it makes manifest what is minute, and brings to light what is obscure. (Then king Wăn) opened (its symbols), and distinguished things in accordance with its names, so that all his words were correct and his explanations decisive;—(the book) was now complete.

48. The appellations and names (of the diagrams and lines) are but small matters, but the classes of things comprehended under them are large. Their scope reaches far, and the explanations attached to them are elegant. The words are indirect, but to the point; the matters seem plainly set forth, but there is a secret principle in them. Their object is, in cases that are doubtful, to help the people in their conduct, and to make plain the recompenses of good and evil.

The principal object, it is said, of chapter VI, paragraphs 45-48, is to set forth the views of king Wăn and his son in the explanations which they appended to the diagrams and lines; and in doing this the writer begins in 45, with Fû-hsî's starting, in the formation of his eight trigrams, from the devising of the whole and divided lines, to represent the two primitive forms in nature. The two 'pure' trigrams formed of these lines, unmixed, give rise to all the others, or rather the lines of which they are formed do so; and are thus compared to a gate by which the various diagrams enter to complete the system that is intended to represent the changing phenomena of nature and experience. The next sentence in the above version of paragraph 45 appears in Canon McClatchie's translation of the Yî, as follows:—'*K'zien* is the membrum virile, and *Khwăn* is the pudendum muliebre (the sakti of *K'zien*).' It is hardly possible, on reading such a version, to suppress the exclamation *proh pudor!* Can a single passage be adduced in support of it from among all the Chinese critics in the

Chapter VII. 49. Was it not in the middle period of antiquity that the Yî began to flourish? Was not he who made it familiar with anxiety and calamity?

50. Therefore (the 10th diagram), Lî, shows us the foundation of virtue; (the 15th), Hsien, its handle; (the 24th), Fû, its root; (the 32nd), Hăng, its solidity; (the 41st), Sun, its cultivation; (the 42nd), Yî, its abundance; (the 47th), Khwăn, its exercise of discrimination; (the 48th), 3ing, its field; and (the 57th), Sun, its regulation.

51. In Lî we have the perfection of harmony; in Hsien, we have the giving honour to others,

line of centuries? I believe not. The ideas which it expresses are gratuitously and wantonly thrust into this text of the Yî. 'K'ien' and 'Khwăn' are not spoken of thus. If the latter half of the paragraph be unintelligible, this interpretation of the former would make the whole disgusting.

In paragraph 46 the writer passes from the work of Fû-hsî to that of king Wăn and his son, and the composition of the written Yî is referred to 'a decaying age,'—the age, namely, of the tyrant Kâu. Then king Wăn and the duke of Kâu, it is said, deploring the degeneracy of their times and the enormities of the government, indicated, by their treatment of the ancient symbols, their sense of right and wrong, and the methods by which the prevailing evils might be rectified.

Paragraphs 47 and 48 follow and expand the meaning of 45. The editors of the imperial edition say that the former sentence of 47 is the sequel of 45, and the latter of 46, bringing us finally to the explanations and decisions of king Wăn, as the most important portion of the Yî. K'ü Hsî, moreover, observes that throughout the chapter, as well as in the chapters that follow, there must be many characters wanting in the text, while there are many also that are doubtful. This is specially the case with 48. Where the order of the characters has been disarranged merely, correction is easy; but where characters are evidently missing, attempts to fill the lacunae are merely guess-work.

and the distinction thence arising; in Fû we have what is small (at first), but there is in it a (nice) discrimination of (the qualities of) things; in Hăng we have a mixed experience, but without any weariness; in Sun we have difficulty in the beginning and ease in the end; in Yî we have abundance of growth without any contrivance; in Khwăn we have the pressure of extreme difficulty, ending in a free course; in 3ing we have abiding in one's place and at the same time removal (to meet the movement of others); and in Sun we have the weighing of things (and action accordingly), but secretly and unobserved.

52. (The use of) Lî appears in the harmony of the conduct; of Hsien, in the regulation of ceremonies; of Fû, in self-knowledge; of Hăng, in uniformity of virtue; of Sun, in keeping what is harmful at a distance; of Yî, in the promotion of what is advantageous; of Khwăn, in the diminution of resentments; of 3ing, in the discrimination of what is righteous; and of Sun, in the doing of what is appropriate to time and to circumstances.

Chapter VII, paragraphs 49-52, is occupied with nine hexagrams, as specially indicating how the superior man, or the ruler, should deal with a time of trouble and solicitude, specially by the cultivation of his own virtue. Not, we are told, that the same thing might not be learned from other diagrams, but these nine specially occurred to the writer, or, as many think, to Confucius.

Paragraph 49 is important as agreeing in its testimony with 46. The Yî was made in middle-antiquity; that is, in the end of the Shang dynasty, and the rise of the Kâu; and the maker or makers had personal and public reasons for anxiety about the signs of the times.

Paragraph 50 shows the particular phase of virtue in each of the nine hexagrams that are mentioned; 51, the marvellous character-

Chapter VIII. 53. The Yî is a book which should not be let slip from the mind. Its method (of teaching) is marked by the frequent changing (of its lines). They change and move without staying (in one place), flowing about into any one of the six places of the hexagram. They ascend and descend, ever inconstant. The strong and the weak lines change places, so that an invariable and compendious rule cannot be derived from them ;—it must vary as their changes indicate.

54. The goings forth and comings in (of the lines) are according to rule and measure. (People) learn from them in external and internal affairs to stand in awe.

55. (The book), moreover, makes plain the nature of anxieties and calamities, and the causes of them. Though (its students) have neither master nor guardian, it is as if their parents drew near to them.

56. Beginning with taking note of its explanations, we reason out the principles to which they point. We thus find out that it does supply a constant and standard rule. But if there be not the proper men (to carry this out), the course cannot be pursued without them.

istics of each phase ; and 52, its use. The 'therefore' with which paragraph 50 commences shows the process of thought by which the writer passed from the anxiety that possessed the mind of the author of the Yî to the use to be derived, in such circumstances, from the study of Lî and the other hexagrams.

Chapter VIII, paragraphs 53–56, describes the method of studying the Yî as consisting very much in watching the changes that take place in the lines, and reflecting on the appended explanations ; while, after all, much must depend on there being 'the proper men,' to carry its lessons into practice.

Chapter IX. 57. The Yt is a book in which the form (of each diagram) is determined by the lines from the first to the last, which must be carefully observed. The six lines are mixed together, according to the time (when they enter the figure) and their substance (as whole and divided).

58. There is difficulty in knowing (the significance of) the first line, while to know that of the topmost line is easy;—they form the beginning and the end (of the diagram). The explanation of the first line tasks the calculating (of the makers), but in the end they had (but) to complete this.

59. As to the variously-disposed intermediate lines with their diverse formations, for determining their qualities, and discriminating the right and wrong in them, we should be unprovided but for the explanations of them.

60. Yea, moreover, if we wish to know what is likely to be preserved and what to perish, what will be lucky and what will be unlucky, this may easily be known (from the explanations of the different lines). But if the wise will look at the explanations of the entire diagrams, their thoughts will embrace more than half of this knowledge.

61. The second and fourth lines are of the same

There seems to be a contradiction between the statements in paragraphs 53 and 56 about the book supplying, and not supplying, a standard rule; but the meaning, probably, is that while it does not give a rule generally applicable, it gives rules for particular cases.

K'ü Hsî says he does not understand 54, and thinks some characters must have been lost. 'The six places of the hexagram' in 53 are, literally, 'the six empties.' The places are so called, because it is only a temporary possession of them, which is held by the fugitive lines, whether whole or divided.

quality (as being in even places), but their positions (with respect to the fifth line) are different, and their value is not the same; but the second is the object of much commendation, and the fourth the subject of many apprehensions,—from its nearness (to that line). But for a line in a place of weakness it is not good to be far (from the occupant of the place of strength), and what its subject should desire in such a case is (merely) to be without blame. The advantage (here) is in (the second line) being in the central place.

62. The third and fifth lines are of the same quality, (as being in odd places), but their positions are different; and the (occupant of) the third meets with many misfortunes, while the occupant of the fifth achieves much merit:—this arises from one being in the noble position and the other in the mean. Are they occupied by the symbol of weakness? There will be peril. By that of strength? There will be victory.

Chapter IX, paragraphs 56–62, speaks of the hexagrams as made up of the different lines, and various things to be attended to in those lines to determine their meaning.

Paragraph 57. The time or order in which the lines enter determines of course the place and number of each in the figure. Their 'substance' is their form, as whole or divided, being yang or yin.

Paragraph 58 belongs to the first and sixth lines. We are hardly prepared for the statement that 'the maker or makers' had so much difficulty in determining the meaning of the first line. Of course when they had fixed that and completed the figure, explaining all the lines, it was easy for the student to follow their exposition, as paragraph 59 says.

Paragraph 60 seems to say that the work of the duke of Kâu on each line was but an indicating in detail of the processes of his father's mind in explaining the whole figure.

Chapter X. 63. The Yt is a book of wide comprehension and great scope, embracing everything. There are in it the way of heaven, the way of man, and the way of earth. It then takes (the lines representing) those three Powers, and doubles them till they amount to six. What these six lines show is simply this,—the way of the three Powers.

64. This way is marked by changes and movements, and hence we have the imitative lines. Those lines are of different grades (in the trigrams), and hence we designate them from their component elements. These are mixed together, and elegant forms arise. When such forms are not in their appropriate places, the ideas of good fortune and bad are thus produced.

The last two paragraphs mention several points important to be attended to in studying, more especially, the duke of Kâu on the several lines. Three different views of the concluding statement,—‘are they occupied,’ &c.,—are given in the imperial edition. ‘It belongs,’ says Wû Kǎng, ‘to the fifth line;’ ‘to the third line,’ says Hû Ping-wǎn (also of the Yüan dynasty); while Hân Hsing-kwo (of the Thang dynasty) held that it belonged to both. The Khang-hsi editors say that ‘by discriminating and combining these views, we get to the meaning of the text.’ I am unable to do so.

Chapter X, paragraphs 63, 64, speaks of the great comprehensiveness of the Yî, its figures and explanations being applicable to the three Powers—heaven, earth, and man.

With paragraph 63, compare paragraph 4, Appendix VI. In the trigram the upper line represents heaven, the middle line man, and the lowest earth. This paragraph and that other are the nearest approach I know to an attempt to account for the doubling of the number of lines, and stopping with the hexagram; but the doing so was entirely arbitrary. Kû Hsi says:—‘The upper two characters belong to heaven, the middle two to man, and the lower two to earth.’ No words could be more express; and yet Canon McClatchie says (p. 354):—‘The two upper strokes represent Heaven, or Thâi-yî, the husband; the two middle strokes, Earth, his wife; and the

Chapter XI. 65. Was it not in the last age of Yin, when the virtue of *K'âu* had reached its highest point, and during the troubles between king *Wăn* and (the tyrant) *K'âu*, that the (study of the *Yi*) began to flourish? On this account the explanations (in the book) express (a feeling of) anxious apprehension, (and teach) how peril may be turned into security, and easy carelessness is sure to meet with overthrow. The method in which these things come about is very comprehensive, and must be acknowledged in every sphere of things. If at the beginning there be a cautious apprehension as to the end, there will probably be no error or cause for blame. This is what is called the way of the *Yi*.

two lower strokes, Man, their son; all being animated by the same Divine Reason (*t'ao*) or Supreme God (*Chih Shăn*).’ This note shows how one error, or misunderstanding of the Chinese original, draws other errors with it. The character *t'ao* in the paragraph has not at all the sense of reason, human or divine, but its primary and ordinary signification of the path or course. As *Lü Si* (Han dynasty) says:—‘In the way of heaven there are the changes of day and night, sun and moon; in that of earth, those of hardness and softness, dryness and moisture; in that of man, those of action and rest, of movement and stillness, of good fortune and bad, of good and evil.’

‘The imitative lines’ in the translation of 64, is simply ‘the *Y'ao*’ in the Chinese text, which I have rendered according to the account of them in paragraph 8, et al. Their different grades are their position as high or low in the figures (paragraph 1, Section i), and their ‘component elements,’ literally ‘their substance, or thing-nature,’ is their structure as being yang or yin, according to the use of wuh in paragraphs 57, 59, et al. A yang line in an even place, or a yin line in an odd, is not in its appropriate place, and gives an indication of what is bad.

Chapter XI, paragraph 65. P. Regis observes on this chapter:—
‘I do not hesitate to say that there is found nowhere in the whole

Chapter XII. 66. (The hexagram) *K'kien* represents the strongest of all under the sky. Through this quality its operations are always manifested with ease, for it knows where there would be peril and embarrassment. (The hexagram) *Khwăn* represents the most docile of all under the sky. Through this quality its operations are always manifested with the promptest decision, for it knows where there would be obstruction.

67. (The sages, who are thus represented, and who made the *Yî*.) were able to rejoice in heart (in the absolute truth of things), and were able (also) to weigh carefully all matters that could occasion anxiety; (thus) they fixed the good and bad fortune (of all things) under the sky, and could accomplish the things requiring strenuous efforts.

68. Therefore amid the changes and transformations (taking place in heaven and earth), and the words and deeds of men, events that are to be fortunate have their happy omens. (The sages) knew the definite principles underlying the prognostications of the former class, and the future of

Yî a passage which affords more light for the explanation of the book.' Paragraph 49 told us that 'the study of the *Yî* flourished in the middle period of antiquity, and that the author of it was familiar with anxiety and troubles.' That information becomes here more particular. The *Yî*, existing when this Appendix was written, was made in the closing period of the Yin dynasty, and the making of it was somehow connected with the attempts of the tyrant *K'âu* against king *Wăn*. We are not told expressly that the book was written, in part at least, by king *Wăn*; but the tradition to that effect derives a certain amount of support from what is said here. The general object of the author is also stated clearly enough,—to inculcate a cautious and reverent administration of affairs, never forgetful of the uncertainties of life and fortune.

those of the latter, (now to be) ascertained by divination.

69. The places of heaven and earth (in the diagrams) having been determined, the sages were able (by means of the Yt) to carry out and complete their ability. (In this way even) the common people were able to share with them in (deciding about) the counsels of men and the counsels of spiritual beings.

70. The eight trigrams communicate their information by their emblematic figures. The explanations appended to the lines and the completed figures tell how the contemplation of them affected (the makers). The strong and the weak lines appear mixed in them, and (thus) the good and the evil (which they indicate) can be seen.

71. The changes and movements (which take place in the manipulation of the stalks and the formation of the diagrams) speak as from the standpoint of what is advantageous. The (intimations of) good and evil vary according to the place and nature (of the lines). Thus they may indicate a mutual influence (in any two of them) of love or hatred, and good or evil is the result; or that mutual influence may be affected by the nearness of the lines to, or their distance from, each other, and then repentance or regret is the result; or the influence may be that of truth or of hypocrisy, and then the result is what is advantageous, or what is injurious. In all these relations of the (lines in the) Yt, if two are near and do not blend harmoniously, there may be (all these results),—evil, or what is injurious, or occasion for repentance and regret.

72. The language of him who is meditating a

revolt (from the right) betrays his inward shame; that of him whose inward heart doubts about it diverges to other topics. The words of a good man are few; those of a coarse man are many. The words of one who slanders what is good are un-

Chapter XII, paragraphs 66-72, is generally divided into three sections;—the first, embracing 66-68, and treating of the sages, the makers of the Yî, as themselves independent of it, knowing all that it enables us to know, and able to accomplish all that it enables us to accomplish; the second, embracing 69-71, and telling how the sages formed the Yî, and made all men, by means of it, partakers of their now unlimited knowledge and power; the third, comprised in paragraph 72, and saying, if it be genuine and in its proper place, that the ordinary speech of men is as mysterious and indicative of what is in them, as the explanations of the Yî are, when we consider who were its authors.

'The sages,' who are the subject of 65-68, are not mentioned in the text; but 67 makes it plain that the subject must be some personal being or beings. Neither *Khien* nor *Khwan* can 'rejoice in heart, and weigh carefully matters occasioning anxiety.' The commentators generally interpolate 'the sages;' even Ying-tâ of the Thang dynasty, who does not introduce the sages in his exposition, yet makes the subject to be 'the disposer and nourisher of all things.' He gets to his view by an unnatural interpretation of two characters in 67, which are now thrown out of the text by all critics as not genuine. That 'the sages' is really the subject in the mind of the writer appears from the express mention of them in 69, when also 'heaven and earth' take the place of *Khien* and *Khwan*. It is absurd, not to say blasphemous, to assume that the sages who made the Yî had the knowledge and ability here ascribed to them; but the theory of the Yî as containing a scheme for the discovery of the future necessitated the ascribing such attributes to them. Compare with the whole Section, and especially with paragraph 68, what is said in 'the Doctrine of the Mean,' chapter 24.

The first Section shows how the sages were themselves independent of the Yî, and had no need of it; the second goes on to tell how they devised and constructed it, to make all men equal to themselves in a knowledge of phenomena and human events, and of their indications of, and issues in, the future. Summing up its

substantial; those of him who is losing what he ought to keep are crooked.

lessons, the editors of the imperial edition say, 'There is no passage in the Appendix more full and clear than this on the five points in regard to the lines which the student of the Yî has to attend to. Those points are :—their time, position, quality, mutual nearness, and responsive relation. It is by a consideration of the two latter points, moreover, that he must form his judgment on their appropriateness or inappropriateness in the three others.'

Paragraph 72 has really no connexion with the rest of the chapter. I have stated above how the critics attempt to make out such a connexion; but I agree myself with P. Regis, who appends to his version of the paragraph this note :—'*Quae sententiae quidem sapiunt doctrinam Confucianam, at non ordinem, utpote cum praecedentibus minime cohaerentes, sed omnino ab iis abscissae avulsaeque.*'

APPENDIX IV.

Supplementary to the Thwan and Yáo on the first and second Hexagrams, and showing how they may be interpreted of man's nature and doings.

SECTION I. *K'HIEN*.

Chapter I. 1. What is called (under *K'hién*) 'the great and originating' is (in man) the first and chief quality of goodness; what is called 'the penetrating' is the assemblage of excellences; what is called 'the advantageous' is the harmony of all that is right; and what is called 'the correct and firm' is the faculty of action.

2. The superior man, embodying benevolence, is fit to preside over men; presenting the assemblage of excellences, he is fit to show in himself the union of all propriety; benefiting (all) creatures, he is fit to exhibit the harmony of all that is right; correct and firm, he is fit to manage (all) affairs.

3. The fact that the superior man practises these four virtues justifies the application to him of the words—'*K'hién* represents what is great and originating, penetrating, advantageous, correct and firm.'

The title of this Appendix is in Chinese the Wǎn Yen Kwan, 'The Record of Wǎn Yen;' and according to the analogy of the titles of the three Appendixes that follow, Wǎn should perform the part of a verb and Yen that of a substantive. So the characters are usually taken, and to Wǎn is given the meaning of 'Explaining (Shih);' and to Yen that of 'Words or Sentences,' meaning the Thwan of king Wǎn, and the Yáo of the duke of Káu on the first two hexagrams. The document treats of these,

Chapter II. 4. What is the meaning of the words under the first line undivided, 'The dragon lies hid (in the deep);—it is not the time for active doing?' The Master said:—'There he is, with the powers of the dragon, and yet lying hid. The influence of the world would make no change in him; he would do nothing (merely) to secure his fame. He can live, withdrawn from the world, without regret; he can experience disapproval without trouble of mind. Rejoicing (in opportunity), he carries his principles

and of no others. 'It shows the amount and depth of meaning in them,' says *K'ü Hsî*, 'and the other hexagrams may be treated after the analogy supplied here.' Confucius, it is said by others, died before he was able to carry out the plan which he had formed. But, as I have shown in the Introduction (pp. 28–30), it is more than doubtful whether we have in this Appendix anything at all directly from the sage.

Chapter I, paragraphs 1–3, shows how the attributes of *K'ien*, as explained by king *Wăn*, are to be understood of the constituent principles of human nature. What is remarkable is, that we find paragraphs 1, 2, with very little variation, in one of the narratives of the *30 Kwan*, as having been spoken by a marchioness-dowager of *Lü* in B.C. 564, several years before Confucius was born. One so familiar as *K'ü Hsî* was with all the classical literature of his country could not be ignorant of this. His solution of the questions arising from it is, that anciently there was this explanation of the characters of king *Wăn*; that it was employed by *Shü Kiang* (of *Lü*), and that Confucius also availed himself of it; while the chronicler used, as he does below, the phraseology of 'The Master said,' to distinguish the real words of Confucius from such ancient sayings. But who was this chronicler? No one can tell. The legitimate conclusion from *K'ü*'s criticism is this, that so much of this Appendix as is preceded by 'The Master said' is from Confucius;—so much and no more.

The ascription in paragraph 3 of 'the four virtues' to the superior or normal man, man in his best estate, and yet inferior to 'the sagely man,' is Confucian,—after the style of the teaching of the Master in the *Analects*.

into action ; sorrowing (for want of opportunity), he keeps with them in retirement. Yes, he is not to be torn from his root (in himself).’ This is ‘the dragon lying hid.’

5. What is the meaning of the words under the second line, ‘The dragon shows himself and is in the field ;—it will be advantageous to see the great man ?’ The Master said :—‘ There he is, with the dragon’s powers, and occupying exactly the central place. He is sincere (even) in his ordinary words, and earnest in his ordinary conduct. Guarding against depravity, he preserves his sincerity. His goodness is recognised in the world, but he does not boast of it. His virtue is extensively displayed, and transformation ensues. The language of the Yî, “ The dragon shows himself and is in the field ;—it will be advantageous to see the great man,” refers to a ruler’s virtue.’

6. What is the meaning of the words under the third line, ‘The superior man is active and vigilant all the day, and in the evening (still) careful and apprehensive ;—the position is dangerous, but there will be no mistake ?’ The Master said :—‘ The superior man advances in virtue, and cultivates all the sphere of his duty. His leal-heartedness and good faith are the way by which he advances in virtue. His attention to his words and establishing his sincerity are the way by which he occupies in his sphere. He knows the utmost point to be reached, and reaches it, thus showing himself in accord with the first springs (of things) ; he knows the end to be rested in, and rests in it, thus preserving his righteousness in accordance with that end. Therefore he occupies a high position without pride, and a low

position without anxiety. Thus it is that, being active and vigilant, and careful (also) and apprehensive as the time requires, though his position be perilous, he will make no mistake.'

7. What is the meaning of the words under the fourth line, 'He is as if he were leaping up, (but still) is in the deep;—there will be no mistake?' The Master said:—'He finds no permanent place either above or below, but he does not commit the error (of advancing). He may advance or recede;—there is no permanent place for him: but he does not leave his fellows. The superior man, advancing in virtue and cultivating the sphere of his duty, yet wishes (to advance only) at the (proper) time, and therefore there is no mistake.'

8. What is the meaning of the words under the fifth line, 'The dragon is on the wing in the sky;—it will be advantageous to see the great man?' The Master said:—'Notes of the same key respond to one another; creatures of the same nature seek one another; water flows towards the place that is (low and) damp; fire rises up towards what is dry; clouds follow the dragon, and winds follow the tiger:—(so) the sage makes his appearance, and all men look to him. Things that draw their origin from heaven move towards what is above; things that draw their origin from the earth cleave to what is below:—so does everything follow its kind.'

9. What is the meaning of the words under the topmost line, 'The dragon exceeds the proper limits;—there will be occasion for repentance?' The Master said:—'The position is noble, but it is not that of office; (its occupant) dwells on high, but he has no people (to rule); and the men of talent

and virtue in the positions below will give him no aid ;—should he move in such a case, there will be occasion for repentance.'

In chapter II, paragraphs 4–9, Confucius is introduced, explaining, with considerable amplification, what is said by the duke of Kâu under the several lines of the hexagram. 'The dragon' becomes the symbol of 'the superior man,' and of 'the great man,' or the sage upon the throne. The language approaches at times to the magniloquence of Mencius, while in paragraph 8 the voice hardly seems to be that of the sage at all.

With paragraph 5, compare chapters 8 and 14 of 'the Doctrine of the Mean,' agreeing much in language and sentiment with what we have here. The line, a strong or undivided line, and therefore yang, is said to be 'exactly in the central place;' but the line is in the second, an even place, that proper to a yin line ; and in other passages this might be explained in an unfavourable way. The Chinese character *k'ang* has the meaning given to it, now of 'exact,' and now of 'correct,' the latter being always favourably interpreted.

Paragraph 8. The fifth is almost always the place of honour and authority in the hexagram, and therefore 'the great man' here continues to be the great man, 'the sage.' The argument is that as things of the same kind respond to and seek one another, so is it with the sage and ordinary man. They are of the same kind, though far apart ; and when a sage appears, all other men look to him with admiration and hope. The continuity of the illustrations, however, is broken by the introduction of the dragon and clouds, and the tiger and wind. Are these of the same kind? *K'ü Hsi* says he does not think that the real dragon and real tiger are intended ; but he does not tell us how he understood the terms. *Šai K'ing* (early in the Ming dynasty) says :—'The dragon feels the influence of the clouds surcharged with rain, and rises from the deep, and when the tiger feels the approach of the cold winds he roars. Thus when the dragon rises, the clouds are sure to collect ; and when the tiger screams, the winds follow ;' but all this does not help us to appreciate any better the words of the text. And the concluding illustration is nearly as foreign to our way of conceiving things. By 'things that draw their origin from heaven' all animals—moving creatures—are intended ; and by those that draw their origin from the earth are intended all plants,—things that stand and

Chapter III. 10. 'The dragon lies hid;—it is not the time for active doing:—the position is (too) low.

11. 'The dragon shows himself and is in the field:—the time (requires him still) to be unemployed.

12. 'All the day active and vigilant:—(he now) does his (proper) business.

13. 'He is as if he were leaping up, (but still) is in the deep:—he is making trial of himself.

14. 'The dragon is on the wing in the sky:—(the subject of the line) is on high and ruling.

15. 'The dragon exceeds the proper limit, and there will be occasion for repentance:—when things have been carried to extremity, calamity ensues.

16. Undivided lines appear in all these representations of the great and originating power denoted by *K'ien*:—(what follows in the *Yáo* tells us how) all under the sky there will be good order.

do not move. The former turn their heads to the sky, and the latter their roots to the earth. So we read in *K'ü Hsi*; but I continue to wonder that Confucius selected such illustrations and spoke in such a style.

Paragraph 9. As I have said above, the place of honour and authority in the hexagram belongs to the fifth line, and no other plays so unimportant a part as the sixth; and hence it is represented here as having 'no place' at all. Before he whom it represents is called to act, the battle has been won or lost. Movement from him will only accelerate and intensify the result.

Chapter III, paragraphs 10–16, goes over again the *Yáo* of the duke of *K'au* with very brief explanations, grounded chiefly on the consideration of the place or position occupied by the several lines, and the time of their introduction into the action of the hexagram.

Paragraph 16. See the note on the Text of *K'ien*, corresponding to this line, page 58, and also that on paragraph 7 of the symbolism of the figures and lines, Section i, page 165. There is the same

Chapter IV. 17. 'The dragon lies hid in the deep;—it is not the time for active doing:—the energy denoted by the undivided line is laid up and hid away as in the deep.

18. 'The dragon appears in the field:—all under heaven (begins to be) adorned and brightened.

19. 'All the day active and vigilant:—continually, as the time passes and requires, does he act.

20. 'He is as if he were leaping up, (but still) is in the deep:—a change is taking place in the method indicated by (this) *K'ien* diagram.

21. 'The dragon is on the wing in the sky:—this shows that his place is based on his heavenly virtue.

22. 'The dragon exceeds the (proper) limit;—there will be occasion for repentance:—the time is come to an end, and so also is his opportunity.

23. Undivided lines appear in all these representations of the great and originating power denoted by *K'ien*:—and (from what follows in the *Yâo*) we see the model (of action) afforded by heaven.

difficulty in understanding the first part of the short paragraph; the conclusion of it must be a consequence of the language of the *Yâo*, though it is not repeated here.

Chapter IV, paragraphs 17–23, goes over the same ground for a third time, treating the various paragraphs chiefly from the standpoint of time.

Paragraph 17 tells us that time and circumstances are essential, as well as inward power, to successful development and demonstration. In paragraph 18, the words of the *Yâo* about meeting with the great man are not quoted, but they prompted the latter half of it.

Paragraph 19. Compare the language on paragraph 6, towards the end.

Paragraph 20. The subject passes here from the lower trigram and enters into the upper. We are told not to lay stress on 'the method of *K'ien*.' In paragraph 21 we have the sage upon the

Chapter V. 24. The 'greatness' and 'originating' represented by *Khien* refer to it as (the symbol of) what gives their beginning (to all things), and (also) secures their growth and development.

25. 'The advantageousness and the correctness and firmness' refer to its nature and feelings (as seen in all the resulting things).

26. *Khien*, (thus) originating, is able with its admirable benefits to benefit all under the sky. We are not told how its benefits are conferred; but how great is (its operation)!

27. How great is (what is emblemized by) *Khien*!—strong, vigorous, undeflected, correct, and (in all these qualities) pure, unmixed, exquisite!

28. The six lines, as explained (by the duke of *Kâu*), bring forth and display (its meaning), and everything about it is (thus) indirectly exhibited.

29. (The great man) at the proper time drives with these six dragons through the sky. The clouds move, and the rain is distributed; all under heaven enjoys repose.

throne. Time and opportunity are both in progress in 19; here in 22, they are both passed, have reached their extremity or end.

Paragraph 23:—see on paragraph 16. 'The model of heaven,' says *Wû Khăng*, 'is the due blending of the strong and active with the weak and passive, the regulation of movement in accordance with the highest reason, so that there shall be neither excess nor deficiency.'

Chapter V, paragraphs 24–29. The author here, leaving the treatise on the symbolism of the *Yáo*, turns to that on the *Thwan*, or expositions of king *Wán*, and amplifies it, not quoting from it, however, so fully and exactly, as he has done in the previous chapters from the *Yáo*.

Paragraphs 24 and 25 are based on the statement of the significance of the *Thwan* under *Khien*, and not on the treatise on the symbolism. The originating power cannot be separated from that of penetration and development. The latter issues from the former

Chapter VI. 30. In the superior man his conduct is (the fruit of) his perfected virtue, which might be seen therefore in his daily course; but the force of that phrase, 'lying hid,' requires him to keep retired, and not yet show himself, nor proceed to the full development of his course. While this is the case, the superior man (knows that) it is not the time for active doing.

31. The superior man learns and accumulates the results of his learning; puts questions, and discriminates among those results; dwells magnanimously and unambitiously in what he has attained to; and carries it into practice with benevolence. What the Yî says, 'The dragon appears in the field:—it will be advantageous to meet with the great man,' has reference to the virtuous qualities of a ruler (as thus described).

32. In the third line there is a twofold (symbol of) strength, but (the position) is not central. (Its

as the summer follows on the spring, according to an illustration of *K'ü Hsî*. 'The advantageousness' and 'firm correctness,' he compares also to the autumn and winter, saying that the *K'hien* power in its essence, as it is in itself, is best described by these two latter characteristics, while the two former describe it in its operation. It is thus that he tries to give his readers an idea of what he understood by 'nature and feelings' in 25. But this chapter treats of the *K'hien* power in nature rather than in humanity. Confining our view to the power so operating, we cannot say that the description of it in 26 and 27 is magniloquent or hyperbolic.

Paragraph 28 returns to the explanations of the lines of the hexagram by the duke of *K'âu*, which exhibit the power in different positions and relations, bringing out all its significance; and then 29 confines us to the fifth line, in which we have its ideal. The spheres of nature and of men seem to be in the view of the author, and therefore I introduce 'the great man,' as the subject, after the example of the best critics. Like the clouds and the rain to the thirsty earth, so is the rule of the sage to expectant humanity.

occupant) is not in heaven above, nor is he in the field beneath. Therefore there must be active vigilance and cautious apprehension as the time requires ; and though (the position be) perilous, there will be no mistake.

33. In the fourth line there is (the symbol of) strength, but (the position) is not central. (Its occupant) is not in heaven above, nor is he in the field beneath, nor is he in the place of man intermediate. Hence he is in perplexity ; and being so, he has doubts about what should be his movements, and so will give no occasion for blame.

34. The great man is he who is in harmony, in his attributes, with heaven and earth ; in his brightness, with the sun and moon ; in his orderly procedure, with the four seasons ; and in his relation to what is fortunate and what is calamitous, in harmony with the spirit-like operations (of Providence). He may precede Heaven, and Heaven will not act in opposition to him ; he may follow Heaven, but will act (only) as Heaven at the time would do. If Heaven will not act in opposition to him, how much less will men ! how much less will the spirit-like operation (of Providence) !

35. The force of that phrase—'exceeding the proper limits'—indicates the knowing to advance but not to retire ; to maintain but not to let perish ; to get but not to lose.

36. He only is the sage who knows to advance and to retire, to maintain and to let perish ; and that without ever acting incorrectly. Yes, he only is the sage !

Chapter VI, paragraphs 30-36. The author leaving the Thwan, turns again to the treatise on the symbolism of the Yáo, his main

SECTION II. KHWĀN.

Chapter I. 1. (What is indicated by) Khwăn is most gentle and weak, but, when put in motion, is

object being to show how reasonable are the decisions and lessons of the duke of Kâu.

The subject of paragraph 30 has the virtue; but his position in the lowest place shows that his time is not yet come.

In paragraph 31 we have the superior man developing, by means of the processes described, into 'the great man,' with the attributes of a ruler, the appearance of whom is a blessing to men.

The twofold symbol of strength in paragraph 32 is the yang or undivided line in the third place (odd) proper to it. There will be no mistake, because the subject of the line, in the exercise of his caution, will abstain from any forward movement.

According to paragraph 63 of last Appendix, Section ii, both the third and fourth lines in the hexagram belong to man, and are intermediate between those of heaven and those of earth. Khung Ying-tâ, to get over the difficulty in what is said on the fourth line, says that, as a matter of fact and locally, man is nearer earth than heaven, and is aptly represented therefore by the third line and not by the fourth;—I prefer to point out the inconsistency, and leave it. The subject of this fourth line will move very cautiously, and so escape blame.

The eulogium of 'the great man' in paragraph 34 cannot fail to recall to the classical scholar the thirty-first and other chapters of 'the Doctrine of the Mean,' where the sage is described as 'The Equal of Heaven.' In one sentence here he is spoken of as sometimes taking precedence of Heaven, which then does not act in opposition to him! I do not know of any statement about the sage, coming without doubt from Confucius, that is so extravagant as this. It is difficult—in fact impossible—to say from the Yî itself, what we are to understand by the kwei shăn, which I have translated here by 'the spirit-like operations (of Providence).' The compound denomination does not often occur in the book. In Appendix III, Section i, 21, kwei is the anima and shăn the animus; and in paragraph 50, I have translated the terms by 'the contracting and expanding operations.' In Appendix I, page 226 and page 259, the name is used as in the present text. That second instance and this

hard and strong; it is most still, but is able to give every definite form.

2. 'By following, it obtains its (proper) lord,' and pursues its regular (course).

3. It contains all things in itself, and its transforming (power) is glorious.

4. Yes, what docility marks the way of Khwăn! It receives the influences of heaven, and acts at the proper time.

Chapter II. 5. The family that accumulates goodness is sure to have superabundant happiness, and the family that accumulates evil is sure to have superabundant misery. The murder of a ruler by

paragraph were evidently constructed, the one on the model of the other. I think it likely that the breath or air, *khi*, became the name with the earliest Chinese for their first concept of spirit; then the breath inspired or inhaled was called *kwei*, and became the name for the grosser part of the spirit, returning to the earth; and *shăn*, the breath exhaled or expired, the name for the subtler and intellectual spirit, ascending to a state of activity and enjoyment. The explanations of the terms in the *R Yâ* and other dictionaries seem to justify this view. The combination *kwei shăn* is sometimes best translated by 'spiritual beings.' The school of the Sung philosophy understand by it—the contracting and expanding of the primary matter, or that matter conceived of in two forms or with two opposite qualities. *Khăng-ze* says here that 'Heaven and earth are another name for *tâo*, and *kwei shăn* another name for "the vestiges of making and transformation;" and that the sage being in harmony with the *tâo* or practical reason of the universe, how can men or the *kwei shăn* be contrary to him?' Whatever be thought of the Sung speculations and theories, I think that a translator ought to give an indication of the primary meaning of the name *kwei shăn*.

Paragraphs 35 and 36 suggest the description of Confucius by Mencius, V, ii, 1, 5, as the one among the sages who was most governed by the consideration of time, doing continually what the circumstances of the time required.

his minister, or of his father by a son, is not the result of the events of one morning or one evening. The causes of it have gradually accumulated,—through the absence of early discrimination. The words of the Yt, ‘He treads on the hoar-frost; the strong ice will come (by and by),’ show the natural (issue and growth of things).

6. ‘Straight’ indicates the correctness (of the internal principle), and ‘square,’ the righteousness (of the external act). The superior man, (thus represented), by his self-reverence maintains the inward (correctness), and in righteousness adjusts his external acts. His reverence and righteousness being (thus) established, his virtues are not solitary instances or of a single class. ‘Straight, square, and great, working his operations, without repeated efforts, in every respect advantageous :’—this shows how (such a one) has no doubts as to what he does.

7. Although (the subject of) this divided line has excellent qualities, he (does not display them, but) keeps them under restraint. ‘If he engage with them in the service of the king, and be successful, he will not claim that success for himself :’—this is the way of the earth, of a wife, of a minister. The way of the earth is—‘not to claim the merit of achievement,’ but on behalf (of heaven) to bring things to their proper issue.

8. Through the changes and transformations produced by heaven and earth, plants and trees grow luxuriantly. If (the reciprocal influence of) heaven and earth were shut up and restrained, we should have (a state that might suggest to us) the case of men of virtue and ability lying in obscurity. The words of the Yt, ‘A sack tied up :—there will be

no ground for blame or for praise,' are in reality a lesson of caution.

9. The superior man (emblemized here) by the 'yellow' and correct (colour), is possessed of comprehension and discrimination. He occupies the correct position (of supremacy), but (that emblem) is on (the lower part of) his person. His excellence is in the centre (of his being), but it diffuses a complacency over his four limbs, and is manifested in his (conduct of) affairs:—this is the perfection of excellence.

10. (The subject of) the yin (or divided line) thinking himself equal to the (subject of the) yang, or undivided line, there is sure to be 'a contest.' As if indignant at there being no acknowledgment of the (superiority of the subject of the) yang line, (the text) uses the term 'dragons.' But still the (subject of neither line) can leave his class, and hence we have 'the blood' mentioned. The mention of that as being (both) 'azure and yellow' indicates the mixture of heaven and earth. Heaven's (colour) is azure and earth's is yellow.

The hexagram Khwăn is dealt with in Section ii, and much more briefly than *K'ien* in Section i. Much less distinct, moreover, is the attempt in it to show how the attributes of the hexagram are to be understood of the principles of human nature. The most important portion of the Section, perhaps, is paragraph 5, the first of chapter II, and I have spoken of it in the Introduction, pages 47 and 48.

APPENDIX V.

Treatise of Remarks on the Trigrams.

Chapter I. 1. Anciently, when the sages made the Yî, in order to give mysterious assistance to the spiritual Intelligences, they produced (the rules for the use of) the divining plant.

2. The number 3 was assigned to heaven, 2 to earth, and from these came the (other) numbers.

3. They contemplated the changes in the divided and undivided lines (by the process of manipulating the stalks), and formed the trigrams; from the movements that took place in the strong and weak lines, they produced (their teaching about) the separate lines. There ensued a harmonious conformity to the course (of duty) and to virtue, with a discrimination of what was right (in each particular case). They (thus) made an exhaustive discrimination of what was right, and effected the complete development of (every) nature, till they arrived (in the Yî) at what was appointed for it (by Heaven).

Chapter I, paragraphs 1-3, treats of the rise of the scheme of the Yî from the wonderful qualities of the divining plant, the use of certain numbers, and the formation of the lineal figures.

P. Regis translates paragraph 1 by—'The ancient (sages), the most excellent men, were the authors of the Yî-king, in making which they were assisted by an intelligent spirit, who for their help produced the plant called Shih.'

But the text will not admit of this version, nor have I found the view given in it in any Chinese writer. It is difficult to make up one's mind whether to translate—'the sage,' or 'the sages.' Khung Ying-tâ contends that the writer had Fû-hsi and him alone in his

Chapter II. 4. Anciently, when the sages made the Yî, it was with the design that (its figures) should be in conformity with the principles underlying the natures (of men and things), and the ordinances (for them) appointed (by Heaven). With this view they exhibited (in them) the way of heaven, calling (the lines) yin and yang; the way of earth, calling (them) the weak (or soft) and the strong (or hard); and the way of men, under the names of benevolence

mind. To me it seems otherwise. Fû-hsî, if we accept the testimony of universal Chinese consent, made the eight trigrams; but he did not make the Yî, which, by the same consent, was the production of king Wăn and his son.

The text would seem to say that the sages 'produced' the plant, but this is so extravagant that the view indicated in my supplementary clause appears in all the best commentators. So understood, the Yî may be said to 'give mysterious assistance to the spiritual Intelligences,' or, if we take that name as singular (according to the analogy of chapter 6), to the Divine Being in affording a revelation of His will, as in paragraph 3. We may well say that it is a pity the revelation should be so enigmatical; but the author, it must be remembered, is writing from his own standpoint. Wăn and his son, as I have endeavoured to show in the Introduction, merely wished to convey, under the style and veil of divination, their moral and political lessons.

On paragraph 2 it is said that heaven is round; and as the circumference of a circle is three times its diameter, hence 3 is the number of heaven. Again, earth is square, and as the circumference of a square is four times its length or breadth, or it consists of two pairs of equal sides, hence 2 is the number of earth.

The concluding statement about 'the other numbers' is understood of the manipulation of the divining stalks, as in Appendix III, i, 51. That manipulation, thrice repeated, might leave three stalks each time, and $3 \times 3 = 9$; or 2, being in the same way in all = 6; or twice 3 and once 2 = 8; or twice 2 and once 3 = 7. These are the numbers of the 4 binary symbols, employed in forming the new figures; $\equiv \equiv \equiv$, the old yang, = 9; $\equiv \equiv$, the young yin, = 8; $\equiv \equiv$, the young yang, = 7; and $\equiv \equiv$, the old yin, = 6.

and righteousness. Each (trigram) embraced (those) three Powers; and, being repeated, its full form consisted of six lines. A distinction was made of (the places assigned) to the yin and yang lines, which were variously occupied, now by the strong and now by the weak forms, and thus the figure (of each hexagram) was completed.

Chapter III. 5. (The symbols of) heaven and earth received their determinate positions; (those for) mountains and collections of water interchanged their influences; (those for) thunder and wind excited each other the more; and (those for) water and fire did each other no harm. (Then) among these eight symbols there was a mutual communication.

6. The numbering of the past is a natural process; the knowledge of the coming is anticipation. Therefore in the Yî we have (both) anticipation (and the natural process).

Chapter II. The top line in each trigram thus belongs to the category of heaven; the bottom line to that of earth; and the middle line to that of man. The odd places should be occupied, 'correctly,' by the undivided lines; and the even by the divided. The trigram being increased to the hexagram, lines 5 and 6 were assigned to heaven; 1 and 2 to earth; and 3 and 4 to man. 5 is the yang characteristic of heaven, and 6 the yin; so 1 and 2 in regard to earth; while 3 represents the benevolence of man, and 4 his righteousness. But all this is merely the play of fancy, and confuses the mind of the student.

Chapter III, paragraphs 5 and 6, is understood, though not very clearly, by referring to the circular arrangement of the trigrams according to Fû-hsî, as shown in Figure 2, of Plate III. Paragraph 5 refers to the correlation of *K'ien* and *Khwân*, *K'ân* and *Tui*, *K'ân* and *Sun*, *Khân* and *Lî*. Paragraph 6 is less easy of apprehension. Starting in the same figure from *K'ien* and numbering on the left we come to *K'ân* by a natural process. Then

Chapter IV. 7. Thunder serves to put things in motion; wind to scatter (the genial seeds of) them; rain to moisten them; the sun to warm them; (what is symbolised by) *Kăn*, to arrest (and keep them in their places); (by) *Tui*, to give them joyful course; (by) *Khien*, to rule them; and by *Khwăn*, to store them up.

Chapter V. 8. God comes forth in *Kăn* (to His producing work); He brings (His processes) into full and equal action in *Sun*; they are manifested to one another in *Lt*; the greatest service is done for Him in *Khwăn*; He rejoices in *Tui*; He struggles in *Khien*; He is comforted and enters into rest in *Khân*; and He completes (the work of the year) in *Kăn*.

9. All things are made to issue forth in *Kăn*, which is placed at the east. (The processes of production) are brought into full and equal action in *Sun*, which is placed at the south-east. The being brought into full and equal action refers to the purity and equal arrangement of all things. *Lt* gives the idea of brightness. All things are now made mani-

we turn back, and numbering on the right, from *Sun*, we come by a backward process to *Khwăn*. The same process is illustrated on a large scale by the circular arrangement of the 64 hexagrams in Plate I. But what the scope of the paragraph is I cannot tell, and am tempted to say of it, as P. Regis does, 'Haec observatio prorsus inanis est.'

In chapter IV we have the same circular arrangement of the trigrams, though they are named in a different order; the last first and the first last. The first four are mentioned by their elemental names; the last four by the names of their lineal figures. No special significance is attached to this. If it ever had any, it has been lost.

fest to one another. It is the trigram of the south. The sages turn their faces to the south when they give audience to all under the sky, administering government towards the region of brightness :—the idea in this procedure was taken from this. Khwăn denotes the earth, (and is placed at the south-west). All things receive from it their fullest nourishment, and hence it is said, ‘The greatest service is done for Him in Khwăn.’ Tui corresponds (to the west) and to the autumn,—the season in which all things rejoice. Hence it is said, ‘He rejoices in Tui.’ He struggles in K’hien, which is the trigram of the north-west. The idea is that there the inactive and active conditions beat against each other. Khan denotes water. It is the trigram of the exact north,—the trigram of comfort and rest, what all things are tending to. Hence it is said, ‘He is comforted and enters into rest in Khan. Kăn is the trigram of the north-east. In it all things bring to a full end the issues of the past (year), and prepare the commencement of the next. Hence it is said, ‘He completes (the work of the year) in Kăn.’

Chapter V, paragraphs 8 and 9, sets forth the operations of nature in the various seasons, as being really the operations of God, who is named Tî, ‘the Lord and Ruler of Heaven.’ Those operations are represented in the progress by the seasons of the year, as denoted by the trigrams, according to the arrangement of them by king Wăn, as shown also in Plate III, Figure 2.

‘The greatest service is done for Tî in Khwăn;’ Yang Wan-lî (of our twelfth century, but earlier than K’ü Hsi) says :—‘Khwăn is a minister or servant. Tî is his ruler. All that a ruler has to do with his minister is to require his service.’ ‘On the struggles in K’hien’ he says :—‘K’hien is the trigram of the north-west, when the yin influence is growing strong and the yang diminishing.’

The ‘purity’ predicated in paragraph 9 of things in Sun, was

Chapter VI. 10. When we speak of Spirit we mean the subtle (presence and operation of God) with all things. For putting all things in motion there is nothing more vehement than thunder; for scattering them there is nothing more effective than wind; for drying them up there is nothing more parching than fire; for giving them pleasure and satisfaction there is nothing more grateful than a lake or marsh; for moistening them there is nothing more enriching than water; for bringing them to an end and making them begin again there is nothing more fully adapted than Kăn. Thus water and fire contribute together to the one object; thunder and wind do not act contrary to each other; mountains and collections of water interchange their influences. It is in this way, that they are able to change and transform, and to give completion to all things.

explained by *Khăng Khang-khăng* (our second century) as equivalent to 'newness,' referring to the brightness of all things in the light of spring and summer. On 'all things receive from the earth their fullest nourishment' the same Yang, quoted above, says:— 'The earth performs the part of a mother. All things are its children. What a mother has to do for her children is simply to nourish them.'

Chapter VI is the sequel of the preceding. There ought to have been some mention of *Shân* or 'Spirit' in chapter 5. It is the first character in this chapter, and the two characters that follow show that it is here resumed for the purpose of being explained. As it does not occur in chapter 5, we must suppose that the author of it here brings forward and explains the idea of it that was in his mind. Many of the commentators recognise this,—e. g. Liang Yin, as quoted in the Introduction, p. 33.

Two other peculiarities in the style of the chapter are pointed out and explained (after a fashion) by *Shui King* (earlier, probably, than the Sung dynasty):— 'The action of six of the trigrams is described, but no mention is made of *Khien* or *Khwan*. But

Chapter VII. 11. *Khien* is (the symbol of) strength; *Khwăn*, of docility; *Kăn*, of stimulus to movement; *Sun*, of penetration; *Khan*, of what is precipitous and perilous; *Lî*, of what is bright and what is catching; *Kăn*, of stoppage or arrest; and *Tui*, of pleasure and satisfaction.

heaven and earth do nothing, and yet do everything; hence they are able to perfect the spirit-like subtilty of the action of thunder, wind, and the other things. (Moreover), we have the trigram *Kân* mentioned, the only one mentioned by its name, instead of our reading "mountains." The reason is, that the putting in motion, the scattering, the parching, and the moistening, are all the palpable effects of thunder, wind, fire, and water. But what is ascribed to *Kăn*, the ending and the recommencing all things, is not so evident of mountains. On this account the name of the trigram is given, while the things in nature represented by the trigrams are given in those other cases. The style suitable in each case is employed.'

Chapter VII mentions the attributes, called also the 'virtues,' of the different trigrams. It is not easy to account for the qualities—'their nature and feelings'—ascribed to them. *Khung Ying-tâ* says:—'*Khien* is represented by heaven, which revolves without ceasing, and so it is the symbol of strength; *Khwăn* by the earth, which receives docilely the action of heaven, and so it is the symbol of docility; *Kân* by thunder, which excites and moves all things, and so it is the symbol of what produces movement; *Sun* by wind, which enters everywhere, and so it is the symbol of penetration; *Khân* by water, found in a place perilous and precipitous, and the name is explained accordingly; *Lî* by fire, and fire is sure to lay hold of things, and so it is the symbol of being attached to; *Kân* by a mountain, the mass of which is still and arrests progress, and so it is the symbol of stoppage or arrest; and *Tui* by a lake or marsh, which moistens all things, and so it is the symbol of satisfaction.'

The *Khang-hsî* editors consider this explanation of the qualities of the trigrams to be unsatisfactory, and certainly it has all the appearance of an *ex post facto* account. They prefer the views of the philosopher *Shâo* (of our eleventh century), which is based on the arrangement of the undivided and divided lines in the figures. This to me is more unsatisfactory than the other. The editors say,

Chapter VIII. 12. *Khien* (suggests the idea of) a horse; *Khwăn*, that of an ox; *Kăn*, that of the dragon; *Sun*, that of a fowl; *Khan*, that of a pig; *Lî*, that of a pheasant; *Kăn*, that of a dog; and *Tui*, that of a sheep.

Chapter IX. 13. *Khien* suggests the idea of the head; *Khwăn*, that of the belly; *Kăn*, that of the feet; *Sun*, that of the thighs; *Khan*, that of the ears; *Lî*, that of the eyes; *Kăn*, that of the hands; and *Tui*, that of the mouth.

Chapter X. 14. *Khien* is (the symbol of) heaven, and hence has the appellation of father. *Khwăn* is (the symbol of) earth, and hence has the appellation of mother. *Kăn* shows a first application (of *Khwăn* to *Khien*), resulting in getting (the first of) its male (or undivided lines), and hence is called 'the oldest son.' *Sun* shows a first application (of *Khien* to *Khwăn*), resulting in getting (the first of) its female (or divided lines), and hence is called 'the oldest daughter.' *Khan* shows a second application

moreover, that Sháo's account of the three yang trigrams, *Kăn*, *Khan*, and *Kăn* is correct, and that of the three yin, *Sun*, *Lî*, and *Tui* incorrect; but this would be based on king Wăn's arrangement, which does not appear to have place here.

Chapter VIII. In the Great Appendix, p. 383, it is said that Fû-hsî, in making his trigrams, was guided by 'the consideration of things apart from his own person.' Of such things we have a specimen here. The creatures are assigned, in their classes, to the different trigrams, symbolising the ideas in the last chapter. We must not make any difference of sex in translating their names.

Chapter IX. Fû-hsî found also 'things near at hand, in his own person,' while making the trigrams. We have here a specimen of such things.

(of Khwăn to *Khien*), resulting in getting (the second of) its male (or undivided lines), and hence is called 'the second son.' *Lî* shows a second application (of *Khien* to Khwăn), resulting in getting the second of its female (or divided lines), and hence is called 'the second daughter.' *Kăn* shows a third application (of Khwăn to *Khien*), resulting in getting (the third of) its male (or undivided lines), and hence is called 'the youngest son.' *Tui* shows a third application (of *Khien* to Khwăn), resulting in getting (the third of) its female (or divided lines), and hence is called 'the youngest daughter.'

Chapter XI. 15. *Khien* suggests the idea of heaven; of a circle; of a ruler; of a father; of jade; of metal; of cold; of ice; of deep red; of a good horse; of an old horse; of a thin horse; of a piebald horse; and of the fruit of trees.

16. Khwăn suggests the idea of the earth; of a mother; of cloth; of a caldron; of parsimony; of a turning lathe; of a young heifer; of a large wagon; of what is variegated; of a multitude; and of a handle and support. Among soils it denotes what is black.

17. *Kăn* suggests the idea of thunder; of the dragon; of (the union of) the azure and the yellow; of development; of a great highway; of the eldest son; of decision and vehemence; of bright young bamboos; of sedges and rushes; among horses, of

Chapter X has been discussed in the Introduction, pp. 49 and 50. Let it simply be added here, that the account which it does give of the formation of the six subsidiary trigrams is inconsistent with their gradual rise from the mutual imposition of the undivided and divided lines.

the good neigher; of one whose white hind-leg appears, of the prancer, and of one with a white star in his forehead. Among the productions of husbandry it suggests the idea of what returns to life from its disappearance (beneath the surface), of what in the end becomes the strongest, and of what is the most luxuriant.

18. Sun suggests the idea of wood; of wind; of the oldest daughter; of a plumb-line; of a carpenter's square; of being white; of being long; of being lofty; of advancing and receding; of want of decision; and of strong scents. It suggests in the human body, the idea of deficiency of hair; of a wide forehead; of a large development of the white of the eye. (Among tendencies), it suggests the close pursuit of gain, even to making three hundred per cent in the market. In the end it may become the trigram of decision.

19. K han suggests the idea of water; of channels and ditches (for draining and irrigation); of being hidden and lying concealed; of being now straight, and now crooked; of a bow, and of a wheel. As referred to man, it suggests the idea of an increase of anxiety; of distress of mind; of pain in the ears;—it is the trigram of the blood; it suggests the idea of what is red. As referred to horses, it suggests the idea of the horse with an elegant spine; of one with a high spirit; of one with a drooping head; of one with a thin hoof; and of one with a shambling step. As referred to carriages, it suggests one that encounters many risks. It suggests what goes right through; the moon; a thief. Referred to trees, it suggests that which is strong, and firm-hearted.

20. Lî suggests the emblem of fire; of the sun; of lightning; of the second daughter; of buff-coat and helmet; of spear and sword. Referred to men, it suggests the large belly. It is the trigram of dryness. It suggests the emblem of a turtle; of a crab; of a spiral univalve; of the mussel; and of the tortoise. Referred to trees, it suggests one which is hollow and rotten above.

21. Kǎn suggests the emblem of a mountain; of a by-path; of a small rock; of a gateway; of the fruits of trees and creeping plants; of a porter or a eunuch; of the (ring) finger; of the dog; of the rat; of birds with powerful bills; among trees, of those which are strong, with many joints.

22. Tui suggests the emblem of a low-lying collection of water; of the youngest daughter; of a sorceress; of the mouth and tongue; of the decay and putting down (of things in harvest); of the removal (of fruits) hanging (from the stems or branches); among soils, of what is strong and salt; of a concubine; and of a sheep.

Chapter XI may be made to comprehend all the paragraphs from the 15th to the end, and shows how universally the ideas underlying the Yî are diffused through the world of nature. The quality of the several trigrams will be found with more or less of truth, and with less or more of fancy, in the objects mentioned in connexion with them. More needs not to be said on the chapter than has been done in the Introduction, pp. 53 and 54.

APPENDIX VI.

The Orderly Sequence of the Hexagrams.

SECTION I.

1-3. When there were heaven and earth, then afterwards all things were produced. What fills up (the space) between heaven and earth are (those) all things. Hence (*Khien* and *Khwan*) are followed by *Kun*¹. *Kun* denotes filling up.

3-6. *Kun* is descriptive of things on their first production. When so produced, they are sure to be in an undeveloped condition. Hence *Kun* is followed by *Mang*. *Mang* is descriptive of what is undeveloped,—the young of creatures and things. These in that state require to be nourished. Hence *Mang* is followed by *Hsü*. *Hsü* is descriptive of the way in which meat and drink (come to be supplied)². Over meat and drink there are sure to be contentions². Hence *Hsü* is followed by *Sung*.

6-8. *Sung* is sure to cause the rising up of the multitudes³; and hence it is followed by *Sze*. *Sze* has the signification of multitudes³, and between multitudes there must be some bond of union. Hence it is followed by *Pi*, which denotes being attached to.

8-11. (Multitudes in) union must be subjected to some restraint. Hence *Pi* is followed by *Hsião*

Khû. When things are subjected to restraint, there come to be rites of ceremony, and hence *Hsião Khû* is followed by *Lî*⁴. The treading (on what is proper) leads to *Thâi*, which issues in a state of freedom and repose, and hence *Lî* is followed by *Thâi*.

11-16. *Thâi* denotes things having free course. They cannot have that for ever, and hence it is followed by *Phî* (denoting being shut up and restricted). Things cannot for ever be shut up, and hence *Phî* is followed by *Thung ǞǞn*. To him who cultivates union with men, things must come to belong, and hence *Thung ǞǞn* is followed by *Tâ Yû*. Those who have what is great should not allow in themselves the feeling of being full, and hence *Tâ Yû* is followed by *Khien*. When great possessions are associated with humility, there is sure to be pleasure and satisfaction; and hence *Khien* is followed by *Yü*.

16-19. Where such complacency is awakened, (he who causes it) is sure to have followers⁵. They who follow another are sure to have services (to perform), and hence *Sui* is followed by *Kû*⁶. *Kû* means (the performance of) services. He who performs such services may afterwards become great, and hence *Kû* is followed by *Lin*. *Lin* means great⁶.

19-23. What is great draws forth contemplation, and hence *Lin* is followed by *Kwân*. He who attracts contemplation will then bring about the union of others with himself, and hence *Kwân* is followed by *Shih Ho*. *Shih Ho* means union. But things should not be united in a reckless or irregular way, and hence *Shih Ho* is followed by

Pt. Pt denotes adorning. When ornamentation has been carried to the utmost, its progress comes to an end; and hence Pt is followed by Po. Po denotes decay and overthrow.

23-26. Things cannot be done away for ever. When decadence and overthrow have completed their work at one end, redintegration commences at the other; and hence Po is followed by Fû. When the return (thus indicated) has taken place, we have not any rash disorder, and Fû is followed by Wû Wang. Given the freedom from disorder and insincerity (which this name denotes), there may be the accumulation (of virtue), and Wû Wang is followed by Tâ K'û.

26-30. Such accumulation having taken place, there will follow the nourishment of it; and hence Tâ K'û is followed by Î. Î denotes nourishing. Without nourishment there could be no movement, and hence Î is followed by Tâ Kwo. Things cannot for ever be in a state of extraordinary (progress); and hence Tâ Kwo is followed by Khân. Khân denotes falling into peril. When one falls into peril, he is sure to attach himself to some person or thing; and hence Khân is followed by Lt. Lt denotes being attached, or adhering, to.

SECTION II.

31, 32. Heaven and earth existing, all (material) things then got their existence. All (material) things having existence, afterwards there came male and female. From the existence of male and female there came afterwards husband and wife. From

- husband and wife there came father and son. From father and son there came ruler and minister. From ruler and minister there came high and low. When (the distinction of) high and low had existence, afterwards came the arrangements of propriety and righteousness.

The rule for the relation of husband and wife is that it should be long-enduring. Hence Hsien is followed by Hăng. Hăng denotes long enduring¹.

32-37. Things cannot long abide in the same place; and hence Hăng is followed by Thun. Thun denotes withdrawing. Things cannot be for ever withdrawn; and hence Thun is succeeded by Tâ Kwang. Things cannot remain for ever (simply) in the state of vigour; and hence Tâ Kwang is succeeded by 3in. 3in denotes advancing. (But) advancing is sure to lead to being wounded; and hence 3in is succeeded by Ming Î. Î denotes being wounded. He who is wounded abroad will return to his home; and hence Ming Î is followed by Kiâ Zăn.

37-40. When the right administration of the family is at an end, misunderstanding and division will ensue; and hence Kiâ Zăn is followed by Khwei. Khwei denotes misunderstanding and division; and such a state is sure to give rise to difficulties and complications. Khwei therefore is followed by Kien. Kien denotes difficulties; but things cannot remain for ever in such a state. Kien therefore is followed by Kieh, which denotes relaxation and ease.

40-44. In a state of relaxation and ease there are sure to be losses; and hence Kieh is followed

by Sun. But when Sun (or diminution) is going on without end, increase is sure to come. Sun therefore is followed by Yî. When increase goes on without end, there is sure to come a dispersing of it, and hence Yî is followed by Kwâi. Kwâi denotes dispersion. But dispersion must be succeeded by a meeting (again). Hence Kwâi is followed by Kâu, which denotes such meeting.

44-48. When things meet together, a collection is then formed. Hence Kâu is followed by 3hui, which name denotes being collected. When (good men) are collected and mount to the highest places, there results what we call an upward advance; and hence 3hui is followed by Shăng. When such advance continues without stopping, there is sure to come distress; and hence Shăng is followed by Khwăn. When distress is felt in the height (that has been gained), there is sure to be a return to the ground beneath; and hence Khwăn is followed by 3ing.

48, 49. What happens under 3ing requires to be changed, and hence it is followed by Ko (denoting change).

49-55. For changing the substance of things there is nothing equal to the caldron; and hence Kǒ is followed by Ting. For presiding over (that and all other) vessels, no one is equal to the eldest son, and hence Ting is followed by Kăn. Kăn conveys the idea of putting in motion. But things cannot be kept in motion for ever. The motion is stopped; and hence Kăn is followed by Kăn, which gives the idea of arresting or stopping. Things cannot be kept for ever in a state of repression, and hence Kăn is followed by Kien, which gives the idea of

(gradually) advancing. With advance there must be a certain point that is arrived at, and hence *Kien* is succeeded by *Kwei Mei*. When things thus find the proper point to which to come, they are sure to become great. Hence *Kwei Mei* is succeeded by *Fǎng*, which conveys the idea of being great.

55-57. He whose greatness reaches the utmost possibility, is sure to lose his dwelling; and hence *Fǎng* is succeeded by *Lü* (denoting travellers or strangers). We have in it the idea of strangers who have no place to receive them, and hence *Lü* is followed by *Sûn*, which gives the idea of (penetrating and) entering.

57-59. One enters (on the pursuit of his object), and afterwards has pleasure in it; hence *Sûn* is followed by *Tui*. *Tui* denotes pleasure and satisfaction. This pleasure and satisfaction (begins) afterwards to be dissipated, and hence *Tui* is followed by *Hwan*, which denotes separation and division.

59-62. A state of division cannot continue for ever, and therefore *Hwan* is followed by *3ieh*. *3ieh* (or the system of regulations) having been established, men believe in it, and hence it is followed by *Kung Fû*. When men have the belief which *Kung Fû* implies, they are sure to carry it into practice; and hence it is succeeded by *Hsião Kwo*.

62-64. He that surpasses others is sure to remedy (evils that exist), and therefore *Hsião Kwo* is succeeded by *K'í 3í*. But the succession of events cannot come to an end, and therefore *K'í 3í* is

succeeded by Wei 31, with which (the hexagrams) come to a close.

The few sentences on this Appendix in the Introduction, pp. 54, 55, are sufficient. It shows the importance of the meaning of the name in the attempt to explain the lineal figures, and prepares us to expect on each one a brief enigmatical essay, which, it has been seen, is the nature of the Text. But the writer, whoever he was, is by no means careful always to follow that Text in the significance of the characters, as will appear in the few instances to which attention is called in the following notices. The treatise is too slight to require, or to justify, an exhibition of all its inaccuracies.

¹ But *Kun* does not denote filling up. It is the symbol of being in a state of distress and difficulty. The writer is thinking of the result of the interaction of heaven and earth as being to fill all between them with the various forms of living beings; and to represent that he gives the result of *Kun*, and not its meaning. He makes a blunder which might have been easily avoided, for he adds immediately that the character is descriptive of things on their first production.

² It is difficult to follow the writer here. *Hsü* in the Text is the symbol of the idea of waiting. Does he mean that a provision of food and drink can only be made gradually? There is nothing in the character *Hsü* to awaken in the mind the idea of nourishment. Then the genesis of contention which is given is strange. The writer probably had in his mind the lines of the *Shih*, II, i, ode 5. 3:—

‘The loss of kindly feeling oft
From slightest things shall grow.
Where all the fare is dry and spare,
Resentments fierce may glow.’

But what is allowable, good even, in poetry, is out of place in this treatise.

³ Contention on a great scale will put all the population of a state in excitement and motion, and military measures of repression will be necessary. But the idea of the multitudes in *Sze* would seem to be simply that of number, and not that of a numerous host. In a feudal kingdom, however, all the able-bodied people might be required to join the army.

⁴ Lî, the name of the 10th hexagram, is the symbol for a shoe, and the act of treading or walking. It seems here to be derived from the homophonous lî, the symbol of acts of ceremony. The identity of sound or name must be considered as accidental. A measured step would be one of the first ways in which the inward sense of propriety would manifest itself.

⁵ By the subject of Tâ Yû and K'ien we must understand the possessor of the kingdom,—the great man who in his greatness is yet distinguished by humility. He attracts followers.

⁶ For the true meaning of K'û and Lin, the names of hexagrams 18, 19, see what is said in the notes on the Text of them.

⁷ The same reference should be made to the notes on the Text of Hsien and many of the other hexagrams that follow.

APPENDIX VII.

Treatise on the Hexagrams taken promiscuously, according to the opposition or diversity of their meaning.

This last of the Appendixes is touched on very briefly in the concluding paragraph of the Introduction, p. 55. It is stated there to be in rhyme, and I have endeavoured to give a similar form to the following version of it. The rhymes and length of the lines in the original, however, are very irregular, and I found it impossible to reproduce that irregularity in English.

- 1, 2. Strength in *K'ien*, weakness in *Khwăn*
we find.
- 8, 7. *Pi* shows us joy, and *Sze* the anxious
mind.
- 19, 20. *Lín* gives, *Kwân* seeks;—such are the
several themes
Their different figures were to teach de-
signed.
3. *K'un* manifests itself, yet keeps its place;
4. 'Mid darkness still, to light *Mǎng* sets
its face.
- 51, 52. *Kǎn* starts; *Kǎn* stops. In *Sun* and *Yi*
are seen
- 41, 42. How fulness and decay their course begin.
26. *Tâ K'û* keeps still, and waits the proper
time.
25. *Wû Wang* sets forth how evil springs
from crime.

- 45, 46. Good men in 3hui collect; in Shǎng
they rise:
- 15, 16. *K'ien* itself, Yü others doth despise.
- 21, 22. Shih Ho takes eating for its theme; and
P1
Takes what is plain, from ornament quite
free.
- 58, 57. Tui shows its scope, but Sun's we do
not see.
- 17, 18. Sui quits the old; Kû makes a new
decree.
23. We see in Po its subject worn away;
24. And Fû shows its recovering from decay.
35. Above in 3in the sun shines clear and
bright;
36. But in Ming Î 'tis hidden from the
sight.
- 48, 47. Progress in 3ing in Khwăn encounters
blight.
31. Effect quick answering cause in Hsien
appears;
32. While Hǎng denotes continuance for
years.
- 59, 60. Hwân scatters; but 3ieh its code of
rules uprears.
40. Relief and ease with *Kieh* are sure to
come;
41. Hard toil and danger have in *Kien* their
home.
38. Khwei looks on others as beyond its care;
37. *Kiâ Zăn* all includes within its sphere.

- 12, 11. While Phî and Thâi their different scopes
prefer,
- 34, 33. Tâ K'wang stops here as right; withdraws
Thun there.
14. Tâ Yû adhering multitudes can show;
13. Thung Zăn reflects their warm affection's
glow.
- 50, 51. Ting takes what's new; the old is left
by Ko.
- 61, 62. Sincere is Kung Fû; but exceeds, Hsião
Kwo.
- 55, 56. Făng tells of trouble; Lü can boast few
friends.
- 30, 29. Fire mounts in Lî; water in Khân
descends.
9. Hsião K'û with few 'gainst many foes
contends.
10. Movement in Lî, unresting, never ends.
5. Hsü shows its subject making no advance:
6. In Sung we seek in vain a friendly glance;
28. And Tâ Kwo's overthrown with sad mis-
chance.
44. Kâu shows a meeting, where the many
strong
Are met by one that's weak, yet struggles
long.
53. In K'ien we see a bride who will delay
To move until the bridegroom takes his
way.
27. Body and mind are nourished right in Î;
63. All things are well established in K'î 31.

54. Kwei Mei reveals how ends the virgin life ;
64. Wei 3t how fails the youth (to get a wife).
43. The strong disperse the weak ; K wâi teaches so.
Prosper the good man's way ; to grief all small
men go.

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Transliteration of Oriental Alphabets adopted for the Trans- lations of the Sacred Books of the East	481
---	-----

P R E F A C E.

I MAY be permitted to express my satisfaction that, with the two volumes of the *Lî Kî* now published, I have done, so far as translation is concerned, all and more than all which I undertook to do on the Chinese Classics more than twenty-five years ago. When the first volume was published in 1861, my friend, the late Stanislas Julien, wrote to me, asking if I had duly considered the voluminousness of the *Lî Kî*, and expressing his doubts whether I should be able to complete my undertaking. Having begun the task, however, I have pursued it to the end, working on with some unavoidable interruptions, and amidst not a few other engagements.

The present is the first translation that has been published in any European language of the whole of the *Lî Kî*. In 1853 the late J. M. Callery published at the Imprimerie Royale, Turin, what he called '*Lî Kî, ou Mémorial des Rites, traduit pour la première fois du Chinois, et accompagné de Notes, de Commentaires, et du Texte Original.*' But in fact the text which P. Callery adopted was only an expurgated edition, published by Fan 3ze-tǎng, a scholar of the Yüan dynasty, as commented on and annotated by K'au Kih, whose well-known work appeared in 1711, the 50th year of the Khang-hsi reign or period¹. Callery has himself called attention to this in his introduction, and it is to be regretted that he did not indicate it in the title-page of his book. Fan's text omits entirely the 5th, 12th, 13th, 19th, 28th, 31st, 32nd, 33rd, 34th, 35th, 37th, and 39th Books in my translation, while of most of the others,

¹ The 禮記體註大全合參, for which Callery gives—
'Combinaison des Commentaires Ta Tsüên (le Grand Complet) et Chu (l'explication), d'après le sens original du Mémorial des rites.' K'au K'ih (周熾) has the alias of K'au Tan-lin (旦林).

'a good third' has been expurgated. I do not think that Callery's version contains above one half of the *Lî Kî*, as it is found in the great editions of the Thang and present dynasties. The latter of these was commanded in an imperial rescript in 1748, the 13th year of the *K'ien-lung* period. The committee charged with its execution consisted of 85 dignitaries and scholars, who used the previous labours of 244 authors, besides adding, on many of the most difficult passages, their own remarks and decisions, which are generally very valuable.

My own version is based on a study of these two imperial collections, and on an extensive compilation, made specially for my use by my Chinese friend and former helper, the graduate Wang Tháo, gathered mostly from more recent writers of the last 250 years. The *K'ien-lung* editors make frequent reference to the work of *Khăn Hào*, which appeared in 1322 under the modest title of, 'A Collection of Remarks on the *Lî Kî*.' This acquired so great a celebrity under the Ming dynasty, that, as Callery tells us, an edict was issued in 1403 appointing it the standard for the interpretation of the Classic at the public examinations; and this pre-eminence was accorded to it on to the *K'ien-lung* period. The whole of the *Lî Kî* is given and expounded by *Khăn*, excepting the 28th and 39th Books, which had long been current as portions of 'The Four Books.' I may say that I have read over and over, and with much benefit, every sentence in his comments. Forming my own judgment on every passage, now agreeing with him and now differing, and frequently finding reason to attach a higher value to the views of the *K'ien-lung* editors, I must say that 'he deserves well' of the *Lî Kî*. His volumes are characterised by a painstaking study of the original text, and an honest attempt to exhibit the logical connexion of thought in its several parts.

禮記集說. The author has the aliases for Hào of Kho Tâ (可大), Yün Kwang (雲莊), and Tung Hui (東匯); the last, I suppose, from his having lived near the lake so called.

P. Callery's translation of his expurgated text is for the most part well executed, and his notes, of which I have often made use, are admirable. I have also enjoyed the benefit of the more recent work, '*Cursus Litteraturae Sinicae*,' by P. Angelo Zottoli, in whom the scholarship of the earlier Jesuit missionaries has revived. In his third volume, published at Shang-hâi in 1880, there are good translations of the 1st, 5th, 10th, 20th, 21st, and 22nd Books; while the 28th and 39th are in his second volume. In the Latin which he employs, according to the traditions of his church and what is still a practice of some scholars, he is able to be more brief in his renderings than Callery and myself, but perhaps not so satisfactory to readers generally. I also referred occasionally to Signor Carlo Puini's '*Li-Ki: Istituzioni, Usi e Costumanze della Cina antica; Traduzione, Commento e Note (Fascicolo Primo; Firenze, 1883).*'

The present translation is, as I said above, the first published in any European language of the whole of the *Li Ki*; but another had existed in manuscript for several years,—the work of Mr. Alexander Wylie, now unhappily, by loss of eye-sight and otherwise failing health, laid aside from his important Chinese labours. I was fortunate enough to obtain possession of this when I had got to the 35th Book in my own version, and, in carrying the sheets through the press, I have constantly made reference to it. It was written at an early period of Mr. Wylie's Chinese studies, and is not such as a Sinologist of his attainments and research would have produced later on. Still I have been glad to have it by me, though I may venture to say that, in construing the paragraphs and translating the characters, I have not been indebted in a single instance to him or P. Callery. The first six Books, and portions of several others, had been written out, more than once, before I finally left China in 1873; but I began again at the beginning, early in 1883, in preparing the present version. I can hardly hope that, in translating so extensive and peculiar a work, descriptive of customs and

things at so remote a period of time, and without the assistance of any Chinese graduate with whom I could have talked over complicated and perplexing paragraphs, I may not have fallen into some mistakes; but I trust they will be found to be very few. My simple and only aim has been, first, to understand the text for myself, and then to render it in English, fairly and as well as I could in the time attain to, for my readers.

THE LÎ KÎ

OR

COLLECTION OF TREATISES ON THE RULES
OF PROPRIETY OR CEREMONIAL USAGES.

THE LÎ KÎ

OR

COLLECTION OF TREATISES ON THE RULES
OF PROPRIETY OR CEREMONIAL USAGES.

INTRODUCTION.

CHAPTER I.

THREE DIFFERENT LÎ KING, OR RITUAL BOOKS, ACKNOWLEDGED IN CHINA. THE RECOVERY OF THE FIRST TWO, AND FORMATION OF THE THIRD, UNDER THE HAN DYNASTY.

1. Confucius said, 'It is by the Odes that the mind is aroused ; by the Rules of Propriety that the character is established ; from Music that the finish is How Confucius spoke of the Lî. received¹.' On another occasion he said, 'Without the Rules of Propriety, respectfulness becomes laborious bustle; carefulness, timidity; boldness, insubordination; and straightforwardness, rudeness¹.'

These are two specimens of the manner in which Confucius expressed himself about the Lî, the Rules of Propriety or Ceremonial Usages, recognised in his time. It is a natural inference from his language that there were Collections of such Rules which could be read and studied ; but he does not expressly say so.

The language of Mencius was more definite. In at least two passages of his works we find the usual form of quotation Lî Yüeh, 'The Lî says²,' which, How Mencius spoke of them. according to the analogy of Shih Yüeh, 'The Shih King, or Book of Poetry, says,' might be rendered,

¹ Confucian Analects, Book VIII, 8 and 2.

² Works of Mencius, II, Part ii, 2. 5 ; III, Part ii, 3. 3.

'The LĪ King says.' In another passage, he says to a Mr. King *K'hun*, 'Have you not read the LĪ?' It does not appear that Mencius was always referring to one and the same collection of LĪ; but it is clear that in his time there were one or more such collections current and well known among his countrymen.

There are now three Chinese classics into which the name LĪ enters:—the Ī LĪ, the *K'au* LĪ, and the LĪ King. Now there are three LĪ King, KĪ, frequently styled, both by the Chinese or three Rituals. themselves and by sinologists, 'The Three Rituals'. The first two are books of the *K'au* dynasty (B. C. 1122–225). The third, of which a complete translation is given in the present work, may contain passages of an earlier date than either of the others; but as a collection in its present form, it does not go higher than the Han dynasty, and was not completed till our second century. It has, however, taken a higher position than those others, and is ranked with the *Sh'û*, the *Shih*, the *Yĭ*, and the *K'hun K'hi'û*, forming one of 'The Five King,' which are acknowledged as the books of greatest authority in China. Other considerations besides antiquity have given, we shall see, its eminence to the LĪ KĪ.

2. The monuments of the ancient literature, with the exception, perhaps, of the *Yĭ* King, were in a condition of disorder and incompleteness at the rise of the Han dynasty (B. C. 206). This was the case especially with the Ī LĪ and *K'au* LĪ. They had suffered, with the other books, from the fires and proscription of the short-lived dynasty of *K'hin*, the founder of which was bent especially on their destruction³; and during the closing centuries of *K'au*, in all the period of 'The Warring Kingdoms,' they had been variously mutilated by the contending princes⁴.

¹ Works of Mencius, III, ii, 2. 2.

² See Wylie's Notes on Chinese Literature, p. 4, and Mayers' Chinese Reader's Manual, p. 300.

³ Sze-mâ K'ien's Biographies, Book 61 (儒林傳), p. 5^b. Other testimonies to the fact could be adduced.

⁴ Mencius V, ii, 2. 2. See also the note of Liû Hsin, appended to his catalogue of LĪ works, in the Imperial library of Han.

The sovereigns of Han undertook the task of gathering up and arranging the fragments of the ancient Work of the emperors of Han in recovering the ancient books. Shih Hwang Ti of *K'hin* had promulgated his edict forbidding any one to hide and keep in his possession the old writings. This was repealed in B. C. 191 by the emperor Hui, so that it had been in existence only twenty-two years, during most of which, we may presume, it had been inoperative. Arrangements were also made to receive and preserve old tablets which might be presented¹, and to take down in writing what scholars might be able to repeat. In B. C. 164, the emperor Wăn ordered 'the Great Scholars' of his court to compile 'the Royal Ordinances,' the fifth of the Books in our *Lî Kî*².

i. Internal evidence shows that when this treatise was made, the *Î Lî*, or portions of it at least, had been recovered; and with this agrees the testimony of Sze-mâ *K'hien*, who was born perhaps in that very year³, and lived to between B. C. 90 and 80. In the 61st Book of his Biographies, referred to in a note above, *K'hien* says, 'Many of the scholars repeated (parts of) the *Lî*; but no other of them so much as Kâo Thang of *Lû*; and now we have only the Shih *Lî*, which he was able to recite.' In harmony with this statement of the great historian, is the first entry in Liû Hsin's Catalogue of *Lî* books in the Imperial library of Han:—'56 *k'üan* or sections of *Lî* in the old text, and 17 *phien* in the (current) text (of the time);' forming, as is universally believed, the present *Î Lî*, for which the Shih *Lî* of *K'hien* is merely another name.

That Kâo Thang should have been able to dictate so much of the work will not be thought wonderful by those who

¹ Such was the 'Stone-Conduit Gallery,' which Mayers (Manual, p. 185) describes as a building erected by Hsião Ho at *K'hang-an* for the reception of the records of the extinct *K'hin* dynasty, about B. C. 200, adding that 'in B. C. 51, the emperor Hsüan appointed a commission of scholars to assemble in this building, and complete the revision of the classical writings.' But it had also been intended from the first as a repository for those writings as they were recovered.

² See the General Mirror of History under that year.

³ Mayers puts his birth 'about B. C. 163,' and his death 'about 85.'

are familiar with the power of memory displayed by many Chinese scholars even at the present day. The sections in the old text were found in the reign of the emperor Wû (B. C. 140–87), and came into the possession of his brother, known as king Hsien of Ho-kien. We do not know how much this mass of tablets added to the Ī Lĭ, as we now have it, but they confirmed the genuineness of the portion obtained from Kâo.

ii. The recovery of the *Kâu Lĭ* came not long after, and through the agency of the same king Hsien. No one did King Hsien of Ho-kien, and his recovery of the *Kâu Lĭ*, so much as he in the restoration of the ancient literature. By name Teh, and one of the fourteen sons of the emperor King (B. C. 156–141), he was appointed by his father, in B. C. 155, king of Ho-kien, which is still the name of one of the departments of *Kih-li*, and there he continued till his death, in 129, the patron of all literary men, and unceasingly pursuing his quest for old books dating from before the *K'in* dynasty. Multitudes came to him from all quarters, bringing to him the precious tablets which had been preserved in their families or found by them elsewhere. The originals he kept in his own library, and had a copy taken, which he gave to the donor with a valuable gift. We are indebted to him in this way for the preservation of the *Tâo Teh King*, the works of Mencius, and other precious treasures; but I have only to notice here his services in connexion with the *Lĭ* books¹.

Some one² brought to him the tablets of the *Kâu Lĭ*, then called *Kâu Kwan*, 'The Official Book of *Kâu*,' and purporting to contain a complete account of the organised government of the dynasty of *Kâu* in six sections. The sixth section, however, which should have supplied a list of the officers in the department of the minister of Works,

¹ See the account of king Hsien in the twenty-third chapter of the Biographies in the History of the first Han dynasty. Hsien was the king's posthumous title (獻), denoting 'The Profound and Intelligent.'

² The Catalogue of the Sui Dynasty's (A. D. 589–618) Imperial library says this was a scholar of the surname Lĭ (李). I have been unable to trace the authority for the statement farther back.

with their functions, was wanting, and the king offered to pay 1000 pieces of gold to any one who should supply the missing tablets, but in vain¹. He presented the tablets which he had obtained at the court of his half-brother, the emperor Wû; but the treasure remained uncared for in one of the imperial repositories till the next century; when it came into the charge of Liû Hsin. Hsin replaced the missing portion from another old work, called *Kháo Kung Kî*, which Wylie renders by 'The Artificers' Record.' This has ever since continued to appear as the sixth section of the whole work, for the charge of which Hsin obtained the appointment of a special board of scholars, such as had from the first been entrusted with the care of the *Í Lî*. The *Kâu Lî* is a constitutional and not a ritual work. The last entry in Hsin's Catalogue of *Lî Books* is:—'The *Kâu Kwan* in six sections; and a treatise on the *Kâu Kwan* in four sections.' That is the proper name for it. It was not called the *Kâu Lî* till the Thang dynasty².

iii. We come to the formation of the text of the *Lî Kî*, in which we are more particularly interested. We cannot

Formation of the *Lî Kî*. speak of its recovery, for though parts of it had been in existence during the *Kâu* dynasty, many of its Books cannot claim a higher antiquity than the period of the Han. All that is known about the authorship of them all will be found in the notices which form the last chapter of this Introduction.

After the entry in Liû Hsin's Catalogue about the re-

¹ This is related in the Catalogue of the Sui dynasty. It could not be in *K'ien*'s sixty-first chapter of Biographies, because the *Kâu Kwan* was not known, or, at least, not made public, in *K'ien*'s time. The Sui writers, no doubt, took it from some biography of the Han, which has escaped me.

² A complete translation of the *Kâu Lî* appeared at Paris in 1851, the work of Edward Biot, who had died himself before its publication, before his fiftieth year. According to a note in Callery's '*Mémorial des Rites*' (p. 191), the labour of its preparation hastened Biot's death. There are some errors in the version, but they are few. I have had occasion to refer to hundreds of passages in it, and always with an increasing admiration of the author's general resources and knowledge of Chinese. His early death was the greatest loss which the cause of sinology has sustained. His labours, chiefly on Chinese subjects, had been incessant from 1835. The perusal of them has often brought to my memory the words of Newton. 'If Mr. Cotes had lived, we should have known something.' Is there no sinologist who will now undertake a complete translation of the *Í Lî*?

covered text of the Î Lî, there follows—'131 phien of Kî,' that is, so many different records or treatises on the subject of Lî. These had also been collected by king Hsien, and Kû Hsi's note about them is that they were 'Treatises composed by the disciples of the seventy disciples,' meaning by 'the seventy disciples' those of Confucius' followers who had been most in his society and profited most from his instructions. These 131 phien contained, no doubt, the germ of our Lî Kî; but there they remained for about a century in the imperial repositories, undigested and uncared for, and constantly having other treatises of a similar nature added to them.

At last, in B. C. 51, the emperor Hsüan (B. C. 73-47) convoked a large assembly of Great Scholars to meet in the Stone-Conduit Gallery, and discuss the Council of B. C. 51. text of the recovered classics¹. A prominent member of this assembly, the president of it I suppose, was Liû Hsiang, himself a celebrated writer and a scion of the imperial house, who appears to have had the principal charge of all the repositories. Among the other members, and in special connexion with the Lî works, we find the name of Tâi Shăng, who will again come before us².

We do not know what the deliberations of the Great Scholars resulted in, but twenty-five years later the emperor K'ang caused another search to be made throughout the empire for books that might hitherto have escaped notice; and, when it was completed, he ordered Hsiang to examine all the contents of the repositories, and collate the various copies of the classics. From this came the preparation of a catalogue; and Hsiang dying at the age of seventy-two, in B. C. 9, before it was completed, the work was delegated to his third and youngest son Hsin. His catalogue we happily possess. It mentions, in addition to the Î Lî and

¹ See the Details in the General Mirror of History, under B. C. 51.

² See the 58th Book of Biographies (儒林) in the History of the first Han, and the Catalogue of the Sui Library.

Kâu Lî, 199 *phien* of *Lî* treatises. The résumé appended to the *Lî* books in the Catalogue of the Sui Dynasty, omitting works mentioned by Hsin, and inserting two others, says that Hsiang had in his hands altogether 214 *phien*. What was to be done with this mass of tablets, or the written copies made from them?

The most distinguished of the *Lî* scholars in the time of the emperors Hsüan and *Khǎng* was a *Hâu* *Shang*, the *Hâu* *Shang* and author of the compilation called in Hsin's the two *Tâis*. Catalogue *Khü Tâi Kî*; and two of his disciples, *Tâi* *Teh* and *Tâi* *Shǎng*, cousins¹, the name of the latter of whom has already been mentioned as a member of the council of B.C. 51, were also celebrated for their ability. *Teh*, the older of the two, and commonly called *Tâ Tâi*, or 'the Greater *Tâi*,' while Hsiang was yet alive, digested the mass of *phien*, and in doing so reduced their number to 85. The younger, called *Hsiào Tâi*, or 'the Lesser *Tâi*,' doing the same for his cousin's work, reduced it to 46 treatises. This second condensation of the *Lî* documents met with general acceptance, and was styled the *Lî Kî*. *Shǎng* himself wrote a work in twelve chapters, called 'A Discussion of the Doubts of Scholars about the *Lî Kî*,' which, though now lost, was existing in the time of Sui. Through *Khiào Zǎn* and others, scholars of renown in their day, the redaction passed on to the well-known *Mâ Yung* and *Mâ Yung* (A.D. 79-166), who added to *Kang Hsüan*. *Shǎng*'s books the *Yüeh Ling*, the Ming

¹ Sinologists, without exception I believe, have called *Shǎng* a 'nephew' of *Teh*, overlooking the way in which the relationship between them is expressed in Chinese. *Shǎng* is always *Teh*'s 從兄之子, and not simply 兄之子. Foreign students have overlooked the force of the phrase 從兄 and, more fully, 從父兄. *Teh* and *Shǎng*'s father had the same grandfather, and were themselves the sons of brothers. They were therefore what we call first cousins, and *Teh* and *Shǎng* were second cousins. The point is unimportant, but it is well to be correct even in small matters. Not unimportant, however, is the error of Callery (Introduction, p. 6), who says, 'Le neveu, homme dépravé, beaucoup plus adonné aux plaisirs, qu'à l'étude, retrancha encore davantage et fixa le nombre des chapitres à 46.' No such stigma rests on the character of *Tâi Shǎng*, and I am sure translators have reason to be grateful to him for condensing, as he did, the result of his cousin's labours.

Thang Wei, and the Yo Kî, making their number in all forty-nine, though, according to the arrangement adopted in the present translation, they still amount only to forty-six. From Mâ, again, it passed to his pupil Kǎng Hsüan (A.D. 127-200), in whom he was obliged to acknowledge a greater scholar than himself.

Thus the Lî Kî was formed. It is not necessary to pursue its history farther. Kǎng was the scholar of his age, and may be compared, in scholarship, with the later Kû Hsi. And he has been fortunate in the preservation of his works. He applied himself to all the three Rituals, and his labours on them all, the Kâu Lî, the Î Lî, and the Lî Kî, remain. His commentaries on them are to be found in the great work of 'The Thirteen King' of the Thang dynasty. There they appear, followed by the glosses, illustrations, and paraphrases of Khung Ying-tâ.

In A.D. 175, while Kǎng was yet alive, Zhâi Yung, a scholar and officer of many gifts, superintended the work of engraving on stone the text of all the ^{Zhâi Yung and his manuscript.} Confucian classics. Only fragments of that great manuscript remain to the present day, but others of the same nature were subsequently made. We may feel assured that we have the text of the Lî Kî and other old Chinese books, as it was 1800 years ago, more correctly than any existing manuscripts give us that of any works of the West, Semitic, or Greek, or Latin, of anything like equal antiquity.

3. A few sentences on the Lî of the Greater Tâi will fitly close this chapter. He handed down his voluminous compilation to a Hsü Liang of Lang Yeh in the present Shan-tung¹, and in his family it was transmitted; but if any commentaries on it were published, there is no trace of them in history. As the shorter work of his cousin obtained a wide circulation, his fell into neglect, and, as Kû Î-jun says, was simply put upon the shelf. Still there appears in the Sui Catalogue these two entries:— 'The Lî Kî of Tâ Tâi, in 13 Sections,' and 'The Hsiâ

¹ 徐良, 字旂卿, 受禮於戴德.

Hsiáo Kǎng, in 1 Section,' with a note by the editor that it was compiled by Tâ Tâi. This little tractate may, or may not, have been also included in one of the 13 Sections. There are entries also about Tâ Tâi's work in the catalogues of the Thang and Sung dynasties, which have given rise to many discussions. Some of the Sung scholars even regarded it as a 14th King. In the large collection of 'Books of Han and Wei,' a portion of the Lî of Tâ Tâi is still current, 39 Books in 10 Sections, including the fragment of the Hsiâ dynasty, of which a version, along with the text, was published in 1882 by Professor Douglas of King's College, under the title of 'The Calendar of the Hsiâ Dynasty.' I have gone over all the portion in the Han and Wei Collection, and must pronounce it very inferior to the compilation of the Hsiáo or Lesser Tâi. This inferiority, and not the bulk, merely, was the reason why from the first it has been comparatively little attended to.

CHAPTER II.

SIGNIFICANCE OF THE CHINESE CHARACTER CALLED LÎ. MEANING OF THE TITLE LÎ KÎ. VALUE OF THE WORK.

1. The Chinese character Lî admits of a great variety of terms in translating a work where it abounds into any of our western languages. In order fully to apprehend its significance, we must try to get hold of the fundamental ideas which it was intended to convey. And these are two. First, when we consult the Shwo Wǎn, the oldest Chinese dictionary, we find Lî defined as 'a step or act; that whereby we serve spiritual beings and obtain happiness.' The character was to the author, Hsü Shǎn, an ideagram of religious import; and we can see that he rightly interpreted the intention of its maker or makers. It consists of two elements, separately called *k'ih* and *lî*¹. That on the left is the symbol,

Lî is a symbol
of religious
import.

¹ 示 + 豊 = 禮.

determining the category of meaning to which the compound belongs. It was the earliest figure employed to indicate spiritual beings, and enters into characters denoting spirits, sacrifices, and prayer¹. That on the right, called lĭ, is phonetic, but even it is the symbol for 'a vessel used in performing rites;' and if, as the Khang-hsi dictionary seems to say, it was anciently used alone for the present compound, still the spiritual significance would attach to it, and the addition of the kĭh to complete the character, whensoever it was made, shows that the makers considered the rites in which the vessel was used to possess in the first place a religious import.

Next, the character is used, in moral and philosophical disquisitions, to designate one of the primary constituents of human nature. Those, as set forth by Mencius, are four; 'not fused into us from without,' not produced, that is, by any force of circumstances, but 'belonging naturally to us, as our four limbs do.' They are benevolence (shān), righteousness (i), propriety (lĭ), and understanding (kĭh). Our possession of the first is proved by the feeling of distress at the sight of suffering; of the second, by our feelings of shame and dislike; of the third, by our feelings of modesty and courtesy; of the fourth, by our consciousness of approving and disapproving².

Thus the character lĭ, in the concrete application of it, denotes the manifestations, and in its imperative use, the rules, of propriety. This twofold symbolism of it—the religious and the moral—must be kept in mind in the study of our classic. A life ordered in harmony with it would realise the highest Chinese ideal, and surely a very high ideal, of human character.

But never and nowhere has it been possible for men to maintain this high standard of living. In China and elsewhere the lĭ have become, in the usages of society in its various relationships, matters of course, forms without the

¹ E. g. 神 (shān), 祭 (kĭ), 祈 (kĭh).

² Mencius, II, i, 6; VI, i, 6. 7.

spirit, and hence we cannot always translate the character by the same term. It would be easy to add to the number of words, more or less synonymous, in French or English or any other Aryan language, which Callery has heaped together in the following passage:—‘Autant que possible, j’ai traduit *Lî* par le mot *Rite*, dont le sens est susceptible à une grande étendue ; mais il faut convenir que, suivant les circonstances où il est employé, il peut signifier—Cérémonial, Cérémonies, Pratiques cérémoniales, L’étiquette, Politesse, Urbanité, Courtoisie, Honnêteté, Bonnes manières, Égards, Bonne éducation, Bienséance, Les formes, Les convenances, Savoir-vivre, Décorum, Décence, Dignité personnelle, Moralité de conduite, Ordre Social, Devoirs de Société, Lois Sociales, Devoirs, Droit, Morale, Lois hiérarchiques, Offrande, Usages, Coutumes¹.’ I have made little use in my translation of the word *Rite* or *Rites*, which Callery says he had endeavoured to adhere to as much as possible, but I do not think I have allowed myself so much liberty in other terms in my English as he has done in his French. For the symbol in the title I have said ‘Rules of Propriety or Ceremonial Usages.’

2. The meaning of the title—*Lî Kî*—need not take us so long. There is no occasion to say more on the significance of *Lî*; the other character, *Kî*, should have a plural force given to it. What unity belongs to the Books composing it arises from their being all, more or less, occupied with the subject of *Lî*. Each one, or at least each group, is complete in itself. Each is a *Kî*; taken together, they are so many *Kî*s. Only into the separate titles of seven of them, the 13th, 16th, 17th, 18th, 19th, 27th, and 29th, does the name of *Kî* enter. That character is the symbol for ‘the recording of things one by one,’ and is often exchanged for another *Kî*², in which the classifying element is *sze*, the symbol for ‘a packet of cocoons,’ the compound denoting the unwinding

¹ Introduction, p. 16.

² The classifier of *Kî* in the title is 言 (*yen*), the symbol of words; that of this *Kî* (紀) is 糸 (*sze*).

l'occident, le besoin impérieux de sonder les mystères du monde invisible.'

The number of the K'î that are devoted to the subject of the mourning rites shows how great was the regard of the people for the departed members of their families. The solidarity of the family, and even the solidarity of the race, is a sentiment which has always been very strong among them. The doctrine of filial piety has also the prominence in several Books which we might expect.

As to the philosophical and moral ideas which abound in the work, they are, as Callery says, 'in general, sound and profound.' The way in which they are presented is not unfrequently eccentric, and hedged about with absurd speculations on the course of material nature, but a prolonged study of the most difficult passages will generally bring to light what Chinese scholars call a *t'ao-lî*, a ground of reason or analogy, which interests and satisfies the mind.

4. The position that came gradually to be accorded to the Lî K'î as one of 'The Five King,' par excellence,

The Lî K'î as one of the Five King. was a tribute to its intrinsic merit. It did not, like the K'âu Lî, treat of matters peculiar to one dynasty, but of matters important in all time; nor like the Î Lî, of usages belonging to one or more of the official classes, but of those that concerned all men. The category of 'Five King' was formed early, but the 'Three Rituals' were comprehended in it as of equal value, and formed one subdivision of it. So it was early in the Thang dynasty when the collection of 'The Thirteen King' was issued; but ere the close of that dynasty our classic had made good its eminence over the other two Rituals. In the 29th chapter of the Monographs of Thang, page 17, it is said, 'To the charge of each of the Five King two Great Scholars were appointed. The Yî of K'âu, the Shang Shû, the Shih of Mão, the K'hun K'hiû, and the Lî K'î are the Five King.'

CHAPTER III.

BRIEF NOTICES OF THE DIFFERENT BOOKS WHICH
MAKE UP THE COLLECTION.BOOK I. *KHÜ LÎ*.

This first Book in the collection is also the longest, and has been divided because of its length into two Books. In this translation, however, it appears only as one Book in two Sections, which again are subdivided, after the *Khien-lung* editors, into five Parts and three Parts respectively.

The name *Khü Lî* is taken from the first two characters in the first paragraph, and the first sentence, 'The *Khü Lî* says,' extends over all that follows to the end of the Book. P. Callery, indeed, puts only the first paragraph within inverted commas, as if it alone were from the *Khü Lî*, and the rest of the Book were by a different hand. He translates the title by 'Rites Divers,' and to his first sentence, 'Le Recueil des rites divers dit,' appends the following note :—'This work, that for a very long time has been lost, was, so far as appears, one of those collections of proverbs and maxims with which philosophy has commenced among nearly all peoples. Although the author does not say so, it is probable that this chapter and the next contain an analysis of that ancient collection, for the great unconnectedness which we find in it agrees well with the variety indicated by the title *Khü Lî*.' My own inference from the text, however, is what I have stated above, that the Book is a transcript of the *Khü Lî*, and not merely a condensation of its contents, or a redaction of them by a different author.

It is not easy to translate the title satisfactorily. According to *Kǎng Hsüan* (or *Kǎng Khang-khǎng*), the earliest of all the great commentators on the *Lî Kî*, 'The Book is named *Khü Lî*, because it contains matters relating to all the five ceremonial categories. What is said in it about sacrifices belongs to the "auspicious ceremonies;"

about the rites of mourning, and the loss or abandonment of one's state, to the "inauspicious;" about the payment of tributary dues and appearances at the royal court, to "the rites of hospitality;" about weapons, chariots, and banners, "to those of war;" and about serving elders, reverencing the aged, giving offerings or presents, and the marriage of daughters, to the "festive ceremonies." On this view the title would mean 'Rules belonging to the different classes of ceremonies,' or, more concisely, the 'Rites Divers' of Callery; and Mr. Wylie has called the Book 'The Universal Ritual.'

But this rendering of the title does not suit the proper force of the character *Khü*, which is the symbol of 'being bent or crooked,' and is used, with substantival meaning, for what is small and appears irregularly. Mention is made in Book XXVIII, ii, 23, of 'him who cultivates the shoots of goodness in his nature,' those 'shoots' being expressed by this character *Khü*; and in a note on the passage there I have quoted the words of the commentator Pái Lü:—'Put a stone on a bamboo shoot, or where the shoot would show itself, and it will travel round the stone, and come out crookedly at its side.' Thus *Khü* is employed for what is exhibited partially or in a small degree. Even Kǎng Hsüan on that passage explains it by 'very small matters;' and the two ablest in my opinion of all the Chinese critics and commentators, Kú Hsí and Wú Kǎng (of the Yüan dynasty, A.D. 1249–1333), take our title to mean 'The minuter forms and smaller points of ceremony.' P. Zottoli is not to be blamed for following them, and styling the Book—'Minutiores Ritus.' Still even this does not satisfy my own mind. Great rites are mentioned in the treatise as well as small ones. Principles of ceremony are enunciated as well as details. The contents are marked indeed by the 'unconnectedness' which Callery mentions; but a translator cannot help that. The Book may not be as to method all that we could wish, but we must make the best we can of it as it stands; and I have ventured to call it 'A Summary of the Rules of Ceremony.' It occupies very properly the place at the beginning of the

collection, and is a good introduction to the treatises that follow.

Among the *Lî* books in Liú Hsin's Catalogue of the Imperial Library of Han, is a Treatise in nine chapters (*phien*), compiled by Hâu 3hang, and called *Khü Thâi Kî*, or 'Record made in the *Khü* Tower.' The *Khü* Tower was the name of an educational building, where scholars met in the time of the emperor Hsüan to discuss questions about ceremonies and other matters connected with the ancient literature, and Hâu 3hang (mentioned in the preceding chapter) kept a record of their proceedings. I should like to think that our *Khü Lî* is a portion of that *Khü Thâi Kî*, and am sorry not to be able to adduce Chinese authorities who take the same view. It would relieve us of the difficulty of accounting for the use of *Khü* in the title.

BOOK II. THAN KUNG.

The name Than Kung given to this Book is taken from the first paragraph in it, where the gentleman so denominated appears attending the mourning rites for an officer of the state of Lû. Nowhere else in the Treatise, however, is there any mention of him, or reference to him. There can be no reason but this, for calling it after him, that his surname and name occur at the commencement of it. He was a native, it is understood, of Lû; but nothing more is known of him.

The Than Kung, like the *Khü Lî*, is divided into two Books, which appear in this translation as two Sections of one Book. Each Section is subdivided into three Parts. The whole is chiefly occupied with the observances of the mourning rites. It is valuable because of the information which it gives about them, and the views prevailing at the time on the subject of death. It contains also many historical incidents about Confucius and others, which we are glad to possess. Some of the commentators, and especially the *Khien-lung* editors, reject many of them

as legendary and fabulous. The whole Book is reduced to very small compass in the expurgated editions of the LĪ KĪ. We are glad, however, to have the incidents such as they are. Who would not be sorry to want the account of Confucius' death, which is given in I, ii, 20? We seem, moreover, to understand him better from accounts which the Book contains of his intercourse with his disciples, and of their mourning for him.

3ze-yŭ¹, an eminent member of his school, appears in the first paragraph much to his credit, and similarly afterwards on several occasions; and this has made the *K'ien-lung* editors throw out the suggestion that the Book was compiled by his disciples. It may have been so.

BOOK III. WANG KĪH.

According to Lŭ KĪh (died A. D. 192)², the Wang KĪh, or 'Royal Regulations,' was made by the Great Scholars of the time of the emperor Wăn (B. C. 179-157), on the requisition of that sovereign³. It professes to give the regulations of the early kings on the classes of the feudal nobles and officers and their emoluments, on their sacrifices, and their care for the aged. The emperor ordered it to be compiled after the death of KĪā Ĩ, a Great scholar and highly esteemed by the sovereign, which event must have taken place about B. C. 170, when KĪā was only thirty-three. The Book is said to have contained, when it first appeared, an account of the royal progresses and of the altars and ceremonies of investiture, of which we do not now find any trace. Parts of it are taken from Mencius, from the Shŭ, and from the Commentaries of Kung-yang and 3o on the *K'hun K'hiŭ*; other parts again are not easily reconciled with those authorities.

¹ 子遊.

² See the 54th Book of the Biographies in the History of the Second Han Dynasty.

³ In B. C. 164. See the Mirror of History on that year.

The *K'ien-lung* editors deliver their judgment on it to the following effect: When it was made, the *Î Lî* must have appeared, but not the *K'âu Lî*. Hence the Banquet and Missions appear among the 'Six Subjects of Teaching,' and no mention is made of the minister of Religion, as one of the six great ministers, nor is anything said of the minister of War's management of the army. On a general view of it, many subjects are evidently based on Mencius, and whole paragraphs are borrowed from him. Nothing is said of the peculiar position of the son of Heaven, because in the Han dynasty, succeeding immediately to that of *K'in*, the emperor was to be distinguished from, and not named along with, the feudal princes. In what is said about the reports of the Income and fixing the Expenditure, only the Grand ministers of Instruction, War, and Works are mentioned, because these were the three ducal ministers of the Han dynasty, and the ancient arrangements were represented so as to suit what had come into existence. That nothing is said about altars and investitures arose from *Wăn*'s having disregarded in that matter the advice of *Hsin-yüan Phing*¹. It only shows how much the information of the compilers exceeded that of *Shû-sun Thung*² and *Sze-mâ Hsiang-sû*³. The Book was received into the collection of the *Lî K'î*, because it was made at no great distance from antiquity. It is foolish in later scholars to weigh and measure every paragraph of it by its agreement or disagreement with Mencius and the *K'âu Lî*.

This account of the *Wang Kih* must commend itself to unprejudiced readers. To myself, the most interesting thing in the Book is the information to be gathered from it about the existence of schools in the earliest times. We see at the very commencement of history in China a

¹ 新垣平. A Tâoistic charlatan, honoured and followed for a few years by the emperor *Wăn*; put to death in B. C. 163.

² 叔孫通. A scholar of *K'in*; was a counsellor afterwards of the first and second emperors of Han.

³ 司馬相如. An officer and author. Died B. C. 126.

rudimentary education, out of which has come by gradual development the system of examinations of the present day.

BOOK IV. YÜEH LING.

The Yüeh Ling, or 'Proceedings of Government in the different Months,' appears in the *K'ien-lung* edition of the *LĪ KĪ* in six Sections; but it has seemed to me more in harmony with the nature of the Book and more useful for the student to arrange it in four Sections, and each Section in three Parts, a Section thus comprehending a season of the year, and every month having a part to itself. There is also a short supplementary Section in the middle of the year, at the end of the sixth month, rendered necessary by the T'aoist lines on which the different portions are put together.

Zhái Yung (A.D. 133-192)¹ and Wang Sū², somewhat later (in our third century), held that the Book was the work of the duke of Káu, and must be assigned to the eleventh or twelfth century B.C. But this view of its antiquity may be said to be universally given up. Even K'ang Hsüan saw in the second century that it was a compilation from the *K'hun K'hiû* of Lü P'ü-wei³, still foolishly said by many Chinese writers to have been the real father of the founder of the *K'hin* dynasty, and who died in B.C. 237. Lû Teh-ming⁴, writing in our seventh century, said, 'The Yüeh Ling was originally part of Lü's *K'hun K'hiû*, from which some one subsequently compiled this Memoir.' The *K'ien-lung* editors unhesitatingly affirm this origin of the Yüeh Ling; as indeed no one, who has compared it with the work ascribed to Lü, can have any doubts on the matter. Of that work, Mayers says that 'it is a collection of quasi-historical notices, and, although nominally Lü's production, really compiled under his direction by an assemblage of scholars.'

'蔡雍. '王肅. '呂不韋; 呂氏春秋.
'陸德命.

Mayers adds, that on the completion of the work, Lü Pû-wei suspended 1000 pieces of gold at the gate of his palace, which he offered as a reward to any one who could suggest an improvement of it by adding or expunging a single character¹.

Such was the origin of the Yüeh Ling. We do not know who compiled it from the *K'ün K'hiu* of Lü, but it was first received into the *Li K'i* by Má Yung. It can be explained only by noting the *K'hin* peculiarities in the names of titles and other things. It is in itself full of interest, throwing light on the ancient ways and religious views, and showing how the latter more especially came to be corrupted by the intrusion among them of Táoistic elements.

The Book has sometimes been called 'A Calendar of the Months of K'áu.' Callery translates the name Yüeh Ling by 'Attributs des Mois.' My own translation of it is after K'äng Hsüan, who says, 'The Book is called Yüeh Ling, because it records the proceedings of Government in the twelve months of the year.'

BOOK V. 3ANG-3ZE WÂN.

This Book is named from the first three characters in it, meaning 'The Questions of 3äng-3ze.' Most of the different paragraphs or chapters in the two Sections of it commence in the same way. It is not found at all in the expurgated editions of the classic.

3äng-3ze, or Mr. 3äng², about fifty years younger than Confucius, was one of the chief disciples of his school, perhaps the ablest among them. He was distinguished for his filial piety, and straightforward, honest simplicity.

¹ Mayers' Chinese Reader's Manual, p. 146. The 1000 pieces of gold suspended at Lü's gate are probably only a variation of what has been related in the preceding chapter of what was done by king Hsien of Ho-kien towards the recovery of the missing Book of the K'áu Kwan.

² 曾子; his name was (Shăn, 參), and that which he received in his maturity, 3ze-yü (子興).

There is an interesting account of his death in Book II, i, Part i, 18. In the department of Liû Hsin's Catalogue, which contains 'Works of the Literati,' there are entered '18 Treatises (phien) of 3ǎng-ze,' but without any further specification of them. Ten of those treatises, or fragments of them, are found in the Lî of the Greater Tâi, but this Book is not among them, nor have I seen it anywhere ascribed to him as the writer of it. It must have been compiled, however, from memoranda left by him or some of his intimate disciples. The names of only two other disciples of the Master occur in it—those of 3ze-yû and 3ze-hsiâ¹. The reference to the disciples of the former in Section ii, 19, must be a note by the final compiler. The mention of Lâo-ze or Lâo Tan, and his views also, in Section ii, 22, 24, 28, strikes us as remarkable.

If it were necessary to devise a name for the Book, I should propose—'Questions of Casuistry on the subject of Ceremonial Rites.' 3ǎng-ze propounds difficulties that have struck him on various points of ceremony, especially in connexion with the rites of mourning; and Confucius replies to them ingeniously and with much fertility. Some of the questions and answers, however, are but so much trifling. Khung Ying-tâ says that only 3ǎng-ze could have proposed the questions, and only Confucius have furnished the answers. He applies to the Book the description of the Yî in the third of the Appendixes to that classic, i, 40, as 'Speaking of the most complex phenomena under the sky, and having nothing in it to awaken dislike, and of the subtlest movements under the sky, and having nothing in it to produce confusion.'

BOOK VI. WÂN WANG SHIH-3ZE.

No hint is given, nothing has been suggested, as to who was the compiler of this Book, which the K'ien-lung editors publish in two Sections. Its name is taken from the first

¹ 子遊 and 子夏.

clause of the first paragraph, which treats of king Wăn, the founder of the Kâu dynasty, as he demeaned himself in his youth, when he was Shih-îze, or son and heir of his father. This is followed by a similar account of his son, who became king Wû; and in paragraph 3 the writer goes on to the duke of Kâu's training of king K'ăng, the young son of Wû. In the last paragraph of the second Section, the subject of king Wăn as prince is resumed.

But the real subject-matter of the Book lies between those portions, and treats of three things.

First; Section i, paragraph 5 to the end, treats of the education and training of the eldest sons of the king and feudal princes, and of the young men of brightest promise throughout the kingdom, chosen to study with these. We learn much from it as to the educational institutions and methods of ancient times.

Second; in Section ii, paragraphs 1 to 15, we have the duties of the Shû-îze, the head of an official Section, belonging to the department of the premier, whose special business was with the direction of the young noblemen of the royal and feudal courts in all matters belonging to their instruction.

Third; from paragraph 17 to 23 of Section ii, we have an account of the various ceremonies or observances in the king's feasting and cherishing of the aged, and of his care that a similar course should be pursued by all the princes in their states.

BOOK VII. LÎ YUN.

Lî Yun means, literally, 'The Conveyance of Rites.' P. Callery translates the name, not unsuccessfully, by 'Phases du Cérémonial;' but I prefer my own longer rendering of it, because it gives the reader a better idea of the contents of the Book. K'ăng Hsüan said it was called the Conveyance of Rites, because it records how the five Tis and three Kings made their several changes in them, and how the Yin and the Yang, or the twofold movement

and operation of nature, produced them by their revolutions. The whole is difficult and deep ; and no other portion of the collection has tasked the ablest commentators more. The *K'hien-lung* editors say that we have in the Book a grand expression of the importance of ceremonial usages, and that, if we are on our guard against a small Tâoistic element in it, it is pure and without a flaw. That depraving element, they think, was introduced by the smaller Tâi, who ignorantly thought he could make the Treatise appear to have a higher character by surreptitiously mixing it up with the fancies of Lâo and Kwang. But the Tâoistic admixture is larger than they are willing to allow.

Some have attributed the Book to 3ze-yû, who appears, in the first of its Sections, three times by his surname and name of Yen Yen, as the questioner of Confucius, and thereby giving occasion to the exposition of the sage's views ; others attribute it to his disciples. The second Section commences with an utterance of Confucius without the prompting of any interlocutor ; and perhaps the compiler meant that all the rest of the Treatise should be received as giving not only the Master's ideas, but also his words. Whoever made the Book as we now have it, it is one of the most valuable in the whole work. Hwang K'ân (in the end of the Sung dynasty) says of it, that notwithstanding the appearance, here and there, of Tâoistic elements, it contains many admirable passages, and he instances what is said about creation or the processes of nature, in iii, 2 ; about government, in ii, 18 ; about man, in iii, 1, 7 ; and about ceremonial usages, in iv, 6.

But the Tâoistic element runs through the whole Book, as it does through Book IV. There is an attempt to sew the fancies about numbers, colours, elements, and other things on to the common-sense and morality of Confucianism. But nevertheless, the Treatise bears important testimony to the sense of religion as the first and chief element of ceremonies, and to its existence in the very earliest times.

BOOK VIII. Lĭ Kĕi.

Book VII, it was said, has been attributed to 3ze-yŭ. I have not seen this ascribed to any one ; but it is certainly a sequel to the other, and may be considered as having proceeded from the same author. The more the two are studied together, the more likely will this appear.

Callery has not attempted to translate the title, and says that the two characters composing it give the sense of 'Utensils of Rites,' and have no plausible relation with the scope of the Book in which there is no question in any way of the material employed either in sacrifices or in other ceremonies; and he contends, therefore, that they should not be translated, but simply be considered as sounds¹.

But the rendering which I have given is in accordance with an acknowledged usage of the second character, *Kĕi*. We read in the Confucian Analects, V, 3 :—' 3ze-kung asked, "What do you say of me?" The Master answered, "You are a vessel." "What vessel?" "A sacrificial vessel of jade."' The object of the Book is to show how ceremonial usages or rites go to form 'the vessel of honour,' 'the superior man,' who is equal to the most difficult and important services. K'ang Hsüan saw this clearly, and said, 'The Book was named Lĭ *Kĕi*, because it records how ceremonies cause men to become perfect vessels.' 'The former Book shows the evolution of Rites; this shows the use of them :—such was the dictum in A. D. 1113 of Fang K'ueh, a commentator often quoted by K'han Hào and by the K'ien-lung editors.

Throughout the Book it is mostly religious rites that are spoken of; especially as culminating in the worship of God. And nothing is more fully brought out than that all rites are valueless without truth and reverence.

BOOK IX. KĪAO THEH SANG.

The name of the Book is made up of the three characters with which it commences, just as the Hebrew name for the Book of Genesis in our Sacred Scriptures is Beraishith (בְּרֵאשִׁית). From the meaning, however, of KĪao Theh Săng the reader is led to suppose that he will find the Treatise occupied principally with an account of the great Border Sacrifice. But it is not so.

The main subject of the Book is sacrifice generally; and how that which is most valuable in it is the reverence and sincerity of the worshipper, finding its exhibition in the simplicity of his observances. In the preceding Book different conditions have been mentioned which are of special value in sacrifice and other ceremonies. Among them is the paucity of things (Section i, paragraph 8); and this consideration is most forcibly illustrated by 'the Single Victim' employed in the Border Sacrifice, the greatest of all ceremonies. At the same time various abuses of the ancient sincerity and simplicity are exposed and deplored.

The ceremonies of capping and marriage are dealt with in the third Section; and we are thankful for the information about them which it supplies. In the end the writer returns to the subject of sacrifices; and differences in the different dynasties, from the time of Shun downwards, in the celebration of them are pointed out.

The K'kien-lung editors say that this Book was originally one with the last, and 'was separated from it by some later hand.' I had come to the same conclusion before I noticed their judgment. Books VII, VIII, and IX must have formed, I think, at first one Treatise.

BOOK X. NĒI 3EH.

The title of this book, meaning 'The Pattern of the Family,' rendered by Callery, 'Réglements Intérieurs,' approxi-

mates to a description of its contents more than most of the titles in the *Lî K'î*. It is not taken, moreover, from any part of the text near the commencement or elsewhere. It is difficult to understand why so little of it is retained in the expurgated editions, hardly more than a page of P. Callery's work being sufficient for it.

K'äng Hsüan says :—' The Book takes its name of *Nêi 3eh*, because it records the rules for sons and daughters in serving their parents, and for sons and their wives in serving her parents-in-law in the family-home. Among the other Treatises of the *Lî K'î*, it may be considered as giving the Rules for Children. And because the observances of the harem are worthy of imitation, it is called *Nêi 3eh*, "the Pattern of the Interior." ' *K'ü Hsi* says, that ' it is a Book which was taught to the people in the ancient schools, an ancient Classic or Sacred Text.'

Because the name of *3äng-3ze* and a sentence from him occur, the *K'ien-lung* editors are inclined to ascribe the authorship to his disciples ; but the premiss is too narrow to support such a conclusion.

The position of the wife, as described in Section i, will appear to western readers very deplorable. Much in this part of the Treatise partakes of the exaggeration that is characteristic of Chinese views of the virtue of filial piety.

The account in Section ii of the attention paid to the aged, and the nourishing of them, is interesting, but goes, as the thing itself did, too much into details. What is it to us at the present time how they made the fry, the bake, the delicacy, and the other dishes to tempt the palate and maintain the strength ? The observances in the relation of husband and wife, on the birth of a child, and the education and duties of the young of both sexes, which the Section goes on to detail, however, are not wanting in attraction.

BOOK XI. Yü 3âo.

The name of the Book, *Yü 3âo*, is taken from the first clause of the first paragraph. The two characters denote the pendants of the royal cap worn on great occasions, and

on which beads of jade were strung. There were twelve of those pendants hanging down, before and behind, from the ends of the square or rectangular top of the cap, as in the cardinal cap which is the crest of Christ Church, Oxford. But we read nothing more of this cap or its pendants after the first paragraph; and the contents of all the three Sections of the Book are so various, that it is impossible to give an account of them in small compass.

K'ang Hsüan said that the Book was named Yü 3áo, because it recorded the dresses and caps worn by the son of Heaven; but it is not confined to the king, but introduces rulers also and officers generally. It treats also of other matters besides dress, which it would be difficult to speak of in so many categories. Much, moreover, of the second Section seems to consist of *disjecta membra*, and the paragraphs are differently arranged by different editors. Here and there the careful reader will meet with sentiments and sentences that will remain in his memory, as in reading Book I; but he will only carry away a vague impression of the Book as a whole.

BOOK XII. MING THANG WEI.

Readers will turn to this Book, as I did many years ago, expecting to find in it a full description of the Ming Thang, generally called by sinologists, 'The Brilliant Hall,' and 'The Hall of Light;,' but they will find that the subject-matter is very different. I have here translated the name by 'the Hall of Distinction,' according to the meaning of it given in paragraph 5, taking 'distinction' in the sense of separation or discrimination.

The Treatise commences with, but does not fairly describe, the great scene in the life of the duke of K'áu, when as regent of the kingdom, he received all the feudal lords and the chiefs of the barbarous tribes at the capital, on occasion of a grand audience or *durbar*. The duke was the ancestor of the lords or marquises of the state of

Lû,—part of the present province of Shan-tung. He was himself, indeed, invested with that fief by his nephew, king *Khăng*, though, remaining for reasons of state at the royal court, he never took possession of it in person, but sent his son *Po-khin* to do so in his room. Because of his great services in the establishment and consolidation of the new dynasty, however, various privileges were conferred on the rulers of Lû above the lords of other states. These are much exaggerated in the Book; and after the sixth paragraph, we hear no more of the Hall of Distinction. All that follows is occupied with the peculiar privileges said to have been claimed, and antiques reported to have been possessed, by the marquises of Lû. What is said has no historical value, and the whole Book is excluded from the expurgated editions.

The *K'ien-lung* editors say that its author must have been an ignorant and vainglorious scholar of Lû in the end of the *K'au* dynasty. Some have imagined that it was handed on, with additions of his own, by *Mâ Yung* to *K'äng Hsüan*; but the latter says nothing about the other in his brief prefatory note.

The Hall of Distinction was a royal structure. Part of it was used as a temple, at the sacrifices in which peculiar honour was done to king *Wăn* (*The Shih*, IV, i, 7). It was also used for purposes of audience, as on the occasion referred to in this Book; and governmental regulations were promulgated from it (*Mencius*, I, ii, 5). To this third use of it would belong the various references to it in Book IV of this collection.

The principal Hall was in the capital; but there were smaller ones with the same name at the four points where the kings halted in their tours of inspection to receive the feudal lords of the different quarters of the kingdom. It was one of these which *Mencius* had in his mind in the passage referred to above.

In the 67th Book of the *Lî* of the Greater *T'ai* there is a description of the building and its various parts; and among the 'Books of *K'au*' said to have been found in A. D. 279 in the grave of king *Hsiang* of *Wei*, the 55th

chapter has the title of Ming Thang, but it is little more than a rifacimento of the first four paragraphs of this Book of the LĪ KĪ.

In Morrison's Chinese Dictionary, vol. i, p. 512, there is a ground-plan of the Hall according to a common representation of it by Chinese authorities.

BOOK XIII. SANG FŪ HSIĀO KĪ.

This 'Record of Smaller Points in connexion with the Dress of Mourning,' is the first of the many treatises in our collection, devoted expressly to the subject of the mourning rites, and especially of the dress worn by the mourners, according to the degree of their relationship. The expurgated editions do not give any part of it; and it is difficult—I may say impossible—to trace any general plan on which the compiler, who is unknown, put the different portions of it together. Occasionally two or three paragraphs follow one another on the same subject, and I have kept them together after the example of Khung Ying-tâ; but the different notices are put down as if at random, just as they occurred to the writer.

Kŭ Hsi says that 3ze-hsiâ made a supplementary treatise to the 11th Book of the Ī LĪ, and that we have here an explanation of many points in that Book. It is so; and yet we may not be justified in concluding that this is a remnant of the production of 3ze-hsiâ.

BOOK XIV. TĀ K'WAN.

This Book, 'the Great Treatise,' has been compared to the Hsi 3hze, the longest and most important of the Appendixes to the Yĭ King, which is also styled TĀ K'wan.

It is short, however, as compared with that other; nor is it easy to understand, the subjects with which it deals being so different in the conceptions of Chinese and western minds. 'It treats,' said K'ăn Hsiang-táo (early in the Sung dynasty), 'of the greatest sacrifice,—that

offered by the sovereign to all his ancestors; of the greatest instance of filial piety,—that of carrying back to his forefathers the title gained by the sacrificer; of the greatest principle in the regulation of the family,—that expressed by the arrangement of the names of its members according to their relations to one another; and of the course of humanity as the greatest illustration of propriety and righteousness. On account of this it is called *The Great Treatise*.’

From this summary of its contents the importance of the Book will be seen. We know nothing either of its author or of the date of its compilation.

BOOK XV. SHĀO Î.

The ShĀo Î, or ‘Smaller Rules of Conduct,’ is akin to much of the first Book in our collection, ‘the Summary of the Rules of Ceremony.’ ShĀo means ‘few,’ and often ‘few in years,’ or ‘young;’ and hence some have thought that the subject of the Book is ‘Rules for the Young.’ So Callery, who gives for the title, ‘*Règles de Conduite des Jeunes Gens*.’

But the contents cannot be so restricted; and since the time of Kǎng Hsüan, shĀo has been taken by most Chinese commentators as equivalent to hsiĀo¹, which occurs in the title of Book XIII. The difference between the two Chinese characters is not so great as that between these alphabetic exhibitions of their names. Lû Teh-ming says, ‘ShĀo is here equivalent to hsiĀo;’ and Kǎng says, that the Book is named ShĀo Î ‘because it records the small rules of demeanour at interviews and in bringing in the provisions for a feast.’ But the observances described are very various, and enable us to form a life-like picture of manners in those early days.

According to K’û Hsi, the Book was intended to be a branch of the smaller learning, or lessons for youth; but

¹ 少 and 小.

was extended to a variety of subjects in daily life and the intercourses of society. When and by whom it was compiled is not known.

BOOK XVI. HSIO KĪ.

The *Hsio KĪ*, or 'Record of Studies,' is a treatise of very considerable interest and importance. *Khǎng-ze*, whom *Kū Hsi* was accustomed to call his 'Master,' considered it to be, after Books XXVIII and XXXIX, the *Kung Yung* and *Tā Hsio*, the most correct and orthodox Book in the *LĪ KĪ*.

The *Khien-lung* editors say that in paragraphs 4 and 5 we have the institutions of the ancient kings for purposes of education; in 6 to 19, the laws for teachers; and in what follows, those for learners. The summary is on the whole correct, but the compiler (who is unknown) did not always keep his subjects distinct. In the three commencing paragraphs the importance of education to the moral well-being of the people is strikingly exhibited. The whole displays an amount of observation and a maturity of reflection on the subject, which cannot but be deemed remarkable. The information about ancient schools and higher institutions may be found in the earlier Books, but we are glad to have this repetition of it.

BOOK XVII. YO KĪ.

The *Yo KĪ*, or 'Record of Music,' will be found to have more interest for general readers than most of the other Books of the *LĪ*. *Khǎng-ze* speaks of it in terms similar to those quoted from him in the preceding notice about the *Hsio KĪ*. That, so far as correctness and orthodoxy are concerned, is next to the *Kung Yung* and *Tā Hsio*; this is near to them. Its introduction into our collection is ascribed to *Mā Yung*.

The old documents on music that had been recovered during the earlier Han dynasty, appear in *Liū Hsin's* Catalogue after those of the *LĪ*, amounting in all to

165 phien, distributed in six collections. The first of these was the *Yo K'i*, in 23 phien; the second, the *K'i* of Wang Yü¹, in 24 phien. Khung Ying-tâ, deriving his information from a note in Hsin's Catalogue and other sources, sums up what he has to say about this Book in the following way:—On the rise of the Han dynasty, the treatises of former times on music, as well as the practice of the art, were in a state of special dilapidation. In the time of the emperor Wû, his brother Teh, with the help of many scholars, copied out all that remained on the subject of music, and made a *Yo K'i*, or 'Record of Music,' in 24 phien or books, which Wang Yü presented to the court in the time of the emperor *K'ang* (B. C. 32-7); but it was afterwards hardly heard of. When Liû Hsiang (died B. C. 9) examined the books in the Imperial library, he found a 'Record of Music' in 23 phien, different from that which Wang Yü had presented. Our present *Yo K'i* contains eleven of those phien, arranged with the names of their subjects. The other twelve are lost, though their names remain.

Most of the present text is found in Sze-mâ *K'hien's* Monograph on Music; and as he was so long before Liû Hsiang (*K'hien* died between B. C. 90 and 80), the *K'hien-lung* editors suppose that it is one of the portions of *K'hien's* work, supplied by *K'û Shão-sun*², who was a contemporary of Hsiang.

K'û Hsi had a great admiration of many passages in the *Yo K'i*, and finds in them the germs of the views on the constitution of humanity, and on the action and interaction of principle and passion, reason and force, in the economy of what we call Providence, on which he delighted to dwell in his philosophical speculations. We expect from the title, as Hwang Kan-hsing (Ming dynasty) says, that music will be the chief subject of the Treatise, but everywhere we find ceremonial usages spoken of equally and in their relation to it; for, according to the view of the author, the framework of society is built on the truth

¹王禹. ²褚少孫; see Wylie's Notes, p. 14.

underlying ceremonies, and music is the necessary expression of satisfaction in the resulting beauty and harmony.

BOOK XVIII. 3Â Kĭ.

Book XVII is given nearly complete in the expurgated edition translated by Callery, while the 18th or 'Miscellaneous Records,' happily rendered by him by the one French word '*Mélanges*,' is reduced to about a third of its length in the Chinese text. Notwithstanding its name of 'Miscellanies,' the greater part is occupied with the observances of the Mourning Rites. Interesting questions concerning them are discussed, and information is given on customs which we do not find in such detail elsewhere,—such, for instance, as those relating to the gifts of grave-clothes and other things for the burial of the dead. Towards the end other customs, besides those of the mourning rites, are introduced. It would be a mistake, however, to suppose that this is done to justify the name of Miscellaneous Records given to the whole. It is a peculiarity of many of the other Books that the writer, or writers, seem to get weary of confining themselves to one subject or even to a few subjects, and introduce entries of quite a different nature for no reason that we can discover but their arbitrary pleasure.

The correctness and integrity of many paragraphs have been justly called in question. The authority of the Book does not rank high. It must be classed in this respect with the Than Kung.

BOOK XIX. SANG TÂ Kĭ.

Book XIII deals with smaller points in connexion with the dress of mourning; Book XVIII, with miscellaneous points in mourning; and this Book with the greater points, especially with the two dressings of the dead, the coffin, and the burial. Beginning with the preparations for death in the case of a ruler, a Great officer, or an ordinary officer, it goes methodically over all the observances at and after death, until the burial has taken place. It takes us into

the palace, the mansion, and the smaller official residence, and shows us what was done at the different steps that intervened between death and the committing of the coffin to the grave. Some of the observances differ in minor points from details in those other Books, and in the *Than Kung* or Book II; but taking them all together, we get from them a wonderfully minute account of all the rites of mourning in ancient China. *Wû K'ang* says, 'This Book relates the greater rules observed in each event which it mentions.' It was not intended to supplement the information elsewhere given about smaller details; and hence it is named 'The Greater Record of Mourning Rites.'

BOOK XX. *K'î Fâ*.

K'î Fâ, so named from the first two characters in the Book, and meaning 'Laws or Rules of Sacrifices,' is the first of three treatises, all on the subject of sacrifices, that come together at this part of the collection of the *Lî*. They were not, perhaps, the production of the same hand; but the writer of this one evidently had before him the 17th article in the first Part of the Narratives connected with the state of *Lû*, which form the second Section of 'the Narratives of the States¹.' That article contains an exposition of the subject of sacrifices by a *Ken K'ên*, in deprecation of a sacrifice ordered by *Çang Wăn-kang*, who had been for about fifty years one of the ministers of *Lû*. *Çang* died in B. C. 617.

Difficulties attach to some of the historical statements in the Book, which cannot be cleared up from our want of sufficient documents. The whole consists of two Parts, —paragraphs 1–8, and paragraph 9. All the former is excluded from the expurgated editions; but in it, as well as in the other, the sacrifices are mainly those to departed worthies. There is no idea of deprecation in them; much less of atonement. They are expressions of gratitude, and commemorative of men whose laws and achievements were

¹ 國語.

beneficial to their own times, and helped on the progress of civilisation, so that they would be beneficial also to all ages.

In the conclusion, the sacrifices to the sun, moon, and other parts of nature appear; and it is said that they were instituted because the action of those bodies contributed to promote the comfort and agency of men. So far those sacrifices were a species of nature-worship; but the question arises whether they were not really offered to the spirits under whose guardianship those objects operated.

BOOK XXI. KÎ Î.

The KÎ Î, or 'The Meaning of Sacrifices,' 'Sens des Sacrifices' in Callery, embraces a wider extent of subjects than the last Book. It treats first of the sacrifices to Heaven, and to the sun and moon in connexion with it, as well as of those in the ancestral temple, though the latter are the principal subject. The writer, whoever he was, goes fully into the preparations of the sacrificer, and the spirit of reverence in which the services should be conducted.

No idea of deprecation or expiation is expressed as belonging to the sacrifices. It is said, indeed, in Section i, 18, that the sacrifice in the suburb of the capital was the great expression of gratitude to Heaven.

In Section ii other subjects besides sacrifice are treated of. It commences with a remarkable conversation between Confucius and his disciple 3âi Wo, on the constitution of man, as comprehending both the Kwei and Shăn, the former name denoting the animal soul, which, with the bones and flesh, 'moulders below and becomes the dust of the fields;' while the latter denotes the intelligent soul or spirit, which issues forth at death, and is displayed on high in a condition of glorious brightness.

The ploughing of the special fields by the king and rulers of states, and the regulations for the nourishment of silkworms and the preparation of silk by their wives, are set forth, both operations being to provide the sacrificial grain and robes.

After this we have the views of ǰǰng-ǰze and one of his disciples on filial piety, which subject again passes into the submission of the younger brother to the elder, and the respect to be paid generally by juniors to their elders.

BOOK XXII. Kĭ THUNG.

The 'Summary Account of Sacrifices' is the last and longest, and, it may be added, the most interesting, of the treatises, specially on that subject. We find nothing in it, any more than in the others, of the idea of propitiation; but it gives many details of the purposes which the institution of sacrifices served in the Chinese state. The old commentators took the character Thung¹ in the sense of 'Root' or 'Origin²,' and hence some English sinologists have named the book 'The Origin of Sacrifices,' and P. Zottoli gives for the title 'Sacrificii Principium.' Callery calls it, better, 'Généralités sur les Sacrifices.' The very able commentator K'ǰǰn Hsiang-tǰo compares the Treatise to 'the large rope which controls the meshes of a net,' saying, that it commences with sacrifice as coming from the feeling of the heart, and ends with the display of its influence in the conduct of government.

The concluding paragraph shows that it was written while the state of Lŭ still had an existence; and if the whole Book proceeded from the same hand, it must have been composed some time after the death of Confucius and before the extinction of Lŭ, which was consummated by K'ǰu in B. C. 248. I think we may refer it to the fourth century B. C.

The doctrine of Filial Piety occupies a prominent place in it. Paragraph 13 and the ten that follow, on the connexion between sacrifice and the ten relationships of men, are specially instructive. The author writes forcibly and often subtly; and can hardly do himself justice in the

expression of his ideas. What he says on the subject of Inscriptions towards the conclusion is interesting. He was a true Lî man, and his views on the sacrifices of his state are contrary to the standard of Chinese orthodoxy about them.

BOOK XXIII. *KING KIEH.*

King Kieh has been translated 'Explanations of the Classics,' and Callery gives for the title 'Sens Général des Livres Canoniques.' A slight attention to the few paragraphs which compose the Book, however, will satisfy the reader that these translations of the name are incorrect. No explanation is attempted of passages in the different *King*. The true meaning of *King Kieh* was given by Hwang Khan in A.D. 538. '*Kieh*,' he says, 'is to be taken in the sense of "separation" or "division;" and the Treatise describes the difference between the subjects dealt with in the different *King*.'

The Book, though ingenious, is not entitled to much attention. The first two paragraphs, assigned to Confucius, could not have come from him. They assume that there were six *King*; but that enumeration of the ancient writings originated with the scholars of the Han dynasty. And among the six is the *K'ün K'hiû*, the work of Confucius himself, which he compiled only a year or two before his death. It was for posterity, and not for him, to raise it to the rank of a *King*, and place it on the same level with the *Shû*, the *Shih*, and the *Yi*. It may be doubted, moreover, if there were ever a *Yo King*, or 'Classic of Music.' Treatises on music, no doubt, existed under the *K'au* dynasty, but it does not appear that there was any collection of them made till the attempts that have been referred to in the introductory notice to Book XVII.

Who the ingenious, but uncritical, compiler of the *King Kieh* was is unknown.

BOOK XXIV. ÂI KUNG WAN.

'Questions of Duke Âi' is a translation of the three characters with which the Book commences, and which mean there 'Duke Âi asked;' and the title is so far descriptive of the contents of the Book,—two conversations on ceremonies and the practice of government between the marquis 3iang of Lû, posthumously called duke Âi, and Confucius. The sage died in the sixteenth year of 3iang's marquise. As an old minister of the state, after he had retired from public life, he had a right of entrance to the court, which, we know, he sometimes exercised. He may have conversed with the marquis on the subjects discussed in this Treatise; but whether he held the particular conversations here related can only be determined by the consideration of their style and matter. I am myself disposed to question their genuineness.

There are other recensions of the Treatise. It forms the third of the Books in the current editions of 'the Lî of the Greater Tâi,' purporting to be the forty-first of those which were in his larger collection; and is the same as in our Lî Kî, with hardly a variation. The second conversation, again, appears as the fourth article in the collection called the 'Narratives of the School¹,' but with considerable and important variations, under the title of Tâ Hwăn, 'The Grand Marriage.' The first conversation is found also in the same collection, as part of the sixth article, called Wăn Lî, or 'Questions about Ceremonies.' There are also variations in it; but the questioner in both articles is duke Âi.

The most remarkable passages of the Book are some paragraphs of the second conversation towards its conclusion. P. Callery translates Thien Tâo, 'the Way of Heaven,' in paragraph 16, by 'La Vérité Céleste,' and

says in a note that Confucius speaks of this Tào in a way not unlike Láo-ze in the Tào Teh King, adding that 'these two fathers of Chinese philosophy had on this mysterious Being ideas nearly similar.' But a close examination of the passage, which is itself remarkable, shows that this resemblance between it and passages of the Táoist classic does not exist. See my concluding note on the Book. If there were a Táoist semblance in the phraseology, it would make us refer the composition of the Treatise to the time of K'in or the early days of Han, when Táoism had taken a place in the national literature which it had not had under the dynasty of Káu.

BOOK XXV. KUNG-NĪ YEN KÜ.

The title of this Book is taken from the four characters with which it commences. Confucius has returned from his attendance at the court of Lû, and is at home in his own house. Three of his disciples are sitting by him, and his conversation with them flows on till it has reached the subject of ceremonial usages. In reply to their questions, he discourses on it at length, diverging also to the subjects of music and the practice of government in connexion with ceremonies, in a familiar and practical manner.

He appears in the title by his designation, or name as married, Kung-nĭ, which we find also two or three times in Book XXVIII, which is received as the composition of his grandson Khung Kĭ, or Ze-sze. This Treatise, however, is much shorter than that, and inferior to it. The commentator Wang of Shih-liang¹, often quoted by K'ăn Háo, says, that though this Treatise has a beginning and end, the style and ideas are so disjected and loose, that many of the utterances attributed to Confucius cannot be accepted as really his.

'石梁王氏.

BOOK XXVI. KHUNG-ȝZE HSIEN K'U.

The title of this Book is akin to that of the last, the characters of that leading us to think of Confucius as having returned from court to 'his ease,' and those of this suggesting nothing of his immediate antecedents, but simply saying that he was 'at home and at leisure.' Instead of being called, as there, by his designation, he appears here as Khung-ȝze, 'the philosopher Khung,' or 'Mr. Khung.'

The Book also relates a conversation, but only one disciple is present, and to him the Master discourses on the description of a sovereign as 'the parent of the people,' and on the virtue of the founders of the three dynasties of Hsiâ, Shang, and K'au, illustrating his views by quotations from the Book of Poetry. His language is sometimes strange and startling, while the ideas underlying it are subtle and ingenious. And the poetical quotations are inapplicable to the subjects in connexion with which they are introduced. If the commentator Wang could not adopt the speeches attributed to Confucius in the last Book as really his, much less can we receive those in this as such.

From their internal analogies in form and sentiment, I suppose that the two Books were made by the same writer; but I have met with no guess even as to who he was.

BOOK XXVII. FANG K'İ.

'The Dykes,' which is the meaning of the title of this Book, is suggestive of its subject-matter. We have in it the rules or usages of ceremony presented to us under the figure of dykes, dams, or barriers; defensive structures made to secure what is inside them from escaping or dispersion, and to defend it against inundation or other injurious assault and invasion from without. The character, called fang, is used for the most part with verbal force, 'acting as a dyke or barrier;' and it would often be difficult to say

whether the writer was thinking of the particular institution or usage spoken of as fulfilling the purpose of defence against peril from within, or violence from without.

The illustrations are numerous, and they are all given as if they came from the lips of Confucius himself; but we cannot suppose that they were really from him. They are not in his style, and the reasonings are occasionally unworthy of him. Many paragraphs carry on their front a protest against our receiving them as really his. Nevertheless, the Book, though sometimes tedious, is on the whole interesting, and we like the idea of looking on the usages as 'dykes.' We do not know to whom we are indebted for it. One of the famous brothers *K'hang* of the Sung dynasty has said:—'We do not know who wrote the Treatise. Since we find such expressions in it as "The Lun Yü says," it is plainly not to be ascribed to Confucius. Passages in the Han scholars, *K'ia* Í and Tung *Kung-shû*, are to the same effect as what we find here; and perhaps this memoir was their production.'

BOOK XXVIII. *KUNG YUNG*.

The *Kung Yung* would be pronounced, I think, by Chinese scholars to be the most valuable of all the Treatises in the *Lî K'î*; and from an early time it asserted a position peculiar to itself. Its place in the general collection of Ritual Treatises was acknowledged by *Mâ Yung* and his disciple *K'ang Hsüan*; but in *Liü Hsin's* Catalogue of the *Lî Books*, we find an entry of 'Observations on the *Kung Yung*, in two *phien*;' so early was the work thought to be deserving of special treatment by itself. In the records of the Sui dynasty (A. D. 589–617), in the Catalogue of its Imperial library, there are the names of three other special works upon it, one of them by the emperor *Wû* (A. D. 502–549) of the Liang dynasty.

Later on, under the Sung dynasty, the *Kung Yung*, the *Tâ Hsio*, or 'Great Learning,' which is also a portion of the *Lî K'î*, the Confucian Analects, or the *Lun Yü*, and the works of Mencius, were classed together as 'The Four Books,'

which have since that time formed so important a division of Chinese literature; and 'the *Kung Yung*, in chapters and sentences, with a digest of commentaries on it,' was published by *K'ü Hsi* early in A.D. 1189. About 125 years afterwards, the fourth emperor of the *Yüan* dynasty enacted that *K'ü*'s edition and views should be the text-book of the classic at the literary examinations. From that time merely the name of the *Kung Yung* was retained in editions of the *Lî K'î*, until the appearance of the Imperial edition of the whole collection in the *K'ien-lung* period of the present dynasty. There the text is given in two Sections according to the old division of it, with the ancient commentaries from the edition of 'The Thirteen King' of the Thang dynasty, followed at the end of each paragraph by the Commentary of *K'ü*.

The authorship of the *Kung Yung* is ascribed to *Khung K'î*, better known as *3ze-sze*, the grandson of Confucius. There is no statement to this effect, indeed, in the work itself; but the tradition need not be called in question. It certainly existed in the *Khung* family. The Book must have been written in the fifth century B.C., some time, I suppose, between 450 and 400. Since A.D. 1267, the author has had a place in the temples of Confucius as one of 'The Four Assessors,' with the title of 'The Philosopher *3ze-sze*, transmitter of the Sage.' I have seen his tomb-mound in the Confucian cemetery, outside the city of *K'ü-fû* in Shan-tung, in front of those of his father and grandfather. There is a statue of him on it, bearing the inscription, 'Duke (or Prince) of the State of *Î*.'

It is not easy to translate the name of the Treatise, *Kung Yung*. It has been represented by 'Juste Milieu;' 'Medium Constans vel Sempiternum;' 'L'Invariable Milieu;' 'The Constant Medium;' 'The Golden Medium;' 'The True Medium;' and otherwise. I called it, in 1861, 'The Doctrine of the Mean,' which I have now changed for 'The State of Equilibrium and Harmony,' the reasons for which will be found in the notes on the first chapter of the present version.

I do not here enter on an exhibition of the scope and value of the Book. It gives the best account that we have of the Confucian philosophy and morals, and will amply repay careful study, and hold its place not only in China, but in the wider sphere beyond it. The writer had an exaggerated conception of the sage; but he deserves well of his own country and of the world.

BOOK XXIX. PIÁO KÍ.

The character called Piáo is the symbol for the outer garments, and is used to indicate whatever is external in opposition to what is internal; the outside of things, what serves to mark them out and call attention to them. Hence comes its use in the sense which it bears in the title of this Book, for what serves as an example or model. Callery renders that title by '*Mémoire sur l'Exemple*;' Wylie, by '*The Exemplar Record*.'

Piáo is also used for the gnomon of a dial; and the *K'ien-lung* editors fix on this application of the character in explaining the name of the Book. 'Piáo,' they say, 'is the gnomon of a dial, by which the movement of the sun is measured; it rises up in the centre, and all round is regulated by it. The Fang Kí shows men what they ought to be on their guard against; the Piáo Kí, what they should take as their pattern.' Then they add—'Of patterns there is none so honourable as benevolence (or humanity proper), and to aid that there is righteousness, while, to complete it, there is sincerity or good faith, and reverence is that by which the quest for humanity is pursued.' This second sentence may be considered a summary of the contents of the Book, which they conclude by saying, they have divided into eight chapters after the example of the scholar Hwang; meaning, I suppose, Hwang Khan, who has been already mentioned as having published his work on our classic in A. D. 538.

That division into eight chapters lies on the face of the Treatise. We have eight paragraphs commencing with the characters which I have rendered by 'These were the words

of the Master ;' and these are followed by a number of others, more or fewer as the case may be, in which the words of the Master ('The Master said') are adduced to substantiate what has been stated in that introductory passage. The arrangement is uniform, excepting in one instance to which I have called attention in a note, and suitably divides the whole into eight chapters.

But no one supposes that 'the words of the Master' are really those of Confucius, or were used by him in the connexion which is here given to them. They were invented by the author of the Treatise, or applied by him, to suit his own purpose ; and scholars object to many of them as contrary to the sentiments of the sage, and betraying a tendency to the views of Tàoism. This appears, most strikingly perhaps, in the fifth chapter. On the statement, for instance, in paragraph 32, that the methods of Yin and K'áu were not equal to the correction of the errors produced by those of Shun and Hsia, the *K'ien-lung* editors say :—'How could these words have come from the mouth of the Master? The disciples of Láo-¿ze despised forms and prized the unadorned simplicity, commended what was ancient, and condemned all that was of their own time. In the beginning of the Han dynasty, the principles of Hwang and Láo were widely circulated ; students lost themselves in the stream of what they heard, could not decide upon its erroneousness, and ascribed it to the Master. Such cases were numerous, and even in several paragraphs of the *Li Yun* (Book VII) we seem to have some of them. What we find there was the utterance, probably, of some disciple of Láo-¿ze.'

No one, so far as I have noticed, has ventured to assign the authorship of this Book on example. I would identify him, myself, with the Kung-sun Ní-¿ze, to whom the next is ascribed.

BOOK XXX. ¿ZE Í.

It is a disappointment to the reader, when he finds after reading the title of this Book, that it has nothing to do with the Black Robes of which he expects it to be an account.

That phrase occurs in the second paragraph, in a note to which its origin is explained ; but the other name Hsiang Po, which is found in the same paragraph, might with equal appropriateness, or rather inappropriateness, have been adopted for the Treatise.

It is really of the same nature as the preceding, and contains twenty-four paragraphs, all attributed to 'the Master,' and each of which may be considered to afford a pattern for rulers and their people. It ought to form one Book with XXIX under the title of 'Pattern Lessons.' I have pointed out in the notes some instances of the agreement in their style and phraseology, and the intelligent reader who consults the translation with reference to the Chinese text will discover more. Lû Teh-ming (early in the Thang dynasty) tells us, on the authority of Liû Hsien, that the 3ze Î was made by a Kung-sun Nî-ze. Liû Hsien was a distinguished scholar of the early Sung dynasty, and died about A. D. 500; but on what evidence he assigned the authorship of the Book to Kung-sun Nî-ze does not, in the present state of our knowledge, appear. The name of that individual is found twice in Liû Hsin's Catalogue, as belonging to the learned school, and among 'the Miscellaneous writers,' with a note that he was 'a disciple of the seventy disciples of the Master.' The first entry about him precedes that about Mencius, so that he must be referred to the closing period of the K'au dynasty, the third century B. C. He may, therefore, have been the author of 'The Black Robes,' and of the preceding Book as well, giving his own views, but attributing them, after the fashion of the time, to Confucius; but, as the commentator Făng Î (? Ming dynasty) observes:—'Many passages in the Book are made to resemble the sayings of a sage ; but the style is not good and the meaning is inferior.'

BOOK XXXI. PĀN SANG.

This Book refers to a special case in connexion with the mourning rites, that of an individual who has been prevented, from taking part with the other relatives in the usual

observances at the proper time. It might be that he was absent from the state, charged by his ruler with public business, or he might be in the same state but at a distance, and so occupied that he had been unable to take part in the mourning services.

But they were too sacred to be entirely neglected, and we have here the rules applicable to such a case, in a variety of circumstances and different degrees of consanguinity. Some other matter, more or less analogous, is introduced towards the end.

We have seen how the first of the 'Three Rituals' recovered in the Han dynasty was seventeen Books that now form the 1 Li. K'ang Hsüan supposed that the P'ăn Sang had been another Book of that collection, and was afterwards obtained from the tablets found in the village of Yen-kung in Lû. It has been decided, however, that the style determines it to be from another hand than the 1 Li.

Here it is, and we have only to make the best of it that we can, without knowing who wrote it or when it came to light. The *K'ien-lung* editors say:—'Anciently, in cases of mourning for a year or shorter period even, officers left their charges and hurried to the rites. In consequence of the inconvenience arising from this, it was enacted that officers should leave their charge only on the death of a parent. It was found difficult, however, to enforce this. The rule is that a charge cannot be left, without leave asked and obtained.'

BOOK XXXII. WÂN SANG.

The W'ăn Sang, or 'Questions about Mourning Rites,' is a short Treatise, which derives its name from inquiries about the dressing of the corpse, the putting off the cap and replacing it by the cincture, and the use of the staff in mourning. Along with those inquiries there are accounts of some of the rites, condensed and imperfect. The Book should be read in connexion with the other Books of a similar character, especially XIII.

Much cannot be said in favour of the style, or of the

satisfactoriness of the replies to the questions that are propounded. The principal idea indeed in the mind of the author, whoever he was, was that the rites were the outcome of the natural feelings of men, and that mourning was a manifestation of filial piety. The most remarkable passage is that with which the Treatise concludes, that the use of the staff was not to be sought in any revelation from heaven or earth, but was simply from the good son's filial affection. The way in which the sentiment is expressed has often brought to my mind the question of the Apostle Paul about faith, in Romans x. 6-8.

BOOK XXXIII. FŪ WĀN.

Like the last two Books and the two that follow, the Fū Wān is omitted in the expurgated editions. It is still shorter than the Wān Sang, and treats also of the mourning rites, and specially of the dress in it, and changes in it, which naturally gave rise to questioning.

The writer, or compiler, often quotes from what he calls the *Kwan*, a name which has sometimes been translated by 'Tradition.' But the Chinese term, standing alone, may mean what is transmitted by writings, as well as what is handed down by oral communication. It is used several times in Mencius in the sense of 'Record' and 'Records.' I have called it here 'The Directory of Mourning.' Wū K'hāng says rightly that the Book is of the same character as XIII; that the mourning rites were so many, and some of them so peculiar, that collisions between different rites must have been of frequent occurrence. The Fū Wān takes up several such cases and tells us how they were met satisfactorily, or, as we may think, unsatisfactorily.

BOOK XXXIV. KIEN KWAN.

The *Kien Kwan* is a Treatise on subsidiary points in the mourning rites. It is not easy to render the name happily in English. I have met with it as 'The Inter-

mediate Record.' *K'wan* is the character spoken of in the preceding notice; *K'ien* is the symbol for the space between two things, suggesting the idea of distinction or difference. *K'ang Hsüan* says that 'the name has reference to the distinctions suitably made in mourning, according as it was lighter or more important.'

However we translate or explain the name, we find the Book occupied with the manifestations of grief in the bearing of the mourners; in the modulation of their voices; in their eating and drinking; in their places; in the texture of their dress; and in the various changes which were made in it till it was finally put off. Some points in it are difficult to understand at this distance of time, and while we are still imperfectly acquainted with the mourning usages of the people at the present day.

BOOK XXXV. SAN NIEN WAN.

The 'Questions about the Mourning for three years' is occupied principally with the mourning for parents for that period, but it touches on all the other periods of mourning as well, explaining why one period differs in its duration from the others.

Mourning, it is said, is the outcome of the relative feeling proper to man; the materials of the dress, the duration of the rites, and other forms are from the ancient sages and legislators, to regulate and direct the expression of the feeling.

What is said in paragraph 4 about the mourning of birds and beasts is interesting, but fantastical. Though the mourning for a parent is said to last for three years, the western reader is not to suppose that it continues to the end of that time, but simply that it extends into the third year. Virtually it terminates with the twenty-fifth month, and positively with the twenty-seventh. It is the eastern mode in speaking of time to say that it lasts for three years. Similarly, I have often been told that a child, evidently not more than six months, was two years old, when a little cross-questioning has brought out the fact that it had been born

towards the end of the previous year, that it had lived in two years, and was, therefore, spoken of as two years old.

BOOK XXXVI. SHĀN Î.

The Shăn Î is what we should expect from the name, a description of the dress so-called. It was the garment of undress, worn by all classes of the people, from the highest to the lowest, when they were at home and at ease. What distinguished it from other dresses was that in those the jacket or upper garment was in one piece, and the skirt or lower garment in another, whereas in this they were joined together, so that it could be put on and off with ease.

In the *K'ien-lung* edition of the *LĪ KĪ*, chapter 29, second collection of Plates, there are pictures of the Shăn Î, taken from *K'û Hsi's* 'Rules for the Family,' but they do not correspond with the description here. More accurate plates are to be found in a monograph on the subject by Yung Kiang, a senior licentiate of the present dynasty, which forms the 251st chapter in the 'Explanations of the Classics under the Imperial dynasty of *K'ing*.' The proper meaning of Shăn Î is 'The Deep Dress,' but the garment was also called 'The Long Dress,' which suits our nomenclature better; and 'The Inner Dress,' when it was worn under another.

The reasons assigned for fashioning it after the description in paragraphs 3 and 4 are of course fanciful; but M. Callery is too severe on the unknown author, when he says:—'On est tenté de rire en voyant les rapprochements que l'auteur cherche à établir entre la forme de cet habit et les principes les plus abstraits de la morale. Je suis porté à croire que toutes ces allégories ont été imaginées après coup; car si elles avaient dirigé la coupe primitive du Shăn Î, il faudrait dire que les ateliers des anciens tailleurs de la Chine étaient des écoles de mysticisme.'

BOOK XXXVII. THĀU HŪ.

The Tháu Hū, or 'Pitching into a Jar,' gives the description of a game, played anciently, and probably at the pre-

sent day also, at festal entertainments. It was a kind of archery, with darts instead of arrows, and the hand instead of a bow; 'the smallest,' as *Kǎng* says, 'of all the games of archery,' and yet lessons for the practice of virtue and for judging of character might be learned from it. It is interesting to us, however, simply as a game for amusement, and a sufficient idea of it may be gained from this Book.

Two might play at it, or any number. The host and guest in the text are the representatives of two sides or parties. It was a contest at pitching darts into the mouth of a pot or vase, placed at a short distance from the players, —too short a distance, it appears to us. There was nothing peculiar in the form of the vase of which we have an account in paragraph 10. We are surprised to read the description of it in the late Dr. Williams' Syllabic Dictionary, under the character for *Hû*:—'One ancient kind (of vase) was made with tubes on each side of the mouth, and a common game, called *Thâu Hû*, was to pitch reeds into the three orifices.' This would have been a different jar, and the game would have been different from that here described, and more difficult.

The style of the Treatise is like that of the *Î Lî*, in the account of the contests of archery in Books VIII-XI, to which we have to refer to make out the meaning of several of the phrases.

The Book should end with paragraph 10. The three paragraphs that follow seem to have been jotted down by the compiler from some memoranda that he found, that nothing might be lost which would throw light on the game.

Then follows a paragraph, which may be pronounced unintelligible. The whole Book is excluded from the expurgated editions.

BOOK XXXVIII. *Zû Hsing*.

The *Zû Hsing*, or 'Conduct of the Scholar,' professes to be a discourse delivered to duke *Âi* of *Lû* on the character and style of life by which scholars, or men claiming to

possess literary acquirements, ought to be, and were in a measure, distinguished. Even so far back, such a class of men there was in China. They had certain peculiarities of dress, some of which are alluded to in Odes of the Shih. The duke, however, had not been accustomed to think highly of them; and struck by something in the dress of Confucius, he asks him if he wore the garb of a scholar. The sage disclaims this; and being questioned further as to the conduct of the scholar, he proceeds to dilate on that at great length, and with a remarkable magnificence of thought and diction. He portrayed to his ruler a man *sans peur et sans reproche*, strong in principle, of cultivated intelligence, and animated by the most generous, patriotic, and benevolent spirit. We are told in the conclusion that the effect on duke Âi was good and great. It made him a better man, and also made him think more highly of the class of scholars than he had done. The effect of the Book on many of the literati must have been great in the ages that have intervened, and must still be so.

But did such a conversation really take place between the marquis of Lû and the sage? The general opinion of Chinese scholars is that it did not do so. Lü Tâ-lin (of the eleventh century, and a contemporary of the brothers *K'hang*), as quoted by the *K'ien-lung* editors, while cordially approving the sentiments, thinks the style too grandiloquent to allow of our ascribing it to Confucius. Another commentator of the Sung period, one of the Lîs¹, holds that the language is that of some ambitious scholar of the period of the Warring States, who wished to stir up the members of his order to a style of action worthy of it. P. Callery appends to his translation the following note:—‘In general, the maxims of this chapter are sufficiently profound to justify us in ascribing them to Confucius, in preference to so many other passages which the author of this work places to the credit of the great philosopher. We find nevertheless in it some ideas of which the really authentic works of Confucius do not offer any trace.’

¹ 李氏.

BOOK XXXIX. TÂ HSIO.

Like the *Kung Yung* (XXVIII), the *Tâ Hsio* has long been published separately from the other Books of the *Lî K'î*, and is now the first of the well-known 'Four Books.' As it appears in this translation, we follow the arrangement of the text given by the *K'ien-lung* editors from that in the *Thirteen King* published by *Khung Ying-tâ*, who himself simply followed *K'ang Hsüan*. Early in the Sung dynasty the brothers *K'ang* occupied themselves with the *Treatise*; and thinking that errors had crept into the order of the paragraphs, and that portions were missing, made various alterations and additions. *K'û Hsi* entered into their labours, and, as he thought, improved on them. It is now current in the *Four Books*, as he published it in 1189, and the difference between his arrangement and the oldest one may be seen by comparing the translation in the first volume of my *Chinese Classics* and that in the present publication. Despite the difference of arrangement, the substance of the work is the same.

There can be no doubt that the *Tâ Hsio* is a genuine monument of the Confucian teaching, and gives us a sufficient idea of the methods and subjects in the great or higher schools of antiquity. The enthusiasm of M. Pauthier is not to be blamed when he says:—'It is evident that the aim of the Chinese philosopher is to exhibit the duties of political government as the perfecting of self and the practice of virtue by all men.'

Pauthier adopts fully the view of *K'û*, that the first chapter is a genuine relic of Confucius himself, for which view there really is no evidence. And he thinks also that all that follows should be attributed to the disciple, *Ûang-ze*, which is contrary to the evidence which the *Treatise* itself supplies.

If it were necessary to assign an author for the work, I should adopt the opinion of *K'ia Kwei* (A. D. 30–101), and assign it to *Khung K'î*, the grandson of Confucius, and author of the *Kung Yung*. 'When *Khung K'î*,' said *K'ia*,

'was still alive, and in straits, in Sung, being afraid that the lessons of the former sage (or sages) would become obscure, and the principles of the ancient Tis and Kings fall to the ground, he made the Tâ Hsio as the warp of them, and the Kung Yung as the woof.' This would seem to have been the opinion of scholars in that early time, and the only difficulty in admitting it is that K'ang Hsüan does not mention it. Notwithstanding his silence, the conviction that Khung K'î wrote both treatises has become very strong in my mind. There is that agreement in the matter, method, and style of the two, which almost demands for them a common authorship.

BOOK XL. KWAN Î.

A fuller account of the ceremony of capping is obtained from portions of the ninth and other Books, where it comes in only incidentally, than from this Book in which we might expect from the title to find all the details of it brought together. But the object of the unknown writer was to glorify the rite as the great occasion when a youth stepped from his immaturity into all the privileges and responsibilities of a man, and to explain some of the usages by which it had been sought from the earliest times to mark its importance. This intention is indicated by the second character in the title called Î, which we have met with only once before in the name of a Book,—in K'î Î, 'the Meaning of Sacrifices,' the title of XXI. It is employed in the titles of this and the five Books that follow, and always with the same force of 'meaning,' 'signification,' 'ideas underlying the ceremony.' Callery renders correctly Kwan Î by 'Signification de la Prise du Chapeau Viril.'

The Chinese cap of manhood always suggests the toga virilis of the Romans; but there was a difference between the institutions of the two peoples. The age for assuming the toga was fourteen; that for receiving the cap was twenty. The capped Chinese was still young, but he had grown to man's estate; the gowned Roman might have reached puberty, but he was little more than a boy.

Until the student fully understands the object of the Treatise, the paragraphs seem intricate and heavy, and the work of translation is difficult.

BOOK XLI. HWAN Í.

After capping comes in natural order the ceremony of marriage; and we are glad to have, in the first portion of this Book, so full an account of the objects contemplated in marriage, the way in which the ceremony was gone about, and the subsequent proceedings by which the union was declared to be established.

The writer made much use of the chapters on marriage in the Í Lî. Nothing is said of the age at which it was the rule for a young man to marry; and this, we have seen, is put down, in other parts of this collection, as thirty. The same age is mentioned in the *K'áu Lî*, XIII, 55, on the duties of the marriage-contractor. But marriage, we may assume from the case of Confucius himself, actually took place earlier in ancient times, as it does now. The *3ze*¹, or name of maturity, which was given at the capping, is commonly said to be the name taken at marriage, as in Morrison's Dictionary, I, i, page 627.

The duties set forth in the Book, however, are not those of the young husband, but those of the wife, all comprised in the general virtue of 'obedience.' After the tenth paragraph, the author leaves the subject of marriage, and speaks of the different establishments of the king and queen and of their functions. So far what is said on these topics bears on marriage as it sets forth, mystically, that union as analogous to the relations of heaven and earth, the sun and moon, and the masculine and feminine energies of nature; and the response made by these to the conduct of the human parties in their wedded union.

BOOK XLII. HSIANG YIN KĪŮ Ĩ.

Hsiang was anciently the name for the largest territorial division of the state. Under the dominion of K'âu, from the hamlet of five families, through the lü, the ĩŭ, the tang, and the k'âu, we rise to the hsiang, nominally containing 12,500 families, and presided over by a 'Great officer.' The royal domain contained six hsiang, and a feudal state three.

In more than one of these territorial divisions, there were festive meetings at regular intervals, all said to be for the purpose of 'drinking.' There was feasting at them too, but the viands bore a small proportion to the liquor, called by the name of K'ĩŭ, which has generally been translated wine, though the grape had nothing to do with it, and whether it was distilled or merely fermented is a disputed point.

The festivity described in this Book was at the true Hsiang meeting, celebrated once in three years, under the superintendence of 'the Great officer' himself, when, in the principal school or college of the district, he assembled the gentlemen of accomplishments and virtue, and feasted them. His object was to select, especially from among the young men, those who were most likely to prove useful to the government in various departments of service. There was in the celebration the germ of the competitive examinations which have been for so long a characteristic feature of the Chinese nation.

The writer had before him the sixth and seventh Books of the Ĩ LĪ on the same subject, or their equivalents. He brings out five things accomplished by the ceremony, all of a moral and social nature; but in trying to explain the arrangements, he becomes allegorical or mystical, and sometimes absurd.

BOOK XLIII. SHĒ Ĩ.

There were various games or competitions of archery; at the royal court, at the feudal courts, at the meetings in

the country districts which form the subject of the last Book, and probably others of a less public and distinguished character. We have references in this Book to at least one of the archery trials at the royal court; to that at the feudal courts; and to one presided over by Confucius himself, of which it is difficult to assign the occasion. The object of the author is to show the attention paid to archery in ancient times, and how it was endeavoured to make it subservient to moral and educational purposes.

He had before him the accounts of the archery for officers in Books VIII, IX, and X of the *Í Lî*; but he allows himself more scope, in his observations on them, than the authors of the two preceding Books, and explains several practices in his own way,—unsatisfactorily, as I have pointed out in my notes.

BOOK XLIV. YEN Í.

The Yen Í, or 'Meaning of the Banquet,' is a fragment of only five paragraphs, which, moreover, are inartistically put together, the first having no connexion with the others. The Book should begin with paragraph 2, commencing:— 'The meaning of the Banquet at the feudal courts was this.' It was of this banquet that the compiler intended to give his readers an idea.

The greatest of all the ancient banquets was that which immediately followed the sacrifices in the ancestral temple, given to all the kindred of the same surname as the ruler, and to which there are several references in the *Shih King*. Thang San-ghai (Ming dynasty) specifies four other occasions for the banquet besides this:— It might be given by a feudal prince, without any special occasion,—like that described in the second of the Praise Songs of *Lû*; or to a high dignitary or Great officer, who had been engaged in the royal service,—like that in the Minor Odes of the Kingdom, iii, 3; or when a high dignitary returned from a friendly mission,—like that also in the Minor Odes, i, 2; or when an officer came from one state to another on a friendly mission. Many other occasions,

however, can be imagined on which public banquets were appropriate and might be given. The usages at them would, for the most part, be of the same nature.

The eleventh and twelfth chapters of the *Î Lî* are occupied with the ceremony of the banquet. The author of this Treatise quotes passages here and there from them, and appends his own explanation of their educational significance. Two lessons, he says, were especially illustrated in them:—the right relations to be maintained between superiors and inferiors, and the distinction between the noble and the mean.

BOOK XLV. PHING Î.

The subject of the Phing Î is the interchange of missions between the ancient feudal states. It was a rule of the kingdom that those states should by such interchange maintain a good understanding with one another, as a means of preventing both internal disturbances and aggression from without. P. Callery gives for the title:—‘*Signification (du Rite) des Visites.*’ I have met with it rendered in English by ‘*The Theory of Embassies;*’ but the Phing was not an embassy on any great state occasion, nor was it requisite that it should be sent at stated intervals. It could not be long neglected between two states without risk to the good fellowship between them, but events might at any time occur in any one state which would call forth such an expression of friendly sympathy from others.

A mission occasioned a very considerable expenditure to the receiving state, and the author, with amusing ingenuity, explains this as a device to teach the princes and their peoples to care little for such outlay in comparison with the maintenance of the custom and its ceremonies.

Those visits are treated with all the necessary details in the *Î Lî*, Books XV–XVIII; and though the extracts from them are not many, we get from the author a sufficiently intelligible account of the nature of the missions and the way in which they were carried through.

In paragraph 11, however, he turns to another subject, and writes at some length about archery, while the concluding paragraphs (12 and 13) give a conversation between Confucius and his disciple 3ze-kung on the reasons why jade is thought so much of. The three paragraphs have no connexion with those that precede on the subject of the missions; and the question arises—Whence were they derived? The previous paragraphs, taken from or based on the 1 Lî, are found in one of the surviving Treatises of the larger collection of the Greater Tâi, the thirty-sixth Book, called *Khâo-sze*, in consequence of which the *Khien-lung* editors suggest that these concluding paragraphs were an addition made by his relative, Tâi Shăng. It may have been so, but we should not thereby be impressed with a high idea of the skill or judgment with which Shăng executed his work.

BOOK XLVI. SANG FŪ SZE KIH.

This Book, with which the collection of the Lî *Ki* concludes, is an attempt to explain the usages of the mourning rites, and especially of the dress, wherein they agree, and wherein they differ, by referring them to the four constituents of man's nature,—love, righteousness, the sentiment of propriety, and knowledge, in harmony with the operations of heaven and earth in the course of nature. We do not know who was the author of it, but the *Khien-lung* editors contend that it could not have been in the original compilation of the Smaller Tâi, and owes its place in the collection to *Kăng Hsüan*.

The greater part of it is found in the thirty-ninth, or last but one¹, of the Books still current as the Lî of the Greater Tâi; and another part in the 'Narratives of the School,' the third article in the sixth chapter of that collection², the compilation of which in its present form is attributed to Wang Sû in the first half of our third century. But this second fragment must have existed previously, else *Kăng*

¹ 本命.

² 本命解.

himself could not have seen it. The argument of those editors, therefore, that some scholar, later than the Smaller Tái, must have incorporated it with what we find in the Greater Tái, adding a beginning and ending of his own, so as to form a Book like one of those of Tái Shăng, and that Kăng thought it worth his while to preserve it as the last portion of Shăng's collection,—this argument is inconclusive. The fragment may originally have formed part of Tái Teh's thirty-ninth Book or of some other, and the whole of this Book have been arranged, as we now have it by Shăng himself, working, as he is reported to have done, on the compilation or digest of his cousin. However this be, the views in the Book are certainly ingenious and deserve to be read with care.

A few lines in Callery's work are sufficient to translate all of the Book which is admitted into the expurgated editions.

THE LÎ KÎ.

A COLLECTION OF TREATISES ON THE RULES
OF PROPRIETY OR CEREMONIAL USAGES.

BOOK I. *KHÛ LÎ*.

SUMMARY OF THE RULES OF PROPRIETY.

SECTION I. PART I.

Ch. 1. 1. The Summary of the Rules of Propriety says:—Always and in everything let there be reverence ; with the deportment grave as when

On the names of the whole work and of this book, see the Introduction, pp. 9-12 and 15-17.

Part I is occupied with general principles and statements about Propriety rather than with the detail of particular rules. It may be divided into seven chapters, containing in all thirty-one paragraphs.

Ch. 1. 1, tells how reverence and gravity, with careful speech, are essential in Propriety ; and shows its importance to a community or nation. 2. 2, specifies habits or tendencies incompatible with Propriety. 3. 3-5, gives instances of Propriety in superior men, and directions for certain cases. 4. 6, 7, states the rules for sitting, standing, and a mission to another state. 5. 8-22, sets forth how indispensable Propriety is for the regulation of the individual and society, and that it marks in fact the distinction between men and brutes. 6. 23-26, indicates how the rules, unnecessary in the most ancient times, grew with the progress of society, and were its ornament and security. 7. 27-31, speaks of the different stages of life, as divided into decades from ten years to a hundred ; and certain characteristics belonging to them.

one is thinking (deeply), and with speech composed and definite. This will make the people tranquil.

2. 2. Pride should not be allowed to grow; the desires should not be indulged; the will should not be gratified to the full; pleasure should not be carried to excess.

3. 3. Men of talents and virtue can be familiar with others and yet respect them; can stand in awe of others and yet love them. They love others and yet acknowledge the evil that is in them. They accumulate (wealth) and yet are able to part with it (to help the needy); they rest in what gives them satisfaction and yet can seek satisfaction elsewhere (when it is desirable to do so). 4. When you find wealth within your reach, do not (try to) get it by improper means; when you meet with calamity, do not (try to) escape from it by improper means. Do not seek for victory in small contentions; do not seek for more than your proper share. 5. Do not positively affirm what you have doubts about; and (when you have no doubts), do not let what you say appear (simply) as your own view¹.

4. 6. If a man be sitting, let him do so as a personator of the deceased²; if he be standing, let him do so (reverently), as in sacrificing. 7. In

¹ The text in the second part of this sentence is not easily translated and interpreted. I have followed in my version the view of K'ang, K'ü Hsü, and the K'ien-lung editors. Callery gives for the whole sentence, 'Ne donnez pas comme certain ce qui est douteux, mais exposez-le clairement sans arrière-pensée.' Zottoli's view of the meaning is probably the same as mine: 'Dubius rerum noli praesumere, sed sincerus ne tibi arroges.'

² On the personator of the deceased, see vol. iii, pp. 300, 301. According to the ritual of K'âu, the representatives of the dead always sat, and bore themselves with the utmost gravity.

(observing) the rules of propriety, what is right (for the time and in the circumstances) should be followed. In discharging a mission (to another state), its customs are to be observed.

5. 8. They are the rules of propriety, that furnish the means of determining (the observances towards) relatives, as near and remote; of settling points which may cause suspicion or doubt; of distinguishing where there should be agreement, and where difference; and of making clear what is right and what is wrong. 9. According to those rules, one should not (seek to) please others in an improper way, nor be lavish of his words. 10. According to them, one does not go beyond the definite measure, nor encroach on or despise others, nor is fond of (presuming) familiarities. 11. To cultivate one's person and fulfil one's words is called good conduct. When the conduct is (thus) ordered, and the words are accordant with the (right) course, we have the substance of the rules of propriety. 12. I have heard that it is in accordance with those rules that one should be chosen by others (as their model); I have not heard of his choosing them (to take him as such). I have heard in the same way of (scholars) coming to learn; I have not heard of (the master) going to teach. 13. The course (of duty), virtue, benevolence, and righteousness cannot be fully carried out without the rules of propriety; 14. nor are training and oral lessons for the rectification of manners complete; 15. nor can the clearing up of quarrels and discriminating in disputes be accomplished; 16. nor can (the duties between) ruler and minister, high and low, father and son, elder brother and younger, be determined; 17. nor can students for office and

(other) learners, in serving their masters, have an attachment for them; 18. nor can majesty and dignity be shown in assigning the different places at court, in the government of the armies, and in discharging the duties of office so as to secure the operation of the laws; 19. nor can there be the (proper) sincerity and gravity in presenting the offerings to spiritual Beings on occasions of supplication, thanksgiving, and the various sacrifices¹. 20. Therefore the superior man is respectful and reverent, assiduous in his duties and not going beyond them, retiring and yielding;—thus illustrating (the principle of) propriety. 21. The parrot can speak, and yet is nothing more than a bird; the ape can speak, and yet is nothing more than a beast². Here now is a man who observes no rules of propriety; is not his heart that of a beast? But if (men were as) beasts, and without (the principle of) propriety, father and son might have the same mate. 22. Therefore, when the sages arose, they framed the rules of propriety in order to teach men, and cause them, by

¹ Four religious acts are here mentioned, in connexion with which the offerings to spiritual Beings were presented. What I have called 'various sacrifices' is in Chinese *K'í sze*. Wú *K'ǎng* says: '*K'í* means sacrificial offerings to the spirit (or spirits) of Earth, and *sze* those to the spirits of Heaven. Offerings to the manes of men are also covered by them when they are used together.'

² We know that the parrot and some other birds can be taught to speak; but I do not know that any animal has been taught to enunciate words even as these birds do. Williams (Dict. p. 809) thinks that the *shǎng shǎng* mentioned here may be the rhinopithecus *Roxellana* of P. David, found in *Sze-~~h~~üan*; but we have no account of it in Chinese works, so far as I know, that is not evidently fabulous.

their possession of them, to make a distinction between themselves and brutes.

6. 23. In the highest antiquity they prized (simply conferring) good ; in the time next to this, giving and repaying was the thing attended to¹. And what the rules of propriety value is that reciprocity. If I give a gift and nothing comes in return, that is contrary to propriety ; if the thing comes to me, and I give nothing in return, that also is contrary to propriety. 24. If a man observe the rules of propriety, he is in a condition of security ; if he do not, he is in one of danger. Hence there is the saying, 'The rules of propriety should by no means be left unlearned.' 25. Propriety is seen in humbling one's self and giving honour to others. Even porters and pedlers are sure to display this giving honour (in some cases); how much more should the rich and noble do so (in all)! 26. When the rich and noble know to love propriety, they do not become proud nor dissolute. When the poor and mean know to love propriety, their minds do not become cowardly.

7. 27. When one is ten years old, we call him a boy ; he goes (out) to school. When he is twenty, we call him a youth ; he is capped. When he is thirty, we say, 'He is at his maturity;' he has a wife². When

¹ Compare with this paragraph the state of 'the highest antiquity' described in the Táo Teh King, chapters 18, 19, et al.

² When it is said that at thirty a man has a wife, the meaning must be that he ought not to reach that age without being married. Early marriages were the rule in ancient China, as they are now. Confucius was married when barely twenty. In the same way we are to understand the being in office at forty. A man might take office at thirty ; if he reached forty before he did so, there was something wrong in himself or others.

he is forty, we say, 'He is in his vigour;' he is employed in office. When he is fifty, we say, 'He is getting grey;' he can discharge all the duties of an officer. When he is sixty, we say, 'He is getting old;' he gives directions and instructions. When he is seventy, we say, 'He is old;' he delegates his duties to others. At eighty or ninety, we say of him, 'He is very old.' When he is seven, we say that he is an object of pitying love. Such a child and one who is very old, though they may be chargeable with crime, are not subjected to punishment. At a hundred, he is called a centenarian, and has to be fed. 28. A great officer, when he is seventy, should resign (his charge of) affairs. 29. If he be not allowed to resign, there must be given him a stool and staff. When travelling on service, he must have the attendance of his wife¹; and when going to any other state, he will ride in an easy carriage². 30. (In another state) he will style himself 'the old man;' in his own state, he will call himself by his name. 31. When from another they ask (about his state), he must tell them of its (old) institutions³.

¹ Perhaps we should translate here in the plural—'his women,' which would include his wife.

² An 'easy carriage' was small. Its occupant sat in it, and did not stand.

³ It is supposed here that the foreign envoys first question the ruler, who then calls in the help of the aged minister.

PART II.

1. 1. In going to take counsel with an elder, one must carry a stool and a staff with him (for the elder's use). When the elder asks a question, to reply without acknowledging one's incompetency and (trying to) decline answering, is contrary to propriety¹.

2. 2. For all sons it is the rule:—in winter, to warm (the bed for their parents), and to cool it in summer; in the evening, to adjust everything (for their repose), and to inquire (about their health) in the morning; and, when with their companions, not to quarrel.

3. 3. Whenever a son, having received the three (first) gifts (of the ruler), declines (to use) the carriage and horses, the people of the hamlets and smaller districts, and of the larger districts and neighbourhoods, will proclaim him filial; his brothers and relatives, both by consanguinity and affinity, will proclaim him

Part II enters more into detail about the rules of Propriety. It has been divided into seven chapters, containing in all thirty-two paragraphs.

Ch. 1. 1, speaks of a junior consulting an elder. 2. 2, describes services due from all sons to their parents. 3. 3, shows a filial son when raised to higher rank than his father. 4. 4-16, contains rules for a son in various circumstances, especially with reference to his father. 5. 17-26, gives the rules for younger men in their intercourse with their teachers and elders generally, and in various cases. 6. 27, is the rule for an officer in entering the gate of his ruler or coming out by it. 7. 28-32, deals with a host and visitor, and ceremonious visiting and intercourse generally.

¹ The reply of Tsăng Shăn to Confucius, as related in vol. iii, pp. 465, 466, is commonly introduced in illustration of this second sentence.

loving; his friends who are fellow-officers will proclaim him virtuous; and his friends who are his associates will proclaim him true¹.

4. 4. When he sees an intimate friend of his father, not to presume to go forward to him without being told to do so; nor to retire without being told; nor to address him without being questioned:—this is the conduct of a filial son. 5. A son, when he is going abroad, must inform (his parents where he is going); when he returns, he must present himself before them. Where he travels must be in some fixed (region); what he engages in must be some (reputable) occupation. 6. In ordinary conversation (with his parents), he does not use the term 'old' (with reference to them)². 7. He should serve one twice as old as himself as he serves his father, one ten years older than himself as an elder brother; with one five years older he should walk shoulder to shoulder, but (a little) behind him. 8. When five are sitting together, the eldest must have a different mat (by himself)³. 9. A son should not occupy the south-west corner of the apartment, nor sit in the

¹ The gifts of distinction, conferred by the sovereign on officers, ministers, and feudal princes, were nine in all; and the enumerations of them are not always the same. The three intended here are the appointment to office, or rank; the robes belonging to it; and the chariot and horses. We must suppose that the rank placed the son higher than the father in social position, and that he declines the third gift from humility,—not to parade himself as superior to his father and others in his circle.

² Some understand the rule to be that the son is not to speak of himself as old; but the meaning in the translation is the more approved.

³ Four men were the proper complement for a mat; the eldest of the five therefore was honoured with another mat for himself.

middle of the mat (which he occupies alone), nor walk in the middle of the road, nor stand in the middle of the doorway¹. 10. He should not take the part of regulating the (quantity of) rice and other viands at an entertainment. 11. He should not act as personator of the dead at sacrifice². 12. He should be (as if he were) hearing (his parents) when there is no voice from them, and as seeing them when they are not actually there. 13. He should not ascend a height, nor approach the verge of a depth; he should not indulge in reckless reviling or derisive laughing. A filial son will not do things in the dark, nor attempt hazardous undertakings, fearing lest he disgrace his parents. 14. While his parents are alive, he will not promise a friend to die (with or for him)³, nor will he have wealth that he calls his own. 15. A son, while his parents are alive, will not wear a cap or (other) article of dress, with a white border⁴. 16. An orphan son, taking his father's place, will not wear a cap or (other article of) dress with a variegated border⁵.

5. 17. A boy should never be allowed to see an

¹ The father is supposed to be alive; the south-west part of an apartment was held to be the most honourable, and must be reserved for him. So of the other things.

² This was in the ancestral worship. A son, acting such a part, would have to receive the homage of his father.

³ I have known instances of Chinese agreeing to die with or for a friend, who wished to avenge a great wrong. See the covenant of the three heroes of the 'romance of the Three Kingdoms,' near the beginning.

⁴ White was and is the colour worn in mourning.

⁵ The son here is the eldest son and heir; even after the regular period of mourning is over, he continues to wear it in so far. The other sons were not required to do so.

instance of deceit¹. 18. A lad should not wear a jacket of fur nor the skirt². He must stand straight and square, and not incline his head in hearing. 19. When an elder is holding him with the hand, he should hold the elder's hand with both his hands. When the elder has shifted his sword to his back and is speaking to him with the side of his face bent down, he should cover his mouth with his hand in answering³. 20. When he is following his teacher⁴, he should not quit the road to speak with another person. When he meets his teacher on the road, he should hasten forward to him, and stand with his hands joined across his breast. If the teacher speak to him, he will answer; if he do not, he will retire with hasty steps. 21. When, following an elder, they ascend a level height, he must keep his face towards the quarter to which the elder is looking. 22. When one has ascended the wall of a city, he should not point, nor call out⁵. 23. When he intends to go to a lodging-house, let it not be with the feeling that he must get whatever he asks for. 24. When about to go up to the hall (of a house), he must raise his voice. When outside the door there are two (pairs

¹ This maxim deserves to be specially noted. It will remind the reader of Juvenal's lines :—

'Maxima debetur puero reverentia. Si quid
Turpe paras, nec tu pueri contempseris annos.'

² To make him handy, and leave him free to execute any service required of him.

³ The second sentence here is difficult to construe, and the critics differ much in dealing with it. Zottoli's version is—'Si e dorso vel latere transverso ore (superior) eloquatur ei, tunc obducto ore respondebit.'

⁴ 'Teacher' is here 'the one born before him,' denoting 'an old man who teaches youth.'

⁵ And thus make himself an object of general observation.

of) shoes¹, if voices be heard, he enters; if voices be not heard, he will not enter. 25. When about to enter the door, he must keep his eyes cast down. As he enters, he should (keep his hands raised as high as if he were) bearing the bar of the door. In looking down or up, he should not turn (his head). If the door were open, he should leave it open; if it were shut, he should shut it again. If there be others (about) to enter after him, while he (turns to) shut the door, let him not do so hastily. 26. Let him not tread on the shoes (left outside the door), nor stride across the mat (in going to take his seat); but let him hold up his dress, and move hastily to his corner (of the mat). (When seated), he must be careful in answering or assenting.

6. 27. A great officer or (other) officer should go out or in at the ruler's doors², on the right of the middle post, without treading on the threshold.

7. 28. Whenever (a host has received and) is entering with a guest, at every door he should give place to him. When the guest arrives at the innermost door (or that leading to the feast-

¹ It was the custom in China, as it still is in Japan, to take off the shoes, and leave them outside the door on entering an apartment. This paragraph and the next tell us how a new-comer should not enter an apartment hastily, so as to take those already there by surprise.

² It is necessary to translate here in the plural. Anciently, as now, the palace, mansion, or public office was an aggregate of courts, with buildings in them, so that the visitor passed from one to another through a gateway, till he reached the inner court which conducted to the hall, behind which again were the family apartments. The royal palace had five courts and gates; that of a feudal lord had three. Each gate had its proper name. The whole assemblage of buildings was much deeper than it was wide.

room), the host will ask to be allowed to enter first and arrange the mats. Having done this, he will come out to receive the guest, who will refuse firmly (to enter first). The host having made a low bow to him, they will enter (together). 29. When they have entered the door, the host moves to the right, and the guest to the left, the former going to the steps on the east, and the latter to those on the west. If the guest be of the lower rank, he goes to the steps of the host (as if to follow him up them). The host firmly declines this, and he returns to the other steps on the west¹. 30. They then offer to each other the precedence in going up, but the host commences first, followed (immediately) by the other. They bring their feet together on every step, thus ascending by successive paces. He who ascends by the steps on the east should move his right foot first, and the other at the western steps his left foot. 31. Outside the curtain or screen² (a visitor) should not walk with the formal hasty steps, nor above in the hall, nor when carrying the symbol of jade. Above, in the raised hall, the foot-prints should be alongside each other, but below it free and separate. In the apartment the elbows should not be held out like wings in bowing. 32. When two (equals) are sitting side by side, they do not have their elbows extended crosswise. One should not kneel in handing anything to a (superior) standing, nor stand in handing it to him sitting.

¹ The host here is evidently of high dignity, living in a mansion.

² The screen was in front of the raised hall, in the courtyard; until they passed it visitors might not be in view of their host, and could feel at ease in their carriage and movements.

PART III.

1. 1. In all cases of (a lad's) carrying away the dirt that has been swept up from the presence of an elder, it is the rule that he (place) the brush on the basket, keeping his sleeve before it as he retires. The dust is not allowed to reach the elder, because he carries the basket with its mouth turned towards himself. 2. He carries the (elder's) mat in his arms like the cross-beam of a shadoof. 3. If it be a mat

Part III continues to lay down the rules for various duties and classes of duties. It extends to sixty-seven paragraphs, which may be comprised in twenty-one chapters.

Ch. 1. 1-4, describes a youth's ways in sweeping for an elder and in carrying and placing his mats. 2. 5-7, relates to host and guest. 3. 8-19, is about a youth, especially a pupil, in attendance on his elders. 4. 20-26, is about his ways in serving a superior. 5. 27-29, is about the shoes in visiting. 6. 30-39, gives rules about not interfering with people's private affairs, and avoiding, between male and female, what would cause suspicion. 7. 40, is a message of congratulation to a friend on his marriage. 8. 41, is about consideration for the poor and the old. 9. 42-46, gives rules for the naming of sons and daughters. 10. 47-51, describes the arrangement of the dishes, and the behaviour of the host and guests, at an entertainment. 11. 52, we have a youth and his host eating together. 12. 53, shows how people, eating together, ought to behave. 13. 54-58, is about things to be avoided in eating. 14. 59, shows us host and guest at the close of the entertainment. In 15. 60, we have a youth and elder drinking together. 16. 61, is about a gift from an elder. 17. 62, shows how the kernel of a fruit given by an elder is to be dealt with in his presence. 18. 63, 64, relates to gifts at a feast from the ruler, and how they are to be used. 19. 65, is about a ruler asking an attendant to share in a feast. 20. 66, is about the use of chopsticks with soup. 21. 67, gives the rules for paring a melon for the ruler and others.

to sit on, he will ask in what direction (the elder) is going to turn his face; if it be to sleep on, in what direction he is going to turn his feet. 4. If a mat face the south or the north, the seat on the west is accounted that of honour; if it face the east or the west, the seat on the south.

2. 5. Except in the case of guests who are there (simply) to eat and drink, in spreading the mats a space of ten cubits should be left between them¹.

6. When the host kneels to adjust the mats (of a visitor), the other should kneel and keep hold of them, declining (the honour)². When the visitor (wishes to) remove one or more, the host should firmly decline to permit him to do so. When the visitor steps on his mats, (the host) takes his seat.

7. If the host have not put some question, the visitor should not begin the conversation.

3. 8. When (a pupil) is about to go to his mat, he should not look discomposed. With his two hands he should hold up his lower garment, so that the bottom of it may be a cubit from the ground. His clothes should not hang loosely about him, nor should there be any hurried movements of his feet. 9. If any writing or tablets of his master, or his lute or cithern be in the way, he should kneel down and remove them, taking care not to disarrange them. 10. When sitting and doing nothing, he should keep quite at the back (of his mat); when eating, quite at the front of it³. He should sit quietly and keep

¹ To allow space and freedom for gesticulation.

² Two or more mats might be placed over each other in honour of the visitor.

³ The dishes were placed before the mats.

a watch on his countenance. If there be any subject on which the elder has not touched, let him not introduce it irregularly. 11. Let him keep his deportment correct¹, and listen respectfully. Let him not appropriate (to himself) the words (of others), nor (repeat them) as (the echo does the) thunder. If he must (adduce proofs), let them be from antiquity, with an appeal to the ancient kings. 12. When sitting by his side, and the teacher puts a question, (the learner) should not reply till (the other) has finished. 13. When requesting (instruction) on the subject of his studies, (the learner) should rise; when requesting further information, he should rise. 14. When his father calls, (a youth) should not (merely) answer 'yes,' nor when his teacher calls. He should, with (a respectful) 'yes,' immediately rise (and go to them). 15. When one is sitting in attendance on another whom he honours and reveres, he should not allow any part of his mat to keep them apart², nor will he rise when he sees others (come in) of the same rank as himself. 16. When the torches come, he should rise; and also when the viands come in, or a visitor of superior rank³. 17. The torches should not (be allowed to burn) till their ends can be seen. 18. Before an honoured visitor we should not shout (even) at

¹ Here, and in some other places, we find the second personal pronoun; as if the text were made up from different sources. I have translated, however, as if we had only the third person.

² He should sit on the front of his mat, to be as near the other as possible.

³ The torches were borne by boys. They were often changed, that the visitors might not be aware how the time was passing.

a dog. 19. When declining any food, one should not spit.

4. 20. When one is sitting in attendance on another of superior character or rank, and that other yawns or stretches himself, or lays hold of his staff or shoes, or looks towards the sun to see if it be early or late, he should ask to be allowed to leave. 21. In the same position, if the superior man put a question on a new subject, he should rise up in giving his reply. 22. Similarly, if there come some one saying (to the superior man), 'I wish, when you have a little leisure, to report to you,' he should withdraw to the left or right and wait. 23. Do not listen with the head inclined on one side, nor answer with a loud sharp voice, nor look with a dissolute leer, nor keep the body in a slouching position¹. 24. Do not saunter about with a haughty gait, nor stand with one foot raised. Do not sit with your knees wide apart, nor sleep on your face. 25. Have your hair gathered up, and do not use any false hair². 26. Let not the cap be laid aside; nor the chest be bared, (even) when one is toiling hard; nor let the lower garment be held up (even) in hot weather.

5. 27. When (going to) sit in attendance on an elder, (a visitor) should not go up to the hall with his shoes on, nor should he presume to take them off in front of the steps. 28. (When any single visitor is leaving), he will go to his shoes, kneel down and take them up, and then move to one side. 29. (When the visitors retire in a body) with their

¹ The style and form of 23-26 differ from the preceding. Perhaps they should form a paragraph by themselves.

² Which women were accustomed to do.

faces towards the elder, (they stand) by the shoes, which they then, kneeling, remove (some distance), and, stooping down, put on¹.

6. 30. When two men are sitting or standing together, do not join them as a third. When two are standing together, another should not pass between them. 31. Male and female should not sit together (in the same apartment), nor have the same stand or rack for their clothes, nor use the same towel or comb, nor let their hands touch in giving and receiving. 32. A sister-in-law and brother-in-law do not interchange inquiries (about each other). None of the concubines in a house should be employed to wash the lower garment (of a son)². 33. Outside affairs should not be talked of inside the threshold (of the women's apartments), nor inside (or women's) affairs outside it. 34. When a young lady is promised in marriage, she wears the strings (hanging down to her neck)³; and unless there be some great occasion, no (male) enters the door of her apartment⁴. 35. When a married aunt, or sister, or daughter returns home (on a visit), no brother (of the family) should sit with her on the same mat or eat with her from the same dish. (Even) the father and daughter should not occupy the same mat⁵. 36.

¹ The host would be seeing the visitors off, and therefore they would keep their faces towards him.

² Concubines might be employed to wash clothes; delicacy forbade their washing the lower garments of the sons.

³ Those strings were symbolic of the union with and subjection to her husband to which she was now pledged.

⁴ Great sickness or death, or other great calamity, would be such an occasion.

⁵ This is pushing the rule to an extreme. The sentence is also (but wrongly) understood of father and son.

Male and female, without the intervention of the matchmaker, do not know each other's name. Unless the marriage presents have been received, there should be no communication nor affection between them. 37. Hence the day and month (of the marriage) should be announced to the ruler, and to the spirits (of ancestors) with purification and fasting; and (the bridegroom) should make a feast, and invite (his friends) in the district and neighbourhood, and his fellow-officers:—thus giving its due importance to the separate position (of male and female). 38. One must not marry a wife of the same surname with himself. Hence, in buying a concubine, if he do not know her surname, he must consult the tortoise-shell about it¹. 39. With the son of a widow, unless he be of acknowledged distinction, one should not associate himself as a friend.

7. 40. When one congratulates (a friend) on his marrying, his messenger says, 'So and So has sent me. Having heard that you are having guests, he has sent me with this present.'

8. 41. Goods and wealth are not to be expected from the poor in their discharge of the rules of propriety; nor the display of sinews and strength from the old.

9. 42. In giving a name to a son, it should not be that of a state, nor of a day or a month, nor of any hidden ailment, nor of a hill or river². 43.

¹ Not to find out what her surname is, but to determine whether it be the same as that of the gentleman or not.

² Such names were so common, that if it became necessary to avoid them, as it might be, through the death of the party or on other grounds, it would be difficult and inconvenient to do so.

Sons and daughters should have their (relative) ages distinguished¹. 44. A son at twenty is capped, and receives his appellation². 45. Before his father a son should be called by his name, and before his ruler a minister³. 46. When a daughter is promised in marriage, she assumes the hair-pin, and receives her appellation.

10. 47. The rules for bringing in the dishes for an entertainment are the following :—The meat cooked on the bones is set on the left, and the sliced meat on the right; the rice is placed on the left of the parties on the mat, and the soup on their right; the minced and roasted meat are put outside (the chops and sliced meat), and the pickles and sauces inside; the onions and steamed onions succeed to these, and the drink and syrups are on the right. When slices of dried and spiced meat are put down, where they are folded is turned to the left, and the ends of them to the right. 48. If a guest be of lower rank (than his entertainer), he should take up the rice⁴, rise and decline (the honour he is receiving). The host then rises and refuses to allow the guest (to retire). After this the guest will resume his seat. 49. When the host leads on the guests to present an offering (to the father of cookery), they will begin

¹ As *primus*, *prima*; *secundus*, *secunda*, &c.

² The appellation was thus the name given (at a family meeting) to a youth who had reached man's estate. Morrison (*Dict.* i. 627) calls it the name taken by men when they marry. Such a usage testifies to the early marriages in ancient China, as referred to in note 2, p. 65.

³ There might be some meaning in the appellation which would seem to place its bearer on the level of his father or his ruler.

⁴ The rice is called 'the principal article in a feast.' Hence the humbler guest takes it up, as symbolical of all the others.

with the dishes which were first brought in. Going on from the meat cooked on the bones they will offer of all (the other dishes)¹. 50. After they have eaten three times, the host will lead on the guests to take of the sliced meat, from which they will go on to all the other dishes. 51. A guest should not rinse his mouth with spirits till the host has gone over all the dishes.

11. 52. When (a youth) is in attendance on an elder at a meal, if the host give anything to him with his own hand, he should bow to him and eat it. If he do not so give him anything, he should eat without bowing.

12. 53. When eating with others from the same dishes, one should not try to eat (hastily) to satiety. When eating with them from the same dish of rice, one should not have to wash his hands².

13. 54. Do not roll the rice into a ball; do not bolt down the various dishes; do not swill down (the soup). 55. Do not make a noise in eating; do not crunch the bones with the teeth; do not put back fish you have been eating; do not throw the bones to the dogs; do not snatch (at what you want). 56. Do not spread out the rice (to cool); do not use chopsticks in eating millet³.

¹ This paragraph refers to a practice something like our 'saying grace.' According to Khung Ying-tâ, a little was taken from all the dishes, and placed on the ground about them as an offering to 'the father of cookery.'

² As all ate from the same dish of rice without chopsticks or spoons, it was necessary they should try to keep their hands clean. Some say the 'washing' was only a rubbing of the hands with sand.

³ A spoon was the proper implement in eating millet.

57. Do not (try to) gulp down soup with vegetables in it, nor add condiments to it; do not keep picking the teeth, nor swill down the sauces. If a guest add condiments, the host will apologise for not having had the soup prepared better. If he swill down the sauces, the host will apologise for his poverty¹. 58. Meat that is wet (and soft) may be divided with the teeth, but dried flesh cannot be so dealt with. Do not bolt roast meat in large pieces.

14. 59. When they have done eating, the guests will kneel in front (of the mat), and (begin to) remove the (dishes) of rice and sauces to give them to the attendants. The host will then rise and decline this service from the guests, who will resume their seats.

15. 60. If a youth is in attendance on, and drinking with, an elder, when the (cup of) spirits is brought to him, he rises, bows, and (goes to) receive it at the place where the spirit-vase is kept. The elder refuses (to allow him to do so), when he returns to the mat, and (is prepared) to drink. The elder (meantime) lifts (his cup); but until he has emptied it, the other does not presume to drink his.

16. 61. When an elder offers a gift, neither a youth, nor one of mean condition, presumes to decline it.

17. 62. When a fruit is given by the ruler and in his presence, if there be a kernel in it, (the receiver) should place it in his bosom².

¹ The sauce should be too strong to be swallowed largely and hurriedly.

² Lest he should seem to throw away anything given by the ruler.

18. 63. When one is attending the ruler at a meal, and the ruler gives him anything that is left, if it be in a vessel that can be easily scoured, he does not transfer it (to another of his own); but from any other vessel he should so transfer it¹.

19. 64. Portions of (such) food should not be used as offerings (to the departed). A father should not use them in offering even to a (deceased) son, nor a husband in offering to a (deceased) wife².

20. 65. When one is attending an elder and (called to) share with him (at a feast), though the viands may be double (what is necessary), he should not (seek) to decline them. If he take his seat (only) as the companion of another (for whom it has been prepared), he should not decline them.

21. 66. If the soup be made with vegetables, chopsticks should be used; but not if there be no vegetables.

22. 67. He who pares a melon for the son of Heaven should divide it into four parts and then into eight, and cover them with a napkin of fine linen. For the ruler of a state, he should divide it into four parts, and cover them with a coarse napkin. To a great officer he should (present the four parts) uncovered. An inferior officer should receive it (simply) with the stalk cut away. A common man will deal with it with his teeth.

¹ A vessel of potter's ware or metal can be scoured, and the part which his mouth has touched be cleansed before the ruler uses it again.

² The meaning of this paragraph is not clear.

PART IV.

1. 1. When his father or mother is ill, (a young man) who has been capped should not use his comb, nor walk with his elbows stuck out, nor speak on idle topics, nor take his lute or cithern in hand. He should not eat of (different) meats till his taste is changed, nor drink till his looks are changed¹. He should not laugh so as to show his teeth, nor be angry till he breaks forth in reviling. When the illness is gone, he may resume his former habits. 2. He who is sad and anxious should sit with his mat

Part IV contains fifty-two paragraphs, which have been arranged in ten chapters, stating the rules to be observed in a variety of cases.

Ch. 1. 1, 2, treats of the ways of a young man who is sorrowful in consequence of the illness or death of a parent. 2. 3-26, treats of the rules in giving and receiving, and of messages connected therewith. The presentations mentioned are all from inferiors to superiors. 3. 27, 28, does not lay down rules, but gives characteristics of the superior man, and the methods by which he preserves his friendships unbroken. 4. 29, 30, refers to the arrangement of the tablets in the ancestral temple, and to the personators of the dead. 5. 31, tells how one fasting should keep himself from being excited. 6. 32-34, sets forth cautions against excess in the demonstrations of mourning. 7. 35, 36, speaks of sorrowing for the dead and condoling with the living. 8. 37, 38, gives counsels of prudence for one under the influence of sympathy and benevolent feeling. 9. 39-48, describes rules in connexion with mourning, burials, and some other occasions. 10. 49-52, describes gradations in ceremonies and in the penal statutes; and how a criminal who has been punished should never be permitted to be near the ruler.

¹ Does the rule about eating mean that the anxious son should restrict himself to a single dish of meat?

spread apart from others ; he who is mourning (for a death) should sit on a single mat¹.

2. 3. When heavy rains have fallen, one should not present fish or tortoises (to a superior)². 4. He who is presenting a bird should turn its head on one side ; if it be a tame bird, this need not be done. 5. He who is presenting a carriage and horses should carry in his hand (to the hall) the whip, and strap for mounting by³. 6. He who is presenting a suit of mail should carry the helmet (to the hall). He who is presenting a staff should hold it by its end⁴. 7. He who is presenting a captive should hold him by the right sleeve⁵. 8. He who is presenting grain unhulled should carry with him the left side of the account (of the quantity) ; if the hull be off, he should carry with him a measure-drum⁶. 9. He who is presenting cooked food, should carry with him the sauce and pickles for it. 10. He who is presenting fields and tenements should carry with him the writings about them, and give them up (to the superior). 11. In every case of giving a bow to another, if it be bent, the (string of) sinew should be kept upwards ; but if unbent, the horn.

¹ Grief is solitary. A mourner afflicts himself.

² Because the fish in such a case are so numerous as not to be valuable, or because the fish at the time of the rains are not clean. Other reasons for the rule have been assigned.

³ The whip and strap, carried up to the hall, represented the carriage and horses, left in the courtyard.

⁴ For convenience ; and because the end, going into the mud, was not so honourable.

⁵ So that he could not attempt any violence.

⁶ The account was in duplicate, on the same tablet. The right was held to be the more honourable part. 'Drum' was the name of the measure.

(The giver) should with his right hand grasp the end of the bow, and keep his left under the middle of the back. The (parties, without regard to their rank as) high and low, (bow to each other) till the napkins (at their girdles) hang down (to the ground). If the host (wish to) bow (still lower), the other moves on one side to avoid the salutation. The host then takes the bow, standing on the left of the other. Putting his hand under that of the visitor, he lays hold of the middle of the back, having his face in the same direction as the other; and thus he receives (the bow). 12. He who is giving a sword should do so with the hilt on his left side¹. 13. He who is giving a spear with one hook should do so with the metal end of the shaft in front, and the sharp edge behind. 14. He who is presenting one with two hooks, or one with a single hook and two sharp points, should do so with the blunt shaft in front. 15. He who is giving a stool or a staff should (first) wipe it. 16. He who is presenting a horse or a sheep should lead it with his right hand. 17. He who is presenting a dog should lead it with his left hand. 18. He who is carrying a bird (as his present of introduction) should do so with the head to the left². 19. For the ornamental covering of a lamb or a goose, an embroidered cloth should be used. 20. He who receives a pearl or a piece of jade should do so with both his hands. 21. He who receives a bow or a sword should do so (having his hands covered) with his sleeves³. 22. He who has

¹ That the receiver may take it with his right hand.

² Compare paragraph 4. In this case the bird was carried across the body of the donor with its head on his left.

³ A different case from that in paragraph 11. It is supposed that

drunk from a cup of jade should not (go on to) shake it out¹. 23. Whenever friendly messages are about to be sent, with the present of a sword or bow, or of (fruit, flesh, and other things, wrapped in) matting of rushes, with grass mats, and in baskets, round and square, (the messenger) has these things (carried with him, when he goes) to receive his commission, and departs himself as when he will be discharging it². 24. Whenever one is charged with a mission by his ruler, after he has received from him his orders, and (heard all) he has to say, he should not remain over the night in his house. 25. When a message from the ruler comes (to a minister), the latter should go out and bow (to the bearer), in acknowledgment of the honour of it. When the messenger is about to return, (the other) must bow to him (again), and escort him outside the gate. 26. If (a minister) send a message to his ruler, he must wear his court-robcs when he communicates it to the bearer; and on his return, he must descend from the hall, to receive (the ruler's) commands.

3. 27. To acquire extensive information and remember retentively, while (at the same time) he is modest; to do earnestly what is good, and not become weary in so doing:—these are the characteristics of him whom we call the superior man. 28. A superior man does not accept everything by which another would express his joy in him, or his devotion to him³; and thus he preserves their friendly intercourse unbroken.

here the two things were presented together, and received as on a cushion.

¹ Because of the risk to a thing so valuable.

² A rehearsal of what he would have to do.

³ E. g., it is said, festive entertainments and gifts.

4. 29. A rule of propriety says, 'A superior man may carry his grandson in his arms, but not his son.' This tells us that a grandson may be the personator of his deceased grandfather (at sacrifices), but a son cannot be so of his father¹. 30. When a great officer or (other) officer sees one who is to personate the dead (on his way to the ancestral temple), he should dismount from his carriage to him. The ruler himself, when he recognises him, should do the same². The personator (at the same time) must bow forward to the cross-bar. In mounting the carriage, he must use a stool.

5. 31. One who is fasting (in preparation for a sacrifice) should neither listen to music nor condole with mourners³.

6. 32. According to the rules for the period of mourning (for a father), (a son) should not emaciate himself till the bones appear, nor let his seeing and hearing be affected (by his privations). He should not go up to, nor descend from, the hall by the steps on the east (which his father used), nor go in or out by the path right opposite to the (centre of the) gate. 33. According to the same rules, if he have a scab on his head, he should wash it; if he have a sore on his body, he should bathe it. If he be ill, he should drink spirits, and eat flesh, returning to his former

¹ The tablets of a father and son should not be in the same line of shrines in the ancestral temple; and the fact in the paragraph—hardly credible—seems to be mentioned as giving a reason for this.

² The personator had for the time the dignity of the deceased whom he represented.

³ The fasting and vigil extended to seven days, and were intended to prepare for the personating duty. What would distract the mind from this must be eschewed.

(abstinence) when he is better. If he make himself unable to perform his mourning duties, that is like being unkind and unfilial. 34. If he be fifty, he should not allow himself to be reduced (by his abstinence) very much; and, if he be sixty, not at all. At seventy, he will only wear the unhemmed dress of sackcloth, and will drink and eat flesh, and occupy (the usual apartment) inside (his house).

7. 35. Intercourse with the living (will be continued) in the future; intercourse with the dead (friend) was a thing of the past¹. 36. He who knows the living should send (a message of) condolence; and he who knew the dead (a message also of his) grief. He who knows the living, and did not know the dead, will send his condolence without (that expression of) his grief; he who knew the dead, and does not know the living, will send the (expression of) grief, but not go on to condole.

8. 37. He who is condoling with one who has mourning rites in hand, and is not able to assist him with a gift, should put no question about his expenditure. He who is enquiring after another that is ill, and is not able to send (anything to him), should

¹ This gives the reasons for the directions in the next paragraph. We condole with the living—to console them; for the dead, we have only to express our grief for our own loss. P. Zottoli's translation is:—'Vivis computatur subsequens dies; mortuo computatur praecedens dies;' and he says in a note:—'Vivorum luctus incipit quarta a morte die, et praecedente die seu tertia fit mortui in feretrum depositio; luctus igitur et depositio, die intercipiuntur; haec praecedit ille subsequetur.' This is after many critics, from *K'ang Khang-k'hang* downwards; but it does great violence to the text. I have followed the view of the *K'ien-lung* editors.

not ask what he would like. He who sees (a traveller), and is not able to lodge him, should not ask where he is stopping. 38. He who would confer something on another should not say, 'Come and take it;' he who would give something (to a smaller man), should not ask him what he would like.

9. 39. When one goes to a burying-ground, he should not get up on any of the graves. When assisting at an interment, one should (join in) holding the rope attached to the coffin¹. 40. In a house of mourning, one should not laugh. 41. In order to bow to another, one should leave his own place. 42. When one sees at a distance a coffin with the corpse in it, he should not sing. When he enters among the mourners, he should not keep his arms stuck out. When eating (with others), he should not sigh. 43. When there are mourning rites in his neighbourhood, one should not accompany his pestle with his voice. When there is a body shrouded and confined in his village, one should not sing in the lanes. 44. When going to a burying-ground, one should not sing, nor on the same day when he has wailed (with mourners). 45. When accompanying a funeral, one should not take a by-path. When taking part in the act of interment, one should not (try to) avoid mud or pools. When presenting himself at any mourning rite, one should have a sad countenance. When holding the rope, one should not laugh. 46. When present on an occasion of joy, one should not sigh. 47. When wearing his coat of

¹ The rope here may also be that, or one of those, attached to the low car on which the coffin was drawn to the grave. Compare paragraph 45.

mail and helmet, one's countenance should say, 'Who dares meddle with me?' 48. Hence the superior man is careful to maintain the proper expression of his countenance before others.

10. 49. Where the ruler of a state lays hold of the cross-bar, and bends forward to it, a great officer will descend from his carriage. Where a great officer lays hold of the bar and bends forward, another officer will descend. 50. The rules of ceremony do not go down to the common people¹. 51. The penal statutes do not go up to great officers². 52. Men who have suffered punishment should not (be allowed to) be by the side of the ruler³.

¹ Not that the common people are altogether freed from the rules. But their occupations are engrossing, and their means small. Much cannot be expected from them.

² It may be necessary to punish them, but they should be beyond requiring punishment. The application of it, moreover, will be modified by various considerations. But the regulation is not good.
